9/26/11 - Raphael Ketani. Matt Carroll of Tenen Environmental (646) 827-1061 called. He said that his company will do the quarterly groundwater monitoring for the site. They will begin the quarterly sampling this week. Mr. Carroll said that a few employees from Fleming Lee Shue had left and had formed this new company, Penen Environmental.

9/28/11 - Raphael Ketani. I received the green return card for the 9/9/11 Fischler clarification letter went out to Mr. Fischler regarding the environmental monitoring and remediation requirements under the STIP. Reference was made to the approved Fleming Lee Shue letters dated 8/19/08 and 12/22/08. 37-11 Development was in violation of the STIP due to their failure to conduct the quarterly groundwater monitoring. It was also stated that quarterly groundwater monitoring and reporting were required to begin this September, and that this should continue until they are ready to excavate the contaminated soil.

DEC with current site status. Vought received return message from Carroll and he noted that there are no development plans for the site to date and they will adhere to DEC approved RAP upon development. 7/31/12: Vought: Spoke with and received email from Arcadis (Steven Feldman Ph: 631-391-5244 email: steven.feldman@arcadis-us.com) requesting locations of former product recovery systems. Vought sent Feldman copy of DEC summary site plans showing recovery trenches and also added plans to e-docs. 04/22/13: Hiralkumar Patel: after discussing with DEC Austin and DEC Vought, case transferred from Vought to Patel. 5/15/13: Vought: Received call from Denise D’Ambrosio (Ph: 914-393-9578) who was inquiring about spill and Vought to returned call. 05/22/13: Hiralkumar Patel: 1:24 PM: received call from Ms. D’Ambrosio, attorney for Midtown Development who owns property at 555 W 36th Street (Block# 708/Lot# 1). Ms. D’Ambrosio asked for update. informed her that the department has not received anything since Oct. 2011. Denise D’Ambrosio: **attorney for neighbouring property** Ph: (914) 393-9578: 51 PM: left message for Matt at Tenen Environmental. Matt Carroll Tenen Environmental Ph: (646) 827-1061 2:01 PM: spoke with Mr. Fischler at 37-11 Development LLC. Mr. Fischler mentioned that the property is currently in foreclosure and he doesn’t know who owns it actually. he will call back with update. 37-11 Development LLC. **property owner as per ACRIS** 158-13 72nd Avenue Flushing, NY 11365 Attn.: Yossi Fischler Ph: (917) 929-2403-11 1031 LLC. **property owner as per ACRIS** 242 Warren Street Brooklyn, NY 11201 11 PM: spoke with Jeremy Feedore, attorney at AG’s office. Jeremy mentioned that the case has been settled with RP and waiting for final ISR to close the pin case. 05/23/13: Hiralkumar Patel: 4:14 PM: sent final ISR to DEC Farrar. final ISR emailed to DEC Farrar, AG Feedore and DEC Austin. 07/15/13: Hiralkumar Patel: 10:52 AM: received call from Mohamed Ahmed from Tenen Environmental. he mentioned that Mr. Fischler has settled foreclosure issue and wants to work on spill closure. Mr. Ahmed inquired about what needs to be done. informed him that file review is pending. Mohamed Ahmed Tenen Environmental **owner’s consultant** Ph: (646) 606-2332 Ext. 101 email: mahmed@tenen-env.com 07/16/13: Hiralkumar Patel: 1:18 PM: received call from Mr. Ahmed. he mentioned that property owner has 60 days to finalize on either spill closure or further requirements, to satisfy bank requirements. as such, owner decided to collect groundwater sample for analysis. informed Mr. Ahmed that the department may not be able to comment on future requirements in 60 days. 08/28/13: Hiralkumar Patel. received email from Mr. Ahmed (at 559 PM on 08/27/13) including groundwater sampling report. abstract: three wells MW-A, MW-B and MW-C are located on north side of the site, along W 37th Street- groundwater samples from monitoring wells were collected on 08/05/13- groundwater was encountered at depths ranging between 11.20 and 29.7 ft bg- no contamination found in samples. Mr. Ahmed requested spill closure based on groundwater sample results from three wells (MW-A, MW-B and MW-C) which are located upgradient and in straight line. he requested closure based on groundwater sampling data from sampling in Feb. 2009, May 2009, Sep. 2011 and Aug. 2013. Mr. Ahmed also included copy of groundwater sampling occurred in 2006 from wells MW-5, MW-6 and MW-7. during sampling in 2006, heavy contamination was noted in well MW-7. report does not include location of wells MW-5, MW-6 and MW-7. before commenting on spill closure request, need to review entire file. 09/10/13: Hiralkumar Patel: 2:39 PM: received call from Mr. Ahmed
inquiring about comments on closure request. informed him that file review is still pending and can not comment on such request at this time.09/16/13-Hiralkumar Patel.12:04 PM- received message from Mr. Ahmed. he inquired about a date when DEC will comment on spill closure request. he also stated that owner’s attorney is planning to discuss with DEC attorney if no response. discussed with DEC Austin and DEC Vought. DEC Vought previously managed this project. he stated that property owner signed a STIP and there was a requirement of quarterly groundwater monitoring and report submission until site development occurs. reviewed available documents. DEC Vought sent letter to property owner on 01/20/2009 requiring quarterly groundwater monitoring and report submission, until site redevelopment occurs. based on available documents, groundwater samples were collected on 02/10/09 (results not included in recent report dated Aug. 2013), 05/08/09, 09/28/2011 and 08/05/2013. also, reports were submitted on 02/24/2009 (only included cover letter in recent report dated Aug. 2013), 05/20/09, Oct. 2011 and Aug. 2013, all these do not satisfy the requirement of quarterly sampling/report submission (as part of signed STIP) until site redevelopment.09/17/13-Hiralkumar Patel.12:01 PM- spoke with Mr. Ahmed. informed him that file review is still pending. informed him that groundwater sampling occurred from three upgradient wells and there is no data from downgradient of the site. also informed him about findings of black oil in monitoring well on north side of W 37th St (along 456 11th Street, spill #: 0007141), and owner of that property had claimed impact from the subject site. also informed him that as per the signed STIP, the department required quarterly groundwater monitoring and report submission until site redevelopment, but property owner failed to comply.10/04/13-Hiralkumar Patel. received message from Mr. Ahmed (at 3:49 PM on 10/03/13).11/06/13-Hiralkumar Patel. DEC Oliva received call from Mike Bogan, attorney representing property owner, requesting spill closure after discussing with DEC Austin and DEC Vought, case transferred to DEC Vought.11/7/13-Vought-Received call from Louis Oliva who received inquiry from Mike Brogan (Esq) as to status of site. Spill transferred back to Vought due to decreased workload as well as familiarity with historical aspects of case due to complete file review. 11/13/13-Vought-Received call from and spoke to Mohammed Amhed (AKRF) who noted that site was going under foreclosure and it was likely that the current owner would also be the developer. Vought requested all current AKRF groundwater reports (excluding the two named in e-docs) and Ahmed will return call or email to Vought with additional reports if available. Vought received email from Tennen (Ahmed) that “Jeff, Tenen was only performed groundwater sampling twice, October 2011 and August 2013. However, attached please find an additional groundwater sampling report prepared by AES in May 2009 which indicated no detection in the three samples. Please let me know if you have any question.”

To date file review by Vought from 6/10/10 (when Vought last managed project) to present: Letter from Atria Builders (Yossi Fischler Ph: 718-380-8882x16) to Vought- 7/30/10. Letter notes that "As per your email dated March 1, 2010 during the future development and construction by Atria Builders of hotel at the above referenced property, vapor mitigation efforts will be implemented during the construction process. This will include an engineered vapor barrier (if applicable), a sub slab depressurization system (if applicable) and a sensitive receptor survey." Letter from DEC Ketani to
NY AUTO SVC JAVITS CTR (Continued)

Fischler-9/8/11. Letter sent requiring "monthly offsite groundwater sampling, gauging and product collection with submission of monthly groundwater reports. Letter also notes DEC set deadline of 10/6/11 for the beginning of soil excavation or otherwise case will be referred to OGC. Letter from DEC Ketani to Fischler-9/20/11. Letter wrote to "clarify the environmental monitoring and remediation requirements". Letter notes that soil by excavation as per the RAWP dated 8/19/08 and quarterly monitoring as per the 12/28/08 FLS letter were never performed and as such DEC requires that quarterly monitoring and reporting resume to begin September 2011 and must continue till property is developed. Quarterly Groundwater Sampling Report (Tennen Environmental)-October 2011. On behalf of 37-11 Development, LLC 158-13 72nd Avenue Flushing, NY 11365 Three bedrock wells along 37th Street were sampled and based on results Tennen concludes that "the petroleum release associated with Spill #9709152 is not impacting the groundwater beneath the sidewalk and recommends that quarterly sampling be suspended. Upon Site redevelopment, the NYSDEC approved 2008 will be implemented." Groundwater from 3-12'bg and "is representative of a bedrock aquifer and while some local areas of perched water may be present, an unconsolidated groundwater aquifer is not present above the bedrock." Groundwater analyticals show no TOGS 1.1.1 Groundwater Standard exceedences. Quarterly Groundwater Sampling Report (Tennen Environmental)-August 2013. Three bedrock wells along 37th Street were sampled and based on results Tennen concludes that "the petroleum release associated with Spill #9709152 is not impacting the groundwater beneath the sidewalk and recommends that the spill case be closed." If subsurface contamination is encountered during excavation activities associated with future redevelopment, a spill will be reported to NYSDEC and any necessary remediation will be conducted in consultation with NYSDEC during redevelopment activities. Groundwater analyticals show no TOGS 1.1.1 Groundwater Standard exceedences. 12/3/13 Vought-Discussed data with RSE as groundwater analyticals were non-detect since 2009 and recent realignment of closure goals via working with DEC Central Office and RSE approved Spill Closure. Vought called and spoke to NYSOAG Berchard and they received 1.25 Million in reimbursement to Fund including fines and penalties and no outstanding final expenditures. Vought spoke to OGC Oliva and no Regional enforcement cases on site as well. Spill closed by Vought and closure letter with soil contamination clause sent to 37-11 Development, LLC 158-13 72nd Avenue Flushing, NY 11365 Final ISR in e-docs by DEC Patel.

Remarks: ECO Parris notified by Jacob Javits Center President of oil puddles in the yard East of the Convention Center - Apperaed to be vacant land located directly beneath NY Auto Service. The oil is impacting the rear of the Javits Center, causing odors and seepage into facilities convention halls.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Assessment and Remediation (John Rochetta) documented the removal of excavation completed on Monday October 2, 2000. Environmental gallon and 1 x 2,000 gasoline USTs. The tanks were removed and owners provided PBS application to register existing tanks 6 x 550 that the contractor is FD certified. DEC Sigona met with facility They referred this to their buried tanks unit to follow up and ensure encountered explosive levels of vapors in piping and stopped work. instructions. Spoke to Chief Mooney. When the FD was on site, they feet no water. Tanks not registered. Mailed PBS application and Structural borings performed by Scott Lewis Eng. Firm - Bedrock at 12 feet no water. Tanks not registered. Mailed PBS application and instructions. Spoke to Chief Mooney. When the FD was on site, they encountered explosive levels of vapors in piping and stopped work. They referred this to their buried tanks unit to follow up and ensure that the contractor is FD certified. DEC Sigona met with facility owners provided PBS application to register existing tanks 6 x 550 gallon and 1 x 2,000 gasoline USTs. The tanks were removed and excavation completed on Monday October 2, 2000. Environmental Assessment and Remediation (John Rochetta) documented the removal of
the tanks under PIN Project investigation for Javits cleanup. EAR collected endpoint soil samples to fingerprint samples for comparison to used oil cleanup under 11th Avenue and West 37th Street/West 36th Street. The material appeared to be gasoline and different from the material cleaned up by DEC state contractor Miro Associates. No used oil USTs were found during the excavation of the site. Prior to Sept, 2004 data translation this spill Lead_DEC Field was "ROMMEL". This spill case was reassigned from DEC (Sigona) to Rommel on 01/07/2004. 08/19/05 Determination needs to be made whether all tanks at site removed. Next step- call property owner to determine whether tank closure report exists. LNK.05/04/06-Vought-See spill #9709152 for three groundwater wells installed by NYS to see if possible upgradient contribution to site located at 450-454 11th avenue (Spill #9709152 PIN00334). EcoTest Groundwater Analyses-6/2/04.

Groundwater analytics show: 30ppb benzene(MW1), 7ppb xylene(MW1), 6ppb isopropylbenzen(MW1), 8ppb n-propylbenzen(MW1), 21ppb 1,2,4-trimethylbenzen(MW1), 34ppb xylene(MW2), 38ppb 1,2,4-trimethylbenzen(MW2), 6ppb benzene(MW4), 8ppb benzene(MW6), 17ppb toluene(MW6), 110ppb ethylbezene(MW6), 420ppb xylene(MW6), 320ppb 1,2,4 trimethylbenzen(MW6), 33ppb napthalene(MW6), 480ppb benzene(MW7), 360ppb toluene(MW7), 3800ppb ethylbenzene(MW7), 13000ppb xylene(MW7), 5500ppb 1,2,4 trimethylbenzen(MW7), 9300ppb napthalene(MW7). Wells MW6 and MW7 located on sidewalk of 456 11th ave show contamination consistent with gasoline. Vought called DEC Brand (project manager for Spill #0007141 at 456 11th Avenue) regarding dissolved groundwater contamination in MW7 and MW6 located on sidewalk of 456 11th Avenue. Martin indicated that spill was going to be transferred back to Region 2 due to end of spill closure initiative in Albany. Martin indicated that he would put spill in Long Term list for transfer back to Region 2.08/17/2006: As noted above, spill may be associated with adjacent spill 9709152. NYSDEC contact name changed to Vought, spill transferred back to Region 2 for evaluation. M.Brand NYSDEC DER Albany. 4/25/2007 - Sangesland spoke to Mr. Zubli (property owner) the spills case needs to be reassigned to someone in the Remediation Group. Sangesland provided Mr. Zubli with a contact name/number for Vadim Brevdo-DEC Remediation. 11/08/07 The owner of the site Ari Zubli called and in a telephone conversation voiced lots of concerns that the spill was opened without evidence of contamination; that his site is being affected by the site across West 37th Street (which is handled by Jeff Voight - PIN Job, Spill No. 9709152), specifically by the oil-related contamination emanating from PIN Job site, and that his site does not have gasoline contamination. Conversation between Vadim Brevdo and Jeff Voight on 11/08/08 following Mr. Zubli’s call and review of documentation related to PIN Job, Spill No. 9709152 reveal that wells installed during PIN Job in 2004 on West 37th Street show high gasoline concentrations and it is not clear which site is the source and which one is being impacted. Groundwater flow direction is unknown. At least, PIN Job site did not appear to have used gasoline, whereas Mr. Zubli’s site operations did use gasoline. This all confirms that if Mr. Zubli wants spill closure, he should retain consultant implement additional investigation which would prove that his site is being affected from by off-site source. Without such evidence/investigation report it is not prudent for DEC to close this spill. (Vadim Brevdo) 4/2/09 - Austin - Transferred from Needs Reassignment to Patel for further work to remediate and close - end 04/13/09- Hiralkumar Patel. visited site. met Isaac Zubli, property
owner. site is occupied by a parking lot and a auto body shop (not a repair shop). no tanks on the property. as per Mr. Zubli, he bought property in 1979 and at that time, site was a gas station. then gas station was closed in 1980s and tanks were closed in-place. after that, he converted site into parking lot and in 2000, Atlantic Outdoor signed a contract to install a billboard at the site. as per Mr. Zubli, according to contract with Atlantic outdoor, Atlantic took responsibility of removing tanks property which were located in area where existing billboard is. Mr. Zubli mentioned that Atlantic removed all tanks and associated material. asked Mr. Zubli to provide Atlantic’s phone number. site is located at the corner of 11th ave and W 37th street. during site inspection, found two monitoring wells on sidewalk of W 37th street; one at the corner of 11th ave and W 37th street and second well slightly west of auto body shop entrance along W 37th street. during site visit, Mr. Zubli mentioned that these wells were installed by DEC as part of pin project across the W 37th street (Spill #9709152). U&I Realty Inc. **property owner** Isaac Zubli 456-460 11th Avenue New York, NY 10018 Ph. (212) 695-7878 Fax (212) 695-307504/17/09-Hiralkumar Patel. received message from Ari Zubli, owner’s son. 04/20/09-09-Hiralkumar Patel. spoke with Ari. he will call back with billboard company’s contact info. Ari Zubli Ph. (516) 316-9297 (C) email: azubli@yahoo.com 05/20/09-09-Hiralkumar Patel. asked Ari to provide billboard company’s information. 05/29/09-09-Hiralkumar Patel. 12:21 PM- received signed return receipt for letter that was sent to the site. 06/11/09-Hiralkumar Patel. 5:06 PM- received email from Ari Zubli with copy of some pages of Phase I done previously. he mentioned that billboard company hired Yellowstone Industries to remove tanks and associated contamination. as per Mr. Zubli, DEC employees were present at the site for almost two weeks supervising the removal and clean up. as per Phase I, initial spill was opened due to an alleged above ground spill. when the billboard company broke the concrete to begin the excavation of the site they encountered the tank vent pipes which were right beneath the surface. this released some petroleum vapor and the tenant next door called the fire department with a complaint of a gas smell. Mr. Zubli mentioned that the Fire departments spill report clearly states that ZERO gallons of gasoline were spilled. There was NO spillage of gasoline at all. Phase I report also shows that ALL The affected soil had been removed by Yellowstone and under the supervision of your DEC employees. entire area that once housed the gas tanks is now solid concrete. for a billboard of that size to be installed there is a massive space of rebar and concrete that needs to be installed. 06/16/09-Hiralkumar Patel. 12:13 PM- letter that was sent to Bayside address came back undelivered. 3:25 PM- left message for Ari Zubli. 3:30 PM- received call from Ari Zubli. explained him that the case is open as proper documents never submitted to the department. asked him to submit complete Phase I report. he mentioned that during installation of billboard, company excavated 50 ft by 50 ft area to a depth of groundwater and poured concrete to support billboard. asked him to contact billboard company to get site map.
with billboard installation details and excavation area. explained him that if most of the area where tanks were located had been excavated then the department requires installation of third well (assuming two wells on W 37th street still works) to define groundwater flow direction and groundwater sampling from each wells.Atlantic Outdoor AdvertisingMatt PerlineEric FormanPH. (212) 787-510006/17/09-Hiralkumar Patel.12:15 PM:- received email from Ari with copy of Phase I. abstract:- historical utilization of the subject property as an auto repair facility, car laundry, grease shed and gasoline filling station- little "E" restriction for the subject property is listed as "Hazmat/Noise" less than -------- elevation of the site is approx. 20 ft above mean sea level- depth to groundwater is approx. 12 ft bg- regional groundwater flow towards the northwest, in the direction of Hudson river- sanborn map 1950 indicates that the southern portion of the site was developed as a gasoline filling station with a car laundry, grease shed and store located on eastern side and six USTs and pump island on the western side less than ---------Phase I also include copy of Tank Removal/Closure Documentation Report, prepared by EAR. abstract of tank closure documentation report:- EAR was on-site as an observer only, and was not responsible for collecting samples related to a site assessment or soil disposal- groundwater is located at the interface between the bedrock and the overburden at 8 to 12 ft bg- soil samples were collected from the south sidewall of tank #7 (one 2,000 gal UST, PID: 80 ppm), the composite bottom of tanks # 1-6 (six 550 gal USTs, PID: 1,600 ppm) and the final extent of excavation 8.5 ft bg- no other endpoint samples collected due to concrete wall and nearby building and above/below grade structures- liquid samples were collected from the interior of the tanks # 1, 3, 4, 5, 6 and 7- all seven tanks were 48 inches in diameter- six 550 gal USTs were encased in concrete- all tanks were closed since 1987 and filled with water-tank #1 (furthest north of six tanks) to tank #4 and tank #6 (furthest south of six tanks) were found with no holes and appeared to be in good condition- top of the tank #1 was punctured by excavator- tank #5 was documented to be in poor condition, having a two-inch hole in bottom, however the tank was holding product and water when it was unearthed- tank #7 (2000 gal) was 48 inches in diameter- no holes found in tank #7 and appeared to be in good condition- as the excavator removed soil from the west side of the tank #7 concrete vault, black liquid drained from the vault base into the open hole, as the excavator removed the liquid and impacted soil from the excavation, strong gasoline odors permeated the ambient air less than ---- final excavation dimensions were 30 ft in length, 24 ft in width and 8.5 ft deep (where bedrock was exposed)- south sidewall sample from tank #7 excavation was collected at 6 ft bg and fingerprint analysis indicated motor oil or diesel oil- previously used vent and product lines were not removed during the time EAR was on-site- all tanks were holding liquid when unearthed, it appears that overfills, line leaks and/or surface spills may have contributed to the impact of the subsurface less than -------- samples were analyzed via TCLP methods (could not ready values in report)06/29/09-Hiralkumar Patel.10:05 AM:- spoke with Eric at Atlantic. he mentioned that they removed contaminated soil and collected endpoint samples. asked him to submit cleanup report.10:11 AM:- received call from Matt from Atlantic. he will look for documents.08/03/09-Hiralkumar Patel.11:50 AM:- spoke with Matt. he looked in record and found no reports.12:42 PM:- spoke with Ari

**456 11TH AVE (Continued)**

Zubil asked him to provide contractor’s info by end of 08/14/09. 08/11/09-Hiralkumar Patel.

4:50 PM: received email from Ari. he spoke with Jill at Preferred environmental regarding required investigation. Ari will send update once he receive comments from Jill. 09/11/09-Hiralkumar Patel. 3:59 PM: received email from Ari. he hired Preferred environmental. will start work soon. 09/14/09-Hiralkumar Patel. 12:43 PM: sent email to Ari to submit work schedule. 11/23/09-Hiralkumar Patel. 3:51 PM: spoke with Jill at preferred. she sent proposal, but no response from owner yet. 3:56 PM: left message for Ari to respond with contractor’s contact info by 11/27/09 or else case will be referred to legal. 11/24/09-Hiralkumar Patel. 3:33 PM: received call from Ari, he was out of country for some time and is sending signed contract to Jill now. Ari will asked Jill to contact to confirm that they will do work. 12/01/09-Hiralkumar Patel. 1:52 PM: sent email to Ari to submit copy of signed contract, between owner and consultant, by end of 12/04/09. 12/17/09-Hiralkumar Patel. 11:54 AM: left message for Ari. 12/15 PM: received message from Ari, he sent signed contract to Jill at Preferred. 1:41 PM: spoke with Ari. he will send copy of work proposal which details what work will be done. asked Ari to provide work schedule also. 12/21/09-Hiralkumar Patel. 2:10 PM: spoke with Bill at Preferred and asked him to submit work plan/schedule. Bill will send update by end of 12/24/09. 01/06/10-Hiralkumar Patel. 10:21 AM: received work plan from Jill. Preferred enviornmental inspected site on 12/29/09 and located seven monitoring wells in area. preferred gauged all seven wells and found free product in two wells: black thick oil (could not find thickness) found in well MW-4 which is located in front of auto shop at the site and 0.35 ft of product with gasoline-like odor in well MW-7 which is located in southwestern corner of the property (close to intersection of W 37th street and 11th Ave). Jill is proposing to install eight soil borings to a minimum depth of 12 ft or until bedrock is encountered (bedrock is estimated to be at approx. 8.5 ft bg). will install three 2-inch diameter wells based on PID results during soil borings. will sample new well and previous well MW-6 (MW-4 and MW-7 will not be sampled as has product in it). Jill is proposing to submit report within two months from work plan approval date. 01/19/10-Hiralkumar Patel. 12:51 PM: sent work plan approval letter to Isaac Zubli. letter emailed to Ari Zubli and Jill. asked to submit investigation report by 03/19/10. 03/03/10-Hiralkumar Patel. 10:33 AM: received email from Jill requesting extension for investigation report submission from Mar. 2010 to Jun 2010. she mentioned that due to heavy snow and some other problems, project got delayed. 03/09/10-Hiralkumar Patel. 3:34 PM: sent email to Jill approving deadline extension to 05/31/10. email copied to Ari Zubli. 03/29/10-Hiralkumar Patel. 3:39 PM: received email from Bill. they have scheduled soil boring/well installation on 04/05/10. 04/06/10-Hiralkumar Patel. received email from Bill (at 5:26 PM on 04/05/10) stating that investigation work has been rescheduled for April 15-16, 2010 due to scheduling conflicts of the property owner. 05/21/10-Hiralkumar Patel. 9:18 AM: received message from Bill. they received sample results but waiting to do well survey which will be done soon. 06/29/10-Hiralkumar Patel. 1:13 PM: spoke with Bill. he will submit report by tomorrow. 07/02/10-Hiralkumar Patel. 3:45 PM: received report from Bill. abstract: seven soil borings (SB-1 to SB-7) were drilled within and adjacent to the former gasoline UST location- three of the borings were completed as monitoring wells (MW-8, MW-9 and MW-10).
presence of the foundation for the billboard post prevented the installation of additional borings at the property to the north/northeast of SB-1- upper five ft of soil in the borings generally consisted of fill material with varying quantities of brick, concrete, silty sands and gravel- within the upper five ft of soils, no petroleum impacts, including staining and odors, were observed less than --------- petroleum odors and elevated PID responses (up to 2,620 ppm) were observed in soils beneath the fill material in boring SB-1- slight petroleum odors and slightly elevated PID responses (between 56.4 and 24.3 ppm) were observed in soils within borings SB-2 and SB-5- no field evidence of impacts were observed in any of the remaining borings- collected one soil sample from each boring for analysis- depth to groundwater was noted at approx. 10 ft bg- three 2 inch wells were installed to 17 ft bg with 10 ft of screen- free product found in wells MW-4 and MW-7- 0.35 ft of free product found in MW-7 exhibited a gasoline-like odor- black thick product found in MW-4 similar to waste oil- groundwater flow direction is to the west-southwest- found heavy soil and groundwater contamination in SB-1/MW-8- soil sample in SB-1 was collected at 8.5-10 ft bg- refusal found before 8.5 ft in borings SB-2 (at 7 ft 10 inch), SB-3 (at 6 ft), SB-4 (at 8 ft 2 inch), SB-5 (at 8 ft) and SB-6 (at 7.5 ft) soil analyticals:-------------------------------SB-1

information is not in report. asked Jill to send copy of field notes, as this information is not in report. asked Jill to collect product samples from wells MW-4 and MW-7 and pump out product from wells, immediately.10:46 AM-: spoke with Isaac Zubli and asked him to collect product sample and pump out product from two wells, asked him to submit work schedule for sample/pump out by end of 07/23/10.11:02 AM-: received email from Jill with copy of field note which shows no product found in wells across the street.07/22/10-Hiralkumar Patel.

1:17 PM-: spoke with Bill. they haven't done product removal yet, asked him to contact property owner to schedule product sampling (for fingerprint analysis) and product removal. asked Bill to call back with work schedule by end of 07/26/10.08/04/10-Hiralkumar Patel.

10:38 AM-: left message for Ari Zubli to submit work schedule for product sampling and pump-out by end of 08/05/10.08/05/10-Hiralkumar Patel.

3:45 PM-: received call from Ari Zubli. he mentioned that he authorized required work last week and asked Bill to schedule product sampling and removal. he spoke with Bill yesterday also. suggest Mr. Zubli to call Bill again by 08/09/10 if doesn't get work schedule.09/13/10-Hiralkumar Patel.

10:24 AM-: left message for Bill.10:25 AM-: received message from Bill. due to unpaid account, they haven't done any work yet.09/15/10-Hiralkumar Patel.

3:07 PM-: spoke with Isaac Zubli and informed him to submit work schedule by end of today 4:27
PM: received call from Ari Zubli. he mentioned that he will send payment today and ask Bill to submit work schedule by end of 09/20/10. 10/08/10 Hiralkumar Patel. 1:35 PM: received message from Bill. they got approval and will go to site on 10/11/10 to collect product samples, gauge wells and remove product from wells. 11/15/10 Hiralkumar Patel. DEC Sangesland received call from Jeremy Heller (917-576-8040) from DEP Hazmat. 12:38 PM: spoke with Mr. Heller at DEP. Mr. Heller mentioned that they found two drums on sidewalk, as per property owner, those drums were generated by Preferred during investigation work and on-site for past six months. owner is claiming that preferred refused to remove those drums. so property owner wants DEP to remove drums, as drums contains contaminated material. Mr. Heller will go to issue commissioner’s order to property owner to dispose these drums properly. 12:41 PM: spoke with Bill and informed him about drums on sidewalk. he doesn’t remember but check with property owner. he also mentioned that they went to site on 10/11/10 for required product sample and product removal. they also gauged all wells (including across the street). no product found in wells across the street. results of fingerprint analysis on both product samples (one from MW-4 and one from MW-7) came back unconclusive. product sample from MW-4 (which looks like waste oil) is mixture of fuel oil and unknown diesel range organics. Bill will submit report this week. 12:56 PM: spoke with Ari Zubli and informed him about drums on sidewalk. 11/29/10 Hiralkumar Patel. 4:24 PM: received email from Bill including report for fingerprint analysis and VEFRing event. 11/30/10 Hiralkumar Patel. discussed with DEC Austin. Austin asked to check well logs for off-site wells MW-1, MW-2 and MW-3. for any indication of soil contamination near bedrock surface which may be impacting well MW-4. checked files for spill #: 9709152 but could not find logs for wells MW-1, MW-2, MW-3 and MW-4. 12/01/10 Hiralkumar Patel. discussed again with DEC Austin and based on groundwater contamination, case transferred to DEC Vadim. summary:- six 550 gal and one 2000 gal tanks removed- all tanks were 48 inches in diameter- all tanks were closed and filled with water in 1987- tank #5 (550 gal) was found with two inch hole in bottom, but was holding oil/water when removed- gasoline contamination observed underneath tank #7, contaminated water drained from the base of the excavation into the open hole, strong gasoline odors noticed- final excavation dimensions were 30 ft in length, 24 ft in width and 8.5 ft deep (where bedrock was exposed)- 1,600 ppm PID reading noticed in composite endpoint bottom sample from 550 gal tanks excavation pit- no other endpoint samples were collected due to concrete walls and other structures- no document about removal of associated lines (could be removed later on by bill board company’s contractor)- all tanks were holding liquid when unearthed, it appears that overfills, line leaks and/or surface spills may have contributed to the impact of the subsurface less than -------- 0.35 ft product found in MW-7 with gasoline-like odor- black thick oil found in MW-4 similar to waste oil (no record of waste oil tank on the site) 09/20/10 Brevdo - Called Ari Zubli and left message representing myself and that I am calling about this project and would like to discuss the status and further course of action. Also called and left similar message to Jill S. Haimson, CGWP, PGP, principal at PREFERRED ENVIRONMENTAL SERVICES 323 Merrick Avenue North Merrick, New York 11566 Port Authority of NY & NJ. NYS & NYC Certified Women-Owned Business Enterprise www.preferredenv.com TEL: 516- 546-1100 x 326CELL: 516-647-4211 FAX: 516-213-8156 Brevdo 05/11/2012 - Brevdo -
Received a call from Bill Schlagether of Preferred Environmental. In the conversation Bill inquired that unless his client receives some sort of letter or communication from DEC he is unlikely to cooperate. His client asserts that the free product oil is attributable to a taxi stand near the site. I expressed to Bill that site also has gasoline contamination that is coming from the on-site operations. Bill will send me contact information for site owner and himself and I will have to send a letter or s STIP to the owner. If owner does not want to cooperate, DEC may need to go to enforcement. Consulted with Kumar Patel who managed the site before its transfer to petroleum remediation. Kumar agrees that site owner is liable for its own contamination with gasoline. They operated parking lot and auto repair shop which is the nature of business which caused gasoline contamination just like taxi stand nearby. There may be contributing off site factor but site definitely has its own contamination that needs to be addressed. Brevdo 11/2012 10:37 AMMr. Brevdo: My contact information is below and the property owner contact information is as follows: Mr. Ari Zubli 212 695-6262 316-9297 We have a mailing address for him @2226 Jericho Turnpike Garden City Park, NY 11040 William J. Schlageter Operations Manager/Senior HydrogeologistPREFERRED ENVIRONMENTAL SERVICESNYS, NYC, PANY/NJ, New York City School Construction Authority-certified WBE323 Merrick Avenue North Merrick, New York 11566 phone 516 213 8213 06/12/2012 - Brevdo - e-mail to William J. Schlageter of PREFERRED ENVIRONMENTAL SERVICES, consultant for the Responsible Party:"Dear Mr. Schlageter: As you requested, attached are Stipulation Agreement, Corrective Action Plan and Cover Letter for Stipulation Agreement which I mailed today to U&I Realty Inc., 2226 Jericho Turnpike, Garden City Park, NY 11040 Attn.: Mr. Ari Zubli via Certified Mail, Return Receipt Requested. If you have any questions regarding this matter, please contact me at 718-482-4928 or via e-mail. Respectfully, Vadim Brevdo 02/06/2015 - V. BrevdoReceived a call from Jason Haith of Langan Engineering. Langan is a consultant for a potential buyer of the property and inquired what needs to be done at the site do close the spill case. Proposed development may be residential or residential/commercial. I explained that there is free product in wells - 0.35 ft product found in MW-7 with gasoline-like odor and black thick oil found in MW-4 similar to waste oil (no record of waste oil tank on the site). Explained that free product and grossly contaminated soil will have to be removed, at minimum. Explained that if they are consultant, they will have to propose remedial action work plan. Jason asked if I believe investigation is complete. I explained that overall we have idea of nature and extent of contamination, there were several wells installed at the site and from the Department's perspective it is more about remediation than investigation. However, if Langan needs additional investigation in order to propose effective remedy, the Department will be fine with that. I explained that if development is residential, then in addition to product and grossly contaminated soil removal the Department is likely to request for incorporation of engineering controls into the construction plans for the building, such as vapor membrane barrier and Sub Slab Depressurization System or Enhanced Ventilation System. Jason stated that if deal goes through for buying the property, and they are retained as consultant, Langan will contact me. Telephone for Jason Haith is 212-479-5427 or (917) 859 - 4908 (cell). V.B. ### Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

11/6/08 - Raphael Ketani. The spill case was opened when contaminated soil was discovered in the ground during a phase II investigation. The call came in on 10/31/08. According to Property Shark, the site was a one story three vehicle garage. The garage has since been demolished. The block and lot are 707 and 26. The main address is 511 West 35 Street. The alternate address is 511-515 West 35 Street. According to ACRIS, the owner is HY707LLC, 20 Jay Street, Ste 1003, Brklyn, 11201. I checked the PBS database, but didn’t find a registration for the site. However, a 550 gal. gasoline UST was below ground. I tried calling Mike Burke at Langan Engineering (212) 479-5413 and A J Pires (718) 222-8155 (from the architectural or design company). However, I could only leave messages. Mr. Burke returned my call. He said that the plan now is to build a parking lot as a temporary development measure. The owners just received the money from the bank, but their plans are not formalized yet. They will dig out the contamination to bedrock. I asked Mr. Burke for an investigation and remediation plan that includes soil and groundwater sampling. He said that he will send a RAP. Mr. Burke added that everyone is scheduled to meet this teusday, 11/11/08, to discuss the plans for the site. 11/7/08 - Raphael Ketani. Mr. Pires (py-reez) from Alloy Development (the parent company of HY707LLC) called to say that they are just starting the demolition of the building. A formal remedial action plan will be sent to the DEC soon. He said that 8 borings were already done on site. He said that they went down 30 feet, but didn’t hit groundwater. The site is on a hill near the Javitz Center. I asked him to include the soil boring logs in the remediation plan. He said he will. I asked him whether there were end point sample results. Mr. Pires said there are and that this will also be included in the plan. 11/13/08 - Raphael Ketani. Mr. Burke (212) 479-5413 called and left a message that the RAP is being prepared. However, excavation will need to take place. So he is working on a permit to do the excavation. He will also let the NYC DEP know that excavation will need to take place. 11/24/08 - Raphael Ketani. Susan Bianchetti (212) 479-5441 called to say that she is taking over the case from Mr. Burke. She said that she will have a well installed to comply with DEC’s request that a groundwater sample be collected. She said that she can’t put the well downgradient from the one location where there is contamination because there is no room for the drilling equipment. So she will put it just slightly upgradient. She said it’s a small site and that this shouldn’t make a difference. I told her the location sounded reasonable and to go ahead with the work. 12/12/08 - Raphael Ketani. Yesterday, I received the December 2008 Remedial Action Plan from Langan Engineering. I found the plan to be deficient. The number of borings that were performed during the first Phase II investigation were too few in number and too widely spaced to allow one to understand the subsurface conditions. I sent a letter to Ms. Bianchetti explaining this. I also wrote that they should wait at least 24 hours before developing the well. Lastly, I stated that they needed to wait at least two weeks from the date of well development before they collect a water sample. 12/17/08 - Raphael Ketani. I spoke to Ms. Bianchetti regarding the additional borings that were requested in the 12/12/08 DEC letter. She said that more borings weren’t done before because the buildings were still up on the lots. However, she said, the buildings have all been knocked down.
VACANT BUILDING  (Continued)  S109373161

down and the rubble has been carted away. I told her that we requested additional borings because the plans showed that there were big areas where the subsurface conditions were unknown. I added that since the area is open, there should be no problem getting the equipment in there to do the requested borings. She said that she will talk to the client to have the additional borings performed. However, she wanted to hold off on the boring through the sidewalk. She said that a sidewalk sample will be taken under the portion of the sidewalk that is near B-5 (the contaminated location). If this sample shows contamination, then Langan will do the sidewalk boring.

I told her that this will be fine. I also told her that Langan has to get utility markouts before any borings are drilled. She said that she always does this because she doesn’t want anyone to be injured.

She mentioned that Gary Heath at the NYC DEP, 59-17 Junction Blvd. is her contact there. She said that she has groundwater data and waste characterization data. I asked that she send this information to DEC. She said she will. 12/22/08 - Raphael Ketani. Ms. Bianchetti (212) 479-5441 called to say that all of the soil on the three lots was going to come out anyway, and some of the bedrock. I told her that if all of the soil is coming out, then soil borings won’t be necessary. I asked her whether they will do the sidewalk sample adjacent to the sidewalk. She said that they will and that DEC will get the analytical data. I asked her for the groundwater data. She said that DEC will be sent this data, too. I asked whether all of the soil will be characterized. She said it will. I asked her for the characterization data and copies of all the manifests. Ms. Bianchetti said that all of this information will be submitted to DEC. She added that, in some places, the developer will go into the bedrock. I asked her why the plan to perform complete soil removal wasn’t explained to the DEC in some document. She said that she wasn’t aware either that this was what the developer intended to do. I asked Ms. Bianchetti to send DEC a revised plan and a reference to our conversation today and to the new agreement. She said she will do so. 12/23/08 - Raphael Ketani. Ms. Bianchetti sent me a letter from Langan by e-mail today.

The letter stated the facts of our discussion on 12/22/08 regarding the changes in the DEC investigation and remediation requirements for the site. At the end of her letter, she requested a DEC letter confirming and memorializing our agreed upon new investigation and remediation strategy. I wrote a draft letter and submitted it to Jeff Vought, the acting unit head. He approved the letter and it was sent out. 2/4/09 - Raphael Ketani. Dan Cole of BEPA, NYC DEP (718) 595-4536 (59-17 Junction Blvd., 11th Floor, Elmhurst, 11373) called. He said that the site has an E-designation. He said that he was going to issue a no comment letter for the excavation, dependent upon the excavated area being small. However, I told him that they are supposed to excavate the entire area, and remove some bedrock. Mr. Cole said that he will make a site visit very soon. 2/13/09 - Raphael Ketani. I tried to contact Ms. Bianchetti (212) 479-5441 to find out whether progress had been made at the site, but could only leave a message. I tried to contact Mr. Cole regarding his site visit, but could only leave a message. Ms. Bianchetti called me back. She said that they haven’t started excavating yet. They are waiting for the DOB excavation permits. They expect to get the permits in a week or two. She added that DEP isn’t issuing anything yet as the developer doesn’t have the full building plans drawn up right now. 3/13/09 - Raphael Ketani. I spoke to Ms. Bianchetti regarding progress at the site. She told me that they finally received the Notice of No
Objection from the NYC DEP. The receipt of this document was holding up everything. They submitted it to the lender so that the excavation work can start soon. The building will not be demolished until the real estate-development climate improves. She will keep me posted. 4/23/09 - Raphael Ketani. I spoke to Ms. Bianchetti regarding progress at the site. She said that now the only thing holding up progress is that the owner needs to get financing for the work. She said that she doesn’t know when the excavation will start. The material that was going to be sent off as hazardous waste now needs to be resampled because the classification deadline has past. 7/8/09 - Raphael Ketani. Ms. Bianchetti (212) 479-5441 called to give me an update regarding progress at the site. She said that the owners are still working on removing some DOB stop work orders. Otherwise, excavation will start in a week or two. She said that the site is large and the excavation area is small. Bedrock is 10 feet down. Clean fill will be stored on site. Ms. Bianchetti will call me back in a week to let me know what is taking place. 8/4/09 - Raphael Ketani. I spoke to Ms. Bianchetti. She said that they are still waiting for the lender to disburse the money and for the DOB to remove the Stop Work orders. She said she will let me know when things start moving. 8/17/09 - Raphael Ketani. Ms. Bianchetti called today. She said that the work at the site will commence this Thursday, 8/20/09. 8/20/09 - Raphael Ketani. I made an unannounced site visit and took pictures. I met Anthony of Langan Engineering. He was overseeing the excavation work that was taking place at the southwest corner of the property - where B-5 used to be. He said that 50 truck loads of gasoline contaminated soil had already been removed. I told him that he will need to send DEC the manifests for all of the soil that is removed and to take end points after he believes the contamination has been removed. He said that he will. The excavated pit measured about 45 feet long by 25 feet wide by 15 feet deep. The soil consisted of brick red brown, clayey, glacial till. The backhoe operator seemed to have hit bedrock in the very southwest corner of the pit. Dark gray soil could be seen in places. There was a slight gasoline odor about the pit area. I pointed out the dark gray soil to Anthony. He said that this was the contaminated soil and that it will be removed. There was nothing else to see. So I left the site. 9/22/09 - Raphael Ketani. I spoke to Ms. Bianchetti (212) 479-5441. She said that she was presently writing the closure report for the site. She said that contamination was found in the pit walls that I had seen during my site visit, and at the southwest corner of the site. However, she said, everything was excavated to the extent practical and safe (an occupied building was still standing next to the pit). She added that end point samples were taken and the results were below TAGM standards. She will give the report to the client this week and the DEC should have it by next week. 10/9/09 - Raphael Ketani. Today I received the Spill Closure Report dated October 2009 and submitted by Langan Engineering. 10/15/09 - Raphael Ketani. I finished my review of the October 2009 Spill Closure Report. End point sample SW-7 was taken right at the border with the sidewalk on West 35th Street. The analytical results show 5 TAGM VOC exceedences. SW-8, which is nearby and against a building, had one exceedence for n-propylbenzene. Both of these samples were near the original location of boring B5, which had 3 VOC exceedences from the leaking gasoline UST. Groundwater analytical results were not provided. Copies of the individual soil manifests were also not provided. I also re-reviewed the December
VACANT BUILDING (Continued)

2008 Remedial Action Plan that was submitted by Langan Engineering. This plan contained a copy of the 2007 Airtek Phase I, the NOVA Geophysical 7/11/07 report, and the Langan 8/6/07 Phase II. The Phase I mentioned the 550 gal. gasoline UST under the site. The NOVA Geophysical report stated that only minor anomalies were found during the survey of the 3 adjoining lots. These lots were the subject site (block 707, lot 26), 506-510 West 36th Street (block 707, lot 41), and 512 West 36th Street (block 707, lot 45. The Langan 2007 Phase II investigation found the contamination at boring B5 (lot 26). I checked the PBS registration for the three lots. No registrations were found. I sent Ms. Bianchetti (212) 479-5441 an e-mail requesting copies of the soil manifests and the groundwater analyticals. I also stated that the DEC wanted the contamination in the vicinity of SW-7 delineated and removed. Later, Ms. Bianchetti responded back via e-mail that she will send the groundwater analytical results and copies of the manifests. However, she wrote that excavating at the location of SW-7 would be a problem since it is close to the neighboring building. I left her a voice mail that we should discuss this issue by phone. 10/19/09 - Raphael Ketani. I spoke to Ms. Bianchetti (212) 479-5441 by phone. We agreed to Langan performing two (2) borings through the sidewalk near SW-7 in order to delineate the contamination. I told her that if there is significant contamination, then it will have to be addressed. She agreed.11/6/09 - Raphael Ketani. Ms. Bianchetti sent me an off site boring plan by e-mail. The plan showed proposed borings B-1 and B-2. She asked whether these locations were alright, and, if so, whether the work can proceed immediately. I e-mailed back that she should move boring B-2 further west so that it is closer to boring SW-7, which had significant contamination. Then she can start the boring. She e-mailed back that she will do this. I received the November 2009 Spill Closure Report. One figure showed the two off-site (sidewalk) boring locations, B-1 and B-2. This closure report was essentially the same report as the October 2009 Closure Report. The November 2009 Closure Report contained the soil disposal manifests and the groundwater analyticals (in Appendix B). The groundwater results were almost completely non-detect, with the exception of one very low VOC hit. I had no comments regarding the entire report. 11/18/09 - Raphael Ketani. Ms. Bianchetti sent me an e-mail stating that tomorrow they will drill the two borings through the sidewalk. They will send off the samples for VOC and SVOC testing. 12/23/09 - Raphael Ketani. I tried to contact Ms. Bianchetti (212) 479-5441, but could only leave a message requesting the soil data for the two borings. Ms. Bianchetti (by-an-chettee) called me back. She said that they tried to install the two borings as requested. One boring was installed about where the DEC wanted it, but the other could not be placed close to SW-7. They tried 5 times, but either had refusal or the utilities were in the way. She said that there were a lot of utilities for the other building. Ms. Bianchetti said that the soil results weren’t bad. The report was completed and given to the client to review. Once the client is done with it and has commented, then it will be sent to DEC. I told her that we just need the additional information regarding the two borings with a figure and data tables, not all of the previous appendices and reports that we have already received. She said that she will just send the small report for the two borings. 12/29/09 - Raphael Ketani. Ms. Bianchetti sent me the Amended Spill Closure Report (ASCR) today (see E-docs). I began my review of the report. 12/29/09 - Raphael Ketani. I finished my review.

TC4381152.2s  Page 1689
of the ASCR. I consulted with Jeff Vought (E.G. I of the Spills Unit and the acting head of the unit in Randall Austin’s absence) regarding the analytical results for SW-7 and B-1 for the 6 to 8 foot interval. We both agreed that Langan needed to address the contamination at these two locations, and that they needed to obtain a representative groundwater sample from a location midway between the two locations. I sent Ms. Bianchetti an e-mail to this effect.

1/11/10 - Raphael Ketani. Ms. Bianchetti called me. She said that they will dig out the soil at SW-7 and at B-1. I sent an e-mail reminding her that they also needed to take a groundwater sample between these locations.

1/19/10 - Raphael Ketani. Ms. Bianchetti sent me an e-mail requesting that she be allowed to use well MW-6 near the southwest corner of the site and downgradient for obtaining the groundwater sample. She said it was from the Hudson Yards project for the DDC. She said that it may still be usable. I wrote back that this well is not close to B-2 and SW-7 where the significant contamination is, and, also, that this well may not even screen the same fracture in the bedrock. I insisted that a groundwater sample be taken between the two locations of concern. Ms. Bianchetti e-mailed me back that Langan will attempt to install a monitoring well in between B-2 and SW-7.1/29/10/ - Raphael Ketani. A conference call took place today between Gared Dellavarie and A.J. Piries of HY707 LLC, Ms. Bianchetti of Langan, and myself. Mr. Dellavarie and Ms. Bianchetti argued that they didn’t want to dig out the gasoline contaminated soil under the sidewalk right now. They wanted to wait and dig it out 5 years from now when the entire lot will be dug out in order to put in the foundation for the building. I told them that the DEC has the mandate to see that contamination is removed in a timely manner in order to protect the public and the environment. Mr. Dellavarie asked what a timely manner would be. I told him that we expect the contamination from a typical spill to be removed in a matter of months, at the most, not years. I told him that we don’t want to keep spill cases open. I added that if the responsible party doesn’t act, then there are fines of $37,500 per day per violation. I told him that HY707 LLC owns the contamination as it came from their property and, therefore, HY707 LLC is the responsible party. Subsequent to this statement, everyone became quiet for a moment. Ms. Bianchetti asked that she be allowed to use the well that is in the sidewalk in front of the site. She said that this well is near SW-7 and that she believed it was still functional. I told her that she could use it. I added that the contamination under the sidewalk has to be either dug out or treated. Mr. Dellavarie asked what if the contamination doesn’t end there and extends under the street? I told him that, then, HY707 LLC would be responsible for managing that contamination, as well. However, I said, let’s not worry about something that we’re not sure exists. I told everyone to deal with these two contaminated locations first, B-1 and SW-7, and then see where things lead. After this, the conversation ended.

3/11/10 - Raphael Ketani. Mr. Burke of Langan (212)479-5413 called to say that Ms. Bianchetti had left Langan. He said that he wanted to know what needed to be done at the site. I told him that Ms. Bianchetti and DEC had agreed to taking a groundwater sample from a well from a previous project. I told him that this well is at the southwest corner of the site. He said that he had the groundwater results from that well and he will forward them to DEC. I added that we had also agreed to the excavation of the soil at locations of SW-7 and B-1. Mr. Burke said that he will talk to his client about this.
I spoke to Mr. Burke today regarding the previous soil sampling, contaminated soil removal, and the groundwater sampling. Mr. Burke explained that well MW-6 is a Parsons-Brinkerhoff well from a previous investigation. He mentioned some of the analytical results and they were low enough, for the most part, that groundwater did not look as if it was presently being impacted by the soil contamination. Mr. Burke explained that the soil under the sidewalk could not be removed as there was bedrock directly underneath. Also, there are utilities under another contaminated soil location. So this soil also could not be removed. However, he said, the owners of the building next door are going to knock down their old building and take out the utilities. This will happen sometime in September 2010 and he believes that Langan will be able to remove this soil at that time. I asked Mr. Burke to send DEC a report explaining the site conditions and showing the bedrock, the boring locations, the location of MW-6, and the utilities. He said that he will do this.

4/9/10 - Raphael Ketani. Today I received the Progress Report dated 4/7/10 from Langan. I began my review of the report. 4/12/10 - Raphael Ketani. I finished reviewing the Progress Report. I found the report to be acceptable. The groundwater sample from the MW-SW (MW-6) well in the southwest corner was a little higher in benzene than TAGM limits (138 ppb) with two other analytes in the teens, but the rest of the analytes were at or below TAGM. So, I didn't consider groundwater to be an issue.

I spoke to Mr. Burke (212)479-5413 about the progress report. I told him that the DEC’s only concern is the high contamination at the location of sidewalk boring B-1. He said that the soil will definitely be dug out. However, he was not sure whether this excavation will be coordinated with the demolition of the building next door. If this doesn’t work out, then the excavation of the soil below the sidewalk will take place earlier in the year, rather than at the end. 5/24/10 - Raphael Ketani. I tried to contact Mr. Burke regarding the excavation of the soil under the sidewalk, but could only leave a message. 5/25/10 - Raphael Ketani. I spoke to Mr. Burke (212)479-5413. He said that he spoke to the owners of the neighboring property recently and they told him that the demolition of their building will take place by the end of the summer. 7/28/10 - Raphael Ketani. Mr. Burke called me today. He said that the Javits Center will lease the property for 3 years and turn it into a parking lot. Allied will still be the owner of the site. The building next door is scheduled for demolition sometime during September or October of 2010. 9/2/10 - Raphael Ketani. I talked to Mr. Burke today about the site. He said that digging of contaminated soil under the sidewalk along West 35th Street and to the west will commence in about a month. He asked whether the owners have to break up the street if they find that the contamination extends beyond the sidewalk. I told him that there are a number of different methods for addressing off site contamination. I added that treatment solution injections can be used, in conjunction with confirmatory soil samples, to remove contamination that can’t be dug out due to such things as closely spaced utilities. Mr. Burke commented that this sounded like a good idea. He said that bedrock is close to the surface, so he doesn’t believe there will be much soil to dig out. I told him that digging to the bedrock in both directions may be the best way to get rid of the contamination. He ended the conversation by stating that he will give me an update some time later.
took place with staff from the Office of Environmental Remediation at the Mayor’s Office regarding the project. However, he hasn’t heard anything since. He will contact OER again and see what they have to say. Then he will send me an e-mail update. 12/8/10 - Raphael Ketani. Mr. Burke called me today. He said that "AJ" from 35th Street has been talking to the Javitz Center people and there is an informal understanding in place right now. The Javitz Center people already have a drawing for the parking lot facility that they want. "AJ" will pay for the site cleanup and for hauling out the contaminated soil. However, the Javitz Center will pay for the heavy equipment to dig the soil out. So Mr. Burke is hopeful that a formal agreement will be reached and that the dig out will be completed early in 2011. 3/14/11 - Raphael Ketani. I tried to contact Mr. Burke (212) 479-5413, but I could only leave a message regarding progress at the site. 3/15/11 - Raphael Ketani. Mr. Burke called me back. He said that the demolition contractor is on site and is presently beginning the demolition of the neighboring building. The work is expected to take until August 2011. Once the building is gone, the contaminated soil excavating will start. It is expected that the excavating will start sometime in September 2011. He will give me a two day notice regarding the excavating so that I can see the conditions. 6/7/11 - Raphael Ketani. I contacted Mr. Burke (212) 479-5413 regarding progress at the site. He said that "A-J" hadn’t called him in some time. I told him to call "A-J" and find out what is taking place and to call me back. Mr. Burke said that he will. Later, Mr. Burke sent me an e-mail. He wrote that the demolition contractor is behind schedule for knocking down the building next door. So the remediation excavation probably won’t take place until the end of the year. 8/3/11 - Raphael Ketani. I spoke to Mr. Burke. He said that the empty lot is being used as a "lay down" area. Essentially, an open lot where equipment is stored. He stated that the demolition of the neighboring building is still on for the end of the year. 3/5/12 - Raphael Ketani. Mr. Burke (212) 479-5413 called today. He said that the site has been excavated down to bedrock. However, the property owner has not bought the building next door. So it is still standing. The only work left to do is to excavate the contamination under the sidewalk. This will be done during March 2012. 5/24/12 - Raphael Ketani. Mr. Burke left a message that the excavation work will start during the week of June 4. 6/8/12 - Raphael Ketani. Mr. Burke informed me by phone that they had dug out as much contaminated soil as they could from under the sidewalk. They took soil samples. There were a lot of utilities in the excavation area. 7/18/12 - Raphael Ketani. I reviewed of the Langan Spill Closure Request report dated 6/27/12. The petroleum contaminated soil under the sidewalk along West 35th Street (south side of the site) was investigated and removed. The work took place from 6/6/12 to 6/8/12. About 850 square feet (439 tons) of contaminated soil were removed. The soil was shipped by Part 364 haulers to Soil Safe. Bedrock was exposed at 2 to 10 feet below grade. There were no fractures or weathered bedrock. Five (5) end points samples labeled SW-9 to SW-12 were taken on 6/7/12 in the former sidewalk area. These were sidewalk samples only. There were only a small number of VOC hits and these were below the CP-51 standards. One soil sample, SW-10, had several very low benzo series exceedences which were just above the CP-51 standards. Fully signed manifests were included in Attachment D. Pictures of the former sidewalk area excavation were included in Attachment E. I found the report to be acceptable and drafted a letter for the review of Hassan
Hussein, supervisor of Unit C, Region 2 DER. The letter approved the data and the information in the report, but stated that the case would have to be presented to the Unit C closure committee for review and a decision regarding closure. 7/20/12 - Raphael Ketani. Mr. Hussein approved the letter and it was sent out today. As a side note, the property at 511-515 West 35th Street used to contain a 1 story building which was a 3 bay garage. For a time, the building was used to house rental trucks. The adjoining property at 508 West 36th Street used to house a 1 story car service building. 8/22/12 - Raphael Ketani. I spoke to Mr. Burke (212) 479-5413 today. I asked him whether he could take a groundwater sample from well MW-SW in the cleaned up area. He asked why. I told him that the last set of results were from 2010 and were a little old. He said that the well had been abandoned with concrete and was no longer there. I told him that this wasn’t good and that somehow we needed more groundwater data. Mr. Burke said that the DEC had agreed two years ago that the benzene hit was not an issue. So more sampling wasn’t expected. I told him that I didn’t think that it was going to be an issue either, but I was told that 138 ppb of benzene was very high - even though the rest of the VOC analytes were no more than 17.8 ppb. He said that he will talk to his client. Lastly, I asked Mr. Burke to send the DEC a drawing showing where the vapor barrier will be installed in the foundation or under the foundation. He said that he will. 9/7/12 - Raphael Ketani. After a staff meeting regarding the site and the remediation project, an e-mail was sent to Mr. Burke with the following questions and comments: 1) please indicate on a broad map of the area the location of MW-6; 2) does Langan believe that MW-6 is in the same set of fractures as MW-SW; 3) what is the groundwater flow direction; 4) was a fill port or a fill pipe found leading to the former gasoline UST and what were their conditions; 5) was a fill port or fill pipe or any other feature seen at the location of SW-7 - particularly such that it may have hinted at the presence of contamination at this location and under the sidewalk; 6) Langan must submit a full table of the 2009 soil analytical results for sidewalk borings B-1 and B-2 listing all of the analytes that were tested for and their results (including the non-detects); 7) a new groundwater monitoring well must be installed at the former location of MW-SW that intersects the same fractures and a groundwater sample must be taken 9/10/12 - Raphael Ketani. Mr. Burke (212) 479-5413 sent an e-mail today in response to the Department’s comments in its 9/7/12 e-mail. Of note was that there was no comment regarding installing another groundwater monitoring well at the location of MW-SW. Mr. Burke stated in his e-mail that there was plenty of opportunity to take more groundwater samples years ago before the well was abandoned. Also, of note was the response that the MW-6 Parsons-Brinkerhoff well IS the MW-SW well. The name was changed for the project. This was unknown to the Department until the sending of this e-mail. The 170 ppb of benzene in the groundwater at MW-6 was found in a sample taken on 8/29/07. While the 138 ppb benzene sample from MW-SW (MW-6) was taken on 2/9/10. So there was a significant drop in the benzene concentration without groundwater treatment. Lastly, Langan has no information regarding the gasoline UST. It was removed before his client bought the property. Mr. Burke requested a meeting on September 18 to discuss the site. I granted his request. 9/17/12 - Raphael Ketani. In preparation for our meeting tomorrow, Mr. Burke sent me a map showing where MW-6 was located, Table 1 with the soil VOC data for sidewalk samples B-1 and B-2, and Table 2 with soil SVOC data for sidewalk
samples B-1 and B-2. Table 1 for VOCs had very high minimum detection numbers in the parts per million range for sample B-1, but the annotations were almost all "U" for non-detect. Table 2 for SVOCs did not have results for boring B-1 at the 8 to 10 foot depth and for boring B-2 at the 6 to 8 foot depth. I will discuss these items with Mr. Burke at the meeting 9/18/12 - Raphael Ketani. The meeting took place as scheduled. In attendance were A. J. Pires (py-rez), Vice President of Alloy Development (20 Jay Street, Ste 1003, Brklyn, 11201, (718) 222-8155, ajpires@alloyllc.com), his consultant Mr. Burke, Hassan Hussein - Unit C Supervisor, and myself. The meeting was not about data, but about a perception by Mr. Pires and Mr. Burke that the rules for closure had changed when the case and I had been transferred from the Spills Unit to Unit C headed by Mr. Hussein. Mr. Burke pointed out that the latest work plan from March 2012 had been approved by DEC. This plan included a statement at the end that after the work described within had been completed, then the case would be presented before the Closure Committee and the case would be closed. Mr. Burke also mentioned that I had told him some years back that the 2010 groundwater results from MW-SW were low enough that the well could be abandoned. I said that both statements were true and that, in the past, each Spills Unit case manager had the authority to close cases when it was determined that the site had been sufficiently remediated. Mr. Hussein stated that this was not the way to close a spill case and that how the Spills Unit does things is not relevant here in Unit C. Mr. Hussein added that he was put in charge to see to it that everyone adhered to the State soil and groundwater standards. That was the purpose of the Closure Committee review. Mr. Pires said that this sounded like a good idea to him, but he still thought that it was not right to refuse to close the case based upon the latest groundwater data. Mr. Burke stated that the source had been eliminated and that the groundwater concentrations had been attenuating, also. Mr. Hussein agreed to try and resolve the matter by presenting the case again to the Closure Committee, but he warned that he could not guarantee the outcome. Mr. Pires asked whether the case could be closed if the committee agrees to the closure. Mr. Hussein said "Yes." With this, the meeting ended. 9/24/12 - Raphael Ketani. I received a Notice of No Objection for the site from Dan Cole of the NYC OER regarding performing 3 paving actions. 9/28/12 - Raphael Ketani. Mr. Burke had contacted staff at the Mayor’s Office of OER and at the NYS DER in the Region 2 office. He had been contending that the case had been mishandled because the rules for closure had been changed and because the DEC was requesting another groundwater sample, even though he had been told he could close the well and had done so. I contacted Mr. Pires (718) 222-8155 regarding Mr. Burke’s statements. I told him that this was unprofessional and that the DEC and him had reached an agreement that the spill case would be presented again for closure. I asked Mr. Pires to stop Mr. Burke’s advocacy efforts as they were not going to get him anywhere and because they were ruining his relationship with the Department. Mr. Pires said he understood and would speak to Mr. Burke. 10/3/12 - Raphael Ketani. The case was presented today to the closure committee. The committee accepted the site for closure. Mr. Burke (212)479-5413 was informed that the closure committee had accepted the case. 10/5/12 - Raphael Ketani. I submitted a draft Spill Closure Letter to Mr. Hussein for his approval. The SCL was approved and was sent out. The case was closed.

Remarks: Caller was doing a phase II inspection and found impacted soils.
Approx 350 yards of soil affected. Excavation is pending development.

DEC Memo:

Prior to Sept, 2004 data translation this spill Lead_DEC Field was "O'CONNELL"Still awaiting info requested 6-22, reply on 7-02 indicated "awaiting update from station manager"NOTE: This is the "Master Spill Number" for Transformer #6. It is to remain open until all repairs on this equipment and remediation are completed. (JHO, 3/23/06)8/4/08: Cleanup completed. As per 9/18/06 agreement between NYSDEC and Con Edison, approved engineering controls (valve bags, drip pans, absorbents, etc.) are in place and are being maintained for minor drips and small leaks. Repairs to be tracked and completed under Con Ed's MAXIMO Work Order. See eDocs for final emis report. Close out. (JHO)~~~~~~~~~~~~~~~~~~~~~~~~~~~CON ED E2MIS #124769 (master)5-10-99 14:30 Approx. 1 gal. transformer oil from transformer #6 FDR-38M44, in vault #6. Spill is contained on concrete pad in metal enclosure around transformer, pads installed to contain spill, no impact to waterway or sewer, sign placed. Chem Lab to take sample. MR. Pitre reports unable to determine where leak is located.TRANSFORMER GROUP SUPERVISOR A. CHASE REPORTS THAT SEVERAL LEAKS WERE FOUND IN THIS TRANSFORMERS. THEY HAVE REPLACED ALL SECONDARY BUSHINGS ON IT AND THE WORK IS ONGOING TO REPAIR ALL OTHER LEAKS. Station Supervisor G. Toto performed an inspection on 29-NOV-2000 and returned the following with regards to this transformer:119254 TR6 No Leak Observed - TR6 was taken out last year to repair all Leaks on it.124769 TR6 No Leaks Observed - TR6 was taken out last year to repair all leaks.126171 TR6 No Leaks Observed - TR6 was taken out last year to repair all leaks. During a station inspection on 04-APR-2001 Sr. Env. Specialist observed a leak from underneath the sound enclosure. The leak is a result of a leaking valve inside of the sound enclosure. The incident status has been changed to CLERE, and the transformer group has been notified, and asked to complete the repairs. Spill tag number 000768 has been hung near the enclosure.-001 SAMPLE TYPE: OIL None <1.00 PPMEQUIPMENT : TR # 6 - MAIN BODY-002 SAMPLE TYPE: OIL 1260 3. PPMEQUIPMENT : TR # 6 - SELECTOR-003 SAMPLE TYPE: OIL None <1.00 PPMEQUIPMENT : TR # 6 - CONTACTOROn May 10, 2002 NYSDEC O'Connell and Foley, along with Con Ed Hanebuth, Susco inspected this leak and found that the leak had not been repaired. This continues to leak into containment.~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~e2mis no. 147046 (sub):ON 04-FEB-2003 AT 09:27 E. ALVALEDO REPORTED THAT AT 09:20 WHILE PERFORMING A STATION INSPECTION HE FOUND APP. TWO GALLONS OF DIELECTRIC FLUID LEAKED OUT OF TRANSFORMER # 6 ONTO A CONCRETE PAD AND WAS CONTAINED WITH OIL PADS AND OIL BOOMS. EMPLOYEE STATED THAT THE LEAK WAS COMING OUT OF THE SHELL OF THE TRANSFORMER THIS SPILL IS CONTAINED AND PENDING SUBSTATION TO REPAIR AND CLEANUP SAME. con ed # 124769, cleanup crew responding.

DEC Memo: Joe Enang from MTA 917-335-2438. While doing excavation for line 7 they found soil contamination at 25 ft. MTA stopped the excavation. MTA will have a meeting tomorrow morning with DEC-Kumar.05/20/11-Hiralkumar Patel.9:30 AM: visited site. met with Joe (LiRo), Akta (on-site environmental engineer), Rose-May (MTA) and Vincent (MTA). MTA is working in area under the 11th Ave. area under the 11th ave, by the Javits center, is an open unoccupied space. as per one of the construction worker, there were some rail tracks in this area in past and most recently there was an underground walkway from Jevits Center to a park across the street between the W 35th and W 36th Street, as part of #7 subway extension project, MTA has planned to construct a 14 ft wide retaining wall running north-south from W 37th Street to W 36th Street and then running east-west from west side of 11th ave to some distance along the W 36th street. the east-west line of the retaining wall will be along the north side of W 36th Street, as per Akta, after constructing the 14 ft wall, MTA will backfill the void space underneath the 11th Ave. there will a building (not MTA project) in the remaining open space underneath the 11th Ave. as part of the retaining wall construction, MTA is going to dig all soil out to bedrock in the 14 ft width area. bedrock is about 6-7 ft below the existing surface. while diggin along the west side of the building at 450-454 11th Ave (spill #: 9709125), contractor found contaminated soil and some oil on rain water collected in excavation. until now, contractor has dug about 4-5 ft wide area along the southern half portion of buiding at 450 11th ave. some minor odors detected in the excavation area. found sheen and minor product on rain water accumulated in excavation. contaminated soil has been stockpiled on plastic and was covered with plastic. observed bedrock along the foundation wall of building 450 11th ave, in the northern portion. as no active leak found from bedrock in northern portion or foundation wall in southern portion, asked MTA to pump out contaminated water. MTA will continue excavating soil for retaining wall project and will call for re-inspection (probably next week) once all soil removed along the building foundation wall. the area where oil found will be backfilled and will not be occupied in future. Rose-May Toussaint-Portes MTACC/NYCTS Sustainability and Environmental Management Ph. (646) 292-3291 email:

currently, the site 450 11th ave has following businesses:
Check Cashing in the northern portion and 11th Ave Auto Repair and Body Shop (212-643-6770) in the southern portion, based on location of oil seepage, changed site address, in spill report, from '11th Ave and 36th Street' to 'underneath 450-454 11th Ave'.

05/25/11-Hiralkumar Patel. 1:59 PM:- spoke with Akta. they haven't done further excavation as wanted to see lab results of soil and water samples collected before. she got partial data and found some contamination. she will send lab results once complete data is available. today they are pumping water into drums for later disposal.

06/06/11-Hiralkumar Patel. received email from Rose-May including results of soil and water samples collected. VOCs were not present in any of the soil samples. the excavated soil is non-hazardous and has low level of metal contamination. water samples detected the presence of some SVOCs and metal contamination. contractor will continue excavation needed for the project.

10:39 AM:- sent email to Rose-May and asked to send complete lab package for soil and water sample results. also asked for update regarding soil excavation.

1:38 PM:- received email from Rose-May including lab package. she mentioned that no further excavation in the area yet.

06/16/11-Hiralkumar Patel. 12:56 PM:- sent email to Rose-May inquiring update regarding further excavation.

06/20/11-Hiralkumar Patel. 1:38 PM:- sent email to Rose-May and asked to send complete lab package for soil and water samples collected before. she got partial data and found some contamination. she will send lab results once complete data is available. today they are pumping water into drums for later disposal.

07/19/11-Hiralkumar Patel. spoke with Akta. mentioned that no further excavation in the area after discussing with DEC Austin, as no contamination found in soil/water samples and as no odors in area, case closed.

Remarks: Unknown petroleum was found in the soil 25 underground during excavation of a tunnel. Contracted clean used absorbent pads.

DEC Memo:
Tank has been emptied and temp tank set up in place 5/30/2012 - Sangesland got an e-mail from Donna at ABC Tank - They submitted a proposal to the owner a while ago, but never heard back. Job was "Probably done" by someone else 5/31/2012 Sangesland spoke with Edwin Colon, Facilities Mgr 212-245-6600 x250. He said Eastmond was hired to do repairs. Neil Tomasetti at Eastmond said both fill line and vent line failed test. Sidewalk was opened and fill line went directly through old coal chute down to tank vault (former coal room). Fill line dripped into coal chute and ran down to tank vault. Tank was cleaned (no holes) but ultrasound showed pitting on tank bottom. Tank was raised into saddles and bottom of tank was relined with metal plates. New fill lines and vent lines installed. No contamination was found and the new system passed a pressure test.

Remarks: Repair/retest pending - all fittings loose
Update - Tank has been emptied and temp set up in place

DEC Memo: Prior to Sept. 2004 data translation this spill Lead_DEC Field was "DEMEO"PBS #2-60582710/7/2002 DeMee responded to the site and witnessed the tank test failure 5/8/03 TJDDemmeo contacted by Paul Stewart (ACT) who has been retained by Dime Savings Bank to perform an investigation at 525 W45th Street due to tank test failure. Mr. Stewart stated (4)borings were installed soil/groundwater samples taken from each location. He reports no contamination found. Mr. Stewart was not aware the Department is pursuing an enforcement case against registered tank owner for non-compliance. Mr. Stewart will be submitting a work plan to further investigate this property including either removing tank or sampling soils beneath tank and investigating buried fill line. See also spill 02065495/22/03 TJDSite visit. Demeo on site to witness uncovering of 2,000 UST. When manway was accessed
tank contained approximately 60 gallons of #2 Fuel Oil. Tank had previously been pumped dry and cleaned by PTC. Unknown how oil reemerged into tank. A small hole was cut into tank bottom and a soil sample was collected. No visual or olfactory indicators or contamination were present in sample. Laboratory analysis subsequently revealed all petroleum constituents are below TAGM. Fill and vent lines were removed from tank and properly disposed. 5/29/03 TJDSite visit. Demeo on site to witness excavation, removal and inspection of feed and return product lines. Action Environmental performing work under supervision of ACT. Product lines were excavated from tank to perimeter of tenant space. A small excavation was opened inside tenant space where product lines penetrate foundation wall (beneath slab) from boiler room. No visible or olfactory indicators of petroleum contamination was identified in area of piping runs. 6/3/03 TJDClosure report submitted by ACT. NFA letter issued. Additional notes: 9/24/02 Amtrack spill reported (0206549) 9/28/02 Letter sent to Tokay Realty requiring tightness test10/7/02 Tightness test conducted (tank failed) 10/22/02 Letter requiring retest and/or tank closure sent 10/22/02 Tightness test performed (tank failed) 10/28/02 Follow-up letter sent requiring subsurface investigation 10/29/02 Tank taken out of service. Temporary tank installed. 2/21/03 New 1500 gal AST installed (not registered) 6/3/03 NFA issued. Old 2000 gal UST still active in PBS. New 1500 gal AST not registered.

- **Contact Phone:** (718) 636-0800
- **DEC Memo:**

3/24/14-Zhune spoke to Paul Matli rom Hydrotech 718-636-0800. He said the site is an E designated site under the BCP program. They were doing remedial investigation and found soil contamination and free product in two of the three wells installed. 4/4/14-Vought-This spill transferred from Zhune to Vought as Zhune out of office for extended period. Vought called and spoke to OER Chawla and site will be excavated below groundwater as part of redevelopment. No PBS Registration found for site and no other spills at address. To date file review by Vought: Email from Hydrotech (Matli) to OER Zhang-4/2/14. Email that "Horace - attached please find the sampling plan with potential locations of 3 gasoline USTs as shown on sanborn maps in the Phase I, I just sent you via dropbox. Also please find in attached our proposed 3 off-site monitoring well locations to delineate the plume of free product off-site. Regards." Vought added site plan with proposed locations to E-docs. Email from OER Chawla to Vought-4/3/14. Email that "Jeff: This Spill was opened last week during RI field work. Based upon gw data, we are requesting them additional wells to delineate spill. Please see attached figure indicating thee off-site wells on sidewalks. Can we discuss today to finalize these well locations? Thanks" Email from OER Chawla to Vought-4/4/14. Email included soil, groundwater and soil vapor data that showed: 11,000ppb ethylbenzene SP1(13-15’bg), 45,000ppb xylenes SP1(13-15’bg), 88,000ppb toluene(SP2 13-15’bg), 79,000ppb ethylbenzene(SP2 13-15’bg), 280,000ppb xylenes(SP2 13-15’bg), 26,000ppb naphthalene(SP2 13-15’bg), 250ppb benzene(SP3 13-15’bg), 1800ppb toluene(SP3 13-15’bg), 6700ppb xylene(SP3 13-15’bg), 2300ppb benzene(SP4 13-15’bg), 7300ppb toluene (SP4 13-15’bg), 5200ppb ethylbenzene(SP4 13-15’bg), 18,000ppb naphthalene(SP4 13-15’bg), 12,000ppb benzene(SP5 12-14’bg), 670,000ppb toluene(SP5 12-14’bg), 250,000ppb ethylbenzene(SP5 12-14’bg), 910,000ppb xylenes(SP5 12-14’bg), 43,000ppb naphthalene(SP5 12-14’bg), 12,000ppb benzene(SP6 13-15’bg), 270,000ppb toluene(SP6 13-15’bg), 230,000ppb ethylbenzene(SP6 13-15’bg), 790,000ppb xylenes(SP6 13-15’bg), 83,000ppb naphthalene(SP6 13-15’bg). Groundwater analytical show: 2000ppb benzene(MW1), 110ppb toluene(MW1), 280ppb ethylbenzene(MW1), and 260ppb xylenes(MW1). No report submitted with site plan or data. 4/4/14-Vought-Sent email to OER Chawla, Moore and Zhang with cc to HydroTech Matli that "Shaminder, There is only groundwater data for one well (MW1) in the attachments. Is there groundwater data for MW2 and MW3? Also you noted that LNAPL was found. Which wells was it found in? We need this info to assure delineation wells are adequate. Thanks again, "Jeff." OER Zhang replied via email that "Hello Jeff, We do not currently have that data, but we are expecting to receive more information on Monday. Thank you, Horace." 4/7/14-Vought-Email from HydroTech Matli that "Jeff - the two remaining wells contained product and in such condition, we do not collect groundwater samples for analysis." Vought sent email to all parties (OER and HydroTech) that "Shaminder/Paul/Horace: Thanks for the update and the Department approves the proposed well installation plan noted below. I have reviewed the data and the Department will also require the following: 1) PBS Registration once tanks uncovered and if applicable. 2) CAMP due to large amount of soil contamination. 3) Petroleum compatible moisture barrier as proposed.
development is below water table. 4) Submission of PDF (versus Excel) of soils and groundwater data received via email on 4/4. 5) Collection of soil endpoint samples from limits of excavation as per DER-10 frequency. 6) Regular intermittent sampling of pre-treated groundwater as being dewatered for VOC analysis to document possible decreasing groundwater contamination associated with dewatering as part of development. 6) Determination of groundwater flow direction after installation of proposed three wells and possible further delineation based on results. 7) IRM (product recovery) if property is not going to be developed soon. If you would like me to formalize this in a letter, please let me know. Also if you have any questions, feel free to respond via email so that we may all be informed. Thanks."

4/11/14-Vought-File review to date: Email from HydroTech (Matli) to Vought with cc to all parties-4/8/14. Email that "Jeff - thanks for your response on this matter. As per your request, please find attached the PDF files for data reports for soil and groundwater. Since the 3 proposed wells will be installed in sidewalks around the subject site, we will need to acquire a DOT permit to complete the field task. Could you please provide us with the typical NYSDEC letter indicating the location and objective of proposed wells so that we can submit to DOT to obtain a sidewalk permit per each well location. Sincerely, Paul." Vought added PDFs to E-docs.

4/11/14-Vought-Sent sidewalk permit letter to HydroTech (Matli) with cc to NYCOER and added letter to E-docs. 4/22/14-Vought-Received email from HydrTech (Matli) that "We need to develop a RAP for DEC for installation of proposed three wells and possible further delineation of soil endpoint samples from limits of excavation as per DER-10 frequency. 6) Regular intermittent sampling of pre-treated groundwater as being dewatered for VOC analysis to document possible decreasing groundwater contamination associated with dewatering as part of development. 6) Determination of groundwater flow direction after installation of proposed three wells and possible further delineation based on results. 7) IRM (product recovery) if property is not going to be developed soon. If you would like me to formalize this in a letter, please let me know. Also if you have any questions, feel free to respond via email so that we may all be informed. Thanks."
it) as it is the role the consultant to propose the most feasible remedial method (as with all sites). One of the indicators of grossly contaminated soil is that it is capable of releasing LNAPL contributing to contaminant mobility. If the soil beneath the water table is grossly contaminated, DEC strongly recommends its removal. DEC is open to many remedial options including non excavation of hot-spots however, this as I am sure you know, may result in extended remedial and monitoring times due to continued desorption of contaminants as well as possible active vapor mitigation systems and/or product showing in sumps post development. You noted in your email below that "we definitely need to remediate the spill during upcoming development". In consideration of the above, we rely on the role of the consultant who has the wealth of site specific information and development knowledge to propose the most feasible remedial method that will get the site clean in the quickest amount of time. With respect to your note of "With respect to the GW plume, we still do not delineate the extent of GW plume beneath the site and as such we do not have data that will allow us to scope the amount of product such as ORC to be injected or applied to the excavation bottom." How do you propose to delineate the plume beneath the site? I agree that we cannot approve a remedial action (ORC) until the investigation is complete. Much of this investigation could be done through excavation of hot spots (or the entire site) and collection of endpoint soil and groundwater samples, if that is proposed by HydroTech. Let me know your thoughts and if you would like to set up a teleconference with NYCOER and DEC, I would be glad to participate. Otherwise I look forward to the RAP. -Jeff

5/14/14-Vought-Received email from HydroTech Matli that "This is to update you of the finding of our recent test pit exercise to locate the 3 suspect gasoline USTs identified in the north central portion of the Site. The USTs are 2 feet below a 7 inch reinforced concrete slab and are buried in sand. The USTs contain gasoline product. We are preparing a scope of work to properly remove and close the USTs as part of a RAP addressing the spill case. We are also evaluating with developer options to remove the free product and remediate the dissolved contaminants in groundwater. Also at this point the developer is exploring options with structural engineer to excavate the entire site and also to be able chase the hot spots of contamination below groundwater. Regards." Vought sent reply that "Thanks for the update and the Department is looking forward to the scope of work to remove the USTs, free product and remediate the dissolved contaminants as well. The Department is pleased that you are exploring "chasing" the hot spots below the water table as once the property is developed, further remedial excavation (which is the most effective remedial method) will not be able to occur."5/22/14-Vought-Received message from OER Chawla that "Jeff and June: This is Hydrotech special RAP. This RAP is combined to address both Spill remediation as well as to address OER requirements for cleanup and development. Property development includes excavation of 80% of property to depths of 16.5 feet for cellar and remaining 20% of rear yard will be excavated to one feet below grade. Groundwater is at 16 feet depths. Rear yard area is not getting excavated because of structural stability of adjoining building. Property will be developed to a 35 story hotel. RAP includes components for Spill remediation as: 1. Performance of a remedial action for the petroleum spill #1312014 under New York State Department of Environmental Conservation.
(NYSDEC) Spill program. This remedial action will consist of the removal and proper closure of underground storage tanks, removal of LNAPL present beneath the site, treatment of groundwater plume via injections of bioremediation and chemical oxidation solutions, excavation and removal of petroleum impacted soil, where feasible, to 2 feet below groundwater and the implementation of a groundwater monitoring program. 2. Closure of onsite petroleum spill number 1312014 under the authority of NYSDEC. This RAWP does not alter or interfere with the remedial action for the petroleum spill. 3. Off-site groundwater investigation by installing three monitoring wells. They are waiting on DOT permits. OER plans to start 30 days public comment period starting next Wednesday. Please review at your earliest. Let’s plan on discussing this next Wed/Thursday.

Thanks, Shaminder. 5/29/14 - Vought - Received email from OER Chawla that “Jeff: We intend to issue attached factsheet by tomorrow. Please review attached factsheet. Also, we are waiting on your comments on RAWP for this Site. thanks. Shaminder.” Vought sent email to OER Chawla noting that “Do you have the RAWP site plans? I want to compare future site layout with current soil and groundwater data to see if excavation will remove source area.” Reviewed HydroTech (Mark Robbins) RAWP dated May 2014. RAWP prepared for: McSam Hotel Group, LLC. 420 Great Neck Road Great Neck, NY 11021 Ph: (516) 773-9300 Site is bound by commercial and office buildings to the southeast, southwest and northwest and 40th Street to northeast. Site used as a 6-story parking garage with partial cellar beneath the northwestern portion of building. Future use will be a 35-story hotel with full cellar and open space rear yard and open space yard will be “established over unexcavated soil” on a 6-inch concrete slab on grade. Cellar will be excavated to 16’bg for cellar foundation. Cellar floor will be a 42” concrete mat. Remedy includes Citizen Participation Plan, CAMP, Track 4 Soil Cleanup Objectives, excavation to 16’bg (to below groundwater) and installation of vapor barrier. No site plan for development included so unable to tell if remedial action will encompass investigation results. RAWP also notes “remedial action will consist of the removal and proper closure of underground storage tanks, removal of LNAPL present beneath the site, treatment of groundwater plume via injections of bioremediation and chemical oxidation solutions, excavation and removal of petroleum impacted soil, where feasible, to 2 feet below groundwater and the implementation of a groundwater monitoring program.” DRAFT also noted that closure would be part of remedial action. Vought sent edits including note that request for closure would be part of remedial action. OER VCP cleanup standards to Track 4 and excavation to 16.5 feet (below water) was also noted. RAWP included collection of endpoint samples as per DER-10 and Grace Pre-Prufe vapor barrier. Vought noted 300R’s petroleum compatibility documented by Grace under other separate spills. RAWP also included provision for submission of Remedial Action Report and Site Management Plan. Property will continue to be E-designated. RAWP contained Community Protection Statement, Summary of Findings, Remedial Alternatives Analysis, Remedial Action Management, Schedule, Citizen Participation Plan, Sustainability Statement, Soil/Materials Mangement Plan and a Health and Safety Plan. Vought also reviewed draft Fact Sheet and sent an email to OER Chawla with cc to OER Zhang that: “Shaminder, My comments on RAWP are attached below and I see the Fact Sheet uses points from executive summary on RIWP. My comments on the Fact Sheet and RAWP include: 1) DEC must have separate RAWP Addendum detailing injections if needed. 2) There is no mention...
COMMERCIAL BUILDING WITH FREE PRODUCT (Continued)

of offsite well installation 3) Closure for NYSDEC will be in accordance with CP-51 Soil Cleanup Guidance. Feel free as always to use your discretion on whether they should be included. I left you message earlier regarding the RAWP. Without Figure 3, there is no way to tell if the proposed remedial action will spatially encompass petroleum found in the investigation results. I look forward to discussing the comments on the below RAWP. If easier as well, -Jeff 5/29/14-Vought-Received email from OER Chawla that “Thanks Jeff. I am not in office. These are good comments and will be incorporated in rawp. Give you call in am.” Vought called and spoke to OER Chawla and he will have OER Zhang send in copy of development site plan and he will also talk with HydroTech Robbins to develop a separate RAWP for injections and with results of off-site delineation for submittal to NYSDEC. Vought received email from OER Chawla with development site plans and proposed rear yard (with excavation to only 1’bg) is approximately 10’ wide. Vought sent email to OER Chawla that “Shaminder, Thank your for the diagrams and as per the foundation plan the rear yard is to be about 10’ wide and I agree that it will either encompass MW3 (LNAPL) or MW3 will be right on the edge of the excavation. This may result in free phase product seeping back in from the sidewall towards this direction. I am pleased that as per the RAWP, “Hot-spot removal actions, whether established under this RAWP or identified during the remedial program, will be performed in conjunction with post remedial end-point samples to ensure that hot spots are fully removed.” As always the Department strongly agrees with and encourages the aggressive full removal of hot spots prior to development which may mean over excavation beyond which is needed for the foundation in the direction of MW3. This is even more important as since our off-site wells have not been installed, we don’t know if we have a large product plume coming off the site and as such should be aggressive in entire hotspot removal in case there is an off-site product issue. Feel free to forward this email to HydroTech if you deem it necessary and I am looking forward to receiving the revised RAWP or the separate RAWP for the Spill as discussed. Thanks again.” 5/30/14-Vought-Received email with OER Chawla that noted “Jeff: Per your suggestions, I have revised RAWP as reflected in red fonts below. I have also informed Paul Matli about separate RAWP and RAR and off-site groundwater monitoring. Factsheet to start 30 days comment period will be issued on Monday. Let me know if you have any other concerns or questions.” 6/3/14-Vought-Received email from OER Chawla that “The New York City Office of Environmental Remediation is providing the attached Fact Sheet pursuant to the New York City Voluntary Cleanup Program (VCP). McSam Group, LLC has applied to enroll in the City VCP. 346-354 West 40th Street site is located in Garment District section of Manhattan, New York and consists of a 9,875 square feet and is currently used as a 6-story parking garage with a partial cellar. The proposed future use of the Site will consist of a new 35-story hotel with a full cellar and an open space rear yard. The ground floor built area will be approximately 7,139 square feet. The open space rear yard will be 1,930 square feet. Public comment period on 346-354 West 40th Street site runs through July 2nd. Direct link to document repository: http://www.nyc.gov/html/oer/html/repository/RManhattan.shtml”. Vought added Fact Sheets to D2.6/6/14-Vought-Email from HydroTech (Matli) to OER Chawla that “Shaminder - As per last update from contractor for above development, the 3 gasoline USTs found at above site can be removed without undermining building structure, as was thought
COMMERCIAL BUILDING WITH FREE PRODUCT (Continued)

previously. Proceeding forward, should we wait until NTP is issued in order to remove and close these tanks or this task needs to be coordinated with Jeff at DEC independent of NTP? Please advise."6/9/14-Vought-Sent email to HydroTech Matli with cc to all parties from NYCOER that "Paul, If the combined capacity of the three USTs is known and it exceeds 1,100 gallons as per PBS requirements in NYCRR Part 612, we need 30 days prior notice via submission of a PBS Registration (also as per the MOA with NYCOER). As the UST removal is three weeks away, we can speed up the 30 day requirement via sending someone here to the DEC is submit the PBS Registration in person effectively providing the Department immediate notification. Please also ensure that endpoint samples are at collected at the UST locations once the foundation depth is reached as well. Thanks."
6/16/14-Vought-Received email from HydroTech (Matli) that "Jeff - this is to update you on the installation of 3 off-site monitoring wells requested to delineate the GW plume identified at the above spill site. The well to the south of the Site has to be relocated west as the sidewalk in front of south-adjacent building consisted of an underground vault for an active AST. The well was successfully installed. The well to the east along 9 Avenue was successfully installed. The well in the north-adjacent sidewalk along W 40 Street could not be installed as the present scaffolding associated with building demolition prevented us from using a heavy geoprobe rig. Lighter geoprobe rig encountered a refusal at the interface with GW at 16 feet. This well will be installed once demolition activities are completed toward the end of July. The only option we currently have is to install this well in the sidewalk to the north of W 40 Street and this task will requires a letter from you to acquire a DOT permit. Moving forward, I plan on completing the development and sampling of the 2 wells installed downgradient of the Site, which would allow the delineation of the GW plume downgradient. Please advise if you have an otherwise direction or any suggestion regarding this matter. Regards." Attached to email with site plan with well status and arrows with indicated direction of proposed movement. Vought added map to D2 and sent reply to HydroTech Matli with cc to NYCOER that "Paul, Thank you for the update. The Department has no objections to the relocation of the well south of the site, to the west, and is pleased that the well to the east along 9th Avenue was installed. With respect to the well on to the north, you noted that the well will "be installed once demolition activities are completed toward the end of July" and the only current option was install it across 40th Street. The Department has no objection waiting until the end of July to have the well installed in the north-adjacent sidewalk once the demolition activities are completed due to the following:1) A well located in the in the immediate north-adjacent sidewalk would better characterize the site than a well located across the street possibly separated hydraulically by utilities that run under 40th Street.2) A well located in the north-adjacent sidewalk would also be best used for recovery of LNAPL, if found, as it may be able to draw any possible plume back to the source and prevent it from migrating off-site.3) The Work Plan calls for hotspots to be "fully" removed during development which will abate any secondary sources which in turn reduces the immediate need for delineation. As always feel free to get back to me with any questions." HydroTech (Matli) replied that "Jeff - thanks for your response." 6/19/14-Vught-Received call from and spoke to HydroTech Matli and he is currently developing scope of work including excavation of all soils to groundwater but near 10'
COMMERCIAL BUILDING WITH FREE PRODUCT  (Continued)

wide section. He also noted that once foundation is in, he will not have access to perform ORC injections and as such he was requesting to do it prior to development (and also prior to completion of the investigation via off-site wells). Voigt approved inclusion of ORC injections in scope of work that is to be drafted by HydroTech.6/27/14-Vought-Received email from HydroTech Matli that “Jeff - Attached please find the RAP requested for the remediation of the soil and groundwater plume at above spill site. I appreciate if you can approve this RAP before July 2nd. Regards.” Remedial Action Plan (Hydro Tech Environmental)-6/27/14. “This building is being demolished in preparation of a proposed new development.” Open space yard area to keep excavated to one foot depth and capped with a 6 inch concrete slab on grade. Excavation to a depth of 16'bg. Cellar slab will be a 42” concrete matt slab underlain by a 4” thick gravel bed. Product in western portion of site was found to be at a maximum of .78 feet thick. Proposed remediation will include: 1) closure and removal of USTs 2) recovery of free product 3) excavation of contaminated soil to 16'bg to “water table” throughout the building footprint 4) Groundwater contamination will be treated "via chemical oxidation and bioremedial solutions 5) installation of soil borings/monitoring wells, implementation of a monthly monitoring and quarterly sampling program 6) installation of a vapor barrier beneath the new building foundations. RAP notes that if tank is above 1,100-gallons, it will be PBS registered also noted samples will be collected from under the USTs at foundation depth. “The depth of the excavation will be extended to the water table at 16 feet bgs and if feasible to 1 or 2 feet below the water table in the central and western portions in order to full remove any hotspots and maximize source removal.” RAP anticipates collection of 26 endpoint soil samples (15 soil sidewall and 11 bottom groundwater samples). RAP also proposed injection of 72 locations of ORC Advanced and Regenox as well as collection and analysis of groundwater samples for baseline parameters including pH, DO, TOC, Mn, redox, Fe and groundwater level. ORC will be injected from a depth of 24’ to 16'bg below water and two phases of injections with first phase being Regenox Part B activator and then Regenox Part A and ORC will be mixed with water and injected. ORC pellets will also be sprayed at bottom of excavated PIT. In unexcavated rear portion of propert ORC will be injected from 14’bg to 24’bg with two phases as noted above. Report also notes that three soil boring will be installed in rear yard to characterize the soils as well as installation of three off-site wells with collection of deepest dry and highest PID sample. Report also notes that monthly monitoring and quarterly groundwater sampling program will begin once offsite wells are installed. Report does not note groundwater flow determination. Two soil borings will be installed in rear yard in 6 months to monitor effectiveness of remedial injections. “The OER’s requirement for a vapor barrier system will be met and approved by OER prior to fieldwork” and a remedial closure report will be submitted to DEC as well as quarterly status reports and remediation soil samples will be in second quarterly report. ORC worksheets also included in RAP. Voigt sent letter approving RAP pending inclusion of determination of groundwater flow direction and installation of a downgradient well if necessary and removal of free product if encountered during excavation and added RAP to D2. Received email from Matli that “Jeff - the site ownership as it appears on the OER VCP application and agreement is listed under NYHK West 40 LLC-15 149th Street New York
COMMERCIAL BUILDING WITH FREE PRODUCT  (Continued)

NY 11357

Applicant Representative: Patrick W. Jones
s116553814

Vought received email from OER Zhang that "Good morning, I would like to inform you that the NTP for this project was e-filed with DOB yesterday. Please see the attached NTP Copy and upload confirmation for your records. Best, Horace." Vought added attachments to D2.8/1/14-Vought-Received email from Matli that "Jeff - this message is intended to update you on remedial activities performed at above site in accordance to the approved RAP. -The liquid contained in the three 550 gallons gasoline tanks was removed using a vacuum truck on 7/1/2014. -The 3 tanks were removed on 7/30/2014 and cleaned on 7/31/2014. -Remedial injections started on 7/31/2014 and are expected to be completed around the end of August 2014. I will keep you posted on the performance of further site remediation." 8/5/14-Vought-Sent reply to Matli with cc to HydroTech that "Paul, When are our off-site delineation wells going to be installed? ORC is known to cause re-mobilization of sorbed contaminants and as such we must assure that our injections are not causing another problem down-gradient via the off-site monitoring wells. Thanks,". Received reply from HydroTech (Matli) that "Jeff - the 2 wells downgradient were already installed. I have been placing pressure on the developer to provide me with a room to install the 3rd well along W 40 Street prior to start our injections for the same reason you explained below and he promised he will provide us with an opening next week as he will be moving construction fence over the sidewalk. Hopefully we will have the 3 off-site wells sampled around Wednesday of next week.I will keep you posted on this matter." OER Chawla also sent email that noted "Jeff:We were at Site today for a Pre-construction meeting and observed injection wells being drilled. First round of 80 injection wells were being drilled and chemicals were being applied to contaminated area. Developer will get his permits later this week and will move fence on sidewalk on 40th Street. Monitoring well will be installed at that time. Second round of 80 injection points will be drilled in 10 days for chemical injection. I will keep you updated." Vought sent email reply to OER Chawla and HydroTech Matli that "Gentlemen,Thank you both for your updates and Paul’s note of an approximate Wednesday sampling date is fine and please keep up the pressure on the developer to install the well prior to the installation of the construction fence. Not only will the wells enable us to see if the contamination, especially post injection and excavation, is moving off-site, but beginning to sample them now will hopefully result in the spill be closed quicker (assuming no off-site impacts) as we have already begun the monitoring to establish trends. I am assuming it will also take time (a week or so) to develop and purge the wells prior to sampling. Thank you both as well for the offer to keep me updated but as I hear rumors that Shaminder is quite busy, I will look forward to the update from HydroTech on the progress of the well installation and sampling." Vought received reply from HydroTech that "Jeff - We plan on installing the well along W 40 Street on Friday, develop it 24 hours after installation on Saturday and sample all 3 off-site wells on Monday." Vought sent reply that "Paul, Good news on the schedule and thanks for the update. Please ensure that the wells are surveyed and flow direction is measured promptly as well as performance of lab analysis to give us the idea if injections have remobilized contaminants down-gradient." Matli sent reply that "Jeff - sure will do."8/8/14-Vought-Received email from HydroTech that "Jeff - This is
to inform you that we are nearing completion of the first phase of injection at above site. Please note that following approval of the RAP, the manufacturer has directed us to split the recommended amount of Regenox Part A between first and second phase of injections, i.e. inject half amount of Regenox Part A and entire amount of Regenox Part B during the first injections and the other half of Part A and entire amount of ORCa in the second injections. Also the manufacturer indicated that we can proceed with the second phase of injections right after finishing the first phase. As such we aim at starting the second injections of Regenox Part A and ORCa next week. Please advise if you have any objections to start our second phase of injections right after the first phase. Regards.” Vought sent reply with to OER Zhang and Chawla that “Paul, Again my main concern is that the injections are proceeding without our sentinel/delineation wells and no current determination of groundwater flow and hence possible enhanced dissolved phase or product migration to an unknown receptor via the injection. If the a) wells were installed last Friday as per your 8/6 email below c) groundwater samples are scheduled to be collected and c) well surveys are scheduled to determine flow direction, then the Department has no objection to both phases of injection. If they are not completed, then the Department cannot approve the injections until the above are scheduled promptly. I must admit due the above complications, this is one of the many reasons why the Department tries to resist initiation of the remedial action until the investigation is completed. Let me know.” 8/11/14-Vought-Jeff - I agree with your concerns about the issue you presented below and please rest assured that we are doing or best to comply with your requirements. So far we attempted to complete the sampling of the wells prior to injections, but due to restrictions arising from site demolition we postponed the well installation along W 40 Str and wells sampling until after demolition. We have discussed at length with developer that our 2 injections will completed over a month after demolition but most recently, the developer requested that the injections have to be completed simultaneously as soon as possible within 2 weeks, a fact that Regenesis did not object upon consulting with them and. In addition, this pressure got our manpower a little short with 2 crews assigned to completing injections on time. We plan on sampling the wells tomorrow. Second phase of injections will start soon after the wells are sampled. Regards.” Vought sent reply with cc to RSE, DEC Hale, OER Chawla and OER Zhang that “Paul, Unfortunately, the Department cannot “rest assured” when we have 80 injection points with the first round of ORC already applied with little knowledge of where the potentially re-mobilized dissolved groundwater contamination is going as groundwater flow direction has not been determined nor has the contamination been delineated. The Department approved the RAP, in a letter dated 6/27, due to a repeated requests by both HydroTech and NYCOER associated with the development of the site, pending the inclusion that groundwater flow direction be determined and groundwater contamination delineated. Furthermore, I also reiterated these requirements in our email correspondence to both HydroTech and NYCOER. Your email notes below that "due to restrictions arising from the site demolition" and the "developer requested that the injections have to be completed simultaneously as soon as possible within 2 weeks" and again referred to "pressure" by the developer. The Department seeks to facilitate development of contaminated sites, however, its first priority is to ensure the
spill is not a threat to the wider community (via the delineation). After discussing the situation with our Regional Spill Engineer, the Department does not approve the second phase of injections at this time as we do not have delineation of groundwater contamination or flow direction. We will trust that HydroTech and NYCOER will make every effort to facilitate these endeavors. Unfortunately, this site may set a precedent for other sites where we have pressures from developers or NYCOER to approve a RAP associated with development without completion of the on-site and off-site investigation. Note I have copied both my supervisor and our Bureau of Technical Support as well. Regards, -Jeff." Vought sent reply that "Paul, As noted in the below emails (I counted four times just now), in order to approve the second round of injections we need a minimum of three wells installed and determination of groundwater flow and possible installation of a fourth monitoring well pending flow direction. Results of the two off-site monitoring wells alone without the above is insufficient to assure there is no threat to the wider community from the either the groundwater contamination nor the injections. If need be, I will be happy to engage in a discussion with NYCOER and/or the developer to explain the issue and the urgent need for the well installation along 40th Street. As another effort to not affect the development, if we have verifiable commitments from the developer and you provide specific details of who and when the delineation will be performed including well installation and well surveying) in the next few days, the Department may consider approval of the second round of injections. I have been also calling NYCOER to discuss and Shaminder is unfortunately out of the office. -Jeff."8/13/14-Vought-Received reply from Matli that "Jeff - the well along W 40 Street was installed last Friday. All 3 off-site wells were surveyed and sampled yesterday. Second Injections will not start until you see the results from the 3 requested MWs around this site." Vought performed site visit and and building was demolished and Vought confirmed installation of well along 40th Street. 8/18/14-Vought-Sent email to Matli with cc to NYCOER that "Paul, My apologies for when you wrote "we postponed the well installation along W 40 Str and wells sampling until after demolition" in the email string below you did not note that demoliition was completed. Good news on the well sampling. When can we expect determination of flow direction and the lab results? As soon know these dates and if they are soon, I can approve the second phase of injection. Thanks, -Jeff."8/21/14-Vought-Received email from HydroTech Matli on 8/19 that "Jeff - Attached please find the Off-site groundwater investigation report prepared for above referenced property. I appreciate your advice and feedback on whether this off-site groundwater investigation is satisfactory to NSYDEC to authorize the start of the second phase of injections. Regards." On 8/20, Vought received another email from Matli that "Jeff - good morning, I appreciate if you could let us know today if we can proceed with the second injections at above spill site. Regards." Vought sent email reply on 8/20 to Matli with cc to NYCOER that "Paul, I see that the the off-site groundwater investigation report shows that there are no wells directly downgradient of the site to ensure our dissolved plume is contained. As such we need to install one more well in that location. When can we have that installed? If it is soon then the Department can approve the second injections. -J." Matli replied to Vought that "Jeff - I will need a letter from you to acquire DOT street opening permit. If possible will you please suggest a location on the site map provided in my last report and
send me the letter for DOT. We will expedite the installation, development and sampling of the well upon receiving the DOT permit, which will take place next week. That being said, should we go head and proceed with the injections?" Vought received call from and spoke to Matli also on 8/21 and then sent email to HydroTech with cc to NYCOER that "Paul, As discussed during our phone conversation, the Department will provide the DOT street opening permit and approves the injections as the down-gradient well can be installed next week. -Jeff". Vought added HydroTech Off-Site Groundwater Investigation Report dated 8/18/14 to D2 and reviewed. Repro prepared for: Mr. Sam ChungNYHR West 40th Street, LLC 420 Great Neck Road Great Neck, NY 11021 Three off-site wells were installed via Geoprobe and groundwater flow direction determined. Petroleum odor noted in 14-16 sample in SB3 immediately adjacent to the site. Depth to groundwater at site is 18'bg. "The site-specific groundwater flow direction was determined to be towards the northwest." Groundwater analyses show: 12ppb xylene(MW-4), 5ppb toluene(MW-4), 8ppb xylene (MW-5), 59ppb benzene(MW-6), 1300ppb toluene(MW-6), 890ppb ethylbenzene(MW-6), and 4000ppb xylene(MW-6). Report recommends submission to NYSDEC for comments.8/21/14-Vought-Called and spoke to Matli and due to width of free product plume as per subsurface investigation and due to no wells directly downgradient from site or impacted well MW6, DEC requires installation of two downgradient wells (one on West 40th Street west of MW-6 and one on 9th Avenue north of MW4 to ensure determination if groundwater contamination is mobile and or enhanced by the injections. Vought sent sidewalk permit letter with requirement of two downgradient wells to Chung with cc to HydroTech and NYCOER. Vought received reply from Matli that "Jeff - thanks for the letters. As I indicated we will work toward installing and sampling the 2 requested wells next week. Based on this info, you do not have any objections to resume the injections this Saturday. I appreciate your advice on this matter. Regards." Vought sent reply that "Paul, I have no objections and please proceed with the injections. 8/22/14-Vought-Received email site plan from Matli with proposed location of well west of MW-6 and Vought approved location via email. DEC possibly requires: 1) Submission of Remedial Closure Report with endpoint soil and groundwater sample and results of off-site well installation and ORC application monitoring results. 2) cc to OER Chawla, OER Zhang and HydroTech (Matli)

**DEC Memo:**
Prior to Sept, 2004 data translation this spill Lead_DEC Field was *
"FOLEY"*Con Ed e2mis #145674:10/22/02 10:30 HRST Rist #1899 of F.O.D reported to N.Muldoon #18723 @ 08:45 hrs while preparing to mark phases on feeder 16m72 in manhole 33117 s/e/c w 37 st and 11 ave noticed approx 1 gallon of unknown oil had leaked out of a duct on the east wall of the structure onto the soil The source and cause of the spill are unknown at this time. N Muldoon # 18723 notified # 9 desk of the incident @ 10:30 hrs. No private properties affected. There was no fire or smoke involved. There were no injuries related to the spill. Weather conditions did not contribute to the hazard of the spill. There was no evidence release to sewer or waterways There is oil filled cable in the structure primary cable. There was no water in the structure. Spill tag # 31512 was installed. Account # 40134 is being used. A sample from the soil was taken for PCB and OIL ID on a priority E basis. Chain of custody form # CC00844 was used. Initial cleanup action taken by placing absorbent pads down. Cleanup will be scheduled as soon as #9 evaluates the incident. This incident meets the criteria of a new spill as to the fact #9 has no crews available at this time.C.I.G W.Murphy #78378 notified @ 11:10 hrsAroclor 1242 < 1.0 ppm EPA 608/8082Aroclor 1254 2.2 ppm EPA 608/8082Aroclor 1248 < 1.0 ppm EPA 608/8082Aroclor 1260 < 1.0 ppm EPA 608/8082TOTAL PCB 2 ppm......Update 10-22-02 @ 23:52Lab Sequence Number: 02-09895-001 Date Approved: 10/22/2002E2 Incident Number: 145674 Date Received: 10/22/2002Chain of Custody ID: CC00844 Date Sampled: 10/22/2002Analysis indicates the presence of a substance similar to a lubricating oil.................J Moran #0118210/24/02 14:50M. Baratta # 19813 underground supervisor reports that at 14:30 the cleanup was completed 100%.there was 2 barrels of various debris, & ppe generated.The flush truck removed all liquid 400 gallons of oil/water mixture.

**Remarks:**
ABOVE MATERIAL DISCOVERED AT ABOVE LOCATION. SAMPLE TAKEN AND CLEANUP IS PENDING CREW AVAILABILITY. CON ED # 145674. OIL CAME FROM DUCT WORK LEADING TO MANHOLE.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource 
Conservation and Recovery Act (RCRA) program through the tracking of 
events and activities related to facilities that generate, transport, 
and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA 
program staff to track the notification, permit, compliance, and 
corrective action activities required under RCRA.

Used oil transfer facility: No
Used oil transporter: No
Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Referred To: Not reported
II 8/11/05- Visited the site and met Mostafa and the letter that the new owner has assumed responsibility for the property has been sold to John Goldberg & Tom Iovane, 406-408 W. 45th St., NY, NY 10003 (Ph: 212-647-8600, Fax: 212-675-7236). The Attorney for the new owner is Scott Newmark, Meister Seelig & Fein LLP, 2 Grand Central Tower, 140 E. 45th St., NY, NY 10017 (Ph: 212-655-3509). He also mentioned in the letter that the new owner has assumed responsibility for the pending spill case.- II 8/11/05- Visited the site and met Mostafa and Rachel from Hydro Tech (consultants) and Ronen, a rep. from new property owner. Advised consultant to advance three more borings - one adjacent to SP-5, one about 15’ west of SP-5 and the third close to SP-7, sample them both for soil and GW, analyze for STARS VOCs and SVOCs and delineate the contamination plume. All phase II investigations done including the above should be summarized into one report and submitted to the Dept. including a proposed remediation.

II 8/8/05- Received a letter from Attorney Howard Sommers - Attorney of the RP asking for submission of the ISRP for the site and will send to the Dept. soon. - II 7/21/05- Investigation results along with recommended remedial measures. - II 5/11/05- Received and reviewed the Phase II investigation report from Hydro Tech dated April 25/05. They conducted GPR survey, installed 5 soil probes and 3 GW probes. The sampling results indicate that both soil and GW are impacted. Spoke to Mark of Hydro Tech and was told that they are going to send the ISRP asap for Dept. review. Mr. Joe Fabian of Certified Environments Inc. being engaged by the Bank who is financing for the dev. of this site also telephoned inquiring about the status of the phase I & II investigation report. He also mentioned that Hydro Tech is preparing ISRP for the site and will send to the Dept. soon. - II 7/21/05- Detailed ISRP as mentioned above has not been received to date. Mailed a letter to the owner (Bristol Three, Inc., Attn: David Sokol, 4400 N Federal Highway, Suite 31, Boca Raton, FL -33431), cc’d to Howard Sommers - Attorney of the RP asking for submission of the required ISRP by September 10, 2005 - II 8/8/05- Received a letter from Attorney Howard Sommers, dt. August 2/05 saying that the property has been sold to John Goldberg & Tom Iovane, 406-408 W. 45th St. Holdings LLC, c/o. Artery Capital, 55 Fifth Avenue, NY, NY 10003 (Ph: 212-647-8600, Fax: 212-675-7236). The Attorney for the new owner is Scott Newmark, Meister Seelig & Fein LLP, 2 Grand Central Tower, 140 E. 45th St., NY, NY 10017 (Ph: 212-655-3509). He also mentioned in the letter that the new owner has assumed responsibility for the pending spill case.- II 8/11/05- Visited the site and met Mostafa and Rachel from Hydro Tech (consultants) and Ronen, a rep. from new property owner. Advised consultant to advance three more borings - one adjacent to SP-5, one about 15’ west of SP-5 and the third close to SP-7, sample them both for soil and GW, analyze for STARS VOCs and SVOCs and delineate the contamination plume. All phase II investigations done including the above should be summarized into one report and submitted to the Dept. including a proposed remediation.

**5 STORY BUILDING (Continued)**

Plan (i.e. ISRP) by October 10, 2005. - II/10/7/05- As per telephone request by Ronen Abergel of Gramercy Property Group, the deadline for submitting the detailed ISRP is extended to October 28, 2005. -II/10/27/05- Mr. Ronen Abergel again requested over telephone for another six weeks of extension of the required ISRP submission on the grounds that they are facing problem in selecting the consultant for doing the job. It was approved. -II/11/29/05- Received and reviewed the ISRP dt. Nov. 28/05 by consultant Leggette, Brashears & Graham (LBG), Inc. No Chain of custody, boring procedures/logs and sampling procedures are not included in the report. No exceedances of NYSDEC soil and GW quality criteria are observed in the report which are in the contrary to the previous findings by consultant Hydro-Tech. Spoke to Dan Buzea of LBG and Ronen Abergel of Gramercy Property Group about these shortcomings and to submit them asap including the excavation plan to remove contaminated soil. Also, told to submit always electronic version of all reports in addition to hard copy. -II/03/29/06: This spill case transferred from I. Islam to J. Kolleeny. Excavation of contaminated soil was performed at the site in late January - early February 2006; received soil excavation summary report (prepared by RND Services, Sharima Ryan) on March 20, 2006 (electronic copy received by email on 3/29/06). Report indicates that 135.66 tons of petroleum-contaminated soil were removed and concludes that soil contamination has been effectively addressed, since end-point samples had no exceedances. Two 550-gallon USTs were found to be partially filled with sand and water; sand and water were pumped out and tanks will be abandoned in place with concrete (they cannot be removed due to proximity to building structural support columns). Report notes that DEC has requested a groundwater sample to investigate potential groundwater impact (July 21, 2005 correspondence), and recommends installing "perforated risers" when backfilling the excavation, as well as applying ORC to excavation, providing bottom is moist. Sharima Ryan of RND Services stated in 3/29/06 email that he will send a work plan for well installation soon. I sent an email to Sharima on 3/29/06 commenting that wells installed in the manner described would have no sand pack, which could compromise the quality of groundwater data from them, asked him to clarify this. - J. Kolleeny/04/03/06: Received email from Sharima Ryan of RND Services explaining that because excavation was in building basement, they recommend installing a 6-8 inch riser in which they would place a 2-inch screen plus riser, with sandpack around it, to avoid having to install wells later using a portable rig, the only kind which they would be able to bring down to the basement in the elevator. - J. Kolleeny/06/06/06: Sent email on 6/5/06 to Sharima Ryan of RND saying I never received a work plan for monitoring well installation and asking for an update on this project. Received reply from Sharima on 6/6/06 saying he was preparing a proposal for the client and expected to send DEC a work plan within 2 weeks. - J. Kolleeny/07/05/06: Received Proposed Work Plan for well installation from Sharima Ryan of RND on June 30, 2006. Plan involves installing 3 wells on bedrock surface 4 feet below grade, within building basement. I wrote email to Sharima on 6/30/06 asking if there would be sufficient water in the wells to sample. Sharima responded on 7/5/06 that based on presence of water in excavation and the fact that previous consultants were able to sample groundwater without penetrating bedrock, it seems likely that there will be adequate water to sample. I sent an email on 7/5/06 approving the Proposed Work Plan, copying the responsible party: Gramercy
Property Group LLC
55 5th Avenue - 14th Floor
New York, NY 10003
Attention: Mr. Eli Liedman
eli@gramercypg.com
and asking for advance notification of scheduled date for fieldwork. - J. Kolleeny
9/27/06: Monitoring wells were installed in basement according to work plan in mid-August '06. According to email from Sharima Ryan of RND received 8/22/06, groundwater sampling would be performed on 8/23/06, and Sharima expected that a report would submitted by 9/18/06. On 9/27/06, I sent email to Sharima inquiring about current status of site and investigation report. Received reply from Sharima same day saying report has been completed and will be sent on either Sept. 29th or Oct. 2nd. - J. Kolleeny
10/26/06:
Reviewed Groundwater Monitoring Well Installation and Sampling report dated Oct. 3, 2006 (received Oct. 16th), prepared by RND Services, Inc. (see eDocs). Report summarizes installation and sampling of three wells in the basement of the on-site building, where 135 tons of petroleum-contaminated soil had been removed from around two closed-in-place 550-gallon motor fuel USTs. Of the three wells, MW-1 was dry and could not be sampled, MW-2 had a number of petroleum-related compounds detected above groundwater standards, with total VOCs of 165 ppb, and MW-3 had only toluene above its GW standard, at 7 ppb. Upon consultation with supervisor Koon Tang, determined that groundwater contamination is very minor and likely to attenuate on its own since source removal was performed, and poses no significant threat to environment and public health. Closed spill and issued NFA letter (see eDocs). - J. Kolleeny

Spill Cause: Equipment Failure
Spill Class: Known release with minimal potential for fire or hazard. DEC Response. Willing Responsible Party. Corrective action taken.

SWIS: 3101
Investigator: JMKRIMGO
Referred To: Not reported
Reported to Dept: 2/24/1997
CID: 297
Water Affected: Not reported
Spill Source: Commercial Vehicle
Spill Notifier: Responsible Party
Cleanup Ceased: Not reported
Cleanup Meets Std: False
Last Inspection: Not reported
Recommended Penalty: False
UST Trust: False
Remediation Phase: 0
Date Entered In Computer: 2/24/1997
Spill Record Last Update: 2/27/1997

**Handler Activities Summary:**
- U.S. importer of hazardous waste: No
- Mixed waste (haz. and radioactive): No
- Recycler of hazardous waste: No
- Transporter of hazardous waste: No
- Treater, storer or disposer of HW: No
- Underground injection activity: No
- On-site burner exemption: No
- Furnace exemption: No
- Used oil burner: No
- Used oil processor: No
- Used oil refiner: No
- Used oil fuel marketer to burner: No
- Used oil Specification marketer: No
- Used oil transfer facility: No
- Used oil transporter: No

**Historical Generators:**
- **Date form received by agency:** 01/01/2006
- **Site name:** C MAX GRAPHICS INC
- **Classification:** Not a generator, verified

- **Date form received by agency:** 05/04/1992
- **Site name:** C MAX GRAPHICS INC
- **Classification:** Small Quantity Generator

- **Waste code:** D001
- **Waste name:** IGNITABLE WASTE
- **Violation Status:** No violations found

**Evaluation Action Summary:**
- **Evaluation date:** 09/25/2002
- **Evaluation:** COMPLIANCE EVALUATION INSPECTION ON-SITE
- **Area of violation:** Not reported
- **Date achieved compliance:** Not reported
- **Evaluation lead agency:** EPA

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

### Spill Information

- **Spill Date:** 7/5/1994
- **Spill Number/Closed Date:** 9404670 / 7/5/1994
- **Spill Cause:** Unknown
- **Spill Class:** Possible release with minimal potential for fire or hazard or Known release with no damage. DEC Response. Willing Responsible Party. Corrective action taken.
- **SWIS:** 3101
- **Investigator:** KSTANG
- **Referral:** Not reported
- **Reported to Dept:** 7/5/1994
- **CID:** Not reported
- **Water Affected:** Not reported
- **Spill Source:** Commercial/Industrial
- **Spill Notifier:** Federal Government
- **Cleanup Ceased:** 7/5/1994
- **Cleanup Meets Std:** True
- **Last Inspection:** Not reported
- **Recommended Penalty:** False
- **UST Trust:** False
- **Remediation Phase:** 0
- **Date Entered In Computer:** 9/30/2004
- **Spill Record Last Update:** 10/5/1994
- **Spiller Name:** Not reported
- **Spiller Company:** CENT FLOR MFG CO
- **Spiller Address:** 545 W. 45TH STREET
- **Spiller City,St,Zip:** NEW YORK, NY 001
- **Contact Name:** Not reported
- **Contact Phone:** Not reported
- **DEC Memo:** Prior to Sept, 2004 data translation this spill Lead_DEC Field was "TANG"+10/10/95: This is additional information about material spilled from the translation of the old spill file: UNK CHEMICAL SMELL.

### Remarks

NYC DEP NOTIFIED, CALLED MR. ZEP VOLPAT, HE SAID THAT THERE IS A PERFUME MFG IN THE SAME BLDG, THEY OCCASIONALLY SMELL DIFFERENT CHEM. ODOR FROM THE VENT SYSTEM. REFERRED TO DEP, HAZMAT & AIR DIV.

Prior to Sept. 2004 data translation this spill LeadDEC Field was "SANGESLAND"2/6/2002 - Sangesland spoke to Joel Landes at Langan Engineering (201-398-4853) about this site. The site is quite large. The east side of 9th Ave from 36th to 37th St (about half the block towards 10th Ave). The site was a former gas station which apparently was closed down around 1980. (This fact needs to be confirmed). According to Langan Engineering, the site had approx 12 - 2,000 gal gasoline tanks inbedded in a large cement block on the site. They said the tanks were closed out prior to 1984 per NYFD guidelines and filled with sand or cement (this must be confirmed). During site excavation a buried tank (approx 2,000 gal) was found approx half filled with gasoline. The backhoe cut the top of this tank and spilled to the soil. Sangesland arrived at the site ~ 11 AM and spoke with Andrew Fuller (engineer with Langan). The "found" tank was removed and several tons of contaminated soil were excavated and placed in a covered dumpster pending proper removal. Considering that the entire site will be excavated down to approx 15-18 ft (down to bedrock) any residual contaminated soil which may continue to exist will soon be removed. Sangesland requested that Langan submit a report.
with the following information: 1) Write up of the found tank (where, how, when) 2) PBS submittal for this newly found tank. 3) Paragraph on 12-2,000 gal tanks which were closed out prior to 1984 and filled with sand/cement. 4) Manifest for contaminated soil removed from the site. 5) Photos showing the site after all excavation is complete. (Hopefully this will show the full city block excavated down to bedrock with no contaminated soil in the area). 9/10/2002 Sangesland reviewed a Site Closure Report submitted by Langan Engineering and dated 7/31/2002. The report outlines all of the work done on the site. (i.e. tank removals, contaminated soil disposal/manifest, PBS registration, etc). All information previously requested by the DEC has been included in this report EXCEPT photographs were missing. 11/8/2002 Langan Engineering submitted an Addendum to the July 31 report which includes color photographs of the final excavation. These photos show the full city block site excavated approx 15 ft down to bedrock. This confirms that any contaminated soil which may have been on the site is now gone. Source removed. Based on this information, spill status is now changed from "open" to "no further action".

Remarks: during construction a backhoe dug up a under ground tank that was unknown to be there cleanup has started

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

**Date form received by agency:** 01/01/2007

**Facility name:** DEMARCO JOSEPH E

**Facility address:** 595 11TH AVE

**EPA ID:** NY986973568

**Mailing address:** 11TH AVE

**Contact:** JOSEP DEMARCO

**Contact address:** 11TH AVE

**Contact country:** US

**Contact telephone:** (212) 315-3350

**Contact email:** Not reported

**EPA Region:** 02

**Land type:** Facility is not located on Indian land. Additional information is not known.

**Classification:** Non-Generator

**Description:** Handler: Non-Generators do not presently generate hazardous waste

**Owner/Operator Summary:**

**Owner/operator address:** 595 11TH AVE
JOSEPH E DEMARCO INC (Continued)

Owner/operator country: US
Owner/operator telephone: (212) 315-3350
Legal status: Private
Owner/Operator Type: Owner
Owner/Op start date: Not reported
Owner/Op end date: Not reported

Handler Activities Summary:
- U.S. importer of hazardous waste: No
- Mixed waste (haz. and radioactive): No
- Recycler of hazardous waste: No
- Transporter of hazardous waste: No
- Treater, storer or disposer of HW: No
- Underground injection activity: No
- On-site burner exemption: No
- Furnace exemption: No
- Used oil fuel burner: No
- Used oil processor: No
- User oil refiner: No
- Used oil fuel marketer to burner: No
- Used oil Specification marketer: No
- Used oil transfer facility: No
- Used oil transporter: No

Historical Generators:
- Date form received by agency: 01/01/2006
- Site name: DEMARCO JOSEPH E
- Classification: Not a generator, verified

- Date form received by agency: 10/15/1991
- Site name: DEMARCO JOSEPH E
- Classification: Conditionally Exempt Small Quantity Generator

  - Waste code: D003
  - Waste name: REACTIVE WASTE
  - Waste code: F007
  - Waste name: SPENT CYANIDE PLATING BATH SOLUTIONS FROM ELECTROPLATING OPERATIONS.

Violation Status: No violations found

Evaluation Action Summary:
- Evaluation date: 07/14/1993
- Evaluation: COMPLIANCE EVALUATION INSPECTION ON-SITE
- Area of violation: Not reported
- Date achieved compliance: Not reported
- Evaluation lead agency: EPA Contractor/Grantee

FINDS:
- Registry ID: 110004477361

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of
JOSEPH E DEMARCO INC (Continued) 1000554867

events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

FIS (New York - Facility Information System) is New York’s Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

Environmental Interest/Information System

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

FIS (New York - Facility Information System) is New York’s Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

- Site Description: Location: The River Place I site is located in Manhattan. It is bounded by 12th Ave., 41st and 42nd Streets, and the River Place II Apartments. Site Features: The site is completely covered by a multi-story apartment building. Current Zoning/Uses: The site is currently in use as an apartment building with commercial space on the ground floor. Historical Uses: The site was used, from the 1860’s to the 1920’s, as a manufactured gas plant (MGP). Gas was produced through the heating of coal and some petroleum products. This activity led to the contamination of the site. Source areas were the main components of the MGP, including the gas holders. This site was originally to be addressed under the multi-site voluntary cleanup agreement with Con Edison (Site No. V00531). The remaining off-site impacts are being addressed in this manner. Site Geology/Hydrogeology: The site is underlain by a thick layer of fill, with thin layers of silty and sand underneath that. Bedrock is found as shallow as 20 feet below the ground surface. Groundwater at the site is encountered roughly 7 feet below the ground and generally flows to the south and east.
- Env Problem: Nature and Extent of Contamination: Remediation at the site is complete. Prior to remediation the contaminants of concern were benzene, toluene, ethylbenzene, xylene, and polycyclic aromatic hydrocarbons in the soil and groundwater.
- Health Problem: Currently direct contact exposure are prevented since the site is
CE - W 42ND ST. - RIVER PLACE I (Continued)

covered with a building, pavement and landscaped areas. The proposed remedy calls for the removal of waste from landscaped areas and the continued maintenance of the building and paved areas. Soil gas and indoor air sampling showed no evidence of soil vapor intrusion. Public water is provided to the area, thereby preventing exposures to groundwater.

Site Description: Location: West 42nd Street Former MGP site is located in an urban area. The site is located on the city block bounded by 41st Street, 42nd St, 11th Ave, and 12th Ave. The former plant also extended west across 12th Ave and into what is now the Hudson River. The main part of the site, bounded by 11th and 12th Avenues has been separated out and has entered the Brownfield Cleanup Program as two separate sites, C231012 and C231024. For the purposes of this description, the site will only refer the remaining portion that was not addressed under the Brownfield clean-up agreements. Site Features: The site is paved with asphalt and concrete. Current Zoning/Uses: The site is not zoned as it is a city right-of-way and is currently in use as 12th Avenue. Historical Uses: The site was used, from the 1860's to the 1920's, as a manufactured gas plant (MGP). Gas was produced through

MAP FINDINGS

438 11TH AVENUE (Continued)

Town: New York City
Update By: JAMORAS
Site Description: Location: The Former NY Central Rail Yard site is located in an urban area in the Hell's Kitchen neighborhood of the Borough of Manhattan. The site is on the east side of 11th Avenue, north side of West 36th Street and south side of West 37th Street. The eastern boundary of the site is defined by a railroad easement. Site Features: The majority of the site is 20 feet below street level. The lower portion is used as a construction material staging area and the upper parking lot is used to park cars and horse-drawn vehicles. Current Zoning/Use: The site is zoned C6-4 (Commercial and Mixed Uses) and is currently being used as a construction staging area for structural steel, wood and roll off containers. Historical Use: Former buildings on the site were built sometime prior to 1890 and utilized as a mix of numerous industrial facilities, warehouses, garages, stores and residential dwellings. Between 1930 and 1950, the buildings were demolished to make way for a NY Central Railroad rail line/yard. The rail line was present from 1951 through sometime prior to 1996. Site Geology and Hydrogeology: Soil at the site is described as historic fill material to a depth of approximately 5 feet below the surface followed by brown fine sand with silt which may or may not be native material. Bedrock is present directly below the fine sand/silt approximately 6 to 9 feet below the surface. The bedrock is a high-grade metamorphic rock consisting of a sequence of Cambrian and Ordovician age gneiss, schistose-gneiss, and marble. The bedrock is characterized by numerous faults and fractures, many of which contain groundwater. Groundwater at the site is present under perched conditions at a depth of approximately 7 feet below grade and is expected to flow west toward the Hudson River.

Env Problem: Generally, the PAH and metals contamination is indicative of historic fill. Benzo(a)anthracene (5.7 ppm), benzo(a)pyrene (6.1 ppm), benzo(b)fluoranthene (8.3 ppm), chrysene (6.0 ppm) and indeno(1,2,3-cd)pyrene (2.8 ppm) are present above restricted residential SCOs in up to 7 of the 12 soil samples collected. Mercury was observed at two locations above its restricted residential SCO and the protection of groundwater SCO at a maximum concentration of 1.23 ppm. PCB-1260 was detected in six of 12 locations above unrestricted SCOs. PCB-1260 was detected above its groundwater SCG at 0.16 ppb in one of the two groundwater samples obtained. Otherwise, the available data indicate that there were no exceedences in groundwater.

Health Problem: Information submitted with the BCP application regarding the conditions at the site are currently under review and will be revised as additional information becomes available.

Prior to Sept, 2004 data translation this spill Lead_DEC Field was "VOUGHT"8/2001-Tank closure report prepared by Franklin Company Contractors. 6/29/2001-Franklin implemented bioremediation by mixing 240lbs of ORC with surrounding soils and filling in excavation. 500 gallons of Waste stream technologies W-4 bio-blend mixture also injected. Site was backfilled with 3 to 6 feet of clean fill, 6 inches of crushed stone and an 8-mil polyethylene vapor barrier. Area was then covered with 6 inch reinforced concrete slab. Soil VOC pass TAGM, soil SVOC exceed TAGM but are due to fill composition. Site visit by Jacob Krimgold showed no visual evidence of contamination. Groundwater VOC and SVOC also pass TAGM. 12/13/2001 Spill closed as per Mark Tibbe, Jacob Krimgold and myself (all NYSDEC personnel).

Remarks: SOIL SAMPLE RESULTS FROM REMOVAL OF 3 TANKS AT LOCATION. NO VISIBLE SIGNS OF CONTAMINATION.

DEC Memo:
Prior to Sept, 2004 data translation this spill Lead_DEC Field was "M TIBBE"TRANSFERED FROM SULLIVAN TO TIBBE 6/5/07-Matthew Klaas (Albany DER)-Upon review of all paperwork in the file, it appears the spill is much smaller than it was originally believed. The tank diameter was listed incorrectly which caused too large a volume to be reported. 483 gallons of fuel oil were released and 165 gallons were recovered, leaving a loss of 318 gallons of fuel oil. 6/6/07-Matthew Klaas (Albany DER)-Attempted to contact Bob Esperto at UPS at 212-631-6364. He is no longer working at the site, however I was referred to a new contact, Dominick Casamassina at 212-631-6364. -They do not have reports at their site dating back to 1992. Since the spill the site has been filled and there has been no report of odor, product, or further spills. Attempted to contact Christopher J. Kopley of Environmental Science Services at 203-221-2753, the company who did the tank assessment to try and identify if they did any work besides re-evaluating the tank. The number is no longer valid, and have no further way to contact anyone from ESS.6/11/07-Matthew Klaas (Albany DER)-Drafted a letter to UPS facility at the listed address requesting information regarding the spill site indicating that we got record of the tank calibration, but have nothing about the cleanup of the site.08/06/07: Received call from Julie Straub, UPS.
643 WEST 43RD STREET (Continued)

Corporate (404) 828-8991. They are checking archives and ESS records for information about cleanup of spill, will get back to us. Martin Brand DER Albany. 3/31/09 - Austin - Transferred from Needs Reassignment to Rahman for further work to remediate and close - end 06/16/10 Performed site visit today. The site has two 15,000 gallon UST (non active) and two 4,000 gallon diesel and gasoline USTs (active). They plan to close those two USTs after subsurface investigation around the tank to ascertain that no contamination exist at the site due to usage of the tanks. UPS rep at the site: Dominick, 212-631-6444/6364 and asked him about the status of the investigation. He replied me that there would like to defer the investigation until next year. I explained to him that this is a long due investigation and the case will be referred to Legal Department for non compliance. He said he will have a meeting with his superior today and let me know the decisions. 08/30/12 A letter was sent to UPS 643 West 43rd Street New York, NY 10036 Attn: 5th Floor Plant Engineering Department - Dominick Casamassina. Letter in edocs. 01/07/2013 I called Dominick and asked him regarding the required works. He indicated that LBG was retained and will start work sometime this month. I asked him to send me the work proposal before they start implementing the proposal. 04/02/13 LBG prepared work proposal. Six soil borings will be installed surrounding the out of service USTs. Borings will be spaced in every 20 ft. In order to collect one to two ground water samples, select soil borings will be extended downward to intersect the static groundwater level. 06/19/13 LBG scheduled subsurface investigation on 20th and 21st June. 10/2/13 - Vought - Received email from LBG Day that “Mr. Rahman: On behalf of Paul Woodell of Leggette, Brashears & Graham, Inc. (LBG) the attached report is forwarded for your file. A bound copy has also been forwarded via United States Postal Service. If you have any questions please do not hesitate to contact Paul at (914) 694-5711. If you have any problems with this e-mail transmission please do not hesitate to contact me, Darlene M. Day”. Vought sent email to Day with cc to DEC Mahat that he will be new project manager. This spill transferred from Rahman to Mahat. 10/16/2013: Mahat This case is transferred to Mahat from Rahman as per Vought. A full case review was performed: 11/30/1992: Spill was reported due to leaks on vent pipes. An isolation tightness test was performed in order to pin point the source. 1/18/2012: A RAP was submitted to DEC by Leggette, Brashears & Graham, INC that included following actions: 1. Identify the main source of the spill. 2. Soil sample and monitoring well installation for Ground Water contamination detection. 3. Submit the report to DEC and backfill as necessary. 4. Investigation report and further action if needed. Work Plan is on edocs. 10/02/2013: Leggette, Brashears & Graham, INC sent an analytical report on the soil and GW sample. Samples were analyzed from vicinity of two out of service tanks and subsurface of the running pipes. Also ground water sample were analyzed from the site. Report indicated that there are 9 soil sample points and out them 2 was GW sampling station. #B6 and #B9 are GW sampling points. Volatile Organic Compounds were not detected on both water and soil. Only
643 WEST 43RD STREET (Continued)

Semi-Volatile Organic Compound was detected in #B1, #B3, #B5 and #B9. Rest of the sample is clean and no contaminations were detected. Here is the summary of the analytical result: #B1 - VOC-Non Detected. SVOC: Benezene(a)pyrene- 1510, Benzo(b)florathene-1050 and Benzo(k)flourathene- 1440. #B2 - No Contamination. #B3 - VOC-Non Detected. SVOC: Benza(a)anthracene- 11500, Benez(a)pyrene-13100, Benzo(b)florathene- 10900, Chrysenene- 13200, Idenopyrene-6760 and Nepathalene- 6200. #B4 - VOC- Non Detected. SVOC : Benza(a)anthracene-1080, Benza(a)pyrene-13100, Benzo(b)florathene- 1400, Benzo(k)flourathene-1270, Chrysenene-1180. #B5 - Soil: VOC- None Detected. SVOC-Non Detected GW: VOC- None Detected. SVOV-Benza(a)anthracene-4.52, Benzo(b)florathene-6.42. Benzo(k)flourathene- 9.07, Chrysenene- 4.14. #B6- VOC- None Detected. SVOC- Non Detected. #B7- VOC- None Detected. SVOC- Non Detected. #B8- VOC- None Detected. SVOC- Non Detected. #B9- Soil: VOC- None Detected. SVOC- Terbutyl- 7.4, P-isopropyl-18 GW: VOC- None Detected. SVOC- Non Detected. 10/18/2013: Mahat A phone call was made to Mr. Woodell. A discussion on the site plan and case was done. It was very helpful to be on the same page. A visit in future is planned but nothing is certain yet. Mr. Woodell informed DEC that the drawing on the site plan was drawn prior to the construction of the building. An assumption was made on the flow of Ground Water which is west. (i.e. toward Hudson River). 10/21/2013: Mahat Vought and Mahat spoke to Mr. Woodell to collect more information about the case. Mr. Woodell is sending DEC some pictures of the site. DEC mentioned that more sample along the remote fill line is required and Mr. Woodell will follow up and will provide more information regarding next move. 11/6/2013: Mahat An email was received from Mr. Woodell stating more conformation sample collection plan. His team is drilling a soil boring and if the soil is contaminated then they will install monitoring well for trending. If soil sample are clean then no further investigation will be required. 12/23/2013: Mahat Received a supplement report from Mr. Woodland with the analytical report from the drill #10 and #11. They both hit refusal at 3 foot below the ground. The sub report is uploaded on Edocs. 1/7/14: Mahat Since there is evidence of contamination on the site as per supplied report. Spill is now closed. DEC REQUIRES : 1. A site plan with the proper pipeline drawing. 2. More soil (GW, if required) sample under pipe lines.

DEC Memo: 11/25/2009 - TTF letter sent to:UPS Plant EngineeringFacilities Manager643 West 43rd StreetNew York, NY 1003612/2/09 Received call from Leo of UPS (917)280-6492. He told me Tanknology tested the tank and did not cap the vent pipe correctly. He said they failed to remove a sleeve when capping the vent pipe. He was unable to explain and said that he may need to take photos to show the pipe. Crompco re-tested the tank the following week and it passed. I told him to submit a letter to J. Krimgold explaining what happened (and that photos may be helpful) and provide a copy of the passing test results. b12/28/09. No release from the tank system. Case closed. JK.

Remarks: tank test failure at above address, tank was 15000 gallon #4 oil, no product lost

DEC Memo: Prior to Sept, 2004 data translation this spill Lead_DEC Field was "VOUGHT"10/16/02 SA/OD TTF LETTER SENT,FILE TRANSFERRED FROM VOUGHT TO OBLIGADO1/19/06- Obligado - File review. From spill report, apparently a tank test failure for diesel tank, soil affected. From PBS, number is 2-602720. There are 2 underground storage tanks at the site. The site was inspected on 11/4/04 by DEC Rossan. A NOV letter was subsequently sent. Among violations for USTs was a failure to test tanks and unreconciled inventory records. Check tank tightness records and there is no file for this site. Call number on PBS report, spoke to the President, George Greeve at (201)529-3666 (ext 1306), said they spend $600,000 to fix the problem and to call Rich Vihonski at (201) 225-7557 who can give all needed information. Called Nich and left message. 2/1/06 - Obligado - received email from Austin. Apparently this site has already been referred to legal for enforcement by Tipple. The text of email read as follows:231032 Coach USA Bus Garage (Tipple)no reference spill # 520 West 46th Street, ManhattanRI end 01/31/06status Notes: RP has failed to perform the required investigation & remediation. Repeated attempts to obtain required documentation have been unsuccessful. Case has been referred to DEC legal for enforcement.9/18/06 - Obligado - Close and consolidate with open spill number 0206549.

Remarks: tank failed test - retry at later date.

Tank Test:
Site ID: 101047
Spill Tank Test: 1527576
Tank Number: Not reported
Tank Size: 4000
Test Method: 03
Leak Rate: 0
Gross Fail: Not reported
Location of leak is western tunnel wall beneath 45th street between 10th and 11th Ave. Demeo has site meeting 9/25 to investigate possible source. 9/26/02 TJDDimeo inspected site with Patrick Teeter (Amtrack). Inspection consisted of accessing tracks at 38th Street and walking along track to impacted area north of 45th street. Track Bed is approximately 25 feet below street level. Oil was observed dripping slowly from bedrock fractures along west wall. Oil suspected to be either diesel or #2 Oil. Oil is running down from rock fracture along rock face and accumulating both on ground surface and in debris lying along the track bed. The petroleum is also impacting a catch basin adjacent to track with an unknown discharge point. Two buildings along 45th Street were inspected as potential sources. The first a bus Company (PBS 2-602720) has (2) Diesel UST's. The second an apartment building (PBS 2-605827) has (1)#2 Oil UST. No obvious sign of a problem at either location and no other obvious sources in immediate vicinity of spill.
Both above facilities sent letters requiring owners to test tanks. Awaiting results. 5/8/03 TJDBus Garage passed tank test. Apt. Bldg failed test. See also spill 0206999.4/15/04 TJD
Investigation of the apartment building UST revealed they were not the source of the petroleum discharge which is impacting the Amtrak ROW. Upon completion of the investigation of 525 West 45th Street, DEC again contacted the Bus Garage (Coach USA) to inform their management additional investigation of their property was necessary. Coach USA was given the option of performing the necessary investigation with their contractor of choice or allowing a state contractor access to the property to conduct an investigation on DEC's behalf. Coach USA decided to perform the investigation themselves. Coach USA retained the services of Bristol Contracting to perform the required investigation. The initial investigation by Bristol revealed a loose pipe fitting at the bottom of the remote fill spill bucket. The two UST's at the bus garage were filled via a single remote fill. The remote fill was directly connected to the 2000 gal UST, a crossover line was connected to the 4000 gal UST. This design created significant backpressure during deliveries. Excavation in the vicinity of the remote fill revealed a large volume of contaminated soils. The contaminated soils extended to the south & east beneath the driveway area. Upon excavation of approximately 50 cubic yards of contaminated soils down to bedrock, several fractures were identified as suspected pathways for the product to migrate to the railway cut where diesel fuel was leaching out of the rockface and accumulating along the Amtrak Right Of Way. The connection between the bedrock fractures and the impact area was confirmed by several dye tests. Upon confirmation of the hydraulic connection, Coach USA was informed that the Department requires them to remediate all petroleum contamination both on their property and off-site on the Amtrak property. A field meeting with all involved parties was held on April 1, 2004. A new spill (0330069) was reported following discovery of the contaminated soils beneath the remote fill on 2/23/04. A letter of responsibility, Stipulation Agreement and a corrective action plan was mailed to Coach USA on 4/15/04. 2/23/05 - Austin - Project reassigned from DeMeo to Tipple 8/23/05 - Raphael Ketani. Case transferred to Jeff Vought. 9/19/06 - Obligado - Site site was left off the original list of sites to be transferred to Obligado from Vought. Transfer from Vought to Obligado. Was previously researching case under a different spill number 0207355. Closed that spill number and consolidated with this open spill number 0206549.
04/30/07-Vought-After review of notes above including fact that Coach USA was the source as owner of remote fill that was the source of the spill, Coach entered a Stipulation Agreement under spill #0330069 this PIN closed and case referred back to DEC Obligado who reopened spill #0330069. DEC Vought, DEC Obligado, DEC Piper and DEC Urda had meeting and DEC Urda will not close case referral originally submitted by DEC DeMeo until follow up is received from Obligado. Spill closed by Vought. 10/01/07-Vought-Received notice from AGs office that Coach payed NYS amount of 2999.86 for cost of cleanup. Costs were possibly low as per DEC Austin. Vought called DEC DeMeo as per Austin to confer that only 2999.86 was incurred by state. 11/27/07 - Obligado - After review of the file, this spill should be reopened because Coach USA has not provided documentation that remediation of the Amtrack right of way has been performed as per September 23, 2004 letter from Tim Demeo to Richard Vihonski. This spill number is also listed on the Stipulation Agreement, which Coach signed and agreed to
remediate both spill numbers 0206549 and 0330069. This spill number is reopened. I called Richard Vihonski (201)225-7557 to get an update on DeMeo’s requirements. Left message to call back the DEC. 11/30/07 - Obligado - Called Mr. Vihonski again. Left a message. 12/12/07 - Obligado - Have not heard from Mr. Vihonski. Called again and left a message to call back DEC. As Mr. Vihonski has not been returning my calls I tried calling the Coach President - George Greeves 201)529-3666 (ext 1306). I left a message to call back the DEC. George Greeves called me back shortly after. I discussed with him the 2 spill numbers and the September 23, 2004 letter from DEC DeMeo. He asked me to fax the letter to him and he would contact the appropriate person. I faxed him the letter. 2/27/08 - Obligado - Received a voice mail from Mr. Greeves. He was following up on our previous conversation. He inquired if Mr. Vihonski had taken care of our requirements. 3/3/08 - Obligado - Called back Mr. Greeve. I left message saying the DEC requirements have not been met. 3/26/08 - Obligado - Had meeting with Richard Vihonski (Coach USA), Jinesh Sheth (Bristol Contracting), and Dennis Oconner (Bristol Contracting). According to Richard, a package was submitted to the DEC in response to the September 23, 2004 letter. This was submitted to Michelle Tipple after Tim DeMeo left. They said the package addressed most of these comments in the letter and they would resubmit it to me within 4 weeks. 8/19/08 - Obligado - Email from Jinesh. They will submit the report via cd. 10/22/08 - Obligado - After review of report emailed Jinesh with following comments: “Please submit a revised and scaled Figure 2 Site Map that shows all of the following: - Entire layout of property between West 45th and 46th St, including adjacent Amtrak property. - Location of existing USTs, dispensers, lines, and fills ports. - Location of former abandoned/removed USTs-Boring/Monitoring Well locations- location/extent of surface spill on Amtrak property. - Any other pertinent information Please also revise Figure 3 and Figure 4 so that the initial/final extents of excavation and soil sampling locations are overlaid on the new site map. Thank you. Please revise the figures and resubmit them to me as pdf files via email within 30 days. Please call me if you wish to discuss this matter.” 3/26/09 - Obligado - Still have not received revised maps. Sent email to Jinesh requiring maps within 15 days or case would be referred to legal for enforcement. 6/10/09 - Obligado - Reviewed revised Maps submitted by Jinesh on 4/20/09. The maps address the above comments. After review of all documentation I called Jinesh for some follow up questions. 1) Where does the drain pipe on the Amtrak property go? According to Dennis Oconner who was also on the call, those pipes were damaged and not functional. 2) Did they broom sweep and inspect the bedrock on the Amtrak property for fractures or possible conduits, as they had done on the Coach USA property. They said they did and they did not find any fractures or conduits through which the product could have traveled. The bedrock was previously blasted out in order to build the tunnel and it acted as a basin to trap the product. 3) Are there walls or foundations north and west of the remote fill that would have prevented migration in those directions. According to Jinesh, yes there were building foundations to the west and north down to bedrock that prevented the movement of product in those directions. They also opened up the tank area to inspect and retrofit tanks and lines. They did not see any signs of leakage and they found no evidence of contamination. 4) Finally, I asked Jinesh to provide a photograph of the Amtrak outcrop to show there is no more leakage. 6/29/09 - Obligado - Received

**COACH USA (Continued)**

from Rich Vihanski @ Coach USA requesting an extension regarding the signing of the Stipulation Agreement and Corrective Action plan dated April 15, 2004. An extension was granted until May 14, 2004 to respond.2/23/05 - Austin - transferred from DeMeo to Tipple3/25/05 - Austin - transferred from Tipple to Vought4/24/06- Transferred to DEC Piper. Piper left message w/ Rich requesting call back and info. There is another spill at address related to this event. See spill 0206549. This spill closed. 11/26/07 - Obligado - After review of the file, this spill should be reopened because Coach USA has not fulfilled all the requirements the September 23, 2004 letter from Tim Demeo regarding the Stipulation Agreement, in which Coach USA agreed to investigate and remediate spill #s0330069 and 0206459. This spill number is reopened. Notes for this spill will be entered under spill remarks for 0206459, as this is where Tim Demeo entered most of his remarks. 6/10/08 - Obligado - This spill is closed and consolidated with 0206549 as per Vadim’s consolidation initiative.

**Remarks:** Contaminated soil discovered. Source is from a leaking loose fitting on buried spill bucket (remote fill). Location is being investigated as source of discharge regarding DEC Spill #0206549.

DEC Memo: Prior to Sept, 2004 data translation this spill Lead_DEC Field was "O'CONNELL". The transformer in the manhole is still leaking transformer oil. R. Austin was informed of the spill and he said the conditions didn't require DEC response. The manhole has another manhole connected to it. Spill # 9808288. This other spill was called in 1.5 hours after this one. Before the second spill was called in, ConEd was asked if this manhole was isolated and they answered yes. General Info: 100 gallons of water. Historical PCB concentration is 18 ppm. How spill was discovered: During inspection. Containment: Static water level condition in the tank but isolation cannot be confirmed. Later ConEd stated that there was a sewer connection but it was clogged. Oil containing equipment in manhole: Transformer. Cleanup Plan: Sample taken. Cleanup pending sample results 12:20 - 22:00 DEP's Mary Barsoun examined the sewer connection and found it to be clean. - spsE2MIS 12032610/05/98 1830 HRS PRYSTIPA #02394 I&A SPLICER FOUND & REPORTED TO G.GNALL #19045 I&A SUPERVISOR 10/05/98 1850 HRS WHOM NOTIFIED CONTROL ROOM OPERATOR DENNIS ROMARO #23349 25 GALLONS OF TRANSFORMER DIELECTRIC (BOTTOM LEAK FROM TRANSFORMER) AND 100 GALLONS OF WATER IN V5008 F/O 653 W42ND ST - DRAIN CLOGGED - DID NOT ENTER SEWER OR WATERWAYS - SAMPLE TAKEN - HUNG SIGN #18066 - 10/05/98 CIG MR ROWLAND NOTIFIED 10/05/98 1956 HRS-------------10/05/98 2030 HRS PRYSTIPA #02394 FOUND LEAKAGE INTO V1946 -- V1946 & BUSS COMPARTMENT- NOTIFIED CONTROL ROOM OPERATOR DENNIS ROMARO #23347 AT 10/05/98 2105 HRS - V1946 IS ADJACENT VAULT NEXT TO V5008 F/O 653 W42 ST -- SUMP WAS NOT RUNNING - 10GALLONS OF TRANSFORMER DIELECTRIC FLUID AND 10 GALLONS OF WATER - DISCONNECTED SUMP PUMP - SAMPLE TAKEN- HUNG SIGN #00821 - CLEANUP PENDING MAN POWER -- DEP NANCEY BARSOUN #217 ON LOCATION - TOOK SAMPLE AND CHECKED TRAP - FOUND NO OIL----MR CEASARE CIG NOTIFIED 10/05/98 2129 HRS----------LOGGER MICHAEL CROWE #71453 Historical analysis from CINDE indicates this transformer contains 8 PPM PCB. Spill and oil should be treated as 50 - 499 PPM until sample to analyzed. .... roz10/7/9810/06/98J. Gnall reports: NYC DEP
representative, Mary Barsoum #217, arrived at 21:20hrs and left at 22:00hrs on 10/05/98. She took a sample from floor of vault 5008. She checked sump pump piping trap in V1946. NOTE: Cannot enter her name in "event involved persons". Also, oil tanker to remove water and oil from vaults is scheduled for 07:00 10/07/98 due to work load.....Logger: A. Johnson #8122610/07/98M. PRYSTUPA REPORTS THAT TRANSFORMER IN V5008 IS DRAINED. ALSO, REMOVED WATER AND OIL FROM VAULT 5008 AND FROM BUSCOMPARTMENT IN V1946. ALSO REMOVED OIL FROM SUMP PIT IN V1946 AND INSTALLED OIL PADS IN PIT TO PICK UP RESIDUE. CLEANED AND DRIED FLOOR IN BUS COMPARTMENT. PLUGGED DRAIN IN VAULT 5008, TO PREVENT SUMP PIT IN V1946 FROM FILLING UP AGAIN. DISCONNECTED GAP FROM TRANSFORMER IN V5008. CUT GAP IN BUS COMPARTMENT ASSOCIATED WITH V1946 AND MARKED PHASES. REMOVED CUT GAP AND CUT INTO SMALL PIECES FOR DISPOSAL. REMOVED NEUTRAL FROM TRANSFORMER AND LEFT IT HANGING IN V5008. TRANSFORMER IN V5008 NOW READY FOR REMOVAL. FOUL OIL TRUCK WAS COMPLETED AT APPROXIMATELY 11:00AM. CLEAN UPPER PERSONNEL WERE MIKE PRYSTUPA #02394 AND KEN CHRISTIANSEN #20167. HAVE TO FOLLOW UP FOR FINAL CLEANUP WHEN TRANSFORMER IS REMOVED. LOGGER: A. JOHNSON #8122610/10/98 22:30HRS & A OS R. BROWNE REPORTS J. JONES #48534, P. PRINZ #20618, R. ZABLINIS #81283 COMPLETED CLEANUPS IN VAULTS 5008 AND 1946. REMOVED WATER AND OIL FROM FLOOR WITH CONTRACTOR TANKER (S&D). REMOVED 8 BARRELS OF DEBRIS AND TRANSPORTED THEM TO 281 11THAVE WITH HARD COPY OF 9 PPM (LSN 98-10698). DOUBLE WASHED WALLS AND FLOORS. REMOVED OIL TAGS #00821 AND 18066. LOGGER: A. JOHNSON #812267/11/02 R. Colanero #26498: Added notification info. from voided incident #120330

Remarks: TRANSFORMER FAILURE AT ABOVE LOCATION. MATERIAL CONTAINED IN VAULT. TESTING ON MATERIAL BEING DONE. NO CALL REQUESTED.

DEC Memo:

email from Paul Matli
"We came to do a phase II investigation at the property 440 10 Avenue in Manhattan, which is located in the northwest-adjacent vicinity of a former gasoline station 436-438 10 Avenue at which, a spill case # 0201270 was closed conditionally back in April 2013. The findings of our Phase II at the 440 10 Avenue revealed the presence of soil vapor beneath the slab and likely impact to indoor air. I appreciate if you can advise what agency; NYSDEC or NYSDOH should be notified of this findings and find out the requirements to install a vapor mitigation system at 440 10 Avenue, which is a mixed use commercial and residential facility. "1/9/2014 - J. Vought and J. Feng talked to Paul Matli. They did a Phase II in the 440 10th Ave where next to the former BP site 436 10th Ave. They collected soil and soil vapor samples in the boundary next to the former BP site. They also collected soil samples around the AST onsite, no sign of contmaination. The property is now used as commercial/residential building with tire shop in the bottom. No other agency has been involved, but probably an e-designated site. They also collected indoor air and outdoor air sample and show some hits. They will submit a work plan for an active SSDS and will need NYSDOH to review and approve it.1/29/2014 - received the SSDS design work plan from HydroTech. Forwarded it to Mike Hughes of NYSDOH for review and comments.2/4/2014 - Comments from NYSDOH Mike Hughes "I reviewed the SSDS Design Work Plan for the 440-442 10th Ave. site. I have one specific comment on the methodology which is if any air samples are to be collected it is very important that the list of analytes be expanded to include compounds not normally present in the TO-15 lab standard. DOH guidance (http://www.health.ny.gov/environmental/indoors/air/guidance.htm), details the necessary compounds to be included for various types of
petroleum mixtures. For example, the indicator compounds for gasoline should include BTEX, trimethylbenzene isomers, the appropriate oxygenate additives (MTBE, ethanol, etc.), and the individual C-4 to C-8 aliphatics (e.g., hexane, cyclohexane, dimethylpentane, and 2,2,4-trimethylpentane [iso-octane]). My other comment is more general, in that collecting indoor air samples post SSDS installation may not be the most prudent approach to verify if the system is working effectively. It is my understanding that the two buildings are occupied and include residential and commercial tenants, one of which is a "tire shop" on the ground floor. Interpretation of indoor air samples can be difficult under the best of circumstances. Let alone when known interference’s are likely to be present. Such an evaluation will require the analysis of concurrent sub-slab vapor samples to be able to compare the vapor composition. A better evaluation of the SSDS system would be a pressure field extension test to measure depressurization under the slab outwards to the perimeter of the building footprint. I understand there may be some logistical access issues, but it should be considered. I have discussed this issue with Jeff in the past, but let me know if you need anything else.  

“2/27/2014 - Received revised SSDS Design work plan and forwarded to NYSDOH and NYCDOH for comments. 3/10/2014 - email from Mike Hughes. he did review the revised work plan and has no comment. 3/13/2014 - sent approval letter to Madison Capital Realty and cc HydroTech.

- **DEC Memo:** Prior to Sept, 2004 data translation this spill Lead_DEC Field was "MULQUEEN"DEC MONITORING SITUATION, AND REQ'D TIGHTNESS TESTING AT ADJACENT BLDG.06/16/06: This spill is transferred from Mike Mulqueen to Mr. Koon Tang 06/22/2012. Brevdo Called Amtrak at 212-630-6215 (Richard Mohlenhoff number). Received voice mail of Claudia Tassetta (? , not sure about correctness of the name). Left message representing myself and stating that I am trying to gather information regarding this spill. Asked to return my call, provided phone number. Brevdo 06/25/2012. Claudia Tassetta of Amtrak returned my call from 6/22. Claudia will speak with Richard Mohlenhoff and will get back to me before end of this week with any information they can find regarding this spill. Brevdo 01/11/2013 V. Brevdo - Left voice mail for Claudia Tassetta, would like to speak about the project and appropriate course of action. V. Brevdo 07/03/2013 - The Department has no records which would confirm or be indicative of impacts to soil and / or groundwater. Given lack of information and/or data, pursuing this 17 year old spill would be questionable. Spill Closed Effective 07/03/2013.

DEC Region: 2
DER Facility ID: 215638
DEC Memo: 4/12/04-Vought-Spill transferred from Tibbe to Rommel as per Rommel.12/7/04 Reassigned from Rommel to Foley. Issued certified letter (Robert Gans, Swing Time LLC Corp., 1270 Saw Mill River Rd, Yonkers NY 10710) requiring site assessment for ten gas USTs removed 7/99. Report to be submitted by 3/7/05.12/21/04 Certified letter returned as attempted, unknown.12/22/04 Resent certified letter to Robert Gans (617 11th Avenue, NY NY 10036).12/27/04 Spoke to Perry Burkett(same address as R. Gans-617 11th Ave, NY NY 10036 (212-582-1951, 212-246-0856(fax)), general counsel for Robert Gans, Swingtime LLC. Will send correspondence and reports that were previously submitted to Steven Saccaccio. Stated that Saccaccio had...
approved remediation and subsequent construction of building currently on property. 1/4/05 Received reports from P. Burkett. 1) Letter workplan dated 5/22/00.2) Letter and fax from B. Pachmohr dated 6/5/00 including field notes and proposal for an additional monitoring well.3) Fax from S. Saccacio to former tenant, Dr. Oscar Sandoval and his atty M. Perle, indicating the planned building will not interfere with the remaining spill investigation and potential remedial obligations.4) Soil Removal Summary Report from American Environmental Assessment Corp. dated 7/5/00.10 gasoline USTs had been located in the SE corner of the property. They were removed prior to the construction work and the site assessment that was performed at the time did not reveal any contamination around the tank field. American Environmental Assessment Corp. (AEAC) was contracted to further investigate. On 5/24/00, AEAC installed three test pits. Soil around the former tank field had been impacted by gasoline. Between 5/31 and 6/14/00, 860 tons of contaminated soil were removed. GW was encountered at 13' bgs. Two samples at 10' bgs showed elevated concentrations of VOCs (total BTEX at 4133 ppb (E-5), and 2525 ppb (E-4)). Rock was encountered at a depth of approx 6' bgs which dropped off towards the SE corner to 10-12' bgs. 1/6/05 Received copy of tank removal affidavit from Petroleum Technology stating ten 550gal gas tanks were removed on 7/20/99.1/10/05 Issued letter requiring installation of three monitoring wells. Two along 11th Ave (adjacent to soil sample locations E-4 and E-5) and one along 45th St (btwn S-2 and S-3). Report due 4/15/05. See spill #s 0001837, 0001719, 3/24/05 Met with M. Roux, Roux Associates. If bedrock is encountered, they will core through bedrock (only at location closest to E-5, highest soil cont.). Will take soil samples at all locations (highest PID and at gw interface). GW samples will be taken if encountered before bedrock. 4/20/05 Met Roux (Marty) and ADT Drilling on-site. Refusal at 9' bgs in first boring on northside of W-45th St. Second boring (northernmost) on 11th Ave had some hits on the PID up to 700 ppm. Sample from 15-17' bgs was wet. ADT installed monitoring well. Third boring to be drilled later. 4/28/05 Spoke to M. Roux. Report expected to be submitted by 5/20/05. 6/15/05 Received letter from AEAC requesting confirmatory GW sample be collected at end of July 2005. 8/19/05 Letter from Roux Assoc. with results of gw analysis from 7/27/05. Concentrations of BTEX above GWQS in MW-2 (300 ppb benzene, 240 ppb ethylbenzene, 182 ppb xylenes). Concentrations in MW-3 were below GWQS. This appears to be due to residual soil contamination as indicated by boring logs. Potential for exposure from soil vapor is not expected, however, according to the report, a vapor barrier had been installed beneath the building.

Remarks:
ENVIRONMENTAL SITE STUDY DONE - GROUND CONTAMINATION FOUND RESULTING FROM TANK LEAKING. PROPERTY IS ABANDONED GAS STATION. 10TH AVE CORP. OWNER ISAAC GATWEN, 18 WOODHAVEN, NEW YORK CITY

**DEC Memo:**

Prior to Sept, 2004 data translation this spill Lead_DEC Field was "HARRINGTON". This spill site has been transferred from DEC Sigona to Remedial Bureau B, on August 4, 2003. This spill site has been consolidated under Spill No. 8806783. Reassigned from O'Dowd to Sigona on 11/6/00 DEC's comments regarding a proposed Work Plan for On-Site and Off-Site Investigation by Roux Associates, dated April 30, 2003. Based on the results of our site visit on March 7, 2003, and evaluation of the proposal by Roux Associates, the DEC accepts ExxonMobil's Work Plan and Schedule to evaluate the on-site and off-site contamination at this location. Exxon-Mobil must now complete the implementation of the Work Plan according to the proposed schedule. The results of this investigation must be compiled into a Subsurface Investigation Report prepared in accordance with Section No. 3, paragraph 3.14 of the Division of Environmental Remediation's Draft DER-10 Technical Guidance for Site Investigation and Remediation, dated December 2002. A complete Remedial Investigation Report must be submitted for DEC review and approval according to the proposed implementation schedule.

**Remarks:** DOUBLE WALLED STEEL TANK. LEAK IS FROM INNER TO OUTER WALL.

DEC Memo: Spoke to Dr. Sandoval who represents Whitehouse - the tenant/builder/runner of future club. Swingtime is the owner of the property. According to a report written by Swingtime's consultant, American Envmtl Assessment(AEA), there was no contamination. DEC Saccacio required more work. PDM performed own investigation for Whitehouse and found contamination. Whitehouse's attorney (Michael Perle) will send DEC letter. Reassigned from Saccacio.5/9/03  
Reassigned from Rommel to Harrington. 1/5/05 Reassigned from Harrington to Foley. Changed address back to 609-611 11th Avenue. Address was 561 11th Ave and listed ExxonMobil as RP. Two PBS registrations, one at each location. Appeared to have been consolidated under spill #8806783 in error. Cross-reference open #9501693 for 609-611 11th Ave. (KMF)  
From closed spill file: (KMF, 3/24/05) 10/24/00 Letter from PDM Environmental Services addressed to Mr. Oscar Sandoval of The White House. PDM reviewed the American Environmental Assessment Corp Summary Report for Soil Removal. They noted that in some samples the reported values were greater than the guidance values. Also noted that some samples were contaminated and above STARS guidance values. Sample results indicate that soils beneath the 11th Avenue property line show the greatest levels in exceedance of criteria and will probably require further remediation. PDM noted complications with obtaining a certificate of occupancy until contaminants have been removed to below acceptable levels. A letter was issued by S. Saccacio on 11/22/00 which states that the spill number will not be considered for closure until additional investigation is conducted and the Dept reviews the results. See spill #s 0001837, 0001719, 9501693.

**DEC Memo:** Sangesland spoke with James at Tritel Developers. as per James, Ethan Eldon Assoc. did phase-II investigation and found no contamination. during excavation, they found two gasoline tanks underground. while removing these tanks, they borke it and spilled gasoline/water mix on construction site 09/15/06-Hiralkumar Patel, spoke with Alex at Ethan Eldon. they are environmental consultant for the site. as per Alex, while removing tanks, crew broke the tank and spilled oil/water mix in south-west corner of property. spoke with Terry (212-594-8833) at Tritel Developers. Tritel has hired Tanks-A-Lot for tank removal. as per Terry, they are removing soil for about 14 ft deep from entire site for foundation work and will dispose off whole amount of soil as contaminated soil to site in PA. Tanks-a-lot has removed water/oil from tank yesterday and will remove tank soon. Terry asked to talk to Rober at Tanks-A-Lot about tank removal. asked Terry to submit disposal manifests for tank and soil.spoke with Donna (718-387-8300)
at ABC Tank. Tanks-A-Lot is owned by ABC Tank. as per Donna, they don't know anything about oil spill. she will check with Robert and will call back.received call from Donna from ABC. as per their notes, they removed 1000 gal of water from tank. as per Donna there was no oil in water.no oil spill.

Remarks: DURING EXCAVATION FOUND CONTAMINATED SOIL: - WATER AND GAS SPILLED OUT:

Sangesland spoke to Mr. Powers. He says there is a groundwater "Solvents" problem in one location on his property. He is working with several companies to figure out how to pump this contaminated groundwater out and treat it through some type of filter/Carbon unit. The site needs to be "De-watered" anyway for construction and he is very anxious to get the problem solved quickly.11/08/07 Health & Safety Plan in edocs.(SR)12/23/08 Left a message for Mr. Powers to follow up on the clean up. His secretary said she would give the info to Mr. Powers.(SR)03/30/09 Rec'd closure report. Thirteen gasoline UST's were removed with contaminated soil. Fifty six end point samples were taken from the tank excavation. VOCs were below TAGM. Some SVOCs above TAGM. Two vocs were found in ground water. CNS designed and operated a ground water remediation system on site. CNS collected a total of fifteen effluent discharge samples. VOCs and SVOCs were non detected in discharge samples. Soil excavation extended to bedrock and the limits of excavation to neighboring buildings and sidewalks. As per CNS, there were no odors or staining and PID readings did not exceed 0.00 ppm. Prior to installing the building foundation, a vapor barrier was installed and designed to mitigate any potential hydrostatic pressure or intrusion. CNS concluded that the remaining VOC levels are likely a regional issue and do not represent a health, safety or environmental impact to the subject site or present a risk to the public health and safety. NFA required.

DEC Memo: Prior to Sept. 2004 data translation this spill Lead_DEC Field was "O'CONNELL"e2mis no. 145-032:9-13-02 @ 00:20V Schembari #15976 reports that while inspecting m56652 f/o 303 w 42 st, he discovered 2 pints of cable oil had leaked onto the soil on the floor of the...
Structure. There was or is no smoke or fire involved. No sewer or waterways affected. No injuries, weather had no affect. Account #13287 is being used for this incident. There is a drip rate of 1 drop per 1/2 hour coming from a primary cable. No measuring device used to determine the amount of the spill. Source of spill is a cable and the cause is a leak. No private property affected. No oil filled equipment in the structure. No askarel components involved. Environmental yellow tag #31595 was applied. Conduit plate # 26-f-2 indicates no sewer connection. Concrete sump not verified at this time. No sump pump running. No water involved. No dielectric feeders. Access anytime. 2 liquid samples were taken by V Schembir #15976 from the spill, 1 for id and 1 for pcb. Update 9-13-02: Spill is being re-classified to a spill dielectric feeder due to an active drip. J McCutchen #62355 was notified and will send a red wagon crew to investigate to see if cable can be sealed. 1/14/04: Sample results - 14 ppm PCBs. Cleanup and repairs completed on 9/14/02 and 9/13/02, respectively.

Remarks:
ELECTRIC CABLE IN THE HOLE THAT IS LEAKING - LEAKING AT A DRIP RATE OF 1 DROP PER 1/2 HOUR - CLEAN UP SCHEDULED FOR 07:00HRS - WILL STILL BE ACTIVE UNTIL THEY DENGERSIZE THE FEEDER - CON ED #145032

**DEC Memo:**

Part of a long term recovery operation at the site. See also spill nos. 0702185 and 0702402.08/16/07: Notified of this spill by Ryan Piper of spill response staff on 8/15/07; sent email to Jane Staten and Harvey Roberts of URS (DDC consultant handling long-term remediation of this site under DDC consent order), with cc to Afsar Samani of DDC, stating: “I’ve been informed by our Spill Response staff that spills are continuing to occur related to damaged fill line to gasoline UST at Midtown South. Initial spill (0613411) occurred in March ’07 when gasoline was found in tank sump and nearby monitoring well. According to URS’s system performance reports, Franklin Co. determined that tank’s fill line was damaged, and they installed direct fill to tank to bypass damaged line. Do you know if Franklin plugged up old fill port when they installed direct fill? It appears that fuel deliveries continue to be made to old fill line, and product keeps showing up in tank sump and monitoring wells. On May 23rd, spill 0702185 was reported by NYPD because sump was filled with gasoline and Veeder Root alarm was going off. Today, another spill was called in (0705553) because of product in sump. Please take necessary steps to have old fill port blocked so it cannot be used anymore (or repaired so it won’t leak) as soon as possible, and please also check out entire tank system to make certain it is damaged fill line that’s problem, and that there are no other leaks in system. Please get back to me on this and let me know what actions have been taken to address this situation.” Afterwards, spoke again with Ryan Piper, who suggested tank be taken out of service and emptied until problem is solved. Sent email to Afsar Samani of DDC, cc’s to Jane Staten & Harvey Roberts of URS: “In light of ongoing problems with gasoline UST at Midtown South Precinct, I strongly suggest that tank be taken out of service and emptied until problem(s) with tank and piping has/have been addressed. If this is not practical because police have no alternative location to fuel their vehicles, then please take whatever steps are necessary to immediately rectify problem(s) with tank system. NYCDDC is conducting remediation at this site using SVE and groundwater extraction & treatment systems, and these ongoing spills of fresh gasoline to subsurface will set back remedial efforts for months, or more likely, years, so it is in DDC’s interest to resolve this situation promptly. In addition, these releases are a violation of Environmental Conservation Law, as you are aware, and if they continue to occur, our spill responders may be inclined to call Environmental Conservation Officers to site to issue summons.” On 8/16/07, received email from Afsar Samani of DDC: “Harvey informed me that vac-truck is scheduled to remove product from sump today. Also, NYPD subcontractor is going to be scheduled to repair fill line. URS is looking into this and will make all necessary action to make sure tank and fill port is tight.” Then, received email from Jane Staten of URS: “I just spoke with Lt. Pete Polanco for an update on problems with gasoline tank at Midtown South Precinct. According to Lt. Polanco, NYPD tank contractor inspected fuel fill line this morning and found no problems with integrity of line. Therefore, Lt. Polanco believes that
product in tank sump was caused by fuel delivery vendor. NYPD are expecting fuel delivery vendor at site this afternoon to discuss problem and also to remove gasoline currently in sump. I will keep you posted.” I then sent email to Afsar Samani, with cc’s to Jane Staten & Harvey Roberts of URS, Jerry Aliberti of DDC and Lt. Peter Polanco of NYPD: “Thank you for your response. Please be advised that no fuel deliveries should be made to gasoline tank at Midtown South until tank system has been tested to insure integrity of all elements of system. Documentation of tightness test results, and of any repairs made to fill line since problem was discovered in March 2007, must be submitted to NYSDEC before fuel deliveries can resume. This situation is high priority and NYPD should arrange for tightness testing immediately.” Then, received phone call from Lt. Polanco of NYPD, who said repairs to damaged fill line were done in June and fill line was tightness tested and passed, and he believes current problem is due to fuel delivery vendor not hooking up vapor recovery line (truck is parked in street long distance from fill port, so there’s long length of delivery hose). He said product will be removed from sump and fill line will be tested again. I asked him to submit documentation of repair work and tightness testing, and sent him email with my address. Then, I was cc’d on email from Afsar Samani of DDC to Lt. Polanco of NYPD: “We were informed by following correspondence from NYSDEC that gasoline tank over at Midtown South Police Precinct should not receive any more deliveries until a tightness test has been scheduled. Please let DDC know when you can arrange for your subcontractor to perform a tightness test on this tank. This is very crucial to remedial effort that URS is performing to clean up site on behalf of DDC.” - J. Kolleeny 08/21/07:Received fax on 8/20/07 from Lt. Polanco of NYPD fuel control unit, with letter from Energy Tank & Environmental Services dated 7/16/07 describing repairs to and pressure testing of fill line to gasoline UST (in eDocs). Sent same-day email response to Lt. Polanco, cc’s to Afsar Samani & Jerry Aliberti (DDC), Jane Staten & Harvey Roberts (URS): “Thank you for faxed description of repair work to fill line of gasoline UST at Midtown South and diagram of site, tank and fill port, provided by Energy Tank & Environmental Services, Inc. However, these items do not completely satisfy my request for documentation of tank repairs and testing of fill line, and they raise additional questions. Page that describes repairs and subsequent pressure testing of line is dated 7/16/07. Is that date when repairs were done? I would like to see dated invoice for repair work in addition to this description. Description states that problem was with primary fill line, and that secondary line was intact, which allowed product to go into containment sump and not into ground. However, in March when this problem was first discovered, URS field personnel reported 5 feet of fresh gasoline in groundwater extraction well that had never had gasoline in it before, so somehow product did get into ground. If repairs were done on 7/16/07, why was gasoline again reported in containment sump on top of tank on August 15th (spill number 0705555)? You mentioned that this was caused by delivery person not hooking up vapor recovery line, yet our Petroleum Bulk Storage staff say this would not result in product appearing in sump. I would greatly appreciate it if you could provide additional documentation of repair work, and if NYPD would schedule a tightness test of all lines going into and out of tank, as well as a hydrostatic test of tank’s containment sump. I would like to be informed in advance when these tests have been scheduled, so that I
can attend." - J. Kolleeny 09/14/07: Visited site 9/10/07 to observe hydrostatic test of tank sump and tightness test of fill line. Mike Suppe of Fenley & Nichol on hand, said sump held water, more or less (slight drip along electric conduit extending from this sump to next sump at end of tank), for over 2 hours. He said no way to test fill line (it’s about 2-3 feet long from “remote” fill port) without physically removing it, but he will test entire tank system. In discussions of how product could turn up in sump, I mentioned that Lt. Polanco said it had to do with delivery person not hooking up vapor recovery line. Mike wasn’t clear on how that would cause product to appear in sump. I called Lt. Polanco, who said by not hooking up vapor recovery during delivery, excessive back pressure was created, so when delivery hose was disconnected, product would back up and spill into overfill bucket, then drain to sump. Mike Suppe said this isn’t possible, since any fuel spilled into spill bucket would drain back into fill line, then into tank (not sump). Mike suggested that temporary fill, which was used while remote fill line was awaiting repair, had not been properly capped once NYPD switched back to using remote fill, and poor threading on top of direct fill extension cylinder and improperly screwed-on cap for this extension, may have resulted in product spilling out capped off temporary fill, again related to back pressure from not hooking up vapor recovery (see photos in eDocs image folder). NYPD now has on-site a long hose to be used for vapor recovery, and reportedly there have not been any more problems with product appearing in sump after deliveries. Spoke with Mike Suppe on 9/11/07, who said tank system passed test. I discussed whole situation with Jane Staten of URS, who forwarded to me email from Harvey Roberts of URS (in eDocs) indicating temporary direct fill was installed by NYPD, not Franklin Co. as stated in URS’s system performance reports for site. While this may explain why product was appearing in sump, none of this adequately explains how product escaped into ground and turned up in groundwater extraction wells and monitoring wells (for site cleanup under spill no. 9512583). Mike Suppe indicated if damaged fill line was unknown for a long time, sump could’ve filled up with gas during deliveries and overtopped inner rim of sump, and from there it could seep into ground. URS will continue to gauge nearby wells for product levels, and see if they continue to decrease. Harvey Roberts email also calls into question when exactly NYPD had repairs done to fill line. I contact Lt. Polanco again and asked for more detailed documentation of repair work, indicating date(s) and nature of work done. He said he would work on getting me that info. - J. Kolleeny 09/17/07: Received fax from Lt. Polanco, a revised version of earlier fax with statement by Energy Tank & Environmental Services regarding repair work on fuel fill line. Statement is still dated 7/16/07; it now states that they uncovered line on 7/5/07, reconnected and tested line on 7/6/07, reporting that line held pressure during backfilling, they then witnessed a fuel delivery on 7/9/07 with no leaks observed, so they re-surfaced area. - J. Kolleeny 01/04/08: On 12/19/07, sent email to Jane Staten of URS: “I recently asked you to ask your field personnel to check if gasoline is still showing up in tank-top sump after fuel deliveries at this site. Do you know if they’ve checked on this?” On 12/26/07, received email reply from Jane: “Our field technician checked tank sumps at Midtown South on 11/29/07. One sump was dry and other contained a little water. There was no evidence of gasoline.” Based on no new reports of gasoline appearing in tank top sump, it appears problem(s)
that caused this and related spills has (have) been addressed; OK to close spill. - J. Kolleeny

<tr>
<td></td>
<td>As part of this remediation effort, there are existing monitoring wells on the site that are tested periodically. Today, the geologist found 4 ft of gasoline product floating on the water table in a well that previously had nothing. The manway was checked and found to be full of gasoline as well. This was clearly an overfill from a recent delivery. Franklin and/or URS is working the long term cleanup of the site and has arranged for a vac truck to clear out whatever is possible right now. On a long term basis, the existing remediation system will be used to skim the free product from the water table and remove it from the site. This problem will now be addressed by the contractor through the existing long term spill number on file.</td>

File review (KMF)-Depth to groundwater 5-10 ft bgs. Depth to bedrock approx 1.5-8.5 ft bgs. Most likely impacted. Delta submitted Monitoring Well Abandonment Report on 7/3/03. MW-2 through MW-5 were abandoned because of unknown construction, the well did not exhibit significant impacts, the well no longer served a productive purpose in the monitoring network, and/or the well presented a risk of cross contaminating deeper strata. MW-1, MW-6 and MW-7 remain in place. Delta submitted First Quarter 2003 Monitoring Report on 10/1/03. LNA PL present in MW-7 since April 2002. BTEX concentrations fluctuating but above GWQS, except for MW-5. MTBE concentrations are consistently above GWQS. Max conc of total BTEX 3680ug/L (MW-4) Max conc of MTBE 34200ug/L (MW-2)12/15/03 2Q2003 monitoring report received. Sampling event from 5/9/03 showed 0.42 of LNA PL in MW-7 and high BTEX and MTBE in other wells. MW-2, MW-3, MW-4 and MW-5 have been abandoned since.5/7/04 Portfolio meeting: shallow bedrock, DTW 4-9 bgs. Diesel/#2 fuel oil detected in MW-1. Bedrock fracture

TC4381152.2s Page 2126
analysis shows possible source as adj. commercial property. Need to investigate further. Will continue monitoring. Need to collect sample from MW-7(new well). Upgrade to be done this year as part of spill prevention initiative. 7/8/04 Received 3Q03 & 4Q03 monitoring reports. 0.41 ft(3Q03) and 0.44ft(4Q03) of product in MW-7. 7/7/27/04 Stipulation due 8/17/04. 8/17/04 1Q04 monitoring report received. Shallow bedrock. Three wells on site. BTEX from 69ppb(MW-6) to 1152ppb(MW-1). MTBE from 38000ppb(MW-6) to 117000ppb(MW-1). 0.07' LNAPL in MW-7. 2Q04 monitoring report received. BTEX from 110ppb(MW-6) to 648ppb(MW-1). MTBE from 2190ppb to 58700ppb. 8/19/04 Stip signed and returned. 8/23/04 Stip fully executed by T. Kunkel. 

-----------------10/26/04 Investigation summary report received. Historic Investigations: 7/1/91 Amoco Oil activated a lease agreement with Spartan, the current property owner. Spartan conducted a baseline gw quality assessment, the results which detected dissolved product in gw. 11/20/01 Delta, as part of an assessment to support lease termination, advanced four soil borings (SB-1 thru SB-4) by Geoprobe. They were advanced around the tank mat and pump islands to refusal between 1-3'bgs. Four existing wells were identified and samples were taken from MW-1 and MW-2 on 11/20/01 (MW-3 & MW-4 were obstructed). Total BTEX from 35ppb(MW-1) to 2124ppb(MW-2). MTBE was detected at 12900ppb in MW-2 and 13000ppb in MW-1. 4/3/02 Three additional wells (MW-5,6,7) were advanced at previously installed boring locations SB-1, 2, and 3. Bedrock was encountered between 1.5 and 3.5 ft bgs and GW in bedrock fractures between 8 and 11'bgs in MW-6 and MW-7. Bedrock GW not encountered in MW-5. The MWs were advanced thru bedrock to depths between 16-26 bgs. Also cleared obstructions in MW-3 and MW-4. BTEX ranged from 50ppb(MW-3) to 4383ppb(MW-4). MTBE from 49ppb(MW-3) to 40700ppb(MW-2). Trace LNAPL was detected in MW-7 and was sampled. Results identified it as highly weathered regular grade gasoline that does not contain MTBE. 12/10/02 Geophysical survey conducted. Identified competent bedrock between 1 and 8 bgs. 6/12/03-6/24/03 Rehabilitated MW-1, MW-6 and MW-7 for use in fracture survey. Abandoned MW-2, MW-3, MW-4 (unknown construction) and MW-5. All were uncased and had potential of contaminating the bedrock GW. 7/2/03 Fracture survey conducted. Possible path from south pump island to MW-1 identified. 2/4/04 0.02' LNAPL observed in MW-1. Identified as 90% weathered/highly degraded diesel/fuel oil distillate and 10% weathered/degraded premium gasoline. 4/15/04 Installed sorbant socks in MW-1 and MW-7. The lease may be terminated prior to its scheduled end during December 2006. At the time of the lease termination, BP will remove all USTs and related piping. If it is to be razed within the timeframe noted in the CAP. Delta intends to address the overburden impacts via excavation. If the site will not be razed within the noted timeframe, Delta will develop an interim remedial plan to effectively address the overburden site impacts until excavation can occur. Quarterly GW monitoring to continue concurrently.

-------------------11/12/04 3Q04 monitoring report. Three wells on site. 0.32' free product in MW-7. BTEX ranged from 226ppb(MW-6) to 6095ppb(MW-7). MTBE from 20900ppb(MW-7) to 36100ppb(MW-1). 2/17/05 4Q04 monitoring report. BTEX ranged from 177ppb(MW-1) to 2876ppb(MW-7). MTBE from 7980ppb(MW-7) to 38200ppb(MW-1). DTW
7-10'bgs 4/27/05 Portfolio meeting- No source identified, assumed to be tanks. Subsurface impacts in the capillary fringe, vadose and saturated zones in the NE part of the site. Hydrophobic socks installed in MW-1, MW-7 to address LNAPL and subsequently removed to evaluate recharge. LNAPL not present currently. Vapor evaluation done in 10/04 for adjacent property. MPE well in area of bedrock depression (MW-8) installed 4/05. Pilot test tomorrow. Reinvestigate vapor recovery system as potential source of vapor complaints during fuel delivery. To be demolished in 18 months. RAP by 6/15/05. 7/1/05 Received pilot test report for portable multi-phase extraction (MPE). Pilot performed on MW-8 on 4/28 and 4/29/05. DTW at 6.26'bgs. The stinger was set at 8'bgs (1.5' below the watertable.) The test was run at 25%, 50%, 75% and 100% vacuum levels while monitoring response levels. No influence was recorded at neighboring wells but vapors were recovered with decent recovery rates. Delta proposes extraction by a portable MPE unit. 7/8/05 Received RAP for portable MPE unit. Pilot test removed hydrocarbons from capillary fringe and unsaturated zone, but due to a lack of overburden groundwater, removal from the saturated zone was not achieved. Propose to use twice a month and reevaluate after two months. 7/27/05 1Q05 DTW 6.51-9.25'bgs. Total BTEX from 313ppb (MW-6) to 806ppb (MW-7). MTBE from 990ppb (MW-7) to 16900ppb (MW-6). 8/1/05 2Q05 DTW 6.60-9.38'bgs. Total BTEX from 104ppb (MW-1) to 350ppb (MW-6). MTBE from 929ppb (MW-7) to 9810ppb (MW-6). 8/24/05 Conditionally approved RAP to be implemented by 12/24/05. Six-month evaluation (6/06) of MPE to include proposal to address saturated zone contamination. To include contaminant mass estimation. It is unclear if recovery well, MW-8, will be sufficient to address entire impacted area. 11/8/05: Reviewed quarterly monitoring report dated November 3, 2005. Only three of four MW’s were sampled on September 15, 2005 because MW8 was dry and MW’s 2, 3, 4 and 5 were abandoned because they could not be converted into cased, open-borehole bedrock wells. No free product present. Groundwater flow beneath the site is dictated by the bedrock fracture pattern. Max BTEX is 2,774 ppb (MW-7) and max MTBE is 14,200 ppb (MW6). Only monitoring occurred this quarter (no remedial action). There was a large increase in MW7 BTEX and MTBE concentrations, as well as MW 1 and MW6 MTBE concentrations. A tightness test should be conducted on existing tanks 12/20/05. Received Subsurface Hydrocarbon Assessment report dated 12/6/05 which documents installation of MW-8 on 4/4/05. Soil sample collected from 5-8.5'bgs. Too many cobbles in split spoon to submit sample. Completed to 8.5'bgs within overburden, not bedrock like MW-1, 6, 7. DTW was 7.3'bgs at installation. GW sample collected 4/27/05. Total BTEX 181ppb and MTBE 2340ppb. 12/21/05 Received copy of “Notice of No Objection” from Darryl Cabbagestalk, NYCDEP, addressed to L. Osorio, Manhattan Borough Commissioner for NYCDOB. High Point Engineering sent in plans to demolish the existing structures and remove the USTs, piping and contaminated soil. They are not planning to change use to residential. The property has been designated with a Hazardous Materials and Noise "E" as part of the Hudson Yards Rezoning action. 2/1/06 Spoke to Julie, Galli Engineering, representing prospective purchaser who will be constructing a residential high rise. Planning to blast out bedrock down to 20'bgs. Based on current data, not expecting to dewater but after blasting will possibly need to dewater. Will submit construction details, to include vapor barrier. Also to submit a remedial action plan, which will include contingency plans. May propose a surface application such as ORC and effectiveness monitoring depending on water.

**MAP FINDINGS**

**BP AMOCO STATION #11248 (Continued)**

infiltration. 3/3/06 4Q05- 3 of 4 wells sampled on 11/16/05. DTW 6.75-9.61' bgs, in bedrock. 0.02' LNAPL detected in MW-1. BTEX from 21ppb(MW-8) to 1872ppb(MW-7). MTBE from 129ppb(MW-8) to 5550ppb(MW-6). 3/16/06 Met with BP and Delta. Source removal to be conducted 4/06. Remediation contract starts after demolition contract. 3/21/06 Conference call with Nick Onufrak, BP, and Paul Meyer, Delta, to discuss future of site. Delta will do EFR events to try and recover product from wells prior to doing source removal down to bedrock. Recommended they coordinate with buyer. Bottom of slab is going to be at 30 bgs. Tanks already pulled. 3 bedrock wells to be destroyed during construction. Possibly to install slotted piping for subslab depressurization. 4/11/06 Update from P. Meyer, Delta. Delta has completed seven 8-hour days of bedrock groundwater remediation at the site. The work was completed using a mobile Multi-PhaseExtraction system to remove LNAPL, groundwater, and soil vapors from the underlying bedrock. It appears that the residual amount of LNAPL (0.02 ft) that was noted in MW-1 during the fourth quarter of 2005 has been successfully remediated. No LNAPL was observed subsequent to Delta’s remediation work. Delta collected ground water samples from monitoring wells MW-1 and MW-7 following conclusion of the bedrock remediation activities. Laboratory analytical results indicate stable or reduced concentrations of BTEX and MTBE for both monitoring wells with the exception of MW-1 which showed an increase in the xylenes concentration. 4/17/06 MPE O&M report received for Oct & Nov 2005. 1lb BTEX, 0.15lbs MTBE, and 61lbs TPH have been recovered. 4/25/06 Conference call with N. Onufrak, BP, and P. Meyer, Delta. Paul will submit groundwater results. Construction is to start next week. No additional groundwater sampling is proposed due to construction. All source soils are to be removed. Expecting to have report submitted by 6/1/06. 4/26/06 Sent email to P. Meyer, Delta. VOCs remain elevated. Petition for closure is denied. If excavation is to be the groundwater remedy, then it must be demonstrated that the contaminant concentrations will decrease to standards through degradation/retardation/dispersal in a reasonable timeframe. 5/11/06 Spoke to Nick Onufrak, BP. Nine abandoned 5550s were uncovered and expect three more. Will register and close out properly. There has been some water accumulation on bedrock at some elevations and they have been pumping it out. Sometimes groundwater has a sheen. He also said that Delta would be looking for locations to install wells to show a reduction in concentrations. Expect to be on site for next two weeks. They are developing a plan for groundwater monitoring. P. Meyer, Delta, anticipates demonstration of contaminant reduction in the ground water through comparison of the present site conditions with modeled results of expected contaminant levels following removal of the source. During the source removal activities they are collecting sidewall samples for closure purposes as well as samples of the excavated material (i.e. the overburden soil that is being removed from the site) for modeling purposes. Soil removal work commenced on Monday May 1st and is anticipated to be completed by Friday May 19th. 6/8/2006 - Feng - project reassigned to RJFeng. (RJF) 8/11/2006 - Feng - Spill Site Inactivation Report, June 29, 2006, by Delta Environmental. The bedrock is extended from 1' to 2' bg at the south and southwest and 10' to 13' bg at the north and northeast. On May 2006, Delta removed 16 USTs, all the soil overburden and weathered bedrock off site. Before the removal activities, Delta did an 8 hours per day, 7 days EFR on a bedrock well, W-1 which has been detected free product (0.02') and W-7. The
last groundwater sampling results (4/3/2006) show that W-1 has found 2,174 ppb BTEX and 9,830 ppb MTBE, and W-7 has found 141 ppb BTEX and 411 ppb MTBE. Since Delta was not able to collected groundwater sample due to the wells abandonment, Delta did a contaminant fate and transport model using WinFlow/WinTran software. The result from the model indicated that there will be no BTEX or MTBE concentration in groundwater after 187 days. Delta requested to close the spill.

Emailed to Joe Haas (Region 1) for comments on the application of WinFlow/WinTran on bedrock site like this. In his reply, he stated "Based upon the limiting assumptions in associated with WinFlow, any WinFlow / WinTrans application to flow and chemical transport in fractured rock is immediately suspect and likely inappropriate". Discussed with Joe Sun and A. Obligado about the site closure. The closure is denied due to the continued presence of elevated level of groundwater contamination. The WinFlow/WinTran model is not appropriate to apply in the bedrock situation. As BP and Delta mentioned in the meeting of 7/20/2006, the new developer will blast the bedrock down to 20 feet below grade and dewatering process would be needed at that time is expected. So DEC requires the following items: 1) Monthly influent groundwater samples from the dewatering system. 2) Installation of water-proofing vapor barrier. The DEC will re-consider closure after completed vapor barrier installation and based on dewatering system data. In case groundwater contamination remains, additional remediation might be required.

MW-6, 217 ppb BTEX, 5,290 ppb MTBE. MW-7, 394 ppb BTEX, 328 ppb MTBE. MW-8, 5.8 ppb BTEX, 1.4 ppb MTBE. (RJF) 9/29/2006 - Feng - Portfolio meeting with BP and Delta. Construction on hold. The new owner couldn’t get the loan from the bank due to open spill. Delta provided 2 options. Option 1, provide some data or drill some bedrock well (may not be the same fracture as previous). Option 2, close the spill based on the current data and re-open spill if contamination encountered during the construction. DEC will discuss internally about this matter. (RJF) 11/7/2006 - Feng - Updates from Nick Onuftrak (BP). Delta will try to install 3 wells and will collect groundwater samples. And will put all the new data into the closure petition report. (RJF) 1/22/2007 - Feng - Letter from Delta serves as Post Remedial Subsurface Hydrocarbon Assessment Report, dated 1/17/2007. On December 1 and 4, 2006, Delta has installed 3 new bedrock wells. DTW 14.05’ at MW-1A, 42.54’ at MW-6A, 10.22’ at MW-7A. Groundwater samples collected from these 3 wells. MW-1A, 143 ppb BTEX, 1,710 ppb MTBE. MW-6A, 244 ppb BTEX, 9,480 ppb MTBE. MW-7A, 1,947 ppb BTEX, 358 ppb MTBE. Delta will continue to sample the wells on a quarterly schedule and will re-evaluate site conditions and the remedial alternatives. 4/19/2007 - Feng - Portfolio meeting with BP and Delta. RAP for Fenton or persulfate injection might be proposed. Pre-injection data, and post injection data will be collected. Injection plan will be submitted. BP is still willing to comply with the items set forth in the previous BP’s letter. (RJF) 8/15/2007 - Feng - 4Q2006, 7/2/2007. Groundwater sampled 12/13/2006. All 3 monitoring wells were sampled. DTW 10.22’ to 42.54’ bg. No LNAPL. MW-1A, 143 ppb BTEX, 1,710 ppb MTBE. MW-6A, 244 ppb BTEX, 9,480 ppb MTBE. MW-7A, 1,947 ppb BTEX, 358 ppb MTBE. (RJF) 8/14/2007 - Feng -

TC4381152.2s Page 2130
1Q2007, 7/10/2007. Groundwater sampled 2/22/2007. All 3 monitoring wells were sampled. DTW 10.31’ to 14.26’ bg. No LNAPL. MW-1A, 106 ppb BTEX, 1,680 ppb MTBE. MW-6A, 189 ppb BTEX, 11,200 ppb MTBE. MW-7A, 2,432 ppb BTEX, 18.7 ppb MTBE. (RJF)10/10/2007 - Feng - Portfolio meeting with BP and Delta. The site is currently vacant. The developer planning to build 28-story hotel with 2-story basement. Removing bedrock down to 30 feet is in the plan. In the future, BP and Delta will coordinate with the new owner during the development to: 1) provide for disposal of impacted bedrock in any, 2) provide for treatment of groundwater removed during the dewatering process as needed, 3) provide for installation of vapor barrier under and around the building foundation. And prepare the closure report for completion of the subsurface remediation work. (RJF)1/15/2008 - Feng - Email to E. Larson (BP) and Delta on the requirement of RAP for the site. (RJF)1/31/2008 - Feng - Email from E. Larson and requested to close out the onsite monitoring wells, MW-1A, 6A and 7A. 2/11/2008 - Feng - Approved the closure of onsite monitoring wells MW-1A, 6A and 7A since BP has done the baseline groundwater sampling on 12/18/2007.

Email from E. Larson, the closure of the monitoring wells will no later than 2/22/2008. 2/27/2008 - Feng - Reviewed the Remedial Action Plan Addendum, dated 2/7/2008, prepared by Delta. The new building will consist with 2-story basement, and foundation excavation depth will be extended down to 25 feet bg. The excavated bedrock/soil will be disposed off site. A dewatering plan will be implemented and regular influent and effluent groundwater will be sampled for NYCDP permit. BP will arrange onsite groundwater treatment and daily sampling if the effluent exceed NYCDP’s limit. At the conclusion of dewatering, an additional groundwater will be collected and sampled. If the contaminants level exceeded DEC standard, remediation/investigation will be arranged. 3/7/2008 - Feng - Letter is received via email from M. Ahmed (Fleming-Lee Shue). 3/17/2008 - Feng - Email is received from M. Ahmed (Fleming-Lee Shue). 3/19/2008 - Feng - Approval letter to BP and cc to Delta and Fleming-Lee Shue. (RJF)3/20/2008 - Feng - eDoc Quarterly Monitoring Report 3Q2007 and 4Q2007. (RJF)5/20/2008 - Feng - Approved the closure of onsite monitoring wells MW-1A, 6A and 7A since BP has done the baseline groundwater sampling on 12/18/2007.

The site owner’s development schedule is unclear at this time and the March 19, 2008 approved RAP Addendum will not be implemented at this time. It is, however, BP’s desire to continue its remedial effort in bringing the spill number toward closure and therefore this RAP is proposed. The RAP details the proposed work to re-install three onsite bedrock monitoring wells and to continue implement quarterly monitoring well sampling program. As per the conversation between you and the Department staff, the scheduled investigation/remediation work are:- Monitoring wells installation will be completed by June 2008- Monitoring wells sampling will be completed by July 2008- First quarter of monitoring wells sampling will be completed by October 2008- Second quarter of monitoring wells sampling will be completed by January 2009- Evaluating the collected groundwater data and discussing the appropriate remedy by March 2009 (the RAP proposed MNA, but we will discuss whether MNA is effective or not)Approval letter to BP and cc to Delta. (RJF)6/26/2008 - 3Q2007, 2/25/2008. Vacant undeveloped lot. The monitoring well network was gauged and sampled on 9/20/2007. 3 monitoring wells. DTW 10.01’ to 11.84’ bg. Flows in bedrock, not determined. NO LNAPL. BTEX range 10.7 ppb (MW-1A) to 959 ppb (MW-7A). MTBE range 219 ppb (MW-7A) to 4,630 ppb (MW-6A). 4Q2007, 2/27/2008. Vacant undeveloped lot. the monitoring well network was gauged and sampled 12/18/2007. 3 monitoring wells.
BP AMOCO STATION #11248  (Continued)

DTW 9.76’ to 11.29’ bg. NO LNAPL. BTEX range 6.3 ppb to 684 ppb (MW-7A). MTBE range 107 (MW-7A) to 4,350 ppb (MW-6A). (RFJ) 10/28/2008 - 3Q2008, 9/5/2008, by EnviroTrac. Currently a vacant lot. The monitoring well network was gauged and sampled on 7/2/2008. MW-1B, MW-6B and MW-7B were installed on 6/17 and 6/18/2008. Boring logs are attached. 3 wells were sampled. No LNAPL. DTW 9.08’ to 43.15’ bg. 3 wells were sampled. Max benzene 53 ug/L (MW-6B). Max BTEX 550.7 ug/L (MW-7B). Max MTBE 2,300 ug/L (MW-6B). (RFJ) 3/4/2009 - 4Q2008, 1/5/2009, by EnviroTrac. Currently a vacant lot. The monitoring well network was gauged and sampled 10/13/2008. 3 wells were gauged. NO LNAPL. DTW 9.50’ to 13.52’ bg. Flows in bedrock. 3 wells were sampled. Max benzene 33 ug/L (MW-6B). Max BTEX 79.2 ug/L (MW-7B). Max MTBE 980 ug/L (MW-6B). (RFJ) 6/8/2010 - 4Q2009, 1/8/2010, by EnviroTrac. Currently a vacant lot. The monitoring well network was gauged and sampled on 11/2/2009. 3 wells were sampled. NO LNAPL. DTW 8.62’ - 11.46’ bg. Unknown flow (bedrock wells). 3 wells were sampled. Max benzene 27 ug/L (MW-6B). Max BTEX 122.5 ug/L (MW-7B). Max MTBE 1,100 ug/L (MW-6B). 1Q2010, 4/2/2010, by EnviroTrac. The monitoring well network was gauged and sampled on 1/24/2010. 3 wells were sampled. NO LNAPL. DTW 9.09’ - 14.83’ bg. Unknown flow. 3 wells were sampled. Max benzene 12 ug/L (MW-6B). Max BTEX 53.7 ug/L (MW-7B). Max MTBE 740 ug/L (MW-6B). 7/27/2010 - 2Q2010, 6/17/2010, by Delta. NO LNAPL. 3 wells. Max BTEX 24.3 ug/L (MW-7B). Max MTBE 730 ug/L (MW-6B)/8/6/10 Spill case temporarily transferred from June Feng to J.A. Maisonave. - JAM 11/10:10: Spill case temporarily transferred from J. Maisonave to J. Kelleeney. - JK 4/11/2011 - Spill transferred back to JFeng. 6/17/2011 - email to Chris Meyer of Anteagroup.

"Chris, We had some discussion about this site and we need some more information. Do you have the information on how the sampling was actually done, such as depth to water, how much water was purged, final water depth, and how did you sample?" 7/5/2011 - received 2Q2011. eDoc. Reviewed the report. The groundwater samples were collected on April 22, 2011. 3 wells were sampled. Max BTEX 31.7 ug/L (MW-6B). Max MTBE 510 ug/L (MW-6B), JF 11/3/2011 - 3Q2011, 9/27/2011, by Anteagroup. The groundwater samples were collected on July 8, 2011. 3 wells were sampled. MW-1B, 3.9 ug/L BTEX, 300 ug/L MTBE. MW-6B, 8.51 ug/L BTEX, 560 ug/L MTBE. MW-7B, 59.2 ug/L BTEX, 45 ug/L MTBE. 1/6/12 - Raphael Ketani. I spoke to Chris Meyer of Anteagroup (800) 477-7411. He said that a closure report was written for the site and sent to the DEC in October 2011. I told him that we had not seen it. Mr. Meyer said that he will re-send it. I told him to send it to me and I will review it. 1/11/2012 - 4Q2011, 12/29/2011, by Anteagroup. Groundwater samples were collected on 10/28/2011. 3 wells. MW-1B, 13.8 ug/L BTEX, 1,200 ug/L MTBE. MW-6B, 16.1 ug/L BTEX, 570 ug/L MTBE. MW-7B, 60.2 ug/L BTEX, 26 ug/L MTBE. 2/8/12 - Raphael Ketani. Nick Onufrak of BP (410) 825-8213/cell (443) 838-7143 called me today to discuss the case. Bedrock is anywhere from at the surface to 15 feet below grade. Marriott will build a hotel on the site with a parking garage 30 feet below grade. He added that sometimes the wells are dry and sometimes the water is at 7 feet below grade. He will send me the 2011 closure report for my review. 2/8/12 - Raphael Ketani. Mr. Onufrak sent the Delta 12/31/09 Remedial Action Completion Report (RACR), the Delta 11/15/10 Follow Up and Mobile Multi-Phase Extraction Event Report (MMPEE) and the Anteagroup 9/27/11 Third Quarter 2011 Monitoring Report (GWMR). I reviewed all three reports. The RACR described the remaining soil contamination that was present after the tanks had been pulled and most of the soil
contamination had been removed. PBS case #2-272523 indicates that 16 tanks were removed. The end point results were very high along the northern border of the property with the five story brick building. However, there was a note on the map that these results were from before this soil was removed down to bedrock. There were high hits in the endpoint samples (5/1-19/06) from SW-4 (2.5') and SW-8 (11.5'), but these were at the western sidewalk. The MMPEE report stated that 525 gallons of total liquids had been extracted from the 3 wells. The GWMR contained data from the 7/8/11 sampling round for wells MW-1B, MW-6B and MW-7B. The majority of the analytical results were non-detect to 40 ppb of total xylenes. However, MW-1B had 300 ppb of MTBE, MW-6B had 560 ppb of MTBE and MW-7B had 45 ppb of MTBE. I determined that the 7/8/11 groundwater results were not a significant issue. Though Mr. Onufrak had sent me the 2011 closure report, I could not close the spill case. Certain pieces of documentation were missing. These were an architectural plan depicting the subterranean garage, its total depth, and the inclusion of a vapor barrier. Also, the developer needed to submit a statement in a letter indicating how much more excavation will take place, whether the soil under the sidewalk will be removed, and if not removed, what they will do about any contamination under there. 5/1/2012 - 1Q2012, 2/28/2012, by Antea Group. Groundwater sampled on 1/11/2012. MW-1B, 110 ug/L MTBE. MW-6B, 1.7 ug/L benzene, 610 ug/L MTBE. MW-7B, 1.6 benzene, 15 ethylbenzene, 80 xylenes. 25 ug/L MTBE. The next sampling will be in April 2012. Attached with the Mobile Multi-Phase Extraction Event report dated 11/15/2010 with the Remedial Action Completion Report dated 12/31/2009. Antea requests spill closure. DEC Hassan Hussein, Raphael Ketani and June Feng spoke to Mohamed Ahmed who is the consultant for the developer. He stated that they are the developer’s consultant who is responsible for meeting the OER’s e-designated requirement for the site. They will be overseeing whatever work that BP will be doing onsite. 5/2/2012 - email Chris Meyer for the clarification on what BP will be doing in addressing the soil (i.e. as shown in the endpoint smaples SW-4 and SW-8 located at the 10th Ave and 34th Street sidewalk) and the groundwater issues (i.e. BTEX and MTBE in the monitoring wells that installed into bedrock). DEC Raphael Ketani spoke to Chris Meyer. DEC required BP to remove the soil hot spots in the sidewalk, remediate the groundwater. And restating the requirement for building plan depicting the subterranean garage, its total depth, and the inclusion of a vapor barrier. And if they could not feasibly fulfill our requirements, they need to have a statement letter stating why they can’t do it. Mr. Meyer understand our requirements. 8/27/2012 - 2Q2012, 6/29/2012, by Antea Group. The groundwater was sampled 4/16/2012. The next sampling will be in 7/2012. MW-1B, BTEX ND, <0.5 MTBE. MW-6B, 27.5 BTEX, 570 MTBE. MW-7B, 93.8 BTEX, 33 MTBE. 3/29/2013 - 4Q2012, 12/27/2012, by Antea Group. The groundwater was sampled on 10/11/2012. the next sampling will be in 1/2013. MW-1B, 8.81 BTEX, 460 MTBE. MW-6B, BTEX ND, 470 MTBE. MW-7B, 42.4 BTEX, 28 MTBE. Observed increase or fluctuation of MTBE. 4/11/2013 - review 1Q2013. MW-1B, BTEX ND. 13 MTBE. MW-6B, 46.8 BTEX, 430 MTBE. MW-7B, 12 BTEX, 12 MTBE. Antea continues to conduct quarter monitoring and the previously requested monthly vacuum extraction events on the 3 bedrock wells. In the mean time, Antea Group requests to consider their previous submitted request for closure. 4/17/2013 - Present the spill closure to Jeff Vought. Spill closure based on: 1) Source removal: Tanks excavation in 2006 and removed soil down to bedrock. The weathered bedrock was removed and the bedrock was power

received call from Ms. Arnold. She works to correct the problem in good condition. No odors in backyard. 01/07/08-Hiralkumar Patel. Spill except a small portion of dirt area. Concrete in backyard found in hallway. Went to backyard. Found concrete surface in area of oil spill. Ms. Weinstein's apartment. No odors inside her apartment or in hallway. 01/04/08-Hiralkumar Patel. Visited site yesterday. Went to backyard using vacuum truck. Spoke with Raha Arnold, property manager. Explained her that as oil vent is lower in elevation, oil came out from old vent pipe and caused a spill. Asked her to stop any further oil delivery until fix tank system. Asked her to properly remove old vent pipe, repair gauge (as found faulty) and remove/plug fill port in front. Also asked her to hire environmental company to remediate contaminated soil in backyard. PBS #: 2-061484, as per PBS record, site uses #2 oil. Thomas (212-581-4407), building super. Apt. # 1FE. Raha Arnold Keystonemanagement.com spoke with Ray Lara at PTC. They were hired by management and they did cleanup on 12/29/07. Found mostly concrete in backyard, except one 2 ft * 2 ft dirt area. Ray took sample from this dirt area and will send it to lab for analysis. Found concrete in front where spill was. Sent CSL to Ms. Arnold requiring tank test, soil and/or groundwater delineation, endpoint samples and repair/ replacement of faulty gauge. Also required to close one vent and fill pipe. Letter emailed to Ms. Arnold.01/03/08-Hiralkumar Patel. Received call from Beth Weinstein (917-744-4377, Apt. # 1RE). She was out on vacation and on return, she found her apartment filled with oil smell. She is not comfortable and wants to check her apartment. 01/04/08-Hiralkumar Patel. Visited site yesterday. Went to Ms. Weinstein's apartment. No odors inside her apartment or in hallway. Went to backyard. Found concrete surface in area of oil spill except a small portion of dirt area. Concrete in backyard found in good condition. No odors in backyard. 01/07/08-Hiralkumar Patel. Received call from Ms. Arnold. She is working to correct the problem.

DEC Memo: 12/31/07-Hiralkumar Patel. visited site. Met crew from PTC. Site has 5000 gal #4 oil tank enclosed in concrete. Found two vent pipes connected to the tank, one in backyard and one in front of building close to fill pipe. pipe in front is open ended (tell tail). Tell tail pipe is higher in elevation then old vent pipe. During oil delivery, as tank got full, oil start coming out from vent in backyard and had a oil pool, before oil start coming out from tell tail pipe in front. Some oil spilled from front pipe on concrete surface. Most of spill was in backyard from old vent pipe. Found old unplugged fill port in front on sidewalk. PTC crew cemented old fill port. PTC cleaned oil spill in front and also removed oil from backyard using vacuum truck. Spoke with Raha Arnold, property manager. Explained her that as oil vent is lower in elevation, oil came out from old vent pipe and caused a spill. Asked her to stop any further oil delivery until fix tank system. Asked her to properly remove old vent pipe, repair gauge (as found faulty) and remove/plug fill port in front. Also asked her to hire environmental company to remediate contaminated soil in backyard. PBC #: 2-061484, as per PBS record, site uses #2 oil. Thomas (212-581-4407), building super. Apt. # 1FE. Raha Arnold Keystonemanagement.com spoke with Ray Lara at PTC. They were hired by management and they did cleanup on 12/29/07. Found mostly concrete in backyard, except one 2 ft * 2 ft dirt area. Ray took sample from this dirt area and will send it to lab for analysis. Found concrete in front where spill was. Sent CSL to Ms. Arnold requiring tank test, soil and/or groundwater delineation, endpoint samples and repair/replacement of faulty gauge. Also required to close one vent and fill pipe. Letter emailed to Ms. Arnold.

#### BROWNFIELDS:

- **Site Code:** 507330
- **Acres:** 1.430
- **HW Code:** C231094
- **SWIS:** 3101
- **Town:** New York City
- **Update By:** SRHEIGEL

**Site Description:**

Location: The site is located at 509-527 West 34th Street, 435 Tenth Avenue and 510 West 35th Street in the Borough of Manhattan, City of New York in New York County. The site is a portion of a city block and it comprises approximately 1.43 acres in size. The site is identified as Block 706, Lots 17, 20, and 29. Site Features: Lot 17 is approximately .07 acres and is vacant land. Lot 20 is approximately .49 acres in which the entire lot is comprised of one four-story garage, with a partial basement. The building is utilized as a parking garage, photography studio, artist studio, elevator services and mixed office and warehouse space. Lot 29 is approximately .87 acres in which the entire lot is a paved parking lot utilized for commercial truck rental and parking. Current Zoning: The current use of the site is vacant and used for commercial use. The site is currently zoned C6-4.Historical Use: Lot 20 - The existing garage building was built circa 1925 and utilized primarily as a parking garage since construction on the ground floor and basement, with light manufacturing on the second through fourth floors. Prior to 1925 this area was occupied by an iron and brass foundry circa 1890. Tenants of include an auto repair in 1968, an auto body shop in 1973 and Plato’s Retreat night club in the early 1980s.Lot 29 - The portion of the lot fronting West 35th Street previously contained a hatter’s fur cutting factory from approximately 1911 to 1950. A series of commercial and residential row structures previously existed along 10th Avenue and West 34th Street from 1890s through 1950. The building and residential structures were demolished sometime between 1950 and 1976. The lot has been utilized for open air parking since approximately the 1970s.Lot 17 - The lot formerly contained an electric company and conduits. A building was constructed in 1945 and condemned in 2007. Site Geology and Hydrogeology:

**Env Problem:** Information submitted with the BCP application regarding the environmental condition at the site are currently under review and will be revised as additional information becomes available.

**Health Problem:** Information submitted with the BCP application regarding the conditions at the site are currently under review and will be revised as additional information becomes available.

DEC MEMO: Prior to Sept, 2004 data translation this spill Lead_DEC Field was "TIBBE" 11/12/10 - spill re-assigned from Tibbe to Joe O'Connell 11/28/11 - Obligado - spill re-assigned from O'connel to Obligado 1/2/14 - Obligado - Spill No. 0304463 was reported when soil exhibiting a petroleum/chemical odor was encountered at boring location PE-19 during the advancement of geotechnical soil borings.
for the Number 7 Line Extension project on July 28, 2003 conducted by NYC transit authority. Boring PE-19 is located in the sidewalk on the south side of 35th street, approximately 50 ft east of 11th avenue. A PID was used to screen the soil for VOCs. PID readings of 100 and 50 ppm were obtained from soil samples collected from 25-27 ft bg and 30-32 ft bg, respectively. Soils did not exhibit visible staining. Bedrock was encountered in the boring at 45 ft bg. 1/6/14 - Obligado - Additional research identified the location of the contaminated boring/monitoring well at Block 706 and Lot 1. The boring/well is located in the sidewalk adjacent to 400 West 11th Avenue aka 555 West 34th Street, which is a Brownfield Site #C231049, managed by John Durnin in Central Office. According to the 2007 RI, MW19 was sampled in 2005 and had 3093 ug/L total VOCs, including 1160 ug/L BTEX. 1/7/14 - Obligado - As understood from correspondence with Central Office, as part of the BCP remediation area redevelopment the entire site has been excavated down to bedrock (as deep as 40 ft bg) so the source of contamination has been removed. According to DEC Durnin, the well has been destroyed during excavation. This spill no longer appears to be a threat to human health or the enviroment. This spill is closed.

Remarks: Soil borings done on behalf on NYC Transit authority reveal soil contamination.

DEC Memo: 10/21/09-Vought-Duty officer. Called Alex Averson (Cosmos Environmental (516)374-7890) and left message to return call to DEC.11/2/09-Vought-Received call from and spoke to Avracen. Basement elevator shaft is 6'x6'x4' deep. Oil came from hydraulic piston and the piston has been removed and the oil was pumped out. During construction phase of renovation, pit filled with water and water had sheen and odors. Pads have been placed in pit to contain sheen and he is proposing to Port Authority to powerwash the pit with soap and remove washwater and remove debris from bottom. Elevator shaft will no longer be used and he proposed to backfill pit and install new elevator pit above. Piston may be approximately 30' deep and he will propose to fill it with slurry. Last time product appeared in sheen one week ago. Avracen will send in email summary and proposal for
The spill was contained in the elevator shaft. The specific business location of the spill is the Port Authority bus terminal at West 40th Street and 9th Avenue. The business affected was Big Bowl, LLC - a bowling alley. The owner is the Port Authority of New York and New Jersey, 1 Madison Avenue, 5th Floor, Manhattan, 10010. I spoke to Alex Avracen of Cosmos Environmental (516)374-7890. He said that the spill had been completely cleaned up a while ago. He will send me the cleanup report and pictures.

10/15/10 - Raphael Ketani. Mr. Avracen sent me the 6/9/10 spill cleanup report that was produced by Cosmos Environmental Services. I reviewed the report and found that the site appeared to have been properly cleaned and the waste properly disposed of. As the oil was originally contained within the elevator shaft and didn’t migrate to the surrounding areas, and as the report indicated that the oil was removed and didn’t contain PCBs, I have determined that the impacts to the site were minimal. Therefore, the spill was no longer a threat to the public or the environment. I have closed the spill case.

Remarks:
Spill contained to elevator shaft/clean up pending

<td>DEC Memo:</td>
<td>205311. see eDocs. Apartment bldg at 527 West 34 Street referred to Spills Group 4/23/07 - Raphael Ketani. The spill was originally reported by Con Ed (Tom Marcimek (212) 580-6763) as they found 4 gals. of fuel oil in their VS #3863. The ERTSDESK for Con Ed (212) 580-8383 was the contact. I spoke to Pat at the ERTSDESK and he said he didn't have any more information on the spill into the transformer vault than what was already given to the DEC. He claimed it was coming from the apartment building at 527 West 34 St., NY. The building is managed by Downing Management Corp., 12 E. 49 St., rm. 1204, NY, 10017-8283, (212) 750-4299. The block and lot are: 00706/0017. I contacted the receptionist at Downing and she said that the super would call me back. 4/24/07 - Raphael Ketani. I never got a response back. So I made a site visit. The fill port for the building is right above the Con Ed transformer vault grating. Stains were slightly visible on the edge of the grating and on the wall below the fill port. Based upon the small size of the spill, the fact that Con Ed already cleaned it up, the location of the fill port right above the grating and no evidence of any other reason for the spillage of oil into the vault, I am closing the spill case. Remarks: LEAKED FROM A BUILDING FILLIN POINT: WILL BE CLEANED UP NO TO 5. 205311</td>

DEC Memo: 2/25/08 - City owned building (HPD) had a loose vent pipe fitting on
the top of the tank. Overfill caused 40-50 gal of #4 oil to spill to
the basement floor over the side of the tank. Eastmond was hired to
do the cleanup. SS.2/27/08 Cleanup is complete and EastCoast Boiler
is in the process of rebuilding the vent piping. Cleanup is complete.
SS.
Remarks: could be a broken pipe still investigating

**DEC Memo:** Prior to Sept, 2004 data translation this spill Lead_DEC Field was "DEMEO" Fall 2005; spoke to Renee Lewis of Eastman. DEC faxed him a letter to owner asking for information. No response. Previously assigned to "SX Dewes" in Albany office. 10/11/06 - Austin - Reassigned from Central Office staff to Piper, for follow up and closure - end 10/17/06 - DEC Piper Left message w/ Issaac looking for infopbs 2-606884330 West 36th St. Hotel Corp 41 Lincoln Street. S. Farmingdale, NY 11735 Dimitrios Bozirkidis7/12/10 - DEC Piper left message for Dimitrios 10/11/11 - DEC Piper mailed info request to Dimitrios. 10/14/14 TJDE - mail inquiry from Neil @Eastmond regarding project manager - includes closure documentation. Spill reassigned
from Piper to DeMeo. File review - as per PBS records (2-606984) 3K AST was removed on 8/1/04 and replaced with a 2K AST on 10/4/04. Based upon above notes no documentation has previously been provided pertaining to open spill file. Eastmond was retained by building owner/representative to perform soil borings in vicinity of previously removed 3K AST. A total of 4 soil borings were completed to a depth of 12 inches below basement grade (tank invert). All samples were submitted to an NYS certified ELAP laboratory - all analytical results are below allowable concentrations for target analytes in accordance with CP-51. Tank associated with reported spill has been removed. No further action is required. All documentation has been uploaded to DECODCS. No further action is required.

Remarks:
STAIN ON OIL TANK AND THEN EMPTIED AND WILL DO OTHER TESTING

Prior to Sept. 2004 data translation this spill Lead_DEC Field was "SANGESLAND"6/18/2002 - Sangesland received this spill report and could not make contact with anyone at the site by telephone. A check of PBS records indicated that no tanks had been registered. Sangesland
PARKING GARAGE (Continued)  
went to the site. It appears there are 3 tanks in the floor of this one story parking garage building. The top 1 ft of asphalt & soil was removed showing the top of the tanks. There was a strong smell of petroleum which required a large standing fan to vent the room. Sangesland was able to speak via phone with Romeo Santos (contractor). Mr. Santos stated that the tanks were still partially filled with a water/petroleum mixture and that Petroleum Tank Cleaners was scheduled to pump them out later this day (6/18/2002). Mr. Santos also stated that he expected to pull the tanks within the next day or two. Sangesland stated that no excavation work could be done on the site until the proper PBS forms had been filed. Once the forms were filed, the tanks could then be removed, and proper endpoint samples would be required to prove the site was clean. 6/19/2002 Mr. Santos hand delivered the PBS forms to the DEC office. 6/27/2002 Mr. Santos called DEC Sangesland to request permission to back fill the hole. He had test results from 5 soil endpoint samples (all non-detect). Sangesland said if they were non-detect then the hole could be back filled. Mr. Santos was told to submit a closure report which will include the endpoint samples, photographs, waste manifests etc. 8/15/2002 Sangesland reviewed a UST Closure Report submitted by Don Carlo Environmental Services Inc. (718-857-1800). * UST tanks were excavated and impacted soil was removed. * Manifests were provided. * End point samples were taken from each side wall and from the bottom of the excavation. * Soil tested for Method 8021- result was all NonDetect. Based on this report - Spill Closed

Remarks: 
ABANDONED 3 500 GALLON TANKS ARE FILLED WITH WATER CAUSING SOIL CONTAMINATION. REMEDIATION IN PROGRESS.

DEC Memo:
1/20/11-Vought-Primary off hours responder. Vought inspected PBS and found no registration at or close to site address. Vought inspected Spills Database and noted open spill #9000078 managed by DEC Ahmed at same site. As per spill notes for that spill from 10/25/10, DEC Ahmed “Received email from Lew Wunderlich of MTA. As per the email, The Hudson Yards Development Corporation (HYDC) contracted with the NYC Housing & Preservation Department (NYC HPD) to demolish the FEDEX building. NYC HPD completed the demolition in June 2010, removed the concrete fill tank, all contaminated soil and backfilled. The site has not been turned over to the MTA as of yet; however, this is anticipated by the end of September 2010. HYDC or NYCHPD would contact DEC in the future regarding this matter.” Vought noted that no CSL letter sent recently reflecting development of site for either spill number. Vought called spill caller (Rosemary Toussaint-Portes MTA Capital Construction 646-252-3291) for more information and left message to return call. 1/24/11-Vought-Received call from Rosemary and she spoke with DEC Ahmed on both spills. 2/8/11-Vought-Spoke with DEC Urda and Ahmed and this spill transferred to DEC Ahmed who will perform site visit and sent letter to MTA Capital Construction with cc to current property owner. Letter to possibly include requirements of: 1) delineation of soil and groundwater contamination 2) collection of endpoint samples 3) inclusion of statement that RAP must be approved by DEC prior to development 4) possible PBS registration requirements. Vought drafted CSL with below requirements: 1) PBS Registration 2) Collection of endpoint samples 3) delineation of soil contamination and Groundwater (if applicable) 4) installation of Vapor barrier/SSDS 5) inclusion of clause that RAP must be approved prior to development. 10/31/11-Hiral Kumar Patel. case transferred from DEC Hasan to DEC Patel. 12/08/11-Hiral Kumar Patel. alternate address: 528-556 W 34th Street, 527-551 W 33rd Street PBS #: 2-600488 other spills: 8910499, 9000078, 9007639, 9011459, 9300804 as per PBS # 2-600488, the site has/had following tanks: - one (1) 20,000 gal diesel UST closed-in-place in Aug. 1992- one (1) 5,000 gal #2 oil AST (in contact with soil), installed in Dec. 1993 and closed-in-place in Mar. 1996- four (4) 10,000 gal gasoline USTs closed-in-place- two (2) 10,000 gal diesel USTs closed-in-place- two (2) 10,000 gal #6 oil USTs closed-in-place in Aug. 1992- one (1) 500 gal waste oil AST (in contact with soil), installed in Jan. 1989 and closed-in-place in Jun. 2008- two (2) 275 gal waste oil ASTs (in contact with soil) were converted to non-regulated use spill #: 8910499 was reported on 02/02/1990 due to 20 gal #6 oil spilled on sidewalk due to overfill. case closed. spill #: 9000078 was reported on 04/04/1990 due to findings of contaminated soil during gasoline tanks abandonment. case is still open. spill #: 9007639 was reported on 12/24/1990 after finding low level of contamination in soil and groundwater samples. case closed. a notification for tanks abandonment on e-docs. spill #: 9011459 was reported on 01/31/1991 as suspected a leak from the 10,000 gal #2 oil tank. spill closed. spill #: 9300804 was reported on 04/16/1993 due to 5 gal #2 oil spill on sidewalk. case closed. Rose-May Toussaint-Portes Environmental Manager Sustainability and Environmental Management. NYCT. Ph: (646) 252-3291 email: rose-may.toussaint-portes@nyct.com 12/12/11-Hiral Kumar Patel. 11:32 AM: spoke with Rose-May and asked to submit UST closure report. 12:38
FORMER FED EX/ FUTURE #7 EXTENSION (Continued)

PM: received email from Rose-May including UST closure report.

Abstract: Site occupies three properties identified as lots 1, 5 and 54. Lot 1 was formerly occupied by half-story Copacabana nightclub. Historic use included a machinery warehouse and a motor freight station located on the western portion of the site. Lot 5 was formerly occupied by five-story Octagon nightclub. Historic use of the lot included an iron foundry, machine shop and potentially other unknown types of manufacturing or commercial uses located on the western portion of the site. Lot 54 was occupied by a three-story FedEx distribution center. Historic use of the lot included a foundry, a rail freight station, and a UPS facility and fueling station located on the eastern portion of the site. Six 10,000 gal USTs were reported to have been abandoned by FedEx on 02/07/1990, before taking occupancy of the site as a tenant. Following the demolition of the FedEx facility in 2010, the six USTs were removed.

------ anticipated redevelopment of the site will include a pedestrian entrance and stairway leading to the proposed 34th street station of the No. 7 subway extension, and the construction of a subterranean system building. Proposed developments of the site require extensive soil and bedrock excavation. Total of four single walled steel USTs were removed: one 12,000 gal fuel oil UST (which could be registered 10,000 gal #6 oil UST), one 550 gal fuel oil UST, one 1,000 gal fuel oil UST and one 550 gal gasoline UST. The 12,000 gal fuel oil (tank T2) and the 550 gal fuel oil (tank T3) were found in southeastern portion of the site, identified as grid C11. Tank T2 was located within a partial concrete encasement observed at the base and at the north/northeast sidewall of the tank, and appeared to be associated with a fill pipe protruding near the edge of the sidewalk along the W 33rd street. Tank T3 was not located within an encasement and appeared to be associated with an observed 3/4 inch copper supply/return line. Upon removal of tank T3, perforations were evident at the base of the 550 gal UST. Underlying soil conditions at both tanks T2 and T3 exhibited visible signs of petroleum contamination (PID readings ranged from 0.2 to 0.8 ppm). The 550 gasoline (tank T1) and the 1,000 ga fuel oil (tank T4) were discovered on the northwestern portion of the site, identified as grid B32. Tank T1 was observed to be encapsulated in concrete and contained residual liquid product. Based on field observations, tank T1 appeared intact, with no visible evidence of leakage or staining in the exposed soils surrounding the tank. Tank T4 was also observed to be encased in concrete. Upon removal, no perforations or cracks were observed. Found visible staining and PID readings up to 80 ppm in soils underlying tank T4. No fill ports, fuel piping, vent lines, dispensers, or other associated tank system components were encountered. Some perched water and stormwater was observed pooled at the site surface. Groundwater was not encountered during tank removal activities or during excavation efforts. Petroleum contaminated soil was encountered at three acres of concerns: two tank bed excavations of the USTs (tanks T1/T4 and T2/T3) and unknown historical contamination identified as Northeast Corner. Overall excavation was not limited to the specific areas of concern, and was extended vertically from grade to underlying bedrock, and laterally to the perimeter boundaries of the site. No VOCs found in endpoint samples. Some SVOCs found in samples. Endpoint samples were collected from each excavation, but then excavations were extended as part of the redevelopment project. The four removed tanks were registered (PBS #: 2-611659) based on UST closure report, case closed.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

**DEC Memo:**
Prior to Sept, 2004 data translation this spill Lead_DEC Field was "ROMMEL"/4/12/04-Vought-Spill transferred from Tomasello to Rommel as per Rommel.3/5/08 - Austin - Assigned to Ketani for further investigation - end5/5/08 - Raphael Ketani. I re-opened the case. There is no paper file. The spill was the discovery of oil contaminated soil in the process of closing some tanks. The discovery took place on 3/14/90. I tried to contact Don Scicutella of Federal Express in Manhattan at (212) 465-4310, but found out that the phone number belonged to a different business. The PBS case #2-600488 lists 13 tanks numbered #1 to #12 and #OO5. Tanks #1 to #12 had diesel, gas, #2 oil, and #6 oil. Tanks #3 and #4 are each 275 gals. and were converted to non-regulatory use. They contain waste oil. Tank #OO5 is 500 gals. and contains waste oil. Tanks #1, #2, #5 to #12 were closed in place. There is a local contact person and phone number, but the number doesn’t work anymore. The local Federal Express address is: 538 West 34 Street, NY, 10001. The main business address is: 3620 Hacks Cross Road, Bldg. B, 2nd Floor, Memphis, TN, 38125. I sent a CSL to the main business address for Federal Express.6/2/08 - Raphael Ketani. I spoke to Tony Gulla (goo-la) (973) 565-2305 of FED EX. He said that he talked to a number of people and no one can recall the spill. He said that FED EX just vacated the site. I told him that DEC has no documentation that the spill was remediated. So a new investigation needs to take place. I told him that the tanks are registered to FED EX. He asked for a copy of the PBS registration. I sent it to him by FAX (973) 565-2363.8/15/08 - Raphael Ketani. In
preparation for case transfer, I am annotating the database as regards what needs to be done at the site to resolve the alleged or known environmental contamination. A followup phone call and maybe a letter need to be sent to find out if an investigation is taking place. A subsurface investigation is needed for the site. 09/03/08-HRAHMED-Charla Reinganum of FedEx (847 215 4115) called, she is the Project Manager for this case. She asked for any documentation that DEC might have. DEC Ahmed would look for any documentation that DEC might have and call her back. Ahmed found another spill case 9007639, that might be a duplicate of this case.09/04/08-HRAHMED-Ahmed Called Charla to inform that no paper documentation was found. Ahmed suggested charla to find any kind of documentation that support that remedial action was taken place. Charla will call back in a week with feedback. 9/15/09 - Raphael Ketani. Lou Wunderlick of the LIRR called today. He wanted to know whether FEDEX had or was going to initiate a remediation project at the site. He said that work was taking place at another part of the site and they are recovering a lot of oil. I told him that Mr. Ahmed is out of the office for a couple of weeks. He said that he will try and contact Ms. Reinganum to find out if FEDEX is going to do anything about the USTs under the site and the released oil. 10/25/10-HRAHMED-Received email from Lew Wunderlich of MTA. As per the email, The Hudson Yards Development Corporation (HYDC) contracted with the NYC Housing & Preservation Department (NYC HPD) to demolish the FEDEX building. NYC HPD completed the demolition in June 2010, removed the concrete fill tank, all contaminated soil and backfilled. The site has not been turned over to the MTA as of yet; however, this is anticipated by the end of September 2010. HYDC or NYCHPD would contact DEC in the future regarding this matter. Contact for MTA: Lew Wunderlich Env Construction Manager MTACC - Env & Sustainability Services lwunderlich@mtacc.info 646-252-3152 (O) 347-237-6249 (C)2/8/11-Vought-See also open spill #1010766 at same location. 10/27/11 - Austin - Transferring this case from Ahmed to Ketani. end12/08/11-Hiralkumar Patel. after discussing with DEC Austin, case transferred from DEC Ketani to my name as working on other spill #: 1010766 at the subject site. alternate address: 528-556 W 34th Street, 527-551 W 33rd Street PBS #: 2-600488. other spills: 8910499, 9000078, 9007639, 9011459, 930004as per PBS # 2-600488, the site has/had following tanks:- one (1) 20,000 gal diesel UST closed-in-place in Aug. 1992- one (1) 5,000 gal #2 oil AST (in contact with soil), installed in Dec. 1993 and closed-in-place in Mar. 1996- four (4) 10,000 gal gasoline USTs closed-in-place- two (2) 10,000 gal diesel USTs closed-in-place- two (2) 10,000 gal #6 oil USTs closed-in-place in Aug. 1992- one (1) 500 gal waste oil AST (in contact with soil), installed in Jan. 1989 and closed-in-place in Jun. 2008- two (2) 275 gal waste oil ASTs (in contact with soil) were converted to non-regulated uses. spill #: 8910499 was reported on 02/02/1990 due to 20 gal #6 oil spilled on sidewalk due to overfill. case closed. spill #: 9000078 was reported on 04/04/1990 due to findings of contaminated soil during gasoline tanks abandonment. case is still open. spill #: 9007639 was reported on 12/12/1990 after finding low level of contamination in soil and groundwater samples. case closed. a notification for tanks abandonment on e-docs. spill #: 9011459 was reported on 01/31/1991 as suspected a leak from the 10,000 gal #2 oil tank. spill closed. spill #: 9300048 was reported on 04/16/1993 due to 5 gal #2 oil spill on sidewalk. case closed. during review, found a groundwater investigation report on e-docs under the

MAP FINDINGS

--- 145) 05/05/2008: DEC Ketani sent letter to FedEx requiring submission of an investigation report.
6) 10/28/2008: response from FedEx to DEC's letter dated 05/05/08: David Jensen from FedEx sent letter to DEC Hasan. He mentioned that FedEx leased the property in Oct. 1988 and retained IT Corp. in 1989 to abandon the tanks. As per Mr. Jensen, the property was under renovation during the time of tank abandonment and FedEx was not operating at the site.
12/12/11-Hiralkumar Patel.

1:23 PM: spoke with Rose-May. She mentioned that all the buildings on site were demolished including the former FedEx building. They have dug down to bedrock in most of the site, but not planning any excavation in former FedEx building area and there will be a building in future. She doesn't know the future use of the former FedEx building area. She mentioned that the six tanks under the former FedEx building basement were removed by HPD in 2010. She will send copy of tank removal report.
2:40 PM: received email from Rose-May. She mentioned that HPD handled removal of six USTs below the basement slab and a storage tank sitting on the basement slab under the entrance ramp area. 12/13/11-Hiralkumar Patel.

10:15 AM: spoke with Mr. Mathew at NYC HPD. Asked him to submit documents about all tanks removed by HPD from the subject site. 10:18 AM: sent email to Mr. Mathew requesting copies of all tank removal reports. Email copied to Rose-May, Chacko Mathew, NYC HPD.
Ph. (718) 636-3320 (718) 623-9911 (917) 578-4679 Fax (718) 636-3325 email: mathewc@hpdnyc.gov

2:06 PM: received email from Rose-May. She mentioned that HPD's letter to DEC Hasan. He mentioned that FedEx leased the property in Oct. 1988 and retained IT Corp. in 1989 to abandon the tanks. As per Mr. Jensen, the property was under renovation during the time of tank abandonment and FedEx was not operating at the site.

12/12/11-Hiralkumar Patel.

Spiller Company: 999
Contact Name: ROBERT HILL
Contact Phone: 7188557272
(718-855-7272, roberthill@petroleumtek.com). The spill is in the
boiler room in an apartment building. One of the valves was loose and
leaked the oil onto the floor. The floor is concrete. The tank and lines have no sign of problems. They checked the problem valve and confirmed there is no more leaking, and turn the heating system back on. At this time, they were on scene for 30-35 minutes and the cleanup is ongoing. They recovered (2) 55-gallon drums, (11) 5-gallon buckets. Approximately 200 gallons #6 oil has leaked. No vapor complaint have been received so far. Spill is assigned to the Runner of the day, R. Piper. He might stop by this afternoon to inspect the site. DEC Piper spoke with rob hill. Riteway is in process of powerwashing boiler room. Approx 125-150 gal of product was recovered via buxkets and drums. Remaining oil was vacced out. DEC Piper inspected site on 11/26/13- Area was clean though globules remained in sump. Required bldg to maintain absorbents in sump for several days. Report to follow. 5/26/15- DECPiper received and reviewed closure report. Based on work to date, this spill is closed. See Dec Docs if warranted.

Remarks:
CLEAN UP IN PROGRESS. SPILL CONTAINED IN THE BASEMENT

DEC Memo: Prior to Sept, 2004 data translation this spill Lead_DEC Field was
"O'CONNELL"5/18/01 Forwarded to Sangesland for follow-up.e2mis
137167Ray Browne #21646, I&A Supervisor, reported at 12:08 hrs. that
Tony D'Alleva #355, I&A Mechanic, found at 11:30 hrs. approx. 1 pint
of #6 fuel oil had spilled into manhole M07181 located at 304 West 38
Street a.ka. 555 8th Avenue. Staff noticed oil in the service ducts
and a 6 inch stain of oil on the concrete floor of the manhole. They
went into the building and discovered that there was a leak from the
building fuel oil standpipe which stained the interior building wall
and had migrated through the service ducts into our manhole. Ray
Browne stated that the building supt. remarked "that it only leaks
when the fuel tank is filled". This is a 3rd Party Spill. The source
of the spill is the building #6 fuel oil tank and the cause is a leak
from the fuel oil standpipe. The buildings private property was
affected by their own oil. There is no evidence of release to sewer or
waterway. There is oil filled equipment in the structure (PILC
cable). Samples will be taken for PCB and flash point. The I&A was
instructed to pack the ducts to prevent further migration of oil and
to place absorbent pads and oil absorb.Update 5-18-01 @ 19:40 As per
lab sequence #01-05818-001 PCBs <1 ppm.UPDATE 11/2 @ 05:05J. Selesky
# 20525 informed me that the cleanup was completed / @ 05:00 HRS.
Flush truck removed oil and water and one(1) drum of solid waste (PPE's
and Diapers) was removed to the St yard. The structure was
Double-washed with "Slix" solution and the Environmental tag # 16960
was removed.

Remarks: 1 pint spill orginated in building fuel stand pipe system, migrated
through the duct work and into manhole. spill covered and cleaned up.

DEC Memo: 6/29/05 Tipple responded to site. #2FO covered floor in basement room. Demolition contractor appeared to have cut hole in tank while working in room, the 5000 gal. tank must be registered for removal. Building houses many recording studios and a club on the first floor, preventing olfactory impact to the populated areas is of upmost importance. Aarco Env. finally arrived with the Vac truck for product
STUDIO FILM LABS (Continued)

removal and began cleanup. Product to be removed, final power wash may be completed Wed AM. 10/21/05 - Raphael Ketani. The associated PBS case is #2-192309. The 5,000 gal. tank has been closed and removed. I left messages for Jack Dickinson of ARCO Environmental ((631) 586-5900) and Henry Harde of GTO Construction ((914) 665-3600 asking them to call me back with information regarding the spill. 10/25/05 - Raphael Ketani. Henry Harde of GTO Construction called me back to say that his company was just the contractor for the cleanup. He said that the environmental company overseeing the work was Sextant Projects and that the person in charge was Walter Mystkowski ((631) 663-3144 cell). I called up Mr. Mystkowski and he said his company was in charge of the project. He asked for my e-mail address so that he could electronically send me the remediation report (wmyst@optonline.net). 12/21/05 - Raphael Ketani. I called Mr. Mystkowski and he said the submission of the remediation/cleanup report was being held up by a billing dispute between ARCO Environmental and Sextant Projects. I called up Mr. Dickinson of ARCO and he said he would send the report to me. 1/4/06 - Raphael Ketani. I left a message for Mr. Dickinson requesting the remediation/cleanup report. 07/20/06: This spill is transferred from Mr. Koon Tang to Q. Abidi. Contacted to Mr. Jack Dickinson ((631) 586-5900) he said he will find out about the spill report and he will fax it to me at the earliest. -QA 07/24/06: Called Mr. Jack Dickinson regarding report of spill and left message to call me back. -QA07/25/06: Contacted Mr. Jack Dickinson on phone ((631) 586-5900) he said he didn’t take any soil sample he will send me waste manifest report and closing confirmation letter by fax today. -QA08/09/06: Called Mr. Jack Dickinson and asked to find out is there any cracks in the basement floor or not. He said he will find out about it and he will fax me the letter very shortly. -QA08/18/06: Called Jack Dickensen for closing confirmation letter. He was not there left message to call me back. -QA08/21/06: Called Jack Dickinson (AARCO) at (718) 586-5900 He said that he will send letter for closing the spill at the earliest. Called Mr. Walter Mystkowski at (631) 663-3144 (cell) for sending report. He said he will talk to contractor GPL Construction then he will call me back. -QA08/25/06: Called Mr. Walter Mystkowski to remind him to send report and left message to call me back. -QA09/07/06: GTL Construction notified # 2 fuel oil in office building basement. GTL contacted to AARCO to respond emergency clean up. According to the letter of operational manager (GTL Construction) Liquid vacuum truck recover 1,805 gallons of #2 Fuel oil/water. The load transported and disposed at N.Y. oil recovery under manifest. On the basis of information DEC Staff closed this spill. -QA

Remarks:
Caller estimates spill is a few hundred gallons. Material covers the entire floor to a 20 x 20 room. Looks like the breather valve broke (that is a guess) GTO Construction is on site. Spill is contained in the room (subfloor 12ft down). Unknown if spill is ongoing. No clean up at this time. Clean up crew ETA is 30min.

**Tank Test:**

IS INTENDING TO COMMENCE WORK.9/8/05 - Raphael Ketani. Levent Eskicakit (es ki cha kit) of Athenica Environmental Services ((718) 784-7729; cell (347) 556-7787), 45-09 Greenpoint Ave., LIC, NY, 11104) called me today to inquire as to whether the spill case can be closed. The owner is Makkos & Sons Realty, 349 W.37 St., NY, NY, 10012. The owner contact is William Castoro. Mr. Eskicakit told me that the spill happened in March 2004 due to an overfill and was noticed by the restaurant owner of Hells Kitchen next door due to odors entering through the wall. The spill took place on a concrete floor and was cleaned up in March. Soil samples were taken below the floor and were clean. The odor abated soon after the spill was cleaned up. PID readings in the restaurant were zero after the spill was cleaned up. In 10/16/04, a report of the results was submitted to DEC Spills. Mr. Eskicakit is looking for a closure letter for the spill. I reviewed the case and found that the tank has a capacity of 1,000 gallons. So it doesn’t need to be registered. However, there is no information regarding repair of the broken petrometer, which may have been the cause of the overfill spill in the first place. I will write a letter requesting documentation of the repair of the petrometer before a spill closure can take place. The letter was sent today. 12/20/05 - Raphael Ketani. I am closing the case because there is a spill closure report dated October 16, 2004 stating that there were no exceedences of TAGM 4046, that the spill was only 10 gals., and that the spill was completely cleaned up.1/19/06 - Raphael Ketani. Mr. Eskicakit called requesting an NFA letter. I sent it.
Tank Test:
Material:
Clean up in progress.

Remarks:
Backfilled. OK to close.

Sangesland spoke to Mark at PTC. He said PTC did some minor repair work to the vent line. As part of this work PTC removed about 1/2 drum of contaminated soil from the area. All is now clean and backfilled. OK to close.

Tank Test:
Prior to Sept, 2004 data translation this spill Lead_DEC Field was "SANGESLAND".Sent TTF letter to consultant:Maria Ramirez, GZA, 65 Willowbrook Blvd, Wayne, NJ 0747011/5/2003 Sangesland spoke with Maria Ramirez at GZA. She says the building is converting to natural gas and the 10,000 gal tank will be abandoned in place. Tank is below the basement floor under an electrical utility room. They cleaned out the tank and found holes in the top 1/3 of the tank. They will take borings through the bottom of the tank to determine if the area is contaminated.12/4/2003 e-mail message from Maria Ramirez said the soil borings through the bottom of the tank would take place around 12/12/03.12/11/2003 Sangesland reviewed a submittal from Maria Ramirez of GZA dated Nov 19, 2003. This outlined the the work discussed above and stated that 4 holes will be drilled through the bottom of the tank and samples will be collected for testing (if possible-it may be in cement). If the samples are clean, the tank will be abandoned in place with foam.12/22/2003 Sangesland spoke with Fran Schultz of GZA about this site. They made 4 holes in the bottom and sides of this tank and hit cement. Water is entering the tank. To date approx 700 gal of water has entered the tank. They believe the water is from a broken water main. Sangesland asked GZA to test the water for VOC and SVOC. GZA said they would also test for Floride and Chlorine to determine if this water is city tap water or groundwater. If the water samples come back clean, then GZA will prepare an argument that the tank is in a subbasement vault. All records of the building (blueprints) are gone (they were in 7 World Trade Center). There are lots of utilities nearby. The tank is being abandoned in place. GZA will request closure of the spill number 3/15/2004 Sangesland reviewed a report from Maria Ramirez of GZA. Based on the description of the tank location (below ConEd electrical equipment), the drilling of holes through the bottom and sides of the tank (all into cement), results of water tests on the water that came into the tank after drilling (no petroleum but did have Floride & Chlorine). Based on all of this information, the DEC will allow GZA to go ahead with abandonment of the tank. After proper abandonment is complete, GZA will submit a final report with a request for spill closure.11/14/05 - Larry Alden - Reviewed file and concur with assessment of Sangesland (3/15/04). Reviewed PBS# 2-606121, which showed that 10,000-gallon tank was closed in-place on 7/8/04. With absence of any contamination, and tank subsequently closed, this spill can be closed.

Remarks:
failed a tighteness test but could not isolate a specific pipe - testwas performed as part of a closure.

- **DEC Memo:** Prior to Sept, 2004 data translation this spill Lead_DEC Field was "VOUGHT"11/26/02 - The amount of spill is about 300 to 400 gal which calculated from tank contains and delivery. Nothing visible on

street. RP assuming that product seeped in the building wall to soil. Ken's Marine is hired. DEP and Con Ed were notified. DEC Vought went on scene. jz side fill line broke. nothing visible outside street assuming product seeped into building wall to the soil.11/27/2002-Vought-Spoke with Maria Ramirez (GZA). Sidewalk has been removed and excavated to a depth of 4'. Fill line was cut and plugged. Small pinholes found in fill line. Excavation dimensions are 15'x9'x8'. Six endpoint samples collected for analysis. Impacted material still present against building. Water line 8’ deep and 6’ away from building wall running parallel to wall. GZA will remove impacted material from under water line on 12/2/02. Fill line will be replaced Tues 12/3/02 and NYSDEC will receive report by 1/15/03.Gerry Marzano 212 615-9915 cell 646-296-0538 7/24/2003-Vought-File review by Vought:Remedial Action Report-Jan 2003-GZA-Report requests No Further Action. Spill occurred during oil delivery on 11/26/2002 during which oil was observed seeping up through seam between sidewalk and building. Spill cleaned using speedy dry and sorbent.

TC4381152.2s  Page 2308
SOLOMON SMITH BARNEY/CITI (Continued)  

pads. Several hours later oil was observed seeping through basement wall near fill line. Based on petrometer readings and estimated 300-400 gallons of oil was discharged. Fill line was removed and replaced and endpoint samples indicated residual fuel oil impacts in soil. Groundwater estimated at a depth of 20' and flows towards the west. Excavation initially took place to a depth of 7' and was backfilled. On 12/8/02 fill line was replaced. Endpoint samples from initial excavation did not pass TAGM 4046. On-site structural engineer advised that excavation depth not exceed 12'. After 12' depth was reached two additional endpoints were taken. Excavation was backfilled and repaved. No sewers or drains affected. The final area of the excavation measured 8 feet wide (north to south) and 12 feet long (east to west) with the additional area measuring 2 feet wide and 4 feet long on the northern portion of the excavation. Fill line was rusted with corrosion holes. Groundwater was not encountered. A total of eight endpoint soil samples were taken. Bottom endpoint soil samples had minor PAH exceedance due to fill nature of material. Southern sidewall had 47200ppb napthalene and 13000ppb xylene however further excavation was performed and only minor PAH exceedances were detected from subsequent endpoint samples. A total of 53 tons of impacted soil was removed from the Site (disposal manifest provided). Spill closed by Vought.

DEC Memo:
Prior to Sept, 2004 data translation this spill Lead_DEC Field was "DEMO"5/15/03 - ROSSAN, DDO - Contaminated soil letter was prepared and sent to: Ms. Kay Zias NYC Economic Development Corporation 110 William Street New York, NY 10038/10/04 TJDClosure report submitted by Metcalf & Eddy Consulting Engineers. Three tanks were removed from property and approximately 81 tons of contaminated soils were excavated and disposed of under manifest. Site is a NYC Pier which extends over Hudson River. The tanks formerly were located in an area supported by piles on a concrete slab. The soils between the slab and tanks and the soils above tank to grade are those which were excavated and disposed in accordance with applicable regulations. Endpoint sampling was performed which revealed minor exceedances to TAQM likely due to the historic fill material on site. No further action is required. Spill closed.

Remarks: DURING DEMOLITION OF PIER SOIL SAMPLES WERE TAKEN AND ANALYTICAL RESULTS SHOW CONTAMINATION

- DEC Memo: 2/11/15-Vought-Duty desk officer. Received email on 2/10/15 from OER Chawla that "Jeff: This spill was opened yesterday, let me know who this is assigned to so that we can coordinate site activities. thanks. Shaminder Chawla". Vought sent reply that "Shaminder, I was on the duty desk so the spill will be assigned to me for now. If it turns out to be a longer term issue I will assign it to Ryan Piper who was on for the day as project manager. Please send me all available reports you have on hand. Note as well I will be at FDNY Hazmat training for three weeks beginning 2/23 so as such I may transfer the project accordingly. -Jeff." Vought spoke with DEC Piper who noted that HydroTech (Paul Matli) left message on duty desk phone and Piper forwarded Voughts email to HydroTech (Matli). Email from OER Chawla contains string that had email dated 2/10/16 from HydroTech (Matli) to OER Chawla and Morris that "Samantha and Shaminder - this is to inform you that a spill case was reported at above site for the presence of elevated levels of gasoline-related VOCs in soil and soil vapor samples collected during the RI. Spill # 1410808 was issued to this release. I will try to have the RIR and
SUNOCO GAS STATION /SAN- RUV LLC (Continued)

RAWP ready by next Monday for your review. Regards." Vought called and spoke to HydroTech (Matli) and he noted that he would have RIR and RAWP ready for review by 2/17/15 and he would submit them to both DEC and OER.04/15/2015 - V. BrevedoAs per discussion between Spill Response Section Chief and Remediation B Section Chief, this spill case is transferred to the Remediation Section B for project management. Spill Case is further assigned to Ms. Ainura Doronova as Project Manager.

VB04/16/2015: Received the following e-mail from Mr. Matli:"Ainura - Please advise on your requirements in terms of delineation and remediation at above Spill Site. We need to pass these requirements on to our client and also his PE who will have a final say on the depth to bedrock and assessment of the decreased depth to GW beneath the Site after we installed the bedrock wells. Regards, Paul I. MATLI." Responded with the following:"Paul, As you aware, this case was transferred to me yesterday. Please expect standard review period (up to 45 days) for submitted documents. If you need expedited review due to some site specific circumstances, please let me know. Sincerely, Ainura Doronova." Received the following response from Mr. Matli:"Ainura - the developer is set to start remedial excavation beginning of May and he has a contract to complete the foundations within a specific deadline. Is Jeff still involved with this spill case as he has the background info for this site. Regards, P. Matli."04/20/2015: Looked into report. Groundwater data indicate high levels of VOCs. There is a shallow bedrock at the site. Called and left a message to P. Matli. AD04/23/2015: Called and spoke with P. Matli. Discussed the site status. Requested to submit a RAP for review and approval. He asked for a written request for the RAP. Sent him the following e-mail:"Hi, Paul: Please submit a detailed RAP for the site for DEC’s review and approval. It should include scaled site plan with limits of the proposed excavation, post-extraction soil sampling intervals and community air monitoring plan. Sincerely, Ainura Doronova." RAP is due. AD06/11/2015: Called and spoke with P. Matli regarding submission of the RAP. He said that it is postponed due to some issues with the re-development project. Asked him to send me an e-mail. ADLater in the day received the following e-mail from Mr. Matli:"Ainura - due to delays in pulling out DOB permits, the site remedial activities have been postponed and as such no excavation activities have taken place at above spill site. The RAP requested by your office to address the above referenced spill case will be prepared shortly. Regards,

___Paul I. MATLI, Ph.D.Hydro Tech Environmental,
Corp. Main Address: NYC Office15 Ocean Avenue, 2nd Floor (Suite B),
Brooklyn, NY 11225 Cell: (631)-241-7165 Tel: (718) 636-0800 Fax: (718)
636-0900pmatli@hydrotechenvironmental.com*AD07/07/2015: Received an
e-mail from P. Matli with the attached RAP. Will review.
AD07/13/2015: Reviewed the RAP. It states that the proposed new development at the Site will consist of a new 5-story commercial building with a full cellar. The cellar will be utilized for mechanical and utility services and accessory uses and the first to fifth floors will be occupied by an auto dealership. The proposed development will encompass the entire property footprint for a total gross floor area of approximately 29,998.60 square feet. The entire Site will be excavated to a depth of 12’-6” for the layout of cellar foundations and to 17’-6” for two elevator pits in the southern portion. Building foundations walls will be 1-foot thick and will be poured against a waterproofing Grace Prepruf 160R membrane.
Building slab will be 5-inch thick and it will be installed atop waterproofing Grace Preprufer 300R membrane and 6 inches of gravel. No open or landscaped areas are proposed as part of this development. The remedial action will be conducted during the site development through the following activities: 1. Closure and removal of USTs: The six USTs identified in the southeastern portion of the Site will properly closed and removed prior to Site development activities in accordance to NYCDEC DER-10. Endpoint samples from the excavated tank pit will be collected in accordance with NYSDEC DER-10 Technical Guidance for Site Investigation and Remediation, May 2010. Since the excavation around the USTs will further extend vertically and horizontally for the layout of building foundations, the USTs endpoint soil samples will be collected in conjunction with post-site excavation endpoint soil once the foundation depth is reached. 2. Excavation of VOC-contaminated soil and collection of end-point samples. The excavation will extend to a depth of 12'-6" for the layout of the cellar foundations across the entire site and to 17'-6" for the elevator pits. Groundwater dewatering will be performed per permit requirements from NYCDEP. This excavation will extend roughly 2 feet within the bedrock present beneath the property. Final volumes of contaminated soil will be provided in the form of waste manifests. All excavation work will be conducted with a Health & Safety Plan and a Community Air Monitoring Plan that have been approved by the OER. Once all accessible petroleum-contaminated soil is removed, end point samples will be obtained in accordance with NYSDEC DER-10 regulations. End point samples will be collected every 30 linear feet of sidewalk and 900 square feet of excavation bottom. 3. Installation of off-site bedrock wells for post-remediation groundwater monitoring via monitored natural attenuation (MNA): The two on-site wells MW-1 and MW-2 will be destroyed during excavation and will be re-installed along with one additional well designated MW-4 following the removal of source of contamination. MW-4 will be installed at the location of the former USTs. The three monitoring wells will be installed within the bedrock, utilizing a track rig unit equipped hollow-stem augers and rock core drilling tools and technology. As the entire site will be excavated to the depth of bedrock, there will be no groundwater remediation performed at the site. Hydro Tech will then implement a monthly monitoring and quarterly sampling program to monitor the natural attenuation of contaminants in groundwater. The monitoring program will be performed throughout the duration of the construction for an estimated period of 16 months. As part of this program, the off-site monitoring well and the three on-site wells will be monitored on a monthly basis and sampled on a quarterly basis. 4. Installation of a waterproofing vapor barrier system beneath the new building foundations and along the exterior walls. This task will be managed by the OER. 5. Reporting: A Remedial Closure Report will be submitted to the NYSDEC and will document all remedial tasks described in this RAP including installation and sampling of monitoring wells, post-excavation endpoint sampling results, copies of soil waste disposal and transportation manifests, tank NYSDEC PBS registration and tank affidavit, vapor barrier installation, laboratory analyticals, diagrams and photographs of fieldwork. The results of the monthly monitoring and quarterly groundwater sampling program will be submitted to the NYSDEC in the form of quarterly status reports. The RAP seems to be adequate to address the site contamination. Called and spoke with Mr. Matli regarding well MW-4, if it will be destroyed.
**SUNOCO GAS STATION / SAN- RUV LLC (Continued)**

During the construction, Mr. Matli is not sure if the sidewalk will be excavated, but assured that this well will be replaced if destroyed. Will discuss the RAP with J. Kelleeny of DER.

**AD07/14/2015:** Discussed the RAWP with J. Kelleeny of DEC. Will request info regarding possible de-watering at the site, if groundwater is encountered during excavation activities. Called and spoke with Mr. Matli. He assured that they will de-water if necessary, and that such activities are stated in the construction plans. Will issue an approval letter. **AD07/15/2015:** Issued and sent an approval letter to Sam Ruv of Samruve Operating Corp with the following comment: "A decision regarding spill case closure will depend on the end-point soil sampling results and post-remediation groundwater analytical data." **AD**

**Remarks:**

Tests confirm contamination in soil and soil vapor

DEC Memo: Spill Case is part of a long term Brownfields project. March 2009: As part of the Site BCP Project, all the on-site soil was removed to bedrock during the fall of 2007. During this process, an unknown UST was discovered and reported as Spill No. 0706755. The UST was decommissioned and properly removed from the site during the soil removal activities and therefore this Spill is closed. J. dunin

DEC Memo:
need to contact either jeff bohlen at envirotack (631-471-1500) or Jerome Kung at verizon (212-338-6754) to determine what work is being done on the site. No letter has been sent yet. 06/21/05-SR// Spoke with Jeff Bohlen(516-807-8983). He will forward all necessary documents to DEC.10.07.05 Sharif is currently reviewing the subsurface investigation report submitted by Envirotack.3/20/06 - DEC Piper reviewed tank closure report. As per report and database, there are two historic spills at the property, 9007995 and 9314833. In 1994, two 4K gasoline USTs were removed, and two 3K gasoline UST were installed. Samples collected from the limits of the excavation detected petroleum impacted soils in the vicinity of these USTs. Additionally, 8-550 gal USTs are located in the basement of the property. These tanks were allegedly closed along w/ the two 4K gal USTs. SVOC’s were detected exceeding NYSDEC TCLP guidance values. Spills 9007995 and 9314833 were closed on 8/6/96 after receipt of tank closure reports for the 2 4K USTs and 8-550 USTs. In June-August 2005, seven (7) MWs were installed on site. Lab analytical
revealed VOC’s, SVOC’s, and metals above TAGM 4046. Note: the groundwater was determined to be slightly to moderately saline. From Jan 6-11, 2006, Envirotrac removed the two 3K gasoline USTs that were installed in 1994 and constructed of double wall fiberglass. A total of six (6) endpoint samples were collected from the excavation. With the exception of the West sidewall in which 226 ppb of benzene was detected, no other VOC’s were detected above TAGM 4046. Additional excavation was performed in the area of the two-4K UST remote fills and the two-3K UST remote fills. Analytical results suggest that VOC’s were not present above TAGM 4046, however SVOC’s were. In addition to the sampling performed in reference to the UST’s, soil samples were collected at the base of the Truck Elevator Shaft where it was determined that VOC’s and SVOC’s were detected above TAGM 4046, due to a bad seal. To minimize any future impact, the seals were replaced and vegetable oil was used in place of pet. based hydraulic oil. As per the report, the property is currently in negotiations to be sold. This party reportedly plans on razing the building and excavating to bedrock. ~45 feet bgs. In the meantime Envirotrac recommends quarterly sampling of the MW network. Referred to K. Tang 3/21/06 - reviewed the tank closure report. Soil and GW contamination is minimal, max GW VOCs is ~200 ppb and only one side wall sample is slight above TAGM 4046. Spill closed. - KST

Town: New York City  
Update By: JAQUINN  
Site Description: Location: The Site is located at 555 West 34th Street, also known as 400 Eleventh Avenue, between 10th and 11th Avenues in Manhattan, New York City.
**WEST 34TH STREET DEVELOPMENT PROJECT** (Continued)

York City, New York County. Site Features: The property is identified as Block 706, Lot 1 in New York City’s tax records and consists of a 37,800 square-foot (1.020 acre) rectangular-shaped vacant parcel. The surrounding urban area consists primarily of retail and commercial business. The Amtrak Railroad tunnel (and easement) runs through the northwest corner of the site. Current Zoning/uses: This site was designated as C6-3 on the NYC Zoning Map 8b which is a general central commercial district. This site is also an e-designation requiring NYCDPR approval. In January 2005, this site was rezoned as part of the City-led Hudson Yards District to allow for commercial and residential uses. The NYC MTA constructed a permanent entrance in the middle of this BCP site for the 34th Street Station of the No. 7 Subway Extension. Historic Use: From 1890 to 1962, the site was used for commercial, residential, and manufacturing including a wagon house, black smith shop, electrical supplies and a warehouse. In 1973, the most recent business that covered the entire site was a 2-story commercial communications facility including numerous petroleum underground storage tanks (USTs). Six petroleum spills have occurred at this site between 1990 and 2007. Site Geology and Hydrogeology: The site is approximately 25 feet above mean sea level. Groundwater is 17 feet to 32 feet below ground surface. Surface water and groundwater flow is towards the Hudson River which is approximately 1,500 feet to the west of the site. The subsurface soil profile consists of urban fill overlying sand and silt deposits. Bedrock is located between 15 and 25 feet below grade. Between 2007 and 2012, all soil above bedrock was removed and replaced with clean fill. 12/19/12-DEC signed the Certificate of Completion for this site.

Not reported

Remediation at the site is complete. Prior to remediation, the primary contaminant of concern was low level petroleum (diesel/gasoline) in soil and in shallow groundwater.

No site-related contaminants of concern were identified beyond the boundaries of the site, therefore no exposure pathways exist.

---

<td>DEC Memo:</td>
<td>Prior to Sept, 2004 data translation this spill Lead_DEC Field was &quot;SANGESLAND&quot;11/15/2001 - Transferred to Sangesland from Hall (visiting DEC responder from upstate) Marcus Simons (AKRF - 212-340-9790) is working on the site for the Hudson River Development Project (city-state park) Near the Circle Line dock at 12th Ave &amp; 43/44th St they found oil contaminated soil and some free product in a tesp pit. AKRF somehow has records or hear say that the Port Authority used to have a 20,000 gal fuel oil tank in this area (no PBS records exist). He does not know if this tank has already been removed or abandoned in place. AKRF plans on doing additional excavation in the area for their construction project, but they may or may not excavate out all of the contamination. Sangesland told Mr. Simons to provide a report, after their delineation effort, which outlines what remediation work will be done and what contamination they expect to leave in place. Because this property is a park under the development of the city and state, the decision to leave any longterm contamination would depend on the concentration levels, the cost to remove it and any health &amp; safety impacts which may occur. Such a report would need to be submitted and reviewed by the DEC before approval would be given to the effort. 1/18/2002 Sangesland spoke to Lori Silberfeld concerning the status of this site. She said AKRF did 7 geoprobes near the tank area on 11/30/2001. 3 to the north east were dirty, the other 4 around other sides all looked clean. She said her office is going to approve bidding out the tank for removal. After the tank pull is done, AKRF will excavate whatever they can and will then take endpoint samples. This data together with the boring data will be included in a report to the DEC requesting closeout of the case. 3/13/2002 Sangesland reviewed a &quot;Proposed Scope of Tank Removal Work&quot; to be done at the site. Sangesland gave approval to Julie Foley of AKRF for the work outlined. 10/18/2010 Sangesland reviewed a &quot;Spill Closure Report&quot; prepared by AKRF and Dated Jan 26, 2005 (This is a new submittal from a few days ago). Report discusses the &quot;closure in place&quot; of a 10,000 gal #6 oil tank at the Pier 84/44th St site. The tank was discovered on Oct 12, 2004. Registered PBS 2-609741. Tank was encased in cement. Jackhammered to get to the top of the tank. Tank was drained of 9,407 gal of oil/water mixture. Tank was cleaned and attempts to remove the tank were unsuccessful. Tank was abandoned in place. Soil borings were taken in the area of the cement encased tank. A few of the samples had &quot;hits&quot;, but it was not determined what the source was for these hits (several historical problems in the area). Based on the location and the fact that most of the impacted soil was removed, this spill case has been closed out. Details on the sampling is available in the eDoc report.</td>

- **DEC Memo:** During quarterly monitoring of transformers, crew noticed stains in four locations. of the four, three were minor though one was heavily stained. This area is a tight space adjacent to the building. Currently there is a different contractor working the area further hampering the cleanup. They are scheduled to work on Friday. The oil does not contain pcb’s (r-tempn)though they will contact us back with numbers. He will forward report when complete, manifests and analytical are in. DECPiper- I recieved and reviewed closure report documenting removal of contaminated soil and ballast. Endpoints revealed low level SVOC’s. Area was backfilled. Based on work to date, this spill is closed. See e-docs if warranted.
- **Remarks:** slow leak discovered in transformer in rail yard today, unk how much leaked or when the leak started.

**DEC Memo:**

03/31/14-Hiral Kumar Patel 1:06 PM - spoke with Steve. he mentioned that about 5 gal hydraulic oil spilled onto soil into construction area, oil leaked from broken hose on excavator. spill was cleaned up immediately. no drain was affected case closed.

**Remarks:** Excavator hose broke leaking hydraulic fluid, unknown spill amount.
likely around 5 gallons though, leaked onto soil. Soil already cleaned up and placed on plastic. Will be hauled away today. No other resources affected.

Contact Name: THERESA
Contact Phone: Not reported
DEC Memo: 12/12/13-Hiralkumar Patel, two lots # 26 (325 W 35th Street) and 27 (321 W 35th St), on block 759, are owned by Landmark Realty LLC and Run 178 LLC, alternate address: 321-325 W 35th St, no other spills or PBS record found for 321-325 W 35th Street. 10:57 AM: spoke with Theresa at Advanced Cleanup Technologies. She mentioned that the site is being redeveloped as a 25-story hotel with a cellar. It is a NYC OER’s VCP site (13CVCP123M). Currently, site is excavated to a depth of 10 ft bg. as part of shoring installation, test pits were dug in southwest corner of the site. During test pit work, crew found black soil from 12 to 16 ft bg and black oil on groundwater at 16 ft bg. Theresa mentioned that the area, where contamination noted, is close to property 327 W 35th Street. She observed a fill port and vent line for neighboring building. She has collected product sample. She asked her to fingerprint the product sample. Also asked her to collect endpoint soil samples for analysis. Asked Theresa to submit available environmental documents. Theresa Burkard at Advanced Cleanup Technologies, Inc. Ph. (516) 933-0655 ext. 17 email: theresab@actenvirons.com 11:20 AM: Received email from Theresa including contact info for owner’s representative and text part of Phase I. Got documents from NYC OER website. Abstract of available documents: 1) 10/18/2012: Phase I - site consists of vacant office and warehouse building (321-323 W 35th St), parking garage driveway (325 W 35th St) and a parking garage (320-328 W 36th St) - site has “e” designation - two (2) 550 gal gasoline USTs were located in the basement area of 320-328 W 36th St - gasoline tanks were abandoned in Mar. 2001, after collection of soil samples - basement at 320-328 W 36th St - no basements at 321-323 W 35th St and 325 W 35th St(2) 11/15/2012: subsurface investigation: - three soil borings (SP-1 through SP-3) were installed - boring SP-1 was installed on site 321 W 35th St, to a depth of 16 ft bg - boring SP-2 was installed on site 325 W 35th St, to a depth of 16 ft bg - boring SP-3 was installed on site 320 W 36th St, to a depth of 3 ft below basement floor - soil encountered was characterized as medium compacted sand with pebbles - evidence of fill material from 0 to 10 ft bg - no groundwater was encountered during investigation - two soil samples were collected from each boring: 0-2 ft in all borings, 2-3 ft from SP-3 and 14-16 ft from SP-1 and SP-2 - no contamination noted in soil samples. 3) 07/07/13: RIR: Proposed use of the site will consist of a 25-story hotel, with basement - installed three soil borings (SB-1 through SB-3), two temporary wells and three soil-vapor probes - two borings (SB-1 and SB-3) were installed at 321 W 35th St - one boring (SB-2) was installed at 325 W 35th St - all soil borings were installed to 15 ft bg - shallow and deep soil samples were collected from each boring - elevation of the property ranges from 39 to 40 ft above mean sea level - sampled one existing well (installed as part of geotechnical investigation) and two temporary wells - depth to groundwater ranges from 14.05 to 14.11 ft bg - groundwater flow is generally from east to west - depth to bedrock ranges from approx. 26 to 31 ft bg - no contamination noted in soil samples - VOC compounds noted in groundwater sample TW-1 (max. 54 ppb Xylene) and soil-vapor samples. 4) 07/07/13: RAWP: Excavation will extend below the water table to the depths ranging from approx. 16 to 19 ft bg - collection and analysis of endpoint samples - installation of waterproofing membrane beneath the building slab and outside foundation sidewalls.
below grade) 08/12/13: NYC OER issued RAWP approval letter.

12/54 PM: spoke with Mr. Caraccio, person-in-charge for building 327-331. he mentioned that the three buildings (# 327, 329 and 331) use a single tank/boiler set which is located in building 329. he mentioned that they are using #4 oil. based on available information, asked Mr. Caraccio to conduct tightness test of the 1,500 gal tank system. also asked him to update PBS registration (from #6 to #4 oil). 1:29 PM: sent letter to Mr. Caraccio requiring tightness testing of the 1,500 gal tank system at 327-331. asked him to submit test result by the end of 12/27/13. letter emailed to Mr. Caraccio. 1:35 PM: sent email to Theresa and asked to submit appendices of Phase I. also asked her to collect and analyze endpoint soil samples and product sample. email copied to Paul Stewart (pauls@actenvirons.com). 1:43 PM: left message for Mr. Sadlowski. 2:19 PM: received call from Mr. Sadlowski. informed him that the department requires collection and analysis of soil and product sample. informed him that sample results must be submitted for review, prior to any foundation work in impacted areas. 2:40 PM: sent email to Mr. Sadlowski, including copy of email sent to Theresa at 1:35 PM. asked Mr. Sadlowski to submit sample results for review, prior to foundation work in area where contamination is noted. email copied to Theresa. 12/13/13 Hiralkumar Patel. 10:12 AM: received email from Paul including email that he received from Mr. Sadlowski. yesterday afternoon, Mr. Sadlowski, Anne Gallagher, Anne Gallagher (Allied / CMS, Inc.), Lance Steinberg (developer) and Julie Requarth (project executive with Flintlock Construction Services, LLC) visited site 327-331 W 35th Street and met with building super Crystal Lugo. the boiler and tank are located in rear basement of building 329. as per Mr. Sadlowski, no sign of spill noted in boiler/tank rooms. the tank is completely encased and tank sides/bottom are not visible. they found fill/vent lines running along basement ceiling. they inspected front part of basement, where fill/vent lines goes under the sidewalk, and noted oil stains on floor. Ms. Lugo mentioned that there was an oil spill from fill line that is under the sidewalk. currently, site has fill and vent at the building's foundation wall, but old fill port is visible near the curb. Ms. Lugo mentioned that after noticing the spill, fill line under the sidewalk was abandoned and a new fill port was installed at the wall, by All American Mechanical, Inc. Anne Gallagher (Assistant Project Manager ALLIED/CMS, Inc. PH. (646) 560-8935 (O) (917) 270-0680 (C) Fax (646) 385-8334
e-mail: agallagher@alliedcms.com

Lance
Steinberg
e: lance@raberenterprises.com

10:45 AM: received call from Mr. Sadlowski. he inquired about investigation process. informed him that the department has asked for tank tightness test of the existing tank system at building 329. asked him about construction details. he mentioned that soil will be removed to about 1-2 ft below water table from entire footprint of the site and the new basement floor will be under water table. he confirmed that there will be no french drain or sump in the basement, but building basement and sub-grade walls will be covered with waterproofing membrane. informed him that contaminated soil and groundwater removed from the site, as part of redevelopment, must be disposed off properly. asked him to collect endpoint soil samples to confirm soil quality underneath new building.

Crystal Lugo **super for building 327-331**

PH. (917) 334-3804

11:22 AM: spoke with Ms. Lugo. she confirmed that there was leak in remote fill line at building 329. she asked to contact building management for further details.

11:24 AM: spoke with Mr. Caraccio and asked him to provide information about when was fill line leak was noted, actions taken to correct it and company who performed the work. he will call back.

11:45 AM: left message for Paul. informed him that the department requires fingerprint analysis of product sample, collection/analysis of endpoint soil samples and proper disposal of contaminated soil and groundwater removed as part of redevelopment of the site.

11:52 AM: received call from Paul. he mentioned that product sample has been submitted to lab for fingerprint analysis. asked him to collect endpoint soil sample from depth of proposed excavation for redevelopment. Paul mentioned that as part of redevelopment, developer is going to install fifty-two (52) 2-inch dewatering wells throughout the site, to lower the water table to 20 ft bg. all these wells will be connected to a frac tank and water will be collected into this frac tank prior to discharge to city sewer system. well installation will start probably next week. due to findings of free product on water table in southwest corner, discussed with Paul about installing well in southwest corner first and implement intrin remedial measures, instead of dragging contaminated water in entire site. Paul will discuss with property owner/developer and will submit a work plan. Paul asked for copy of letter sent to Mr. Caraccio.

12:22 PM: sent email to Paul including letter that was sent to Mr. Caraccio. email copied to Ms. Gallagher, Mr. Steinberg, Shaminder Chawla (NYC OER) and William Wong (NYC OER, WiWong@dep.nyc.gov). 12:25 PM: spoke with Mr. Caraccio. he is looking for more information about fill line leak. informed him that as per Ms. Lugo, there was leak in remote fill line at building 329. asked Mr. Caraccio to excavate along the abandoned fill line to investigate and remediate any petroleum contamination. he will call back once get more information about fill line leak issue.

2:12 PM: received email from Paul. he mentioned that site owner and developer have agreed to install a 2 inch well in the southwest corner of the site, which is part of dewatering needed for site development. Paul mentioned that well drilling will begin sometime next week.

12/16/13-Hiralkumar Patel.9:45 AM: visited site. met Ms. Lugo and inspected oil tank system in building 329. building 329 has one 1,500 gal tank, completely wrapped in concrete. the tank and boiler are located in rear of the basement. inspected front part of basement, where fill/vent lines are entering into building. new set of piping noted near basement ceiling. an old capped pipe noted at middle of the wall. found black stains underneath the capped pipe. a sewer trap pit located near the front foundation wall. observed black liquid from

**CONSTRUCTION SITE (Continued)**

- Pit wall towards the sidewalk. Ms. Lugo showed location of old fill port, which is near a tree area on sidewalk. Inspected excavation pit at building 325. No petroleum odors noted in area, as pit near the southwest corner was partially backfilled after collection of samples.
- 11:54 PM: spoke with Mr. Caraccio. Informed him that based on observations during the site visit, the department requires delineation and remediation of any petroleum contamination due to possible leak in former fill line. Mr. Caraccio mentioned that contractor testing tank system on 12/13/13 and it passed. He will submit test result, once available, based on observations during site visit, a spill number (1309186) is generated for building 327-331.
- 1:05 PM: received email from Mr. Caraccio including result of tank tightness test. As per test result, All Boro Tank Testing tested the tank on 12/13/13 and found tight. The result shows tight tank, but it is unclear whether it is tank only test or tank system test.
- 1:11 PM: sent email to Mr. Caraccio and asked him to confirm whether it is tank only test or system test.
- 1:13 PM: sent letter to Mr. Caraccio requiring subsurface investigation along formerly abandoned fill line and at sewer trap pit. Asked him to submit report by the end of 02/28/14. Letter emailed to Mr. Caraccio, Mr. Sadlowski, and Paul.
- 1:33 PM: received call from Chris from All Boro Testing. He confirmed that they tested entire tank system which passed. Chris will submit revised test result. Refer to spill # 1309186 for further details about spill investigation for building 327-331 W 35th ST. 12/20/13-Hiralkumar Patel.
- 1:49 AM: left message for Paul inquiring about results of fingerprint analysis and status on well installation in southwest corner of the site.
- 12:35 PM: received email from Paul including lab result of fingerprint analysis. Result shows presence of #4 oil. Paul mentioned that contaminated soil and water are coming up during installation of wells along W 35th St. 01/06/14-Hiralkumar Patel.
- 3:34 PM: sent email to Paul and asked to submit well logs and site map with well locations. 01/08/14-Hiralkumar Patel.
- 11:57 AM: received email from Paul including a site sketch. He mentioned that construction has stopped due to NYCDOB issuance of a stop work order as a result of cracking observed in the wall of the adjacent property to the west. As such, no wells installed in southwest portion of the site. No wells can be installed in southwest area until soil beneath the building to the west has been stabilized, which may take a month or more. Map shows four wells installed in southeast portion of the site. Some oil found in two of the four wells in southeast corner. Map also shows location where floating product observed near southwest corner.
- 1:05 PM: received email from Mr. Caraccio including lab result of fingerprint analysis. Result shows presence of #4 oil. Paul mentioned that contaminated soil and water are coming up during installation of wells along W 35th St. 01/06/14-Hiralkumar Patel.
- 3:34 PM: sent email to Paul and asked to submit well logs and site map with well locations. 01/08/14-Hiralkumar Patel.

is stored on frac tank and disposed off-site. asked Paul to collect endpoint samples for analysis. informed him about absence of any soil contamination under the former remote fill line at building 329.06/12/14-Hiralkumar Patel.3:14 PM: received message from Paul. he mentioned that bedrock excavation has begun in southwest corner of the construction site. they found film of oil and water and collecting it.06/16/14-Hiralkumar Patel. received email from Paul (at 5:05 PM on 06/13/14) including summary of bedrock work and findings of oil in south-central portion. he included some pics.07/02/14-Hiralkumar Patel.1:50 PM: received call from Paul and Mr. Steinberg. Paul mentioned that site has been dug to about 3-4 ft into bedrock in southwest corner, to the depth of proposed foundation. they noticed minor oil drops on water. bedrock cracks will be sealed and a water proofing will be installed.3:10 PM:- visited site. met Paul, Mr. Steinberg and other members with Mr. Steinberg. noticed very minor oil seepage through bedrock crack in western side of the property. absorbent pads at the seepage location. no petroleum odors noted. found water in excavation, not more than 25 ft from the western side. no oil or sheen noted on water in excavation. Paul mentioned that water samples were collected for dewatering purpose. asked Paul to submit copy of water sample result. as all soil will be removed and water proofing membrane will be installed around the property, no further investigation needed. Mr. Steinberg inquired about reimbursement of remediation cost, due to possible off-site source. asked him to contact spill fund.08/20/14-Hiralkumar Patel. received email from Carla Giarrusso (at 10:58 AM on 07/31/14) from Allied including copy of water sample result. no contamination noted in water sample. based on available information and observations during site visits, case is closed.**also refer spill # 1309186.**

DEC Memo:
William J Curtin #50, Mechanic A, I & A South found approx. 5gallons of transformer oil in top of approx. 3 gallons of water. He also states that this is a bottom leak, and after inspection will be coming out OOE/2 on feeder M77. Update: At 15:13 Called and informed E/V desk that clean up will be pending transformer removal, and for now oil absorbent has been put down and has made a dike around transformer with oil absorbent. Update 12/18/03 called CIG spoke to K. Mcardle #16516 @ 15:21 hrs and told him of the the "Opn Status" is now -PTRAN (Pending transformer removal) Update 12-18-03 @ 19:59 Lab Sequence Number: 03-10076-001 Analysis indicates the presence of a substance similar to a dielectric fluid. Update 12-18-03 @ 22:20 Lab Sequence Number: 03-10075-001 TOTAL PCB 9 ppm, Lab Sequence Number: 03-10075-002 TOTAL PCB 6 ppm Update: 3/12/04 @ 14:15 hrs. Jerry Gnall #19045, I & A Operating Supervisor reported that the transformer in
MANHOLE #1110 (Continued)

this vault is scheduled to be drained and disconnected on the 3 to 11 pm shift on 3/12/04. An Under 50 tanker and crew has been scheduled. The transformer is scheduled to be removed and replaced on the midnight shift (3/13/04). Update: 03/12/04M.Grazia # 16040 Mech A, reports that drain and disconnect complete and that tanker removed 150 gallons from transformer, and 650 gallons of oil and water mixed from vault. (water from flush truck) 3/13/04 08:32 E. Hulser # 39723

Cable/cleanup supervisor reports that the cleanup was completed at 08:00. The structure was double washed with Bio-Gen. The flush truck removed all debris & liquid. The spill tag # 38893 was removed. The transformer was removed & a new one installed.

Remarks: BOTTOM LEAK, CONTAINED, NO SEWER, WATERWAYS, SMOKE OR FIRE. CLEAN UP IS PENDING REMOVAL OF TRANSFORMER;

DEC Memo: Prior to Sept, 2004 data translation this spill Lead_DEC Field was "DEMO"12/18/03 TJDVapor are emanating from an ejector pit (est. capacity 100k gal) A thin layer of diesel was floating on top of water inside pit. LIRR was directed to pump pit, removed debris and pressure wash collecting wash water. All work performed in accordance with directive. Trackdown investigation did not reveal source. LIRR directed to monitor pit for minimum of two weeks.12/19/03 TJDVapor returned in afternoon. DEC responded. DEP notified and responded. DEP investigation revealed that LIRR yard is hydraulically separate from NYC sewer system, therefore, vapors must be emanating from LIRR property. Trackdown investigation again did not reveal source. Vapor condition began to dissipate inside control tower bldg. LIRR directed to ventilate space and continue to monitor.12/22/03 TJDLIRR contacted. Vapors have not returned. Continuing to monitor.1/23/04 TJDTThe following notes are copied from an e-mail message received from LIRR pertaining to this spill event:Per my discussions earlier today with Tim Fiske (LIRR Electrician), the Control Tower and ejector pit have been monitored since December 18, 2003 for the presence of petroleum odors and oil sheens. The petroleum odor, previously detected throughout most of the building, has dissipated; however, a faint odor remains in the ejector pit. Additionally, a light oil sheen has once again been detected at the bottom of the ejector pit. The current sheen may be the result of oil residue that has been hung up in the yard’s drainage system. Recent precipitation may have resulted in this release. The LIRR plans to once again clean the ejector pit and all pumping equipment. Additionally, booms will be placed at both influent pipes at the bottom of the pit. The booms will help to isolate any residual oil that may enter the pit and will aid in identifying the source of the oil. A monitoring log will continue to be maintained for ejector pit observations and the documentation of petroleum odors in the building. I have scheduled an onsite meeting for Monday January 26th at 9:00 AM with AB Oil to plan the clean out and pumping of the ejector pit. If AB’s personnel and equipment are available, work will be performed on Tuesday January 27th. I will advise you of our plans after meeting with AB Oil.
**LIRR - WEST SIDE YARDS (Continued)**

- end06/8/05: LIRR cleaned pit again on 01/27/04. Sample of water taken from the pit. Results: ND. Pit was monitored thru April 13, 2004 without reoccurrence of odor or sheen. At least one heavy rain event but still no odor or sheen. MCT.

**Remarks:** LIRR reporting the control tower at West Side Storage Yard is being impacted by Diesel vapors. FDNY responded and temporarily evacuated bldg. LIRR to investigate problem.

DEC Memo: e2mis 152543D Pace # 13149 of I&A reported to me that Esposito #13588 found while working in V-7168 on an “ABF” situation on Feeder M76 approx 1.5 gallons of unknown oil on top of leaves and debris. No sewer/waterway affected. The source and cause are unknown at this time. The spill is on the concrete structure. There is no standing water. There is a sewer connection. The sump pump was found disconnected upon arrival. The crew is taking apart the sump to verify that there was no release to the environment. Environmental tag # 41999 was hung. Two samples for PCB and ID will be taken. No cleanup action taken at this time. Pagano spoke to Pace of I&A and he informed me that when the trap was taken apart there was no sign of oil. There was just plain water. D Pace verified that there exists a bottom leak and the oil seems to have come from the unit, but the leaves and debris are keeping him from making a positive conclusion.

Lab Sequence Number: 04-02036-001: TOTAL PCB 28 ppm

Lab Sequence Number: 04-02040-001: Analysis indicates the presence of a substance similar to a dielectric fluid. A partial cleanup was done on 5/17/04. It was started at 15:00 & finished at 23:30. The tanker removed 380 gallons of water/oil from the floor of the vault and removed 250 gallons of oil out of the transformer. 5/18/04 07:10 V. Mirance #58484 Cable/Cleanup supervisor called & spoke to M. Casalta # 12684 and stated that the final cleanup was completed at 07:00 on 5/18/04. The structure was double washed with slix & rinsed down. Spill tag #41999 was removed. The source of the spill was the transformer and it was removed & replaced.

Remarks: 1/2 GAL OF UNKNOWN OIL FOUND IN A MANHOLE. NO CLEAN UP IN PROGRESS.

DEC Memo: Prior to Sept. 2004 data translation this spill Lead_DEC Field was "RODRIGUEZ"e2mis 1493790On 7/17 @ 04:29, Griffing # 14428 of FOD reported to me that he found approx 5 gallons of unknown oil in V-6145. The source and the cause of the spill is unknown. The spill was on the concrete structure floor. At that time he saw what might be oil in the sump but no indication at that time that there might be a release. After further investigation where the finder used his flashlight to see into the sump he noticed that the drain pipe was...
coated with oil on the inside of the pipe, but not full of oil - there may possibly be a release to the environment. Two samples are being taken by the finder for PCB and ID. UPDATE 7/19 @ 05:26 Conduit Plate # 23-D-2 shows that the bank of vaults with ath above structure in it is connected to M-6088 which has a sewer connection. At this time a partial cleanup is in progress and the unit will be drained and disconnected as soon as the feeder is taken out of service. Capacity of unit is 380 gallon and oil reading is just above the below min line. Unit has been drained of 375 gallons and the Unit also has been disconnected. Lab Sequence Number: 03-05966-001 PCB 6 ppm 7/21/03 M. Prystupa # 02394 went to the location on this day at 10:00 & found that the transformer was disconnected & he found that there is no evidence of any oil in the trap just water. The transformer is ready to be removed. 9/5/03 clean up is complete as of this time as reported by E. Hulser #39723 O.S Cable Dept. One barrel of rock & soil was filled, flush truck removed water & oil mix. Vault was washed twice with slix, and tag #34595 was removed. Supervisor Hulser confirmed the removal of the transformer.

Remarks: VAULT 6145. 5 GALLONS UNKNOWN OIL FOUND IN THE VAULT. THERE IS A PIPE IN THE VAULT THAT LEADS TO A SEWER, AND THERE'S OILY RESIDUE ON THE PIPE. THEY ASSUME THAT OIL GOT INTO THE SEWER. SAMPLES TO BE TAKEN. CLEAN UP PENDING RESULTS. CON EDISON REFERENCE NUMBER NOT AVAILABLE AT THIS TIME.

DEC Memo: 160745. On 8/26/05 at 21:31 P. Abel # 10966 Shift Manager Of substation operations called to report a spill of Dielectric fluid. He states that at 21:10 they discovered that feeder M-54 has been leaking at a rate of 13 gallons per hr. They know this from the flow meter. 350 gallons was reported as of that time as per CIG P. Didonato # 01669. They do not know where the spill is as of yet they are in the process of looking for it. P. Abel states that the substance is non-pcb. At this time we do not know if any sewers or water ways were affected. Nor do we know if any private property was affected. No fire or smoke has been reported to be involved with this spill. At this time no injuries were reported to be involved with this spill. 8/26/05 21:41 CIG P. Didonato # 01669 was notified. 2 PFT vans sent out. TO crews sent out to check manholes. Allstate and Manetta notified to respond to East River S/S and standby. At 00:55 8/27/05 TO crews found leak in Mh 61732 on 12th Ave & 38th St. Leak was on weld for 1" save-a-valve formerly used for thermo-probes. Allstate responded and cleaned out manhole and at 04:27 leak was contained using half drum under pipe. Allstate continued to power was manhole. At 08:29 Feeder M54 was removed from service and at 12:52 feeder was on reduced pressure. Safeway started excavating street to break out wall. 5' barrel installation started at 05:30 8/28/05 and at 10:30 8/28/05 welding was completed. Normal pressure was requested and at 17:55 Feeder was at normal. At 02:26 08/29/05 Feeder was returned to service. Allstate measured 2 tankers that were used to pump out manhole and reported that 5850 gallons of dielectric fluid was removed from themanhole. VS 78367 06:45 8/29/05 Sam.Below are soil sample results taken to verify the cleanup associated with the subject incident. In short, we discovered a leak in MH 61732 and in
FEEDER LEAK UNDER STREET (Continued)

making repairs we broke out the manhole wall. We discovered that some
dielectric fluid escaped through the manhole penetrations on the
north end of the manhole. We estimated the amount as 5 gallons.
Contaminated soils were removed and Jacques Whitford conducted
sampling on the north end. The results are below. The report is also
attached for your review. Please let me know if I can close this
spill or if there are additional efforts we need to make. Thanks for
your help. Mike.9/06/2005

<td>DEC Memo:</td>
<td>10/13/05-Vought-See also spill #s:0506652, 0506800, 0507015 for onsite spills. Vought spoke to Joel Rogers (gannett Flemming 516-671-8440) and source of spill is possibly adjacent site, Free product entering at corner of excavation. Oil coming coming out of wall from adjacent mechanics building. Vought will perform site visit on 10/14/05 at 3:30pm and will meet with Jessica Ferngrem (516-669-1504). Rogers will be out of country: 10/14/05-Vought-Site visit by Vought. Onsite was Jessica Ferngrem(Gannett Fleming) and Jerome Kung (Verizon). Also on site were owners of 605 West 47th Street (Felix Guralnik). Free product coming from under 605 West 47th Street and flowing into groundwater in excavation of adjacent...</td>
</tr>
</tbody>
</table>
Verizon site. Site visit to 605 West 47th street showed waste oil tanks in very poor condition and numerous puddles of waste oil on garage floor. According to Felix, he has had numerous problems with first floor tenant and operator of waste oil tanks. DEC requires: 1) removal of all debris and emptying of waste oil tanks 2) performance of soil boring under waste oil tank location. Vought will sent out soil contamination letter to Felix with above requirements. NOTE THAT BUILDING OWNERS (FELIX AND ALEX) ARE COMPLIANT WITH DEC REQUIREMENTS BUT SPILLER IS TENANT OF FIRST FLOOR (MR. AZHAR IQBAL). AS SUCH VIOLATIONS SHOULD BE WRITTEN TO OCCUPANTS OF FIRST FLOOR. 11/2/05 - Vought-Received call from ECO's (failure to register PBS and failure to investigate). 05/17/06 - Vought- Spill transferred from DEC Vought to DEC Ketani as per DEC Austin. 6/22/06 - Raphael Ketani. I tried to call Jessica Ferngrem [cell (516) 669-1504] [516)671-8440, but could only leave a message. Ms. Ferngrem called back to say that everything has been cleaned up at her property 617-623 West 47 Street. She said she will submit a cleanup report very soon. She said that the property the oil came from was 605 West 47 Street. I called up Jerome Kung (646) 483-6554, owner of 607-611 West 47 Street. He said they are in the process of trying to sell the property. He said that when it is sold, either he or the new owners will tear down the building and remove the contamination which is under a ramp. The ramp prevents the contaminated soil from being removed. Mr. Kung said that a woman under Joe Sun of DER Section B is in charge of the project for his property. I talked to Mr. Sun and he said Sarah Andersen may be the person he is referring to. 6/23/06 - Raphael Ketani. I spoke to Ms. Andersen and she told me to keep my oil spill case open and to keep it in my name just for the sake of the spill. 7/28/06 - Raphael Ketani. I spoke to Ms. Ferngrem regarding the report. She said that Verizon and her are still working on it and that I should get it in August. I asked about any oil seepage from 605 West 47 Street. She said that they put up a barrier against the building. So there is no more oil seepage. 8/14/06 - Raphael Ketani. I talked to Jerome Kung about the spill. He said his consultant, Ms. Ferngrem, will send me the report soon for the cleanup of the oil that entered the property from 605 West 47 Street. 8/30/06 - Raphael Ketani. I contacted Mr. Kung (646) 483-6554 regarding the cleanup report. He thought that Ms. Ferngrem had sent it. I told him that I had nothing. He said that he will call her and have her send me the report. 9/18/06 - Raphael Ketani. I received the closure and tank removal report for 617-623 West 47 Street (#0506652; part of the block of properties held by the owners of 610-630 W. 48 St.) from Ms. Ferngrem. I reviewed it and found it acceptable. There were very high concentrations of SVOCs listed. When I spoke to Ms. Ferngrem about this, she said she was aware of the concentrations, but the soil looked clean and no one had any idea why the concentrations were so high. She said that the soil was removed as part of the entire remediation project. 11/10/06 - Raphael Ketani. I spoke to Mr. Kung. He said the property still hasn’t been demolished. The only issue with this case is removal of the contamination from under the ramp. This can’t be done without demolishing the building. 4/5/07 - Raphael Ketani. I spoke to Mr. Kung about his property, 607-611 W. 47 Street. He said that the entire building on that site was torn down some time ago. He said that the soil was dug out down to 23 feet and so the contamination is gone. He added that a new building is now standing on the entire site and the adjacent properties. Mr. Kung said that he will send me the
manifests for all of the soil that was removed. I told him that would be fine. 4/24/07 - Raphael Ketani. Mr. Kung never sent the manifests. So I made a site visit. The site now contains the Verizon truck garage. It occupies the entire site, 607-611 W. 47 St. and 617-623 W. 48 St. (associated closed spill case #0506652). I took one picture. Based upon my conversation with Mr. Kung on 4/5/07, the closed spill case #0506652 for the neighboring property and the site visit I made today, I am closing the spill case. 4/30/07 - Raphael Ketani. Jessica Fergren of Gannett Fleming (516) 671-8440 left a message stating that she will send the soil manifests for the site.

Remarks:

soil sampling is being done. vac truck is en route, active leak.

### MH 56574 (Continued)

Regan reports that the cleanup is complete and sample sign #27173 has been removed. NOTE: The date and time that the cleanup was completed was inadvertently entered into the "Resolved" field which produced a "Duration (Hours)" of 12.75 hours. The Environmental Desk cleared the entry in the Resolved field and entered the data (date & time cleanup was completed) into the "Stop" field. The duration hours did not clear when the Resolved field was cleared. In addition, the Environmental Desk made some formatting and status changes to this report.12/19/2002All oil spill cleanups in Manhattan are a double wash of the effected area with an approved degreaser such as "SLIX".

### Remarks:
1 gal on 300 gal of water...samples taken clean up pending test results...clean up will be 50 to 489 ppm...ref #133834. fire involved...unsure if it is out or not.

DEC Memo: Prior to Sept. 2004 data translation this spill Lead DEC Field was "O'CONNELL*CON EDE2 MIS REPORT4/13/00While excavation ro a new transformer...discovered a black unknown solid at approx. 8-9' depth...Chem -Lab to take PCB & ID samples, #9 is enroute to deliver oil and sign...There is no elease to sewer, no fire or smoke. There is 1 gallon of water in excavation,possibly water table... This is a third party spill, cleanup pending lab results. The amount of solid is 3 cubic yds.6/3/00 As per Mr. Anello form Energy Services and Joe Fleigner of M&C EHS, this is an old Gas Manufacturing Plant Site. The soil wasencapsulated by injecting slurry and then vault was field constructed. All excavated soil was put in lined roll-offs and shipped by Waste Management at Waste Management Site in PA. Water was stored in frack tanks and was disposed of by Allstate Powervac. This incident is closed. ~~~~~~~~~~~~~~~~~~~~DEC INSPECTOR NOTES CON ED installing transformer vault for new service at construction site(Silvestein property- formerly MGP site). Found black substance, tested for oil, ID, TPH, BTEX, PCB's. Told CON ED to backfill, characterize waste for disposal. Start new excavation elsewhere. Consultant for property owner did on site investigation. Told CON ED they did not find anything. Got consultant's phone # will call for further information.

Remarks: CALLER HAS CREW ON SITE EXCAVATING AND CAME ACROSS A 3 CUBIC YARDSOF A BLACK SOLID MATERIAL - NO CLEAN UP - CON ED 130874

DEC Memo: Left message for Michael Tumulty at STV. Follow up needed.7/8/13- 
Ahmed - The case is reassigned to Piper after discussing with 
him.Issue: Coordinated Site with Chlorinated Soil Vapor 
contamination ADDRESS: 618?618 West 47th Street, New York, NYDEC  
Involvement: Open Spill # 1303354 (DEC PM Ryan Piper), Spill #9504915  
(closed 5/12/2004), Spill#0203467 (closed 3/7/2003)Current Usage: An  
open parking lot and two buildings (a one?story building formerly  
used for carstorage, and a one?story building formerly used as  
auto?repair/body shop)Proposed Development: Demolition of the two  
existing on?site buildings and construction of a onestorybuilding  
with mezzanine and basement containing utility and extra storage  
space which will encompass the entire site, approximately  
10,000?square feet. The new building will act as a transfercenter for  
Prince Lumber.Environmental SummaryHistory and Areas of Concern: auto  
repair, parking, and garages since 1930. Ten 55 gallon waste oil  
storage drums found on site during Phase I Site inspection.? A  
suspected fill port, feed and return lines and a potential  
underground storage tank? On?Site petroleum spillSoil: 0.5 to 7 feet  
of historic fill underlain by 2.5 to 11 feet of silty clayey fine  
sand underlain by bedrock.Depth to bedrock ranges from 1 to 15 ft bgs  
at the site.? No detectable concentrations of PCBs or pesticides.?  
VOCs including isopropylbenzene (max. of 2,900 ?g/Kg);  
1,2?dichloroethane (at 170 ?g/Kg);benzene (at 1,300 ?g/Kg);  
ethylbenzene (max. of 3,000 ?g/Kg); toluene (at 6,200 ?g/Kg);  
and xylenes (max. of 3,000 ?g/Kg) exceeding Unrestricted Use SCOs but  
below RestrictedCommercial Use SCOs.? SVOCs including  
benzo[a]anthracene (max. of 82,000 ?g/Kg); benzo[a]pyrene (69,000  
?g/Kg);benzo[b]fluoranthene (96,000 ?g/Kg); chrysene (max. of 97,000  
?g/Kg); dibenzo(a,h)anthracene(max. of 9,200 ?g/Kg); indeno(1, 2,  
3?cd)pyrene (max. of 49,000 ?g/Kg) exceeded Track 2Restricted  
Commercial SCOs in three soil samples. Highest total SVOCs ranged  
from 97 ?g/Kg to1,334,100 ?g/kg.? Metals including arsenic (16.1  
mg/Kg), lead (max. of 538 mg/Kg), and mercury (1.5 mg/Kg)above  
Restricted Residential SCOs in shallow and deep samples.Groundwater?:  
Depth to groundwater: 11.9 to 12.75 ft bgs (in bedrock)? Flow  
Direction: East to West? No petroleum?related VOCs detected in any  
groundwater samples. Trace concentrations (lessthan 1 ppb) of TCE,  
PCE, and chloroform detected.? SVOCs including benzo[a]anthracene  
(0.12J ?g/L); benzo[a]pyrene (0.053 ?g/L).benzo[b]fluoranthene (0.36  
?g/L); benzo[k]fluoranthene (0.29 ?g/L); chrysene (0.33 ?g/L);  
andindeno(1, 2, 3?cd), pyrene (0.31 ?g/L) above GQS in 1 sample.? No  
pesticides or PCBs detected in groundwater.? Manganese and sodium
PRINCE LUMBER COMPANY (Continued)

above GQS in dissolved samples. Soil Vapor: PCE in all five samples ranging from 51 to 2700 ?g/m3. TCE was not detected in any sample (max detection limit of 6.3 ?g/m3). Carbon tetrachloride was not detected in any sample (max detection limit of 7.3 ?g/m3). TCA was not detected in any sample (max detection limit of 13 ?g/m3). Petroleum-related VOCs (BTEX) ranged from 52 ?g/m3 to 2007 ?g/m3. Overall the highest reported concentrations were for acetone (maximum of 910 ?g/m3), cyclohexane (maximum of 15,000 ?g/m3) and hexane (maximum of 15,000 ?g/m3). Remedy: Excavation and removal of soil/fill exceeding Track 4 Site Specific SCOs. The basement area of the property (25% site) will be excavated to 13 feet below grade.?

Removal of underground storage tanks and closure of petroleum spill?

Active SSDS? Vapor barrier system? Composite cover? Site Management Plan and continued registration with e?designation

Remarks: Phase 2 indicated petroleum on site. Property has been an auto repair company since the 1930’s.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Tank Test:
samples and groundwater samples upon reaching limits of excavation.

Additional 550-gallon USTs discovered. DEC requires: soil endpoint samples and bottom groundwater samples will be collected. Dewatering excavation. After excavation for foundation is complete sidewall 63000ppb napthalene. Additional soil excavation required at area of exceedences attributable to fill material. One soil sample had 63000ppb naphthalene. Additional soil excavation required at area of excavation. After excavation for foundation is complete sidewall samples and bottom groundwater samples will be collected. Dewatering will occur for building construction. Groundwater samples show minor PAH and MTBE exceedence. See also spills 0506800, 0507015. Two additional 550-gallon USTs discovered. DEC requires: soil endpoint samples and groundwater samples upon reaching limits of excavation.

Sangesland spoke to rep from Gannett Flemming - no need to send a CSL
- They know the process and will submit a report as soon as the work is complete9/9/05-Vought-Spoke to Joel Rogers (Gannett Flemming 516-671-8440) and contaminated soil was removed and endpoint samples were collected. One fuel oil UST and one gasoline UST onsite. Known release with minimal potential for fire or hazard. DEC Response. Willing Responsible Party. Corrective action taken.

Known release with minimal potential for fire or hazard. DEC Response.

Willing Responsible Party. Corrective action taken.
for foundation. 10/18/05 - Vought-Site visit by Vought on 10/14/05. Onsite was Jessica Ferngren (Gannett Fleming) and Jerome Kung (Verizon 646-483-6554). Also on site were owners of 607 West 47th Street (Felix Guralnik) See also spill #. Free product coming from under 607 West 47th Street and flowing into groundwater in excavation of adjacent Verizon site. Site visit to 607 West 47th street showed waste oil tanks in very poor condition and numerous puddles of waste oil on garage floor. DEC required Verizon: 1) collection of one endpoint soil sample from sidewall under 607 West 47th st at 2) submission of analyticals of free product sample 3) regular intermittent sampling of dewatering effluent as remedial method 4) submission of PBS registration. NYCDEP discharge permit obtained by Verizon. Vought called Joel Rogers and left message that he will be faxed a copy of the letter. Vought also faxed copy to Ferngren and emailed to Kung. 11/28/05 - Vought-Received message from Rogers that hydraulic line ruptured. Vought returned call and line broke from construction equipment. Spill on perched water on bedrock and will be cleaned using adsorbent pads and boom. No further action on this minor spill required. 05/05/06 - Vought-See also closed spill #0507015 at same location. 05/17/06 - Vought-Spill transferred from DEC Vought to DEC Ketani as per DEC Austin. 06/22/06 - Raphael Ketani. I spoke to Ms. Jessica Ferngren ((516) 669-1504) of Gannett Fleming. She said they are almost ready to send DEC the closure report. She said that the wall of the neighboring building was waterproofed. [This spill is downgradient from a garage (605 W. 47 St.) with 2 waste oil tanks and sloppy housekeeping] 7/10/06 - Raphael Ketani. I spoke to Ms. Ferngren. She said the closure report will probably be sent in August. Right now it is being reviewed by the client. 8/17/06 - Raphael Ketani. I tried to reach Ms. Ferngren, but could only leave a voice mail. 9/6/06 - Raphael Ketani. Ms. Ferngren left me a message requesting my mailing address. I sent her a message back with the correct address. 9/15/06 - Raphael Ketani. The following tanks were removed from the site: 3000 gal., 5000 gal., five 550 gal., and a 275 gal. However, there are no PBS records or registrations for the site. I finished reviewing the September 2006 Underground Storage Tank and Spill Closure Report. There were moderate to extremely high concentrations of SVOCs at some of the boring locations. Most of these locations are associated with tanks that have been removed or their piping, though a few are not. 9/18/06 - Raphael Ketani. I spoke to Ms. Ferngren about the need to register the tanks and about the very high SVOC concentrations at some of the former tank locations. She said that the soils at the tank locations looked clean, but staff in her office couldn't figure out why the results were so high. She just figures there was urban fill mixed in. I told her that these high sites were at the former locations of the tanks. She said that the soil looked clean and that all of the soil was removed anyway and delivered to a facility that takes very contaminated soil. She said she will send in a PBS registration form. 9/20/06 - Raphael Ketani. Nick Lombardo of the PBS Unit came over to me to discuss the PBS registration for the site. He said that Ms. Ferngren had told him that the site is registered. He showed me a PBS registration for the neighboring property, 610-630 W. 48 Street. He said that Ms. Ferngren told him this was the same property as the new owners had combined both 617-623 and 610-630, and planned to build on both. The registration for 610-630 is #2-344818 and shows all of the tanks listed in the September 2006 Underground Storage Tank and Spill Closure Report as closed and removed, and even lists other tanks not
indicated in the report for 617-623. I spoke to Ms. Ferngren and told her DEC would prefer that the form list 617-623 as this is where the majority of the tanks came from. She asked whether both addresses can be listed on the registration form. I spoke to Mr. Lombardo and he said that she should get Verizon to submit a letter to DEC requesting that both addresses be listed. I relayed the message to Ms. Ferngren. She agreed to do this. Based upon the Underground Storage Tank and Spill Closure Report and the PBS registration #2-344818, I am closing the spill case.

DEC Memo:
9/9/05-Vought-Spoke to Joel Rogers (Gannett Fleming 516-671-8440) and contaminated soil was removed and endpoint samples were collected. One fuel oil UST and one gasoline UST onsite. Groundwater was present in the bottom of the excavation. Samples were also collected from piping runs and remote fills. One groundwater sample was collected. Active construction going on. Endpoint samples did show TAGM exceedences. Site is DEP E site and vapor barrier will be installed. Groundwater at 12' below grade. Groundwater samples were below TOGS and therefore no passive ventilation system. Site will be excavated down to bedrock over most of site. Minor PAH exceedences attributable to fill material. One soil sample had 63000ppb naphthalene. Additional soil excavation required at area of excavation. After excavation for foundation is complete sidewall samples and bottom groundwater samples will be collected. Dewatering will occur for building construction. Groundwater samples show minor PAH and MTBE exceedence. See also spills 0506800, 0507015. Two additional 550-gallon USTs discovered. DEC requires: soil endpoint samples and groundwater samples upon reaching limits of excavation for foundation 10/13/05-Vought-Spoke to Joel Rogers and see also spill #0506652, 0506800, 0507015 and 0508375. All three spill numbers will be addressed in one report. Three spill numbers will be consolidated once bedrock is reached and dewatering begins. 10/18/05-Vought-Site visit by Vought on 10/14/05. Onsite was Jessica Ferngrem(Gannett Fleming) and Jerome Kung (Verizon 646-483-6554). Also on site were owners of 607 West 47th Street (Felix Guralnik) See also spill #. Free product coming from under 607 West 47th Street and flowing into groundwater in excavation of adjacent Verizon site. Site visit to 607 West 47th street showed waste oil tanks in very poor condition and numerous puddles of waste oil on garage floor. DEC required Verizon: 1) collection of one endpoint soil sample from sidewall under 607 West 47th st 2) submission of analyticals of free product sample 3) regular intermittent sampling of dewatering effluent as remedial method 4) submission of PBS registration. NYCDEP discharge permit obtained by Verizon. Vought called Joel Rogers and left message that he will be faxed a copy of the letter. Vought also faxed copy to Ferngrem and emailed to Kung. 10/21/05-Vought-Received call from Greg Earnst (Gannett Fleming). Vought returned call and left message to return call. Vought spoke to Earnst and west side of 607 West 47th Street had product coming from under building. Vought did not require new spill number due to existing spill number 0508375. Product will be vacummed out and underpinning will be installed. Paint on membrane will be applied to underpinning and voids will be filled with cement slurry. 10/25/05-Vought-ECO will be performing site visit to 607 West 47th Street on 10/24/05. Vought received call from Joel Rogers. Vought returned call and left message to return call. Vought received second call from Rogers. Vought returned call and spoke with Rogers. 11/15/2005-Vought-Spoke with Joel Rogers and he will include tank closure report with above requirements and report will be submitted by 1/15/06. 05/05/06-Vought-This spill closed and referred to open spill #0506652 at same location.

DEC Memo: 9/9/05-Vought-Spoke to Joel Rogers (Gannett Flemming 516-671-8440) and contaminated soil was removed and endpoint samples were collected. One fuel oil UST and one gasoline UST onsite. Groundwater was present in the bottom of the excavation. Samples were also
VERIZON (Continued)

collected from piping runs and remote fills. One groundwater sample was collected. Active construction going on. Endpoint samples did show TAGM exceedences. Site is DEP E site and vapor barrier will be installed. Groundwater at 12' below grade. Groundwater samples were below TOGS and therefore no passive ventilation system. Site will be excavated down to bedrock over most of site. Minor PAH exceedences attributable to fill material. One soil sample had 63000ppb naphthalene. Additional soil excavation required at area of excavation. After excavation for foundation is complete sidewall samples and bottom groundwater samples will be collected. Dewatering will occur for building construction. Groundwater samples show minor PAH and MTBE exceedence. See also spills 0506800, 0507015, 0506652. Two additional 550-gallon USTs discovered. DEC requires: soil endpoint samples and groundwater samples upon reaching limits of excavation for foundation10/18/05- Vought-Site visit by Vought on 10/14/05. Onsite was Jessica Ferngrem(Gannett Fleming) and Jerome Kung (Verizon 646-483-6554). Also on site were owners of 607 West 47th Street (Felix Guralnik) See also spill #. Free product coming from under 607 West 47th Street and flowing into groundwater in excavation of adjacent Verizon site. Site visit to 607 West 47th street showed waste oil tanks in very poor condition and numerous puddles of waste oil on garage floor. DEC required Verizon:
1)collection of one endpoint soil sample from sidewall under 607 West 47th st 2)submission of analyticals of free product sample 3)regular intermittent sampling of dewatering effluent as remedial method 4)submission of PBS registration. NYCDEP discharge permit obtained by intermittent sampling of dewatering effluent as remedial method 4) submission of PBS registration. NYCDEP discharge permit obtained by

verizon. Vought called Joel Rogers and left message that he will be faxed a copy of the letter. Vought also faxed copy to Ferngrem and emailed to Kung. 3/21/06- DEC Piper spoke w/ Joel Rogers. As per conversation, pbs records in order, he will be collecting endpoint/ sidewall samples soon. Report to DEC in approx 2 mos. 3/26/06- DEC Piper, same spill site as 0506652. Hydraulic oil cleaned up.

Petroleum contamination related to sp 0506652. This spill closed.

Tank Test:
were tested for VOC's and SVOC's (Methods 8021 & 8270). Trace levels of fuel oil was detected. ATC says "no physical or olfactory evidence of fuel oil was detected at the tank. 4 on each side of the tank and 1 in the presumed spill volume.” In July 2001, ATC advanced 5 borings to a level "just below" the bottom of the tank in the courtyard which came back below STARS. The remote fill tank in the courtyard has been re-lined; the manway has been rebuilt and the UST has passed a pressure test on Aug 10, 2001. UST Tank location is in the courtyard at the rear of the apartment building at 425 West 48th St. In June 2001, ATC advanced 5 borings to a level "just below" the bottom of the tank. 4 on each side of the tank and 1 in the presumed downgradient direction. ATC says "no physical or olfactory evidence of fuel oil was detected. No groudwater was encountered.” Samples were tested for VOC's and SVOC's (Methods 8021 & 8270). Trace levels were not detected.
TERRIFIC TENEMENTS  (Continued)  U001837807

of VOC’s were found, but none exceeded the TAGM 4046 Levels. Based on
the sampling data presented by ATC and the documentation of the tank
being rebuilt and retested, the DEC will close this spill number
out.4/13/2002 - Spill Closed.

Prior to Sept, 2004 data translation this spill Lead_DEC Field was "FOLEY"Con Ed e2mis #142982:NIDE: When I received this incident the system was "down" and I could not input it into E2MIS. I called CIG and spoke to Morris # 85791 @ 23:22 Hrs on 5/24/2002. ERT was also notified and said would make "notifications". At 23:08 HRS on 5/24, Muccio # 18771 of FOD Dept. reported to me that while working Ely N/WIC W 45 St & 8th Ave. he discovered @ 22:55 HRS approx 2 quarts of Cable oil and two gallons of water in M-32392. There was a leak from Dead Cable Ends on 3c Cable. He estimates a drip rate of 1 drop per hour. He was taking Trouble readings for Feeder 21 M 27. No
sewer/waterway was affected, no fire or smoke involved, no injuries related to this spill, no weather conditions contributed and NO private property was affected. The source of the spill is the Dead Cable Ends and the cause is a leak. The spill was on the concrete structure floor. There was no movement on the standing water. There were no substantial cracks observed in the structure. There is no sewer connection as per Conduit plate 27 - f - 1. No sumps or pump running. Environmental tag # 20745 was hung. Two samples (PCB and ID) were taken. The courier was called to pick up sample. Chain of custody # CC 00808 was used. No cleanup action was taken. According to J McNeil # 43961 and P Setera UG Feeder Rep, no crews are available at this time to seal the Cable ends. Cleanup will be pending crews to Seal Cable. UPDATE 5/25 01:07 Notified CIG ans spoke to Morris @ 01:05 HRS 5/25/2002 Update 5/25 Cleanup completed and cable ends sealed.

Remarks: spill is at rate of 1 drop per hour 1 qt on top of 3 gallons of water crew is en route to clean up coned#142982

| DEC Memo: | Prior to Sept, 2004 data translation this spill Lead_DEC Field was *ENGELHARDT/O'CONNELL*8/13/02. Originally assigned to Engelhardt, who closed the spill on 4/27/98. New findings by AKRF and Con Edison indicate probabalye historic MGP impacts. Spill number reopened by O'Connell.09/27/11 - located documents which pertain to the originally called in finding by AKRF and put into eDocs; the spill was a finding of contamination at the property located between 11th and 12th Avenues, and W. 45th and W. 46th Streets, as part of the Route 9A reconstruction and more specifically associated with preparation for construction of a pedestrian bridge spanning 12th Avenue from the northwest corner of the property located southeast of the intersection of 12th Avenue and W. 46th Street. The contamination that was identified and reported through this spill report is presently being addressed under VCP site V00532, and as such this spill number is administratively closed. Additional information on the matter is available under that project. (JOC) |

DEC Memo: Sangesland spoke to Don Hickey at the site. He said the site is already being dug out and remediated under another spill number. During the excavation, they hit a newly discovered tank and had an additional spill on the site. Samples from this tank have been tested and found to be non-hazardous. Site will continue to be dug out and remediated as before.

Remarks: HIT AN UNDER GROUND OIL TANK DURING EXCAVATION. SO IT CONTAMINATED THE SOIL FOR METALS AND OILS.

DEC Memo: Prior to Sept, 2004 data translation this spill Lead_DEC Field was *KRIMGOLD*3/24/04. J.Krimgold spoke to AKRF - Marcus Simonson (646)459-3527. He should submit a site assessment repot for NY Times new building on 4/15/04.04/20/04. J.Krimgold reviewed a Spill Closure Report submitted by AKRF on April 2, 2004. The report stated that
NEW YORK TIMES BLDG. (Continued)

2x550 gal gasoline tanks previously closed with water has been discovered and removed from the site. During tank removal contaminated soil was found, but tanks appear to be in a good condition, without evidence of excessive corrosion or holes. All contaminated soil was removed and properly disposed (see attached manifest). Bottom of excavation is a bedrock at depth of 10’. No groundwater was found in excavation. Visual observations and PID screening show no evidence of residual contamination. 4 post-excavation soil samples from each wall do not show levels above TAGM. NFA letter has been sent.

Remarks: Did tank removal at the site. Did lab tests on the soil... found contamination. The tanks have since been removed as well as the contaminated soil. was an empty lot at the time and will now be developed into the new New York Times Bldg. Spill had no effect on surface or ground water.

DEC Memo: 8/31/06 - ttl letter sent. bf.10/16/06 received a letter from Anthony Lara of Petroleum Tank. tank was encased in concrete (#6 fuel oil). tank was pumped out and cleaned. fill line was cemented tank was removed from site. bf11/8/06 spoke to Anthony Lara. needs to send disposal manifests. bf1/31/07 spoke with A. Lara. He will fax manifest for waste tomorrow morning. According to him, there was one drum of material. bf3/14/07 Spoke with A. Lara. He said it was two drums of material. Sent me a copy of invoice to show this. No closure application received. This case can not proceed without closure of the tank. Called A. Lara back and told him this. Faxed PBS closure application to him. fax: (718)858-4268. bf3/26/07 On 3/21/07, received letter and closure application for tank. NFA. bf
Remarks: TANK WAS LEAKING AND HAS BEEN PUMPED OUT

Analysis of oil.
NATIONAL CAR RENTAL (Continued)

DER Facility ID: 225139
DEC Memo: Prior to Sept, 2004 data translation this spill Lead_DEC Field was "ROMMEL"09/03/03Reassigned from Tibbe to Rommel/09/11/03Spoke to Chris Lochra EnecoTech. No free product at this time in wells. They have initiated the peroxy injections. A report will be generated toward the end of the year. 10/29/03 - ANC Rental Corporation liable for this new spill. 6/22/05-Vought-Received call Jed Smith (GES 303-861-2200x196) who is consultant for Realm (consultant for old spill number). GES does not work for national. Two different responsible parties USTs removed in late 2003 and new spill number issued. GM formerly owned National Car Rental prior to the merger with Alamo and Vanguard. See also Spill # 0308028 reported by American Envmt removing two 1000 gallon tanks. American Environmental contracted by ANS Rental Corporation 200 South Andrews Avenue, 2nd Floor, Ft. Lauderdale, FLA 3330195 spill and 03 spill being handled by different RPs and consultants. Rommel GM retained liability for this spill prior to merge with Alamo, Vanguard. 02/03/04 Drilling scheduled to investigate groundwater. 2/4/04 LBG, Ed DeStephanus 914-694-5711 Rommel/4/7/05-Vought-Spill transferred from Rommel to Vought as per Tang. 6/23/05-Vought-Spoke to Jed Smith (GES 303-861-2200x196) who is consultant for Realm (former owner of site). USTs removed in late 2003. Report was sent to DEC on 2/15/05. Peroxy injections performed in 2002-2003 and report recommended NFA. An additional copy will be sent for review. Sensitive receptor survey performed in 1999. A copy of sensitive receptor report, tank closure report and NFA request will be sent for review. 8/1/05-Vought-See also closed spill #0308028. New file review by Vought: Final Results of Soil Investigation at 252 W. 40th Street-October 1995. Installation of sixteen soil borings. Bedrock encountered at 4' below grade in basement. Free phase product was observed in soil sample SB12-[2-4'] and also in SB15-[2-4']. Soil analyticals show: 310ppb MTBE (SB7-1 0-2'bg), 3000ppb MTBE (SB9-1 0-2'bg), 460ppb benzene (SB11-1 0-2'bg), 12400ppb xylene (SB11-1 0-2'bg), 7700ppb MTBE (SB12-1 0-2'bg), 980ppb benzene (SB12-2 2-4'bg), 4800ppb toluene (SB12-2 2-4'bg), 21400ppb xylene (SB12-2 2-4'bg), 25000ppb MTBE (SB12-2 2-4'bg), 1520ppb xylene (SB15-1 0-2'bg), 550ppb benzene (SB15-2 2-4'bg), 14000ppb ethylbenzene (SB15-2 2-4'bg), 4600ppb toluene (SB15-2 2-4'bg), 72000ppb xylene (SB15-2 2-4'bg). Subsurface Investigation for Underground Storage Tanks (EnecoTech 303-861-2200)-1/10/00. Installation of three soil borings around two (550-gallon) gasoline USTs. Three monitoring wells were advanced into bedrock. "Soil impacts appeared greatest adjacent to and downgradient of the dispenser. "EnecoTech is requesting that the site be closed under risk based corrective action criteria since no complete exposure pathways have been identified". Site is located within a parking garage and two USTs are in basement of garage. USTs were in bedrock. "The results of the survey indicated that none of the thirteen adjoining property occupants had complaints of vapors". Soil analyticals show no TAGM 4046 Required Soil Cleanup Objective exceedences. Groundwater analyticals show: 37ppb benzene (GW1), 18ppb toluene (GW1), 127ppb ethylbenzene (GW1), 4095ppb xylene (GW1), 8.5ppb toluene (GW2), 91ppb ethylbenzene (GW2), 181ppb xylene (GW2), 109ppb benzene (GW3), 27600ppb MTBE (GW3). Phase I Additional Subsurface Investigation (EnecoTech)-January 2002. Installation of thirteen soil borings. "USTs are filled through street level fill pipes on the west side of the garage". "In its letter of June 11, 2001 the NYSDEC requested further soil and groundwater investigation at the site with emphasis being placed on the two areas where ENSR encountered free..."
product..." Groundwater flow to the west/southwest. "EnecoTech recommends 1) installation of two monitoring wells for downgradient delineation 2) the injection of dilute hydrogen peroxide into the monitoring wells to enhance natural bioregradation". Soil analyticals show: 1655ppb MTBE(GP4), 8800ppb MTBE(GP12), 1540ppb xylene(GP13), 3650ppb xylene(GP13). Groundwater analyticals show: 120ppb benzene(GW1), 735ppb ethylbenzene(GW1), 1360ppb xylene(GW1), 73ppb MTBE(GW1), 1510ppb MTBE(GW3). Underground Storage Tank Closure Report (American Environmental)-November 2003. Removal of two (1000-gallon) gasoline USTs. Two dispenser islands were present (one on basement level and one on the first floor level of the garage). The fill box to the tanks was on West 40th Street. A total of 22 (55-gallon) drums of impacted soil was removed from the site. Soil excavation was limited due to the presence of a sewer line on the east side of the excavation and "the spatial constraints of maintaining an active facility on the north side of the excavation". Five endpoint soil samples were collected. 8/3/05-Continued file review by Vought: Underground Storage Tank Closure Report (American Environmental)-November 2003. Endpoints from UST excavation show: 6600ppb toluene(west wall 5'bg), 13000ppb xylene(west wall 5'bg), 3100ppb benzene(bottom 8'bg), 65000ppb toluene(bottom 8'bg), 38000ppb ethylbenzene(bottom 8'bg), 140000ppb xylene(bottom 8'bg), 10000ppb MTBE(bottom 8'bg). Phase II Investigation and Initial Corrective Action Report (Eneco Tech)-5/2/03. "Eneco Tech is proposing injection of dilute hydrogen peroxide solution at the facility in order to increase dissolved oxygen concentrations...". Installation of six monitoring wells and one injection well. Free product in GW-7. Groundwater flow to the southeast. Soil analyticals show: 1540ppb xylene(GP13), 3650ppb xylene(GP15), 1655ppb MTBE(GP4), 8800ppb MTBE(GP4). Groundwater analyticals show: 237ppb benzene(GW1), 974ppb ethylbenzene(GW1), 935ppb xylene(GW1), 44400ppb MTBE(GW1), 820ppb MTBE(GW3), 4360ppb MTBE(GW4), 9ppb benzene(GW5), 5ppb toluene(GW5), 19ppb ethylbenzene(GW5), 416ppb MTBE(GW5), 325ppb benzene(GW7), 1860ppb toluene(GW7), 1700ppb ethylbenzene(GW7), 13300ppb xylene(GW7), 2890ppb MTBE(GW7), 7ppb benzene(GW8), 12ppb ethylbenzene(GW8), 67ppb xylene(GW8), 510ppb MTBE(GW8), 12ppb xylene(GW9). Letter from DEC Sawyer to Roberta Barkman (Paul, Hastings, Janforsky and Walker LLP)-10/30/03. "The NYSDEC has received notification that petroleum contaminated soil was discovered at the above referenced site". Letter from Paul Hastings to DEC Sawyer-11/11/03. "This letter is to confirm our understanding that the Department of Environmental Conservation is flexible on the two week deadline contained in your October 30, 2003 letter to me". Letter from DEC Rommel to ANC Rental Corporation (Paula Rickborn)-12/8/03. Department reviewed UST Closure Report and requires additional investigation both onsite and offsite. Letter also required the installation of two monitoring wells in the "vicinity of the west wall soil sample and in the southwest corner, northwest of the floor drain". Report due to the DEC by 1/31/04. Letter from Leggette, Brashears and Graham (Destefanis) to ANC(Rickborn)-12/11/03. Proposal for installation of ten soil borings in vicinity of former UST location and preparation of a RAP. Letter from Paul Hastings to DEC Rommel-12/23/03. "...this letter is a request for an extension of the January 31, 2004 deadline for investigation and reporting...". Request to extend deadline to 3/31/04. Request due to coordination with General Motors (previous owner of site). General Motor's consultant is EnecoTech. Corrective Action Progress and Groundwater Sampling
NATIONAL CAR RENTAL (Continued)

Report (Eneco Tech)-3/11/04. Application of hydrogen peroxide during six monthly site visits. Eleven monitoring wells onsite. "The dissolved oxygen measurements indicate that a general increase has been effected across the site, in particular in the vicinity of the former UST pit (GW-1) and along the south wall of the garage (W-7) where free product has been detected". "The application of hydrogen peroxide solution at a 10% concentration is scheduled for March and April". Depth to groundwater is 1-3' below grade and flow to the south. Groundwater analyticals show: 59ppb benzene(GW1), 72ppb ethylbenzene(GW1), 27ppb xylene(GW1), 2960ppb MTBE(GW1), 12ppb MTBE(GW3), dry well(GW4), 9ppb ethylbenzene(GW5), 11ppb MTBE(GW5), 13ppb benzene(GW7), 12ppb ethylbenzene(GW7), 726ppb xylene(GW7), 2360ppb MTBE(GW7), 76ppb benzene(GW8), 47ppb ethylbenzene(GW8), 1750ppb MTBE(GW8), Remedial Investigation Report (Leggette, Brashears and Graham)-March 2004. Consultant hired by National Environmental. Installation of two additional monitoring wells. Two samples were collected "for forensic analysis in order to determine approximate aging...". Groundwater flow to the east-southeast. Soil analyticals show: 140ppb MTBE(GW10 4-8'). Groundwater analyticals show: 59ppb benzene(GW1), 72ppb ethylbenzene(GW1), 27ppb xylene(GW1), 2960ppb MTBE(GW1), 12ppb MTBE(GW3), 9ppb ethylbenzene(GW5), 11ppb MTBE(GW5), 13ppb benzene(GW7), 12ppb ethylbenzene(GW7), 726ppb xylene(GW7), 2360ppb MTBE(GW7), 76ppb benzene(GW8), 47ppb ethylbenzene(GW8), 1750ppb MTBE(GW8), 19ppb benzene(GW10), 16ppb ethylbenzene(GW10), 76ppb toluene(GW10), 97ppb xylene(GW10), 1700ppb MTBE(GW10), 35ppb benzene(GW11), 23ppb ethylbenzene(GW11), 91ppb toluene(GW11), 199ppb xylene(GW11), 390ppb MTBE(GW11). Corrective Action Progress and Groundwater Sampling Report (EnecoTech)-2/15/05. Application of dilute hydrogen peroxide during monthly site visits. Eleven monitoring wells onsite. Groundwater flow to the south-southeast. "The data show that oxygen levels have generally returned to those observed prior to the hydrogen peroxide treatments". "It would be expected that concentrations of STARS VOCs will continue to show a decline toward the applicable New York Standards. Therefore regulatory closure of this site is requested". Groundwater analyticals show: 1.4ppb benzene(GW1), 15ppb ethylbenzene(GW1), 7ppb xylene(GW1), 55ppb MTBE(GW1), 10ppb benzene(GW7), 6ppb toluene(GW7), 49ppb ethylbenzene(GW7), 121ppb xylene(GW7), 470ppb MTBE(GW7), 36ppb benzene(GW8), 6ppb ethylbenzene(GW8), 908ppb MTBE(GW8), 10ppb benzene(GW10), 96ppb toluene(GW10), 25ppb ethylbenzene(GW10), 192ppb xylene(GW10), 291ppb MTBE(GW8), 40ppb benzene(GW11), 100ppb toluene(GW11), 37ppb ethylbenzene(GW11), 139ppb xylene(GW11), 333ppb MTBE(GW11). Letter from GES Jed Smith to DEC Vought-6/29/05. Sent copies of 2/15/05 sampling report, 5/04 remedial investigation report, 11/03 UST Closure Report and 1/00 request for closure. 8/5/05-Vought-After file review DEC requires: 1) continued monitoring to ensure conditions exist (DO concentrations) Vought called Smith (303-861-2200x196) and application of peroxide was performed in May 2004 and DO levels still capable of supporting MNA. If groundwater concentrations show continued decrease spill be closed. Letter should be sent to: David Favero Favero Geosciences 1210 South 5th Street Suite 2 Springfield, Ill. 62703 Fax: 217-522-6727 9/05-Vought-Sent letter with above requirement. 9/12/05-Obligado-FILE TRANSFERRED FROM VOUTED TO OBLIGADO9/14/05-Obligado- Review letter from Paul Hastings Attorneys, dated 9/8/05, which requested that Spill #0308028 be combined with Spill #9502512. Called Roberta Barkman and informed her that the 03 spill number was already closed by DEC Vought on 8/1/05.

- DEC Memo: Prior to Sept, 2004 data translation this spill Lead DEC Field was "ROMMEL" 10/30/03 DDO Sawyer sent contaminated soil letter to: Roberta Barkman. Hastings, Janofsky & Walker 10th Floor 1299 Pennsylvania Avenue, Washington, DC 2000412/08/03 Letter mailed to: Ms. Paula Rickborn, ANC Rental Corporation, 200 South Andrews Avenue, 2nd Floor, Fort Lauderdale, Florida 33301. J & W copied American Environmental Assesments, Eric Meyn 631-586-2000 copied Letter required that a subsurface investigation be performed to delineate the extent of petroleum contamination in the soil and groundwater, both on and off site. Assuming you will gain access to the existing monitoring wells network (associated with Spill 9502512), two additional wells must be installed in the vicinity of the west wall soil sample and in the southwest corner, northwest of the floor drain. If you cannot access the existing wells, your investigation must include the installation of a minimum of three monitoring wells. A report summarizing the findings of the subsurface investigation including boring logs, well installation logs, soil and groundwater sample analyses, site plan, a surrounding property sketch including property layout and usage, and conclusions and recommendations must be submitted to the Department before January 31, 2003. Additional borings/monitoring wells may be required by the Department upon review of the investigation report. Rommel 4/7/05 Vought transferred from Rommel to Vought as per Tang 8/1/05 Vought - This spill closed and referred to open spill #9502512 at same location 9/12/05 - File transferred from Vought to Obligado 9/13/05 - Obligado - Receive fax from Paul Hastings Attorneys requesting spill #0308028 be consolidated with open spill #9502512. Call Roberta Barkman at Paul Hastings to inform her that the #0308028 spill was already closed by Vought on 8/1/05 and consolidated with the #9502512 spill number. Roberta asks for documentation and Obligado will send letter.

**Remarks:** COMPANY REMOVING 2 1000 GAL TANKS FROM PROPERTY AND TANKS APPEAR TO HAVE BEEN LEAKING FOR UNDETERMINED AMOUNT OF TIME. CURRENTLY REMOVING CONCRETE ENCASEMENT AND CONCRETE SMELLS OF GASOLINE.

"RODRIGUEZ"EMIS 1387918/08/01 12:55 HRS.Frank Garafola #15481, I&A Supervisor, reported approx. 1 quart of transformer oil spilled onto the floor and sump in vault V3471 located at 301 West 35 Street and 8th Ave. There is a possible bottom leak in the transformer which caused the spill onto the concrete floor and under the transformer. There is a sheen of oil on top of the water in the sump pit. There is a sewer connection and concrete sump. The sump pump was found not running and there are no substantial cracks. There is no evidence of release to sewer or waterway. Spill tag #00253 installed. Sample taken from transformer by Mike Reiter #27277 for PCB on a priority "E" basis. Prior PCB historical data is 10 ppm from 1999. The transformer is a GE class FUG Serial #B327221 with a fluid capacity of 355 gallons. Initial cleanup action taken by placing oil absorbent pads & pigs on floor and around sump. Final cleanup pending transformer removal. LSN # 01-08058-001 TOTAL PCB 7 ppm Update 10-14-01 @ 15:10 . V Mirance #58484 reports that the cleanup is complete as of 15:00.

Remarks: Double washed with slix and flushed.

DEC Memo: 10-1-05 @ 14:55. P Diaz # 09784 reports that while doing an inspection in v9879 f/o 704 9 av (48 st), he discovered 5 gallons of unknown oil and 30 gallons of water on the concrete floor of the structure. There was or is no smoke or fire involved. No sewer or waterway affected (the trap was checked and it was dry). No injuries and weather had no affect. No measuring device was used to determine the amount of the spill. Source and cause of spill are unknown. No private property affected. There is oil filled equipment in the structure (a transformer). Environmental yellow tag 38844 was applied. Water is standing, no visual water movement. Sump is concrete and the pump was unplugged. No dielectric filled feeders in the structure. No dielectric filled feeders in the structure. 2 liquid samples were taken by P Diaz # 09784 from the spill, 1 for id and 1 for pcb. Sample priority "e". Chain of custody # cc17993. Cleanup is pending availability of crews and lab results.....J Moran #01182Lab Results 01/11/05 20:43 hrsLab Sequence Number: 05-00244-001
Analysis indicates the presence of a transformer oil. 1/12/05 11:00K.
Wilkinson # 24331 I&A supervisor reported that on 1/10/05 the unit was pressure tested & was holding presssure. He says it held 7lbs. for 20 minutes. A cleanup is being set up for 1/13/05 at 07:00 & the unit will be re-evaluated. Update 1-13-05 @ 15:50 M Ryder #27277 reports that the cleanup is complete as of 15:45. Double washed with slix and flushed. 1100 gallons of oil and water mixed removed by tanker. 1 bag of ppe and debris removed. Tag # 38844 removed. Cleanup supervisor and crew are listed in the event involved person screen. No visible sign of the spill was observed during the cleanup

Remarks: Material is on water on concrete. No to five questions. Transformer is in vault and unsure if it is teh cause. Con ed#156821

Prior to Sept, 2004 data translation this spill Lead_DEC Field was "KRIMGOLD"1/27/2004 Sangesland spoke with Mr. Steven Green (building owner) Cell #917-359-1187 - Office #212-719-2757.Mr. Green said the supply line sprung a leak and dumped onto the basement floor. Fire Dept Haz Mat was on scene and said some of the oil was pumped out of the sump pit into the city sewer.Mr. Green says the oil is now only in the basement sump pit. He says Eastmond has been hired to do the cleanup and the tank/supply line will be pressure tested.Sangesland called Eastmond to confirm they are hired. Rene said he had someone there earlier today to "scope it out". The spill is contained for now. Eastmond will try to get a crew out to the site this evening or tomorrow morning.1/27/2004 - Late afternoon - Rene from Eastmond called back. He is concerned that there is a leak in a buried 5,000 gal tank. He is going to powerwash the basement floor and sump pit and then recheck if the pit recharges with oil. He is going ahead with a full tank/lines pressure test.2/2/2004 Sangesland spoke with Rene at Eastmond. He said the system was pressure tested. The tank alone past the test. Both vent line and fill line failed the test. Strong possibility that there is contamination somewhere along the route of the fill line (Under the sidewalk).2/4/2004 Sangesland spoke to Mr. Green (917-359-1187) to tell him the DEC will require a soil boring (2"diam/18"deep) taken adjacent to the curb fill port to check for contamination.3/11/2004 Sangesland spoke to Mr. Green. He said he hired a contractor to take the soil borings. He didn't have the name with him and he would call back "soon".3/2/2004 Krimgold received a letter from Gil Klein of Environmental Testing and Analysis Co. (845-721-1252) saying that he was hired to take a boring in the sidewalk looking for contamination.4/5/2004 Sangesland called Mr. Klein to ask if the boring was taken. Yes, no contamination was found.4/5/2004 J.Krimgold reviewed a letter report submitted by Environmental Testing and Analysis Co. The report stated that no contamination has been found during soil boring around fill port. NFA. Not reported

DEC Memo: 06/02/09- Zhune spoke to Kelvin Brown Director Facility Management 917-558-5183, 212-389-9362He said about a month ago while doing sidewalk and vault repair they discovered a UST. They star the process to remove the tank. They came twice to suck out oil and clean the tank. The tank was rusted and the oil were seeping under the tank over passs years. Today they were cutting the tank in pieces the flame from the torch of the welder and the oil under the tank caused a fire and the smoke. Tomorrow the oil company is coming back to clean the oil and water that were left on the pit. 06/08/09-Zhune spoke to Kelvin. He said oil and soil contaminated is been complety removed from the pit. The tank is completed gone by tomorrow. The engineers from Super Structure will remove the walls contaminated with oil. DEC Requested soil samples. Kelvin will call PTC to request soil samples. 08/17/09-Petroleum Tank Cleaners sent the report dated 08/11/09Bernini Construction Corporation of 37 Wesr 20th street contacted PTC regarding their discovery of an oil tank under the sidewalk at the referenced location. The tank was opened and it was determined that the tank has a small amount of oil at the bottom that appeared to be #6 fuel oil. PTC cleaned the tank in preparation for dismantling. Bernini’s employees were cutting out the tank when a small, but undetermined amount of oil was found on the floor in the concrete vault containing the tank. The floor of the tank vault is tick, sound concrete free of cracks or voids. Upon removal of all contaminated debris, three soil samples were obtained from the remaining rubble and submitted to South Mall Analytical labs for analysis. All analytes in the three samples were found to be not detectable. Case Closed.

Tank Test:
### Location:
The West 45th Street Gas Works site is located on the west side of mid-town Manhattan in an urban area. The site is located on the blocks between 11th and 12th Avenue and between West 44th and West 46th Streets although the footprint of the former MGP extended into the area currently beneath 12th Avenue.

### Site Features:
The main site features include a large self-storage building, a private truck refueling facility and a parking lot.

### Current Zoning/Uses:
The site is zoned M2 for medium manufacturing and currently used as a storage facility, truck parking and refueling facility, and for parking.

### Operable Units:
The site has been divided into 2 operable units. An operable unit represents a portion of a remedial program for a site that for technical or administrative reasons can be addressed separately to investigate, eliminate or mitigate a release, threat of release or exposure pathway resulting from the site contamination. Operable Unit 1 consists of the main plant site between West 44th Street and West 46th street and 11th to 12th Avenues including the area beneath 12th Avenue as well as all off-site areas where contamination has spread.

Operable Unit 2 is the portion of the MGP site between West 45th and West 46th streets. It is currently a parking lot associated with the Intrepid Museum.

### Site Geology/Hydrogeology:
The entire site and its surroundings lie on fill materials which were placed in the Hudson River to extend the shoreline westward prior to construction of the MGP. Thus, the soils immediately beneath the ground surface consist of varying thicknesses of urban fill, ranging in depth from 3 to 12 feet. Beneath that are layers of peat, sand, silt, and some gravel. Bedrock is encountered between 25 and 35 feet below the ground surface. Groundwater at the site is found anywhere from about two feet to ten feet below the ground surface. Groundwater generally flows westward toward the Hudson River beneath the western portion of the site, and eastward on the southeastern side of the site. This pattern is complicated somewhat by tidal variations in some areas.

### Env Problem:
Nature and Extent of Contamination: Based on the investigations, the chemicals of concern at the site are the constituents of MGP tar which leaked from gas holders, tar tanks, and subsurface pipes during...
the period when the MGP was operating. MGP tar is a black, oily liquid which was produced as a byproduct of the gas manufacturing process. The principal contaminants in the tar are benzene, toluene, ethylbenzene, xylene (collectively referred to as BTEX compounds); and polycyclic aromatic hydrocarbons (PAHs). BTEX and PAHs have been found in the soil and groundwater at the site in exceedance of standards, criteria, and guidance. The MGP tar is found in close proximity to historic structures in the subsurface, including the original gas holder foundations on OU-1, and the tar storage tanks on OU-2. Under OU-1, there is little evidence of tar. It has migrated roughly 120 feet to the southeast, mostly in thin seams, into an apparent depression in the bedrock surface at depths ranging from 12 feet to 25 feet below the ground surface. The amount of tar in the depression is minimal creating a small pool roughly 8 feet thick but less than 5,000 square feet, making a total volume of less than 500 cubic yards of impacted soils at least 15 feet below ground. Total BTEX concentrations range from non-detect to 5,230 parts per million (ppm), found at 30 feet below grade. PAHs are primarily co-located with the BTEX contamination, adjacent to the coal tar, with values ranging from non-detect to 2,808 ppm found at 20 feet grade, as compared to the soil cleanup objective of 500 ppm for commercial properties. Groundwater contamination is found down gradient of the tar contamination and includes the same contaminants as the soil contamination. Total BTEX concentrations range from 1.3 parts per billion (ppb) to 12,000 ppb. Total PAHs concentrations range from non-detect to 5,128 ppb. These levels of both BTEX and PAHs are well in excess of ambient water quality standards. The soil vapor sampling showed a range of contaminants, including benzene, naphthalene, xylene, and ethanol. While some of the contaminants could have been related to the former MGP plant, many were not. Values ranged from non-detect for naphthalene in several samples to 480 micrograms per cubic meter for 2,2,4-trimethylpentane. Based on the sampling results, it was determined that soil vapor intrusion was not a current issue that needed to be addressed.

Health Problem: Direct contact with contaminants in the soil is unlikely because the majority of the site is covered with buildings and pavement. People are not drinking the contaminated groundwater because the area is served by a public water supply that is not contaminated by the site. Volatile organic compounds may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air or buildings, is referred to as soil vapor intrusion. Actions are not needed to address the potential for soil vapor intrusion given the current use of the site. However, if the site is redeveloped or the use changes, the potential for soil vapor intrusion must be re-evaluated. Sampling indicates that off-site soil vapor intrusion as a result of site contamination is not a concern.

Tank Test:

213825; W 46 ST AND 12TH AVE (Continued)  S110306604

2/26/13 TJD File review. Tank failed tightness test on 9/8/12 - initially reported as a wet leak. Tank was uncovered and corrosion was identified at tank top fittings and associated piping. Repairs were performed and a tank only (isolation test) was performed on 10/2/12 which passed. A complete system tightness test was then performed on 10/11/12, also with passing results. Contractor has provided the following statement in their closure report, "Throughout excavation operations, close inspections indicated neither visual nor olfactory evidence of petroleum contamination, confirming that there was no loss of product into the subsurface.* all required closure documentation has been submitted and uploaded to EDOCS. No further action is required at this time.

Remarks: Not reported

Contact Name: ERT DESK MIKE DAUGHTERY
Contact Phone: (212) 580-8383
DEC Memo: 159063. 06-09-05 @ 12:05 M Amari # 11090 reports that while doing an inspection in v4159 s/s w 46 st 305 e/o 8 av, he discovered 4 gallons of transformer oil mixed in with dirt on the concrete floor of the structure and in the sump pit. There was or is no fire or smoke involved. No sewer or waterway affected. No injuries and weather had no affect. Account #80484 is being used for this incident. V4159 is on feeder 21m35. No measuring device was used to determine the amount of the spill. Source of the spill is the transformer and the cause is a leak. No private property affected. There is oil filled equipment in the structure(a transformer). Environmental yellow tag # 38680 was applied. No substantial racks. 1 liquid sample was taken by M Amari # 11090 from the spill, for pcb. Sample priority "e". Chain of custody # cc17430. Sample priority "e". Pressure test of transformer and a trap inspection are to be performed by M Amari #11090. J Moran # 01182CIG R Elliott # 81653 notified @ 12:43..........J Moran # 01182Update 6-9-05 @ 13:07. M Amari # 11090 reports that the trap checks clean, and the unit failed a pressure test due to a bottom leak. He will place pads and speedy dry to contain the spill and for a partial cleanup.....J Moran # 01182 6/9 @ 22:46. Lab Sequence Number: 05-05544-001. TOTAL PCB 9 ppmLab Sequence Number: 05-05544-002. TOTAL PCB 8 ppm. Logger R Pagano # 487036/23/05 05:16 R. Stiles # 03740 Cable supervisor called to report that at 04:00 the cleanup was completed. The unit was drained prior. The tranformer was removed. The stucture was double washed with citrus cleaner. The flush truck removed all debris. The spill tag # 38680 was removed. The crew was: K. Parrom # 04996, W. Holder. # 85940. A new transformer was installed. R. Bruns # 21106 Closed. 8-19-05. George Breen

the site at 698 10th Avenue. Oil stain on the floor, along the
basement wall. Building is heated by gas. Next door property address
is 462 W 49th street. They have a vaulted tank (1000 gallon?), no sign
of spill around. I asked property manager Benjamin, 516-330-1000 to
have a tightness testing of the tank system and send the result to
Owner: Chicago Investors C/O Victoria Roham
805 Gatos Place
PVE, CA
90204 ** Fax: Benjamin, 516-960-1200.06/20/13 Lenny no longer works
for the building. Spoke with Ada, 212-581-1398, she indicated that no
more oil seeping through the wall, call back in few days. (sr) 5/29/14
- Austin - Reassigned from Rahman to Mahat for follow-up on
complaint/impact - end 6/5/15: Mahat DEC Mahat called the Nail salon
and confirm with the employee that there is no odor/smell of heating
oil in the basement. Since the building is running in gas, the source
of the stain on the floor may be one time accident with in the
basement. No further investigation is warranted by te Department as
there is no complaint from the nail salon. Spill case will be
administratively closed based on the phone conversation. ***** Spill

Sangesland spoke to Al Albano. Spill from a locomotive into a series of floor drains in Penn Station. They are working on cleaning the spill and will report back on 10/6/2010. Sangesland received this e-mail from Al Albano: The following provides details on how the above-referenced spill occurred and what was done to clean it up. Attached are the waste manifests for the removal/disposal of impacted material. Spill Summary October 5th, at approximately 11 AM, a compressor line on locomotive # 514 failed while it was parked at the west end of 18-Track at the LIRR’s West Side Yard. West Side Yard is located in between 10th and 12th Avenue between 31st and 33rd Streets, in Manhattan. Lubricating oil from the ruptured line flowed into a retention tank on the underside of the locomotive until it overflowed the tank. Approximately 15 - 20 gallons of oil spilled onto concrete (under the tracks) and then into an adjacent storm drain. Upon discovery (within minutes of when the spill occurred), granular oil absorbent was spread over the spill area and into the catch basin to prevent the oil from migrating. In addition, several catch basins that were located "down-stream" of the initial catch basin were inspected to determine if the oil had spread through the piping network. Based on the inspection, it was determined that the oil (mixed with water) had been carried through a number catch basins to the south, before terminating in the line prior to reaching the catch basin at 4-Track. A catch basin at 11-Track that was readily accessible was plugged with absorbent pads to restrict the passage of any additional oil downstream. The storm drain on 4-Track is the next to last drain on the property and it was also plugged with oil absorbent pads to catch any oil that got through the plugged storm drain at 11-Track. When the LIRR’s environmental cleanup contractor arrived (approximately 3:30) they cleaned up the used granular absorbent that was spread at the scene of the spill at 18-Track. They also plugged the outlet pipe in the storm drain on 4-Track with oil absorbent booms and removed/disposed the used pads from the storm drains at 4 and 11-Tracks. Starting at the storm drain at 18-Track, drains were flushed using a fire hose to push the oil all the way to the drain at 4-Track. As these drains were being flushed a pump truck was sucking up all the oil and water coming through the drainage system. The flushing continued in each storm drain until there was no visible oily sheen on the water. Oily sand at the bottom of the drain at 4-Track was removed. The outlet pipe boom was then removed in the drain at 4 - Track and placed on the bottom of the drain at 4-Track to catch any stray bits of oil. This boom will be removed at a later date. A total of 1,090 gallons of oily water were sucked out of the drains during the flushing and 600 hundred pounds of oil soaked debris (pads, granular absorbent and miscellaneous material pre-existing in the catch basins) were removed. As mentioned above, copies of the waste manifests are attached. There was no rain during
### WEST SIDE YARD (Continued)

DEC Memo: 06/12/09-Spoke to Allen Fredman (212 788 4310) of DOH. As per him this is a commercial real state running on gas. DOH Rosemary Addison(212 676-8916) inspected the site. As per her report, the meter reading was 45 ppm. She noticed cracks in the basement floor. No body lives in the basement. As per her it’s not emmegency to respond. Investigation is necessary to find the source. Allen faxed DOH inspection report, see eDocs in NonFoil section.6/15/09- DEC Piper performed inspection. Due to flooding of con ed service box with water and oil from street runoff, fluids are leaching into this address. This seems to be a ongoing issue. I recommended to owner, to wait for a dry spell as this month has already seen more than twice the average of rainfall already. Once the area dries, to seal the bawsement with a two part epoxy paint. If that does not work, then to develop a freanch drain to the sump to control the seepage. There was minor amounts of petroleum observed though it was not coming from building. No additional action warranted by owner. Spill closed.
Remarks: unk oil seeping out of ground on commercial site. On site contact # 212-300-2727 Ms. Simmons. They have cracks in the basement which is seeping through. The building is run on natural gas. They would like a call back.

need to send a TTF letter11/17/05 - Raphael Ketani. I am sending a TTF letter today regarding the site. I will send one copy to Angela Dounolo, ATC Management, 1501 Broadway, NY, 10036, and one to 605 West 48 Street, LLC. Nov. 7, 2005A "Tank Test Failure Letter" was sent to Joseph DounoloAdvanced Cout. Corporation605 West 48th St.New York, NY 10036/21/05 - Raphael Ketani. Letter received from Thomas Leddy, President of Pro Test (718) 815-6292. Piping is disconnected
from the two tanks. Tanks are partially excavated. Studying feasibility of removing the tanks or bioremediation of soil around and under tanks. 12/21/05 - Raphael Ketani. I spoke to Mr. Leddy and he said that one tank was pumped out, but the other is still leaking into the sub-basement. Nothing has happened at the site, as far as he knows, and he doesn’t know if another contractor was hired to clean up the site. 1/4/06 - Raphael Ketani. I spoke to Mr. Joe Bernotas of ATC Management ((917) 337-1702). He is not the owner, but works for the owner. He said that the tanks are out of the ground and empty, but he is waiting for the environmental company to clean out the tanks and get rid of them. 2/8/06 - Raphael Ketani. Jerry Tiss of JLC ((212) 420-8119/ (917) 617-3894) called me to say that they removed the tanks. He said that the problem was a leaking fill line. I told him all of the contaminated soil has to be removed. He asked whether the soil under the sidewalk had to be removed. I told him "yes." He said he couldn’t get too close to a neighboring building to get more contaminated soil as the wall is brick. I told him I would need an engineers letter telling me that he can’t go any further. He said he would get it. Mr. Tiss said that he will take 2 end-point samples after removing the contaminated soil. I told him to send me the results. He said he would. 2/13/06 - Raphael Ketani. I received a FAX from Mr. Tiss. The letter discusses whether there is a need to remove more soil, but doesn’t address safety, structural integrity issues. The letter states that the site has been satisfactorily remediated, pending the results of samples that were sent to the lab. 2/15/06 - Raphael Ketani. I received a revised 2/10/06 letter from Mr. Tiss of JLC. It states that they can’t go any further without damage to the foundation and structural elements. 3/2/06 - Raphael Ketani. I tried to call Mr. Tiss, but could only leave a message. 3/15/06 - Raphael Ketani. I spoke to Mr. Tiss today. I asked him what is happening on the site. He said that they filled in the pit and have received the analytical soil results. I asked him to send the results. 3/16/06 - Raphael Ketani. I received the soil analytical results today. 3/17/06 - Raphael Ketani. I reviewed the soil analytical results and found them as either non-detect or a few SVOCs that were just above TAGM. In light of the received documentation and the engineer’s letter, I am closing the case. 3/29/06 - Raphael Ketani. Mr. Bernotas of ATC Management called to request an NFA letter. I told him I will send one out for the site.

Remarks: no remarks.

Spiller Company: OTL ENT.
7/18/14: Mahat T/C: DEC Mahat received a call from Ms. Debby Brown regarding the spill case. She mentioned that the inactive 1000 UST has been removed from the site. She discovered the contaminated soil in the vicinity of the tank. Tank is exposed and removed from the site; however the cause of the spill is still unknown. Spill case is assigned to DEC Zhune for the further investigation. Contact Information: Ms. Debby Brown GC Environmental 631.206.3700 Ext 101
Brown said she will contact Veronica with further information. 7/21/14-Vought-Vought spoke with Mahat and called Brown for more information including owner information for DEC requirement letter. Vought spoke to Debby Brown and she will send Vought the information. Debby noted that endpoint samples were collected (approximately two) and the excavation was not backfilled. No additional samples were collected yet due to concrete base which will be drilled through for samples. Excavation is 10' wide x 4' long x 6' deep. Tank is located in the basement of a two story building and bottom is vacant. Brown to send Vought an email with owners address and Vought to send requirement letter. Vought received call from GC Collins and bottom is bedrock (not concrete) and sidewalls are vault (not useful). They want to collect one bottom sample and four sidewalls (if bottom can be collected due to bedrock). If samples appear to be elevated, GC will recommend continued excavation and then collection of samples. Scott Furman, Esq. is working for client. Property undergoing a renovation and they want to clean out basement and remove tank. 7/23/14-Vought-Vought spoke to Collins and UST was in brick vault, they removed soil and tank and exposed vault and behind brick was foundation of buildings, elevator pit and bedrock. Bedrock is exposed in other parts of the basement. And as such no endpoint samples and reasoning will be included in report and Vought approved no collection of endpoint samples. Report will be submitted with site plan and disposal manifests. 10/6/14-Vought-Received call from and spoke to GC Collins who inquired as to status of review of Closure Report. Spill transferred from Zhune to Vought due to Vought’s main role as documented above. Vought performed to date file review. Email from GC Kolaventi to Vought-9/11/14. Email that "Good morning Mr. Vought, Please find attached subject spill closure report. Feel free to call me if you have any questions. Enclosure: 14-016-00 Shore-Closure Report-Final.pdf Thanks. Ravi Kumar Kolaventi". Vought uploaded report to D2.Spill Closure Report (Tank Removal) G Construction Enterprises (Ravi Kolaventi)-9/11/14. Spill was reported due to discovery of oil in vault during noted during tank removal as part of building renovation (site photos show renovation of site). One fill pipe was located in basement portion of building. Tank removal performed on 7/17 and 7/22/14. "All underground piping associated with the removed UST that was located within the UST excavation area was removed". A hole was noted in the UST that was approximately 0.5 inches in diameter "on the northern portion of the tank bottom". "The walls of the vault are enclosed by brick and the base of the vault is by concrete. Discoloration, petroleum-type odors and/or elevated levels of total VOCs were discovered in the soil along the north, west, east and south sidewalks of the excavation and free product was discovered in the bottom of the excavation. Final
CONTAMINATED SOIL IN BASEMENT UST EXCAVATION (Continued)

excavation was 3.5' wide x 11' long x 5' deep. Holes were drilled in bottom and each sidewall of vault. "Bedrock and foundation walls were found approximately 6-9 inches below/sides of vault". No endpoint samples collected as no soil found for sampling. Excavation was backfilled with 5 yards of clean soil. GCE requests spill closure.10/6/14-Vought-Sent email to GC Collins and GC Kolaventi that "Greg/Ravi, I just finished the report and have a few questions. The report noted "All underground piping associated with the removed UST that was located within the UST excavation area was removed." Questions: What about the piping that was not in the UST excavation? Was it isolated and tested? Investigated? Removed? Any former supply return piping the boiler noted? hanks and after you respond, and if needed, I can formalize the above in a letter." Vought received reply from GC Collins that "Jeffrey, All piping underground left the vault and was above ground. The building was in renovation so the piping above ground and the boiler had been previously removed by others." Spill closed by Vought due to removal of UST and all associated contaminated soil to bedrock and all piping removal as well as it was aboveground. Vought sent email to GC Collins asking for address for spill closure letter. Vought received reply that letter should be sent to:318 West 47th Street, LLC/c/o Shore Assets, Inc.19 West 21st StreetNew York, NY 10021Vought sent Spill Closure with above address to above address with cc to GC Collins and added letter to D2. prior to sept. 2004 data translation this spill lead DEC Field was "O’Connell*CON ED E2MIS NOTES 4-14-99"While Pre-inspecting structure for retro-fill, found dielectric transformer oil on floor. Have approx. 170 gals. of dielectric transformer oil on floor Found dump running on arrival, however it was not sucking, unplugged same. incident records indicate 374ppm No water in structure. 20:45 As of this time on location: Mr. Callazano of DEPMr. Thomaselle of DECMr. Dave Perez of ERTLab seq# 99-03683Aroclor 1254PCb 422ppm 4-10-99 01:55Dep reps on location were pleased with response and left @22:30hrs. No oil was released into the waterways. 4-09-99 23:45 The vault and rectifier were drained into >50ppm Astoria tanker. Approx. 475 gals. of PCB >50ppm waste was removed from the vault and rectifier by the tanker. Partial cleanup was completed by removing all free oil with tanker and then oil absorb.2 solid waste 55 gal. drums with PCB >50ppm waste stream generated and delivered to E. 16th Street PCB temporary storage area. Precautions taken against further contamination by placing oil absorbent socks around sump area and around rectifier. Also, oil absorbent placed on vault floor. Partial cleanup completed 4-10-99 01:30hrs. Note: The sump in this vault makes water. There might be a weak leak through bottom foundation of vault. #9 notified for B-ticket and notifications. A tanker might be needed again for final cleanup - pre-inspect will be needed to check water level in vault. From: Ramon, Richard Sent: Friday, April 07, 2000 11:04 AMTo: First, Louis W. Jr.; Radtke, Edward Jr.Cc: Jones, Paula E.; Zoeller, Richard; Coates, HarrySubject: DEP inquiry on Incident # 124136Importance: High Lou/Ed, I just received a call from Al Gorden of the DEP. The DEP wants some additional information on incident # 124136 April 9, 1999 spill The DEP wants to know: 1) the capacity of the transformer that leaked ---- 300 gallons? 2) how much oil was recovered ------ The Corporate Tanker removed 475 gallons of fluid, their breakdown was 250 oil and approximately 225 water. Apparently there
was NO proof that oil entered the sewer - please also include any other information which would be helpful in convincing the DEP that no oil entered the sewer (assuming this is the case). ------- The E2MIS report indicates that the drain was checked on 4/9/99 and found to be clean and this inspection was witnessed By the “DEP representatives” on location. Richard Ramon, E.H&S Phone - (212) 460-2262 06/01 @ 07:30hrs. OS. J. Liguori reports. Removed 3 drums of solid and 3 drums of liquid and transported to West 28th Street PCB yard as per corporate GEI. Job to be followed up due to rain. Time of cleanup 23:00 to 07:30 hrs. Crew on location ikinson # 24331, H. Cruz # 50390, 04/09/01 @ 23:00 hrs. OS. J. Gnall # 19045 reports removed 2 drums of solid debris and 1 drym of liquid and transported to W. 28th street as per GEI. Double washed floor, Removed oil tag # 01382, cleanup complete. Time of cleanup 18:00 - 23:00 hrs. Crew on location.

Remarks: the sump in the underground structure was not working, contained in the vault but possibly entered a sewer. historical pcb is 374ppm. sample was taken for pcb concentration. nrc number 47-98-81.

"GHIOSAY"10-10-2001 SITE WAS INSPECTED AND MET WITH THE BUILDING
SUPER LAZAR, HE STATED THAT THE TANK WAS FILLED YESTERDAY AND WHEN HE
CAME IN THIS MORNING, #6 FO OIL WAS ALL OVER THE FLOOR. IT APPEARED
THAT ABOUT 400-500 GALLONS HAD LEAKED OUT OF THE TANK AND INTO THE
VAULT. THE VAULT WAS NOT TIGHT AND OIL SEEPEP THOUGH THE BLOCK AND
ONTO THE BASEMENT FLOOR WHERE IT ENTERED A SUMP PIT. THE SUMP HAS
BEEN SHUT OFF. PETROLEUM TANK CLEANERS WAS ONSITE PUMPING THE OIL OUT
OF THE TANK AND SPREADING SPEEDI DRY ON THE FLOOR. THEY WILL RETURN
ON 10-11-01 TO SWEEP UP. SUPER ADVISED THAT THE TANK WILL BE
REPLACED. T. GHIOSAY10/23/01 ROBERT CROSSEN/LAZAR BUILDING SUPT. SITE
INSPECTION. DIKE AREA AND SPILLAGE OUTSIDE THE DIKED AREA CLEANED UP
BY PTS 624-4842. ABOUT 20 DRUMS REMOVED. THEY WILL FAX REPORT WITH
DISPOSAL RECEIPTS TO RANDY AUSTIN, DUE 11/30/013/30/05 - Austin -
Spill cleaned up,according to notes from staff assigned during the
WTC event - closed - end
Remarks: leaking tank..crew enroute to determine more.

Tank Test:
that the previous tank area will be dug down to about 10-12 ft in basement/building. Kevin mentioned that all soils from previous tanks area have been removed and currently contractor removed bedrock. groundwater found at 15 ft bg, couple of feet below bedrock surface.

Kevin Brussee from EBC. he mentioned that three more tanks found close to recently found waste oil tank. Kevin mentioned that the development is occurring under NYC Voluntary cleanup program. they have conducted environmental investigations prior to beginning the project. asked Kristen to submit copy of environmental reports.

spoke with Kristen from the site. she mentioned that site will be dug down to bedrock as part of development.04/18/13-Hiralkumar Patel.3:38 PM:- received message from Kevin Brussee from EBC. he mentioned that three more tanks found close to recently found waste oil tank. Kevin mentioned that the three tanks were used to store gasoline.Kevin BrusseeEnvironmental Business ConsultantsPh. (631) 504-6000 Ext. 114 (631) 338-1749 (C)email: kbrussee@ebcincny.com05/28/13-Hiralkumar Patel.1:39 PM:- spoke with Kevin. he mentioned that all soils from previous tanks area have been removed and currently contractor removed bedrock. groundwater found at 15 ft bg, couple of feet below bedrock surface. Kevin mentioned that the previous tank area will be dug down to about 10-12 ft in
bedrock. There is no groundwater data from previous tanks area. Based on groundwater sample results from other side of the site (along 48th St), DEP allowed dewatering from excavation. Kevin mentioned that NYC OER has required collection of groundwater sample from previous tank area (how, if site will be excavated to 12 ft into bedrock). asked Kevin to collect groundwater sample from excavation now. Also asked him to submit previous environmental investigation reports for review. Also asked to provide property owner/developer’s contact information.

1:50 PM: Left message for Breanna at NYC OER. Breanna Grilbbed NYC OER Ph. (212) 442-7126. Email: BGribble@dep.nyc.gov

Downloaded Phase I, Remedial Investigation Report and Remedial Action Work Plan from NYC OER’s website. Abstract of Phase I: Site is comprised of five adjacent lots on Block 1077: Lots 8, 9, 10, 55 and 56----------------

Street addresses for the site are 545-551 W 48th St and 534-542 W 49th St-------- lots 8, 9 and 10 are adjacent rectangular lots that front W 48th St- lots 55 and 56 are adjacent lots located north of lots 8, 9 and 10 that have street frontage on W 49th St- lots 8 and 9 were each developed prior to 1890 with residential buildings.

Buildings were demolished between 1968 and 1979. According to 1995 sanborn map, lots 8 and 9 were combined with lot 10 and used as a parking facility - lot 10 was originally two separate lots labeled as 545 and 547 W 48th St. Both lots were developed prior to 1890 with residential buildings. Buildings were demolished by 1968. Lot 10 remained vacant until it was combined with lots 8 and 9 and used as a parking facility- prior to 1890, lot 55 consisted of three lots with street addresses 534-536, 538 and 540 which were each developed as residential properties with outbuildings- by 1911, 534-536 and 538 W 49th St were combined and redeveloped into a 2-story garage/repair shop ---------------- in 1911, 540 W 49th St was utilized as a wagon repair shop- sometime between 1911 and 1919, 540 W 49th St was combined with 534-536 W 49th St and redeveloped into a 1-story automobile service station and repair shop ------------------ a 250 gal underground gasoline tank is present beneath the sidewalk in 1911 sanborn map-------- in 1959, lot 55 redeveloped with a new 1-story garage building and appears to have been used as a parking garage, auto repair facility and for auto sales through the 1980's. It was then used as a parking garage to present time- the entirety of lot 55 was redeveloped in 1959 with a 1-story parking garage with a basement level, the basement level of the parking garage extends to a depth of at least 10 ft bg. Therefore, any prior gasoline tanks and any associated contamination would have been removed to construct the basement level (three soil borings were installed through basement floor during Phase II investigation in Apr 2012) ---------------- the underground gasoline tank was no longer shown but a 275 gal gasoline tank appears in the southwest corner of the building in 1919, 1930 and 1950 sanborn maps-------- prior to 1890, lot 56 was developed with a residential home and outbuildings- lot 56 was redeveloped in 1919 into a 1-story auto repair shop in the front of the lot and an adjoining 2-story machine shop in the rear of the lot -------- by 1930, lot 56 was used by trucking company- building on lot 56 reverted back to an auto repair facility by 1947 and has remained an auto repair facility since -------- no soil borings were performed within the interior of the auto repair facility during phase II investigation performed in Apr. 2012. However, two soil borings were installed within basement of the adjacent parking garage building and collected a sub-slab soil gas sample immediately next to the auto repair facility during inspection, EBC noted the presence of one 275
gal waste oil tank within the auto repair facility (lot 56), evidence of either an AST or UST for #2 fuel oil located either within the basement of the auto repair facility or beneath the sidewalk immediately in front of the auto repair facility, and evidence of an UST in the open-air parking lot 8 (which was found as monitoring well during later inspection)- on page 3 of Phase I, Kevin mentioned that lots 55 and 56 were previously evaluated through an approved Phase II investigation and eliminated from further consideration.

---------- abstract of Remedial Investigation Report- proposed future use of the site will consist of residential use- two new 7-story buildings will have a full basement level which will be utilized for ‘residential apartments’, common and recreation areas and mechanical equipment rooms- first floor of each building will consist of a lobby area, connection to the courtyard and residential apartments- floors 2 through 7 will consist of residential apartments- excavation for the basement of the two towers and the open space behind the buildings will result in excavation of the entire property to a depth of 14-16 ft below street level. this will require excavation of at least 4 to 7 ft into the bedrock over the majority of the site less than

----------- installed seven soil borings (B1 through B7) and collected ten soil samples- installed three sub-slab soil vapor probes within the parking garage building on lot 55- installed three soil vapor implants within the asphalt paved parking lot (along W 48th St)- depth to bedrock ranges from 4 to at least 14 ft bg- groundwater was not encountered within the overburden soil above the bedrock- pre-existing 1 inch monitoring well was discovered in the lot 8 (well was believed to be a fill port, during initial site inspection)- well was installed, for a geotechnical report, to a depth of 20 ft- depth to groundwater was measured to be approx. 9 ft bg using existing monitoring well on lot 8 less than ----------- elevation of property ranges from approx. 25 to 27 ft- stratigraphy of the site, from the surface down, consists of a layer of historic fill (primarily comprised of brick, concrete, wood and other debris in a brown sand matrix) to a depth of at least 4 ft below the basement level of the parking garage (on lot 55) and a depth of approx. 7 ft or to the bedrock surface in the asphalt paved parking lot located behind the auto repair facility (lot 56) and parking garage building (lot 55)- waterproofing membrane will be installed- during site inspection, small cellar area was accessed, located in the front of the auto repair facility (lot 56) and determined the vent and fill line observed within sidewalk (in front of lot 56) were associated with a former 275 gal AST located within the cellar less than ------ no PID readings above background concentrations were obtained from any of the soil borings- soil borings B1, B2, B3 and B4 were performed within the basement of parking garage- concrete slab of the parking garage is estimated to be 10 ft bg- each soil boring within the basement was advanced to a depth of 4 ft below concrete slab and collected soil sample from 0 to 4 ft- soil borings B5, B6 and B7 were performed on lots 8, 9 and 10- borings B5 and B6 were sampled continuously from grade to a depth of 7 ft bg, where bedrock encountered- bedrock was encountered at a depth of approx. 4 ft bg at boring B7- one soil sample collected from borings B2, B3, B4 and B7- two soil samples were collected from each borings B1 (one duplicate sample), B5 and B6- no VOC contamination found in soil samples except 1,200 ppb Naphthalene at 5-7 ft bg in boring B6- found SVOC contamination in most soil samples- groundwater sample collected from
pre-existing well on lot 8- no VOC contamination found in groundwater sample- minor SVOC contamination (less than 1 ppb) noted in groundwater sample- found petroleum and chlorinated solvent contamination in soil-vapor samples (mostly below 70 ug/m3, except PCE at 121 ug/m3 in sample SS-1 collected from lot 55) less than ------ soil-vapor sample SS1 was collected from beneath the floor of the parking garage basement, and sample was collected adjacent to lot 56 (where repair facility located) less than ------- chlorinated solvent compounds were not found in soil or groundwater samples

alternate addresses: 545-551 W 48th St, 534-542 W 49th St no other spills found.PBS #: 2-611208. as per PBS record, site 542 W 49th Street (lot 56) has one 100 gal waste oil AST on legs. tank installed in Aug. 2009. 4:00 PM:- spoke with Kevin. asked him about previous Phase II reorts, as noted on page 3 of Phase I. Kevin mentioned that soil borings for Phase II (report dated Sep. 2012) were installed in Apr. 2012, before Phase I report was written and there were no other Phase II investigations done. asked Kevin about groundwater sample from previous tanks location. he mentioned that excavation is filled with rain water. so they will remove rain water from excavation and will collect groundwater sample, once excavation recharge with groundwater. groundwater sampling may happened on 05/31/13. based on available sampling results and proposed redevelopment plans (which requires excavation into bedrock), no further investigation needed if no contamination noted in groundwater sample that will be collected from excavation pit in area where previous waste oil/gasoline tanks were located. 05/29/13 Hiralkumar Patel. 2:41 PM:- received call from Breanna. discussed about groundwater sampling requirements from OER. Breanna confirmed that OER required two groundwater samples after on-site buildings demolished. she will talk to Kevin about analyzing groundwater sample from excavation pit for full list and other required parameters. 06/11/13 Hiralkumar Patel. 4:36 PM:- spoke with Kevin, they collected groundwater sample and waiting for results. 06/24/13 Hiralkumar Patel. 12:17 PM:- spoke with Kevin and asked to submit groundwater sample results. he will submit results today. 12:31 PM:- received email from Kevin including results of water sample collected from open pit chiseled into bedrock.
water analyticals:
------------------------------ water
Benzene---------------------------8
Toluene--------------------------150
Ethylbenzene---------------------1.1
100Tetrachlorethane-------------3,660
1,2,4-Trimethylbenzene-------1
5001,3
5-Trimethylbenzene-----------370
Naphthalene------------------41007/
22/13 Hiralkumar Patel. 3:38 PM:- sent email to Kevin and asked to call back to discuss the sample result. 3:43 PM:- received call from Kevin. he mentioned that the water sample collected before was actually a rain water and currently, site excavation is completely dry. bottom of current excavation is about 13 ft bg. previously, groundwater was found at about 10 ft bg in well installed on property towards W 48th street. water found at 10 ft could be perched water. Kevin mentioned that a bedrock well will be installed in area where tanks were found. this well will be installed as per NYC OER requirement. well will be installed using hand held drill machine. 08/12/13 Hiralkumar Patel. 1:08 PM:- left message for Kevin. 08/20/13 Hiralkumar Patel. 11:15 AM:- spoke with Kevin. he mentioned that well has not been installed yet. well may be installed in next two weeks. 10/10/13 Hiralkumar Patel. 3:10 PM:- visited site.
met Bob, construction supervisor. Inspected area where tank was found. Foundation wall, along W 49th Street, has been poured. Bob mentioned that there will be about 2 ft concrete floor throughout the site. Found bedrock at the bottom of excavation pit. Bob mentioned that the required bedrock well will be installed tomorrow. No water found in excavation. No signs of soil contamination noted.

05/13/14 - Hiralkumar Patel. 3:45 PM: - Spoke with Kevin regarding bedrock well. He mentioned that some odors were noted during well installation, so they conducted VEFR events and then collected water sample. He will submit report by 05/16/14.

11/14/14 - Hiralkumar Patel. 9:30 AM: - Spoke with Kevin. He will email groundwater sample results.

10:17 AM: - Received email from Kevin including results of groundwater sample collection. Groundwater sample was collected from well MW2 on 02/18/14 and 04/23/14. Found increasing VOC contamination in groundwater samples. Kevin mentioned that both samples were collected following VEFR events.

Groundwater analyticals: 02/28/14 - 04/23/14:

- Benzene: 14
- Toluene: 50
- Ethylbenzene: 26
- Xylene: 374
- 4-Trimethylbenzene: 330
- 5-Trimethylbenzene: 110
- Naphthalene: 74

11/25/14 - ground water samples. Kevin mentioned that both samples were collected following VEFR events. Groundwater sample was collected from well MW2 on 02/18/14 and 04/23/14. Found increasing VOC contamination in groundwater samples. Kevin mentioned that both samples were collected following VEFR events.

Groundwater analyticals: 02/28/14 - 04/23/14:

- Benzene: 14
- Toluene: 50
- Ethylbenzene: 26
- Xylene: 374
- 4-Trimethylbenzene: 330
- 5-Trimethylbenzene: 110
- Naphthalene: 74

05/13/14 - Hiralkumar Patel. 3:45 PM: - Spoke with Kevin regarding bedrock well. He mentioned that some odors were noted during well installation, so they conducted VEFR events and then collected water sample. He will submit report by 05/16/14.

11/14/14 - Hiralkumar Patel. 9:30 AM: - Spoke with Kevin. He will email groundwater sample results.

10:17 AM: - Received email from Kevin including results of groundwater sample collection. Groundwater sample was collected from well MW2 on 02/18/14 and 04/23/14. Found increasing VOC contamination in groundwater samples. Kevin mentioned that both samples were collected following VEFR events.

DEC Memo: 01/10/08 - See eDocs for Con Ed report detailing cleanup and closure. Prior to Sept, 2004 data translation this spill Lead_DEC Field was "RODRIGUEZ". Con Ed e2mis #149297:7-15-03 @ 11:55G Reimers reports that while doing maintenance work in V2818 235 w 40 st, he discovered 3 gallons of unknown oil mixed with 2 gallons of water on the concrete floor of the structure. V2818 is on feeder #16m73. No measuring device was used to determine the amount of the spill. There is a drain in the structure that is clogged. Source and cause of spill are unknown. There is oil filled equipment in the structure (transformer). Environmental yellow tag # 38783 was applied. Water is standing, no visual water movement. No sump. No substantial cracks. No dielectric filled feeder in the structure. 2 liquid samples taken by G Reimers #13973 from the spill. 1 for id and 1 for pcb. Sample priority "E". Chain of custody # cc18051. Cleanup pending resources. Update 7-15-03 @ 13:25 Partial cleanup is to begin now. Requested that I get a tanker and flush truck for the cleanup. Also states that the gauge on the transformer indicates that the oil is at minimum. Update 7-15-03 @ 14:00 EPA #nyp 004 113 072 has been issued for this cleanup. All resources have been ordered for a 15:00 cleanup. Not reported

Remarks: Above material discovered at above location on top of 2 gallons of water. Samples have been taken and cleanup pending results and resources. Con Ed # 149297.

DEC Memo: 2/27/15: Mahat DEC Mahat responded to the reported 20 gallon spill on the floor. It was due to the corroded fuel line. Riteway was on site to perform the necessary clean up. Speedy dry was applied and power washed will be performed once the speedy dry was sweeped up. A complete report will be submitted to the DEC attention once the clean up is done. Point of Contact: Peter L. Troisi **** Building Management 212.560.3946 Email: ptroisi@ngkf.com DEC is waiting for a clean up report. 3/25/15: Mahat e/c: DEC Mahat has uploaded the closure on D2. Based on the report, surface spill has been cleaned and there is no other resource impacted. Hence, the spill case will

DEC Memo: Con Ed e2mis #147047:2-4-03 @ 10:36 D Richards #88492 reports that while inspecting v2818 @ 231 w 40 st. A Cohen #08224 discovered 5 ounces of an unknown oil on top of 120 gallons of water on the concrete floor of the structure. Source and cause of spill are unknown. There is oil filled equipment in the structure (the transformer). Sewer connection not verified. Sump is concrete. 2 liquid samples taken by A Cohen #08224 from the spill, 1 for pcb and 1 for id. Cleanup in progress.2/4/03 16:13 Received lab results, Lab Sequence Number: 03-01016-001 Analysis indicates the presence of a substance similar to a dielectric fluid.2/4/03 20:26 Received lab results, Lab Sequence Number: 03-01015-001 TOTAL PCB 18 ppm

Remarks: caller states spill is exactly 5 ounces onto 120 gallons of water in the vault - is all being cleaned up at this time - cause is still under investigation - con ed #147047
