Introduction

This Phase II Investigation Work Plan has been developed for the above referenced site. The Site is located in the Clinton neighborhood of Manhattan and is identified as Block 1050 and Lots 1 and 61 (portions). The entire site is being redeveloped in two separate phases to allow for Covenant House’s continued operation of services during the construction of a new Covenant House facility on the eastern portion of the site. Currently, the western portion of the Site is occupied by the Covenant House New York shelter for homeless youth (Wing A) while the eastern portion of the Site most recently consisted of two buildings (Wings B and C) that have been demolished in preparation for Phase 1 of the proposed site redevelopment. A Notice to Proceed for the Phase 1 redevelopment was issued by NYCOER on 25 January 2019.

This Work Plan is being prepared for Phase 2 of the proposed redevelopment located on the western portion (Wing A) of the site, which corresponds to the extents of the approved tentative reapportionment of tax Lot 61.

Site Location, Current Use, and Proposed Development Plan

The Site is located in the Clinton neighborhood of Manhattan and is identified as Block 1050 and Lots 1 and 61 (portions). A site location plan is provided as Figure 1. The eastern portion of the Site most recently consisted of two buildings (Wings B and C) that have been demolished in preparation for Phase 1 of the proposed site redevelopment; the western portion of the Site (Wing A) is occupied by the Covenant House New York shelter for homeless youth and a parking lot. As part of development, the tax lots are expected to be reapportioned to correspond with the proposed redevelopment extents: tentative lots 1 (Phase 1 redevelopment / eastern portion of the Site) and 61 (Phase 2 development / western portion of the Site).

The Phase 2 portion of the proposed redevelopment (Wing A) site is bordered by 10th Avenue to the west, West 41st Street to the north, West 40th Street to the south, and the Phase 1 Covenant House redevelopment site to the east. New York City Transit (NYCT) tunnels are located to the north of the site, below West 41st Street. In addition, Lincoln Tunnel entrance roads and access ramps for the nearby Port Authority Bus Terminal are located to the south of the site, beyond West 40th Street. The existing basement level beneath Wing A extends approximately 15-feet below sidewalk level.

Phase 2 of the development project will consist of demolishing the existing 8-story Covenant House building (Wing A) and associated cellar space in the western portion of the site, and constructing a new 42-story mixed-use building with an approximate footprint area of 15,913
square-feet. Excavation will be completed to vertically and horizontally extend the existing cellar extents. Based on field measurements collected from permanent monitoring wells installed during Langan’s December 2018 Due Diligence Investigation, the water table is anticipated at approximately 14 feet below sidewalk level. The proposed development plans for the Phase 2 development / western portion of the site are presented in Attachment 1.

**Phase I ESA Summary**

A Phase I Environmental Site Assessment (ESA) was completed for the Covenant House by TRC Engineers, Inc. (TRC) dated September 2015. According to the summary of the historical Sanborn Fire Insurance Maps provided in the ESA, prior to 1930 the Covenant House property was occupied by up to 16 residential buildings, some of which included mixed commercial use. Increased commercial operations were documented between 1930 and 1950. Two filling stations and an automobile repair shop operated between 1950 and 1968 on the western portion of the Covenant House site, located within the extents of the proposed Phase 2 redevelopment. The northeastern corner of the site (within the extents of the proposed Phase 1 redevelopment) is labeled as automobile parking during this period. Between 1968 and 1979 additional site buildings were demolished and the southwestern filling station was no longer present. Buildings labeled as a Narcotic Rehabilitation Center are shown between 1968 and 1990. The northwestern filling station is no longer present by 1990.

Historical ownership information obtained from the New York City Department of Finance and provided in the ESA revealed no information regarding environmental conditions related to past usage.

The Phase I ESA also identified that the Covenant House is registered with the New York State Department of Environmental Conservation (NYSDEC) for Spill No. 0613314, which was reported in 2007 following the observation of oily water in an onsite excavation. Approximately 3,000 gallons of oily water were pumped out of the excavation and no additional oily water infiltration was observed following the removal. The spill was administratively closed in 2009. A second spill was reported for the property, but associated with the 7 Line Subway Extension. According to the ESA, petroleum impacted soils were identified during drilling for the subway extension and Spill No. 04044424 was reported in 2004. Contaminated soil was reportedly removed and replaced with clean fill and the spill was administratively closed in 2005. The Phase I ESA also identified that Covenant House is registered with NYSDEC as Petroleum Bulk Storage (PBS) facility no. 2-610819 for a 10,000-gallon No. 2 fuel oil underground storage tank (UST) beneath the parking lot in the northern portion of property, located within the extents of the proposed Phase 1 redevelopment extents.
The AOCs identified for the Phase 2 redevelopment include:

1. Historical operations including two filling stations and one automobile repair shop in close proximity to the proposed redevelopment extents.
2. Closed NYSDEC Spill Nos. 04044424 and 0613314 which were reported for Covenant House based on the observation of petroleum impacts in soil and/or groundwater at the site.
3. Active 10,000-gallon fuel oil UST.
4. Presence of historic urban fill.

The Phase I ESA is included in Attachment 2.

**Due Diligence Investigation Summary**

For the purposes of due diligence, to determine if the above identified AOCs could potentially impact the proposed site redevelopment plans, and to partially satisfy future NYCOER remedial investigation requirements a limited Phase II EI was completed within the proposed Phase 2 development extents of the Site in November 2017 which included completion of six soil borings (LSB-1, LSB-2, and LSB-5 through LSB-8) and collection of six soil samples, and the installation of two temporary monitoring wells (TW-2 and TW-3) and collection of two groundwater samples. Soil samples were collected from depths corresponding to between 15 and 18 feet below street level and were analyzed for volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), and target analyte list (TAL) metals. Groundwater samples were analyzed for VOCs, SVOCs, and total TAL metals.

An additional due diligence investigation completed by Langan in December 2018 included the completion of four additional soil borings (LSB-21 through LSB-24) and collection of four additional soil samples, installation of three permanent monitoring wells (LMW-8 through LMW-10) and collection of three groundwater samples, and installation of three soil vapor points (LSV-9 through LSV-11) and collection of three soil vapor samples. Soil samples were collected from depths corresponding to 13 to 15 street below street level and 1 to 3.5 feet below basement slab level and were analyzed for VOCs, SVOCs, TAL metals, pesticides, and polychlorinated biphenyls (PCBs). Groundwater samples were analyzed for VOCs, SVOCs, total and dissolved TAL metals, pesticides and PCBs, and soil vapor samples were analyzed for VOCs.

A summary of the sampling completed as part of due diligence is provided as Table 1. Due diligence investigation analytical results were generally unremarkable and will be discussed in detail in the Remedial Investigation Report.
**Phase II Investigation Work Scope**

**Geophysical Survey**

A limited geophysical survey will be performed for utility clearance at each boring location. The contractor will determine the potential underground structures using ground penetrating radar and magnetic geophysical instruments and will clear a 10-foot area around each boring location.

**Soil, Groundwater, and Soil Vapor Sampling Summary**

An investigation of soil, soil vapor and groundwater is being performed to supplement the due diligence investigations previously completed in November 2017 and December 2018 and to properly characterize the site for potential environmental impacts from historical on-site/off-site uses, operations, etc. The proposed sampling event will address both AOCs and historic fill, as well as provide general horizontal/vertical characterization across the site for development purposes. The sampling procedures of this investigation will be performed in accordance with the NYSDEC Technical Guidance for Site Investigation and Remediation DER-10.

Eight test borings will be completed at the site. A proposed sample location plan (which also includes historical sampling locations) is provided as Figure 2 and a summary of the proposed sampling plan is provided as Table 2. At a minimum, a total of 11 soil samples will be collected from the eight test borings to address data gaps remaining following the November 2017 and December 2018 due diligence investigations to satisfy NYCOER investigation requirements. Soil borings will be advanced for the collection of shallow soil samples to supplement the deeper soil samples previously collected at LSB-2, LSB-9, and LSB-21, and for the collection of deeper soil samples to supplement shallow samples previously collected at LSB-22, LSB-23, and LSB-24; these samples will be analyzed for VOCs, SVOCs, pesticides, PCBs, TAL metals, and hexavalent chromium. Soil samples will also be collected from previously sampled intervals at LSB-2, LSB-5, LSB-8, LSB-9, and LSB-23; these samples will be analyzed for pesticides and PCBs, which were not previously analyzed.

A minimum of three groundwater samples will be collected from three previously installed permanent monitoring wells and analyzed for VOCs, SVOCs, pesticides, PCBs, total and dissolved TAL metals, and hexavalent chromium. One soil vapor point will be installed and one soil vapor sample will be collected and analyzed for VOCs to supplement the three soil vapor samples previously collected.
The depth of groundwater is expected to be encountered at approximately 14 feet below sidewalk level. General groundwater flow direction is expected to be west towards the Hudson River. Each sample point location at the site will be accurately measured using detailed building floor plans.

**Soil Sampling**

A geologist/engineer/QEP will screen the soil samples during borehole advancement for organic vapors with a photo-ionization detector (PID) and evaluated for visual and olfactory impacts prior to collecting environmental samples. All field work will be recorded in a field log. A track mounted direct push GeoProbe 7822DT drill rig will be used to drill two locations in the parking lot to the north of the existing Wing A building and a limited access direct push Geoprobe 420M drill rig will be used to drill six locations within the building cellar.

Based on the 2016 Remedial Investigation Sampling Scope Guidelines, NYCOER requires seven soil borings and the collection of a minimum of fourteen soil samples for analysis of VOCs, SVOCs, pesticides, PCBs, and TAL metals for a 10,000- to 15,000-square-foot site. As eight borings were previously completed by Langan in November 2017 and December 2018, eight additional soil borings will be installed to collect the required number of samples and analyses at the site to address data gaps remaining following the previous investigations to satisfy NYCOER investigation requirements. A minimum of 11 samples will be collected for laboratory analysis. Up to two discrete soil samples will be collected from each of the eight borings to supplement the samples previously collected as described above – one from the previously sampled interval for compounds not previously analyzed, the upper two-foot depth interval material, from the capillary fringe (two-foot interval above the groundwater interface), and/or one from the depth interval exhibiting the greatest degree of contamination. If neither contamination nor groundwater are encountered, the sample will be collected from the depth equivalent to the base of the final excavation for redevelopment based on the available design drawings. Discrete (grab) samples will be collected from the aforementioned sampling intervals. The subsurface soil samples may also serve as in-situ post-excavation soil samples for the remedial plan. An additional soil sample may be collected from each or several test boring(s) if elevated PID readings and/or visual and olfactory observations are noted during borehole advancement, and/or field observations identify an upper fill layer underlain by native material the additional soil sample from the upper zone of the native layer will help delineate the vertical migration of impacts (if any), as well as determine a more detailed remedy and potentially provide a cost savings for disposal options.
Monitoring Well Installation and Groundwater Sampling

No additional groundwater monitoring wells will be installed. Representative groundwater samples will be collected from three permanent monitoring wells, previously installed during Langan’s December 2018 due diligence investigation using low-flow sampling techniques. A representative groundwater sample will be collected from each well with a peristaltic pump and dedicated tubing. Sampling will be conducted in accordance with NYSDEC Draft DER-10 Technical Guidance for Site Investigation and Remediation, dated May 2010, and Sampling Guidelines and Protocols, dated March 1991. Groundwater wells will be gauged with a water level meter to record a depth to groundwater reading (1/100 foot), and if necessary, an interface meter to determine the thickness of LNAPL or DNAPL.

Soil Vapor Sampling

One soil vapor sample will be collected to supplement the three soil vapor samples previously collected in December 2018 in accordance with the Final Guidance for Evaluating Soil Vapor Intrusion in the State of New York (NYSDOH October 2006). Conditions in the field may require adjustment of the proposed sampling location. Groundwater is expected to be encountered at a depth of 14 feet below sidewalk grade.

The soil vapor implant will be set at a depth of approximately 13 feet, corresponding to one foot above the groundwater interface. The vapor probe will consist of a new, dedicated stainless steel screen implant connected to polyethylene or Teflon™ tubing extending to the target depth. About 1 foot of clean sand filter pack will be placed around the screen implant, and the remaining annular space will be backfilled to grade with hydrated bentonite. Sampling will occur for the duration of two hours.

Samples will be collected in appropriate sized Summa canisters that have been certified clean by the laboratory and samples will be analyzed by using USEPA Method TO-15. Flow rate for both purging and sampling will not exceed 0.2 L/min. 24-hours following soil vapor probe installation, one to three implant volumes shall be purged prior to the collection of any soil-gas samples. A sample log sheet will be maintained summarizing sample identification, date and time of sample collection, sampling depth, identity of samplers, sampling methods and devices, soil vapor purge volumes, volume of the soil vapor extracted, vacuum of canisters before and after the samples are collected, apparent moisture content of the sampling zone, and chain of custody protocols.
As part of the vapor intrusion evaluation, a tracer gas will be used in accordance with NYSDOH protocols to serve as a quality assurance/quality control (QA/QC) device to verify the integrity of the soil vapor probe seal. A container (box, plastic pail, etc.) will serve to keep the tracer gas in contact with the probe during testing. A portable monitoring device will be used to analyze a sample of soil vapor for the tracer gas prior to sampling. If the tracer sample results show a significant presence of the tracer, the probe seals will be adjusted to prevent infiltration. At the conclusion of the sampling round, tracer monitoring will be performed a second time to confirm the integrity of the probe seals.

**Sample Analysis**

Soil, groundwater, and soil vapor samples will be submitted to a NYSDOH Environmental Laboratory Accreditation Program (ELAP)-certified laboratory for Full analysis:

- Volatile Organic Compounds by EPA Method 8260;
- Semi-volatile organic compounds by EPA Method 8270;
- Pesticides/PCBs by EPA Method 8081/8082; and
- Target Analyte List metals by EPA Method 6010 and 7471;
- Hexavalent chromium by EPA Method 7196A;
- Soil vapor samples will be analyzed for VOCs by using USEPA Method TO-15.

All groundwater samples will be analyzed for both filtered (dissolved) and unfiltered (total) metals.

If either LNAPL and/or DNAPL are detected, appropriate samples will be collected for characterization and “finger print analysis” and required regulatory reporting (i.e. NYSDEC spills hotline) will be performed.

**Quality Assurance/Quality Control Procedures**

QA/QC procedures will be used to provide performance information with regard to accuracy, precision, sensitivity, representation, completeness, and comparability associated with the sampling and analysis for this investigation. Field QA/QC procedures will be used to document that samples are representative of actual conditions at the Site and identify possible cross-contamination from field activities or sample transit. Laboratory QA/QC procedures and analyses will be used to demonstrate whether analytical results have been biased either by interfering compounds in the sample matrix, or by laboratory techniques that may have introduced systematic or random errors to the analytical process. QA/QC samples (field and trip blanks, duplicates, etc.) will be collected and analyzed at an ELAP-certified laboratory.
**Investigation Derived Waste**

Cuttings may be disposed at the site within the borehole that generated them to within 24 inches of the surface unless:

- Free product or grossly contaminated soil, are present in the cuttings;
- The borehole has penetrated an aquitard, aquiclude or other confining layer; or extends significantly into bedrock;
- Backfilling the borehole with cuttings will create a significant path for vertical movement of contaminants. Soil additives (bentonite) may be added to the cuttings to reduce permeability;
- The soil cannot fit into the borehole.

Those soil cuttings needing to be managed on-site will be containerized in properly labeled DOT approved 55-gallon drums for future off-site disposal at a permitted facility. All boreholes which require drill cuttings disposal would ultimately be filled with bentonite chips (hydrated) and asphalt/concrete capping. Disposable sampling equipment including, spoons, gloves, bags, paper towels, etc. that came in contact with environmental media will be double bagged and disposed as municipal trash in a facility trash dumpster as non-hazardous trash.

**Reporting**

A Remedial Investigation Report will be prepared following completion of the field activities and receipt of the laboratory data. The report will provide detailed summaries of the investigative findings. Soil, groundwater, and soil vapor analytical results will be compared to the NYSDEC Part 375-6.8(a) Unrestricted Used Soil Cleanup Objectives, appropriate Part 375-6.8(b) Restricted Soil Cleanup Objectives and NYSDEC Part 703 Groundwater Quality Standards (GQS) (class GA) and Division of Water Technical and Operational Guidance Series (TOGS) 1.1.1 Ambient Water Quality Standards (AWQS), and NYSDOH October 2017 Final Guidance for Evaluating Soil Vapor Intrusion Matrices. The report will include an updated sampling plan, spider diagrams, analytical data tables for all reported constituent compounds (including non-detectable concentrations) and remedial recommendations, as warranted.

**Investigation HASP**

An OSHA compliant Health and Safety Plan that meets all OSHA HAZWOPER requirements will be implemented during the site work to protect worker safety. The Site Safety Coordinator will ensure full compliance of the HASP in accordance with applicable health and safety laws and regulations. All field personnel involved in investigation activities will participate in training.
required under OSHA HAZWOPER 29 CFR 1910.120, including 40-hour hazardous waste operator training and annual 8-hour refresher training. Emergency telephone numbers will be posted at the site location before any work begins. A safety meeting will be conducted before each shift begins. Topics to be discussed include task hazards and protective measures (physical, chemical, environmental); emergency procedures; PPE levels and other relevant safety topics including a highlighted route map to the nearest hospital/emergency room. Meetings will be documented in a log book or specific form. Potential on-site chemicals of concern include VOCs, SVOCs, Pesticides/PCBs, and Metals (specifically arsenic, lead, and mercury at a minimum). Information fact sheets and/or summary tables for each contaminant group are included in the HASP. A copy of this HASP will be on-site during each sampling event.

EXECUTIVE SUMMARY

Subject to the qualifications and limitations stated in Section 1 of this report, TRC Engineers, Inc. (TRC) was retained by Covenant House International (also known as “Client” or “User”) to perform a Phase I Environmental Site Assessment (ESA) of the property located at 538-554 Tenth Avenue, New York, NY 10018 (herein referred to as the “Site”). The legal description of the Site is Block 1050, Lots 1 and 61. This property was assigned an E-Designation “E-137” as part of the 2005 No. 7 Subway Extension—Hudson Yards rezoning study. The E-designation is for Hazardous Materials and Window/Wall Noise Attenuation. According to the study, the Site or nearby properties were historically occupied by a coal yard and a piano factory and, as a result, there is potential for non-petroleum contamination on the Site. This Phase I ESA was performed in accordance with the scope and limitations of the American Society of Testing and Materials Practice E 1527-13 Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process (ASTM E 1527-13). Limiting conditions and/or deviations from the ASTM E 1527-13 standard are described in Sections 1.3 and 7.7 of this report.

The approximately 29,000 square foot (sf) lot area contains 3 buildings (buildings A, B and C) and a parking lot. Building A is an 8-story 90,000 sf building that fronts on Tenth Avenue. Originally built in 1961 as a hotel, the building was converted by Covenant House in 1984 to serve as its main residential and administrative facility. Building B is a 4-story, 12,000 sf building that fronts 40th Street. Originally built as a branch of the New York Public Library in the early 1900s, the building has been significantly altered by Covenant House to serve as the organization’s gymnasium, chapel, and legal services center. Building C is a 5-story, 29,000 sf building that fronts 41st Street. The building currently serves as Covenant House’s cafeteria, health center, classrooms, and administrative offices.

As a result of the Phase I ESA, including but not limited to our visual observation of the Site; review of historical information, environmental databases, and information provided by the User; interviews with current Site representative(s); and TRC’s professional judgment, the following recognized environmental conditions (RECs) and/or controlled recognized environmental conditions (CRECs) associated with the Site, as defined by the ASTM E 1527-13 standard were identified:

On-Site RECs:

- The review of the regulatory agency database report identified the Site in the Historic Automobile Stations database. Additionally, the review of the historic Sanborn Maps confirm the historic presence of two filling stations and an automobile repair shop. One of the filling stations on the northwest corner of the Site operated from approximately 1950 until at least 1987. Historic Site use for automobile repair and filling stations are considered RECs.

- The review of the regulatory agency database report identified two NYSDEC reported spills associated with the Site. In 2004, petroleum impacted soils were reportedly identified during soil borings drilled on the Site in association with the No. 7 subway
extension. Additionally, petroleum impacted soil and perched water/groundwater were encountered during excavations associated with rate renovations performed in 2007. Petroleum impacted soil and groundwater are considered RECs.

- There is an active 10,000-gallon fuel oil underground storage tank (UST) on-Site. The presence of a 10,000-gallon fuel oil UST is considered a REC.

- Structures were formerly on-Site and demolished prior to the construction of the current Site building. Historic fill of unknown origin and suspect buried structures have the potential to impact the Site property. The likely presence of historic fill and buried structures is considered a REC.

Off-Site RECs:

- Review of the regulatory agency database revealed that petroleum releases to soil were observed during a pre-closure investigation performed in the vicinity of the No. 6 fuel oil UST located on the east adjoining site. A spill was reported to the NYSDEC and groundwater monitoring wells were installed in the vicinity of the UST to monitor for the presence of petroleum impacts. Reportedly, the wells were monitored for several years and the spill was closed by the NYSDEC. However, petroleum impacts to soil remain in the vicinity of the UST and this is considered a REC.

- Review of the regulatory agency database report revealed that the east adjoining site is listed in the RCRA database as a CESQG for generation of hazardous waste. The current and historic generation of hazardous waste at this site is considered a REC.

- Review of a previous Phase I Environmental Site Assessment performed at the east adjoining property revealed that the site was previously utilized as an automobile repair trade school. Historic site uses of the east adjoining property for automobile repair is considered a REC.

- The review of historic Sanborn fire insurance maps revealed that coal yards were present on a property to the east of the Site from at least 1890 to approximately 1899 and the northeast adjoining property from at least 1950 to approximately 1968; a laundry facility, “Steam Laundry”, was present on a property to the east of the Site along 41st Street from at least 1930 to approximately 1950; an upholsterer was present on a property to the east of the Site along 40th Street from at least 1930 to approximately 1968; a laundry facility, “Steam Laundry”, was present on a property to the east of the Site along 41st Street from at least 1930 to approximately 1950; an upholsterer was present on a property to the east of the Site along 40th Street from at least 1930 to approximately 1950; and “Iron Works” was present on a property to the east of the Site along 40th Street from at least 1930 to approximately 1950. These historic uses of adjoining properties are considered RECs.

- Review of the regulatory database report identified the west adjoining property as a historic automobile station and a CESQG. There is a NYSDEC reported spill associated with the property as well. Petroleum impacted soils were encountered in 1995. Reportedly, wells were installed and monitored for several years. Historic fill and impacted soils were excavated for off-site disposal during the redevelopment of the site.
A vapor barrier and waterproofing system was installed beneath the footprint of the current building. The spill case was closed in 2014, however, the historic use of the western adjoining property as an automobile station, the historic generation of hazardous waste and the presence of petroleum impacted soils and groundwater are considered a RECs.

- Review of the regulatory agency database report identified that two Con Edison service boxes located on the west adjoining sidewalks and associated with the Site address are listed in the RCRA database as CESQGs for generation of hazardous waste. The historic generation of hazardous waste is considered a REC.

In addition to the ASTM E 1527-13 requirements and in accordance with TRC’s signed proposal dated July 30, 2015, TRC performed limited visual inspections for asbestos-containing materials (ACM), lead-based paint (LBP), and other building materials with regulated components. Suspect ACM, LBP, and building materials with regulated components (i.e., fluorescent light bulbs and ballasts, mercury switches, exit signs, electronic waste, first extinguishers, etc.) were identified during the Site reconnaissance. The presence of ACM, LBP and building materials with regulated components at the Site is considered an environmental concern.

This Executive Summary is part of this complete report; any findings, opinions or conclusions in this Executive Summary are made in context with the complete report. TRC recommends that the User read the entire report for all supporting information related to findings, opinions and conclusions.
Legal Notice

This document was prepared by TRC solely for the benefit of the User. With regard to third-party recipients of this document, neither TRC, nor the Client, nor the User, nor any of their respective parents, affiliates or subsidiaries, nor any person acting on their behalf: (a) makes any warranty, expressed or implied, with respect to the use of any information or methods disclosed in this document; or (b) assumes any liability with respect to the use of any information or methods disclosed in this document. Any third-party recipient of this document, by its acceptance or use of this document, releases TRC, the Client, the User, and their parents, affiliates and subsidiaries, from any liability for direct, indirect, economic, incidental, consequential or special loss or damage whether arising in contract, warranty, express or implied, tort, or otherwise, and irrespective of fault, negligence, and strict liability.
1.0 INTRODUCTION

TRC Engineers, Inc. (TRC) has prepared this Phase I Environmental Site Assessment (ESA) for Covenant House International (hereinafter “Client” or “User”).

This report was prepared for and may be relied upon by Client for the purposes set forth herein; it may not be relied on by any party other than the Client and reliance may not be assigned without the express approval of TRC. Authorization for third party reliance on this report will be considered by TRC if requested by the Client. TRC reserves the right to deny reliance on this report by third parties.

1.1 Purpose and Scope of Services

The following Phase I ESA was performed for the property located at 538-554 Tenth Avenue in New York, New York (hereinafter the “Site”). The legal description of the Site is Block 1050, Lots 1 and 61. A Site location map is included as Figure 1. This Phase I ESA has been prepared by TRC in accordance with the American Society for Testing and Materials E 1527-13 Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process (ASTM E 1527-13) and is intended for the sole use of Client as per the Proposal for Phase I Environmental Site Assessment dated July 30, 2015.

The purpose of this assessment is to identify Recognized Environmental Conditions (RECs) at the Site, as defined by the ASTM E 1527-13 standard. The completion of this Phase I ESA report may be used to satisfy one of the requirements for the User to qualify for the innocent landowner, contiguous property owner, or bona fide prospective purchaser limitations pursuant to the Comprehensive Environmental Response, Compensation and Liability Act (CERCLA), thereby constituting all appropriate inquiries into the previous ownership and uses of the property consistent with good commercial or customary practice as defined by 42 U.S.C. §9601(35)(B) of CERCLA.

TRC understands that this assessment is not funded with a federal grant awarded under the United States Environmental Protection Agency (U.S. EPA) Brownfields Assessment and Characterization program.

The Scope of Services for this Phase I ESA included the following tasks:

- Site and vicinity reconnaissance;
- Site and vicinity description and physical setting;
- Historical source review and description of historical Site conditions;
- Interviews with owners, operators, and/or occupants of the Site, and/or local officials;
- Review of environmental databases and regulatory agency records;
- Review of previous environmental reports/documentation, as applicable;
- Review of environmental liens, if provided or authorized to obtain by the User; and
- Preparation of a report summarizing findings, opinions and conclusions.
Pursuant to the ASTM E 1527-13 standard, recommendations to conduct Phase II sampling or other assessment activities are not required to be included in this report. TRC can provide such recommendations upon request.

### 1.2 Additional Services

Items outside the scope of the ASTM E 1527-13 standard include, but are not limited to, the following:

- Asbestos-containing building materials (ACM)
- Radon
- Lead-based paint (LBP)
- Lead in drinking water
- Wetlands
- Regulatory compliance
- Cultural and historic resources
- Industrial hygiene
- Health and safety
- Ecological resources
- Endangered species
- Indoor air quality unrelated to releases of hazardous substances or petroleum products into the environment
- Biological agents
- Mold
- Polychlorinated biphenyls (PCBs)

The additional services performed during the course of this Phase I ESA, other than those required by the ASTM E 1527-13 standard, included limited visual survey for suspect ACM, suspect LBP, and suspect PCB-containing materials as discussed in greater detail in Section 9.0.

### 1.3 Deviations to ASTM E 1527-13 Standard

The following significant deviations or deletions to the ASTM standard were made during this Phase I ESA:

1. Property area history was not conducted in five-year intervals. However, sufficient information about the history of the Site and surrounding area could be obtained from the available historical Sanborn maps, aerial photographs, city directories, and local records, and this data gap is not likely to alter the conclusions of this report.
2.0 SITE DESCRIPTION

2.1 Site Location and Legal Description

The approximately 29,000 square foot (sf) property is located at 538-554 Tenth Avenue in New York, New York, in a mixed commercial/residential area. The Site is described by the tax assessor as Block 1050, Lots 1 and 61, is zoned as C6-3, commercial, and is currently owned by the City of New York. A Site location map is included as Figure 1.

2.2 Site Improvements

Current on-Site improvements are listed in the following table. A Site layout plan is included as Figure 2.

Table 2.1 - Site Improvements

2.3 Current and Historical Site Use

2.3.1 Current Site Use(s)

The approximately 29,000 sf property is located in an area that is part of a rezoning project under the Metropolitan Transportation Authority (MTA) to facilitate the No. 7 Subway Extension-Hudson Yards Rezoning and Development Program and consists of 3 buildings (buildings A, B and C) and a parking lot. Building A is an 8-story, 90,000 sf building that fronts on Tenth Avenue and serves as the main residential and administrative facility. Building B is a 4-story, 12,000 sf building that fronts 40th Street and serves as the organization’s gymnasium, chapel, and
legal services center. Building C is a 5-story, 29,000 sf building that fronts 41st Street and serves as the cafeteria, health clinic, classrooms, and administrative offices.

2.3.2 Previous Owner and Operator Information

Based on information provided by the User (Section 3), the historical record review (Section 4), and/or interviews conducted during this Phase I ESA (Section 6), historical Site ownership and operator information is provided in the tables below.

Review of the New York City Department of Finance Office of the City Register database revealed that the Site is located in an area that is part of a rezoning project under the Metropolitan Transportation Authority (MTA) to facilitate the No. 7 Subway Extension-Hudson Yards Rezoning and Development Program. The No. 7 Subway is believed to run beneath 41st St. The lateral extent is not known and may partially run beneath the northern extent of the Site.
2.4 Physical Setting

According to the United States Geological Survey (USGS) topographic map, Central Park, New York quadrangle dated 1995 (Figure 1), the Site is located approximately 0.5 miles east from the Hudson River, the Site topographic elevation is approximately 26 feet above mean sea level (MSL), and local topography slopes downward toward the west. The topographic downward slope observed at the Site during the Site reconnaissance is generally flat slightly sloped toward the west. Based on local topography and historical environmental reports provided to TRC, as applicable, the assumed direction of shallow ground water flow is to the west, towards the Hudson River. However, a subsurface investigation would be required to determine actual ground water flow direction.

The database radius report supplied by Environmental Data Resources, Inc. (EDR) of Milford, Connecticut was reviewed to obtain information regarding the dominant soil composition in the Site vicinity. This information is summarized below:

- Hydric Status: Soil does not meet the requirements for a hydric soil.
- Soil Surface Texture: Silt loam, loamy sand, sandy loam, fine sandy loam
- Soil Component Name: URBAN LAND
- Deeper Soil Types: Unweathered bedrock, very gravelly-loamy sand, stratified, sandy loam

Please refer to the Geocheck Physical Setting Source Summary of the EDR report presented in Appendix A for further information regarding the soil composition in the Site vicinity. According to Federal Emergency Management Agency (FEMA) Flood Insurance Rate Map (FIRM) Panel ID 3604970088F, the Site is not located in a FEMA flood zone.
3.0 USER PROVIDED INFORMATION

According to the ASTM E 1527-13 standard, certain tasks that may help identify the presence of RECs associated with the Site are generally conducted by the Phase I ESA User. These tasks include: providing, or authorizing the environmental professional to obtain, recorded land title records for environmental liens or activity and land use limitations (AULs); providing specialized knowledge related to RECs at the Site (e.g., information about previous ownership or environmental litigation); providing commonly known or reasonably ascertainable information within the local community about the property that is material to RECs in connection with the property; and informing the environmental professional if, as believed by the User, the purchase price of the property is lower than the fair market value due to contamination. A list of requested information was included in TRC’s Proposal for Phase I Environmental Site Assessment dated July 30, 2015 (see Section 1.1). The User did not provide any additional helpful documents as defined in the ASTM E 1527-13 standard. A copy of the User questionnaire is included in Appendix B.

3.1 Title and Judicial Records for Environmental Liens or Activity and Use Limitations

TRC reviewed the EDR report (discussed in Section 4.2), local municipal records (Section 4.4), and the State Land Records (Section 4.4). No evidence of environmental liens or AULs associated with the Site was identified.

3.2 Specialized Knowledge

The User was not aware of specialized knowledge related to RECs at the Site.

3.3 Property Value Reduction Issues

The User was not aware of property valuation reduction issues regarding the Site.

3.4 Commonly Known or Reasonably Ascertainable Information

TRC was supplied with commonly known and/or reasonably ascertainable information regarding the Site by the Site occupants. This information was used during this Phase I ESA and has been incorporated in this report as applicable.

3.5 Reason for Conducting Phase I

It is TRC’s understanding that the User requires a Phase I for due diligence purposes associated future redevelopment of the Site.
4.0 RECORDS REVIEW

4.1 Historical Use Information

Information regarding Site and vicinity historical uses was obtained from various publicly available and practically reviewable sources including:

- Local municipal records;
- An environmental database report; and
- Interviews with Site representative(s) and regulatory agency official(s), as necessary. Historical research documentation is included in Appendix C.

4.1.1 Site History

Operational History

<table>
<thead>
<tr>
<th>Year</th>
<th>Site History</th>
</tr>
</thead>
<tbody>
<tr>
<td>1890 – 1911</td>
<td>The Site is developed with multiple (approximately 16) 4-story buildings and a 5-story building located in the southern portion of the Site labeled “Piano Factory”.</td>
</tr>
<tr>
<td>1911 – 1930</td>
<td>The 4-story buildings are now labeled as residential buildings with basements and first-floor commercial space. Two buildings along Tenth Avenue are labeled “Drugs” and “Bakery”.</td>
</tr>
<tr>
<td>1930 – 1950</td>
<td>Two of the 4-story buildings in the southern corner of the Site are labeled “N.Y. Public Library”. The 5-story building located in the southern portion of the Site is no longer labeled “Piano Factory”. Two of the 4-story buildings at the corner of Tenth Avenue and 41st Street have been demolished and replaced by a triangular building labeled as a store.</td>
</tr>
<tr>
<td>1950 – 1968</td>
<td>Five buildings in the northeastern portion of the Site and two buildings in the southwestern corner of the Site have been demolished. The northeastern corner of the Site is now labeled “Auto Parking”. The 5-story building located in the southern portion of the Site is labeled “Auto Repair”. The southwestern and northern corners of the Site are labeled “Fill’g Sta.”</td>
</tr>
</tbody>
</table>
Table 4.1 - Site History

<table>
<thead>
<tr>
<th>Year</th>
<th>Site History</th>
</tr>
</thead>
<tbody>
<tr>
<td>1968 – 1979</td>
<td>The remaining 4-story buildings along Tenth Avenue have been demolished. There is no longer a filling station located on the southwestern corner of the Site. The Site is improved with the current Site buildings A and B on the eastern portion of the Site along Tenth Avenue (c. 1961) and in the southern corner of the Site (c. 1912). The Site is labeled “Narcotic Rehabilitation Center”.</td>
</tr>
<tr>
<td>1979 – 1990</td>
<td>Current Site building C has been built in the northeastern portion of the Site (c. 1968). The Site is labeled “N.Y. State Narcotic Rehabilitation Center”.</td>
</tr>
<tr>
<td>1990 – 2001</td>
<td>The Site is depicted as the current configuration. The filling station located in the northern corner of the Site is no longer shown.</td>
</tr>
</tbody>
</table>
| 2001 – Present| The Site is labeled “N.Y. State Narcotic Rehabilitation Center”. The northern corner of the Site is labeled “Park’g”.

It does not appear that topographic contours in the Site area have significantly changed during the time period reviewed.

**Hazardous Substances**

The historic use of hazardous substances on-Site (i.e., gasoline) associated with the former filling stations and an auto repair shop are considered a REC. No hazardous substances were observed during the Site reconnaissance.

4.1.2 Adjoining Property History

Table 4.2 - Adjoining Property History

<table>
<thead>
<tr>
<th>Direction</th>
<th>Adjoining Property History</th>
</tr>
</thead>
<tbody>
<tr>
<td>North</td>
<td>West 41st Street has been present north of the Site since at least 1890. The properties beyond West 41st Street, adjoining north of the Site, were generally developed with mid-rise buildings with undesignated uses until approximately 1930. A tile warehouse was located on the northeast adjoining property in 1930. In 1950 a coal yard is shown on the north adjoining property. In 1968, the warehouse facilities were razed and West 41st Street was widened to create a “Bus Driveway” to a 4-story building with a basement located on the north adjoining property labeled “Westside Airlines Bus Terminal”. In 1984 the bus garage was replaced by a recording studio until 2005 when the entire northwestern adjoining block was razed. In 2001 the adjoining property to the north was razed and replaced with a parking garage in 2002.</td>
</tr>
</tbody>
</table>
### Table 4.2 - Adjoining Property History

<table>
<thead>
<tr>
<th>Direction</th>
<th>Adjoining Property History</th>
</tr>
</thead>
<tbody>
<tr>
<td>East</td>
<td>The adjoining property to the east was developed with multiple (approximately 16) 4-story buildings and one 5-story building from 1890 until 1911. In 1911, approximately 19 4- and 5-story buildings with basements are depicted as residential buildings and one of them is labeled “Job Painter”. The small northern adjoining structure is labeled “Plaster &amp; Moulder” from 1911 to approximately 1950. Between 1930 and 1950, an adjoining property to the southeast along 40th Street was labeled “Iron Works”. In 1950, the buildings on the eastern portion of the property are no longer depicted and the area is labeled “Lumber Yard” and “Auto Parking”. A structure along 40th Street is labeled “Metal Wks” from 1950 to approximately 1968. In 1968 the property is improved with a 6-story L-shaped building labeled “Off. &amp; W. Ho.” and is occupied by “Diana Stores Corp.”. The property was occupied by “N.Y.C. Community College” from 1979 to approximately 1995. Since 1995, the eastern adjoining property has been occupied by “Hunter College Voorhees Campus”.</td>
</tr>
<tr>
<td>South</td>
<td>West 40th Street has been present south of the Site since at least 1890. The properties beyond west 40th Street, adjoining south of the Site, were developed with 3-, 4- and 5-story buildings from at least 1890 until approximately 1950 when the south adjoining property was replaced with a tunnel exit/entrance ramp to the 3rd floor of the nearby bus terminal.</td>
</tr>
<tr>
<td>West</td>
<td>Tenth Avenue has been present to the west of the Site since at least 1890. West adjoining properties were generally developed with 5-story buildings with the exception of a mid-rise building to the southwest labeled “Kilns” and “Matt House” from 1890 to approximately 1911. In 1911, the 5-story buildings are identified as residential buildings having basements and first-floor commercial space. In 1930, one of the 5-story buildings is labeled “Chine Laundry”. The adjoining property to the southwest is labeled “Schlossman’s Furniture Warehouse” until the entire block was razed and replaced with an access tunnel connecting to the Lincoln Tunnel in 1950. One of the 5-story buildings is labeled “Tin Shop” and three of the 5-story buildings have been demolished and replaced with a “Filling Station” with four underground storage tanks. In 1968, the remaining 5-story buildings were demolished and the property is depicted as undeveloped land until 1990 when it was replaced with an auto repair shop and parking lot. In 1995, the four underground storage tanks are no longer shown on the northeastern adjoining property.</td>
</tr>
</tbody>
</table>

### 4.1.3 Surrounding Property History

<tr>
<td>North</td>
<td>Central Park is present to the north of the Site. From at least 1890 to approximately 1950 this area consisted of mid-rise commercial and residential buildings. In approximately 1968, the area was cleared of buildings, temporarily used for parking and consisted of a filling station until approximately 1979. The area has been improved with high rise residential buildings from approximately 1979 to present.</td>
</tr>
</tbody>
</table>
Table 4.3 - Surrounding Property History

<table>
<thead>
<tr>
<th>Direction</th>
<th>Surrounding Property History</th>
</tr>
</thead>
</table>
| East      | From at least 1890 to approximately 1950 this area consisted of low to mid-rise commercial and manufacturing buildings. In 1940, Dyer Avenue was constructed which vertically bisected the block east of the Site between the Site and 9th Avenue. In approximately 1950 this area was redeveloped with the current entrance and exit ramps to various levels of the nearby “Bus Terminal”.
Review of topographic maps revealed that the subway along Broadway, St. Patrick’s Cathedral, Bryant Park, and the Public Library have been located east of the Site since at least 1947; “Longacre Sq” was shown east of the Site in 1947 and was replaced by “Times Square” by 1956; and, Penn RR Station was shown southeast of the Site, PS 17 was located northeast of the Site, and the Metropolitan Opera House, Rockefeller Center, and Grand Central Terminal have been located east of the Site since approximately 1956. No other significant changes were noted from the historical reference documents. |
| West      | The Hudson River is west of the Site. Subway tracks have been west of the Site since at least 1947. No other significant features from historical reference documents were identified on surrounding properties to the west. |
| South     | Public School 127 was present south of the Site from approximately 1956 to 1966. Pennsylvania Railroad station has been present south of the Site since at least 1956 and the department of education has been located south of the Site since approximately 1966. No other significant features from historical reference documents were identified on surrounding properties to the south. |

4.2 Database Report and Environmental Record Review

A database search report that identifies properties listed on state and federal databases within the ASTM-required radii of the Site was obtained from EDR and is included in Appendix A.

The environmental database report identified 1,708 properties/listings including the Site and adjoining properties. These properties included those that could be mapped and those that could not (i.e., orphan properties). The Site and the adjoining properties were listed in the database search report.

4.2.1 Subject Site

Site information included in the database search report is summarized in the following table:

<table>
<thead>
<tr>

### Description/ID No(s.)

| Description/ID No(s.) | N/A |

### Database Review Summary

| The Site is listed in the City of New York Searchable Property Environmental E-database with an “E”-designation for noise attenuation and hazardous materials. This property was assigned an E-Designation “E-137” as part of the 2005 No. 7 Subway Extension—Hudson Yards rezoning study. The E-designation is for Hazardous Materials and Window/Wall Noise Attenuation. According the study, the Site or nearby properties were historically occupied by a coal yard and a piano factory and, as a result, there is potential for non-petroleum contamination on the site. |

### 4.2.2 Adjoining and Surrounding Property Record Review

TRC evaluated the following factors to determine whether additional environmental records should be reviewed with respect to the potential for contaminant migration from the adjoining and surrounding properties:

1. Whether the property is up-gradient or down-gradient of the Site vis-à-vis **ground water migration** based on the local topography, and the assumed ground water depth and westerly shallow ground water flow direction;

2. Whether the property is up-gradient or down-gradient of the Site vis-à-vis **vapor migration** based on readily available information pursuant to the ASTM E 1527-13 standard including soil and geological characteristics; contaminant characteristics;
contaminated plume migration data; and significant conduits that might provide preferential pathways for vapor migration such as major utility corridors, sanitary sewers, storm sewers, and significant natural conduits such as Karst terrain (vapor migration may also be influenced by the age and design of infrastructure features associated with these conduits);

(3) Property case status (i.e., whether the New York State Department of Environmental Conservation (NYSDEC) has issued a No Further Action letter;

(4) Type of database and whether the presence of contamination is known; and

(5) The distance between the listed property and the Site.

Based on this evaluation, TRC limited the review of additional environmental records to the properties listed below, since the potential for contamination to be migrating to the Site from the other properties identified by the database search is considered low.

4.2.2.1 Adjoining Properties

Adjoining property information included in the database search report is summarized in the following table(s):

<table>

### Database Review Summary

- A 125-gallon spill of an unknown liquid occurred in February 2004. Corrective action was taken and the spill case was closed in June 2004.

- The site is listed in the City of New York Searchable Property Environmental E-database with an “E”-designation for noise attenuation and hazardous materials. This property was assigned an E-Designation “E-137” as part of the 2005 No. 7 Subway Extension—Hudson Yards rezoning study. The E-designation is for Hazardous Materials and Window/Wall Noise Attenuation. According the study, the site or nearby properties were historically occupied by a coal yard and a piano factory and, as a result, there is potential for non-petroleum contamination on the site.

- The NY Manifest database revealed that the site was listed for disposal of 500 gallons of unknown hazardous wastes in 2015.
### Database(s)
- **Description/ID No(s).**
  - Spill No.: 9503865

**Database Review Summary**
This site is listed in the NYSDEC petroleum spills database. 83 tons of contaminated soil and 434 gallons of contaminated water were removed from the site in 1995. A Phase II report was conducted by MTA during the No. 7 Subway Line Extension. Monitoring wells were installed and vacuum truck extraction was performed prior to the excavation and redevelopment of the site. Historic fill and impacted soils were excavated for off-site disposal. A vapor barrier and waterproofing system was installed beneath the footprint of the building. The spill case was closed in December 2014.

**Database Review Summary**

This site is listed in the NYSDEC petroleum bulk storage tank database for one (1) 20,000-gallon capacity aboveground storage tank (AST) installed in 1995 which originally contained No. 6 fuel oil but presently contains No. 2 fuel oil and one (1) 100-gallon capacity AST which contains No. 2 fuel oil. No spills related to either AST were identified in the regulatory database review.

Based on the above-listings, TRC conducted a file review for abovementioned properties of available files maintained by NYSDEC and USEPA. TRC has not yet received any documentation related to spill closure for these sites, however, if the file review alters the findings within this report, TRC will submit an addendum.

#### 4.2.2.2 Surrounding Properties

Surrounding property information included in the database search report is summarized below:

| Site Facility Name(s) and/or Listed Address(es) | “In Street”  
440 West 41st Street

</tr>
<tr>
<td>Description/ID No(s.)</td>
</tr>
</tbody>
</table>

**Database Review Summary**

Approximately 30 gallons of petroleum spilled onto a sidewalk during the removal of drums from the site. The spill was cleaned up and no drains were impacted. The spill case was closed in June 2010.
4.3 Other Environmental Record Sources

Per the ASTM standard, local or additional state records were reviewed to enhance and supplement the ASTM-required federal and state records reviewed and discussed earlier in this report. These additional records include additional information obtained from New York State Department of Environmental Conservation (NYSDEC) and New York State Department of Health (NYSDOH). Local sources that were contacted include New York City Department of Environmental Protection (NYCDEP) and New York City Department of Health and Mental Hygiene (NYCDOHMH). Information from these sources is discussed throughout the report, as applicable.
5.0 SITE RECONNAISSANCE

5.1 Methodology and Limiting Conditions

Mr. Kevin McGuinness, TRC Principal Environmental Scientist conducted a Site reconnaissance of accessible areas on and around the Site on August 14, 2015 for the purpose of identifying potential RECs, and was accompanied by Covenant House Director of Facilities, Mr. Nunzi Cuzzupoli who provided access to the property and answered questions during the reconnaissance. Photographs taken during the reconnaissance are provided in Appendix D. A Site layout plan is included as Figure 2.

5.2 Interior and Exterior Site Observations

Unless otherwise noted, the items listed in the table below appeared in good condition with no visual evidence of staining, deterioration or a discharge of hazardous materials; and there are no records of a release in these areas. Items where further description is warranted are discussed in the section(s) following the table.

### 5.2.1 Hazardous Substances

No hazardous substances were present on-Site.

### 5.2.2 Underground Storage Tanks

According to Site personnel and observations made during Site reconnaissance, there is one in-service 10,000-UST at the Site, which contains No. 2 oil. According to the NYSDEC Petroleum Bulk Storage (PBS) database, the UST is a painted steel tank located below the parking lot in the northern portion of the Site. A record request for spill/tank installation documentation was submitted to NYSDEC. TRC has not yet received any additional information from NYSDEC.

### 5.2.3 Aboveground Storage Tanks

There are no aboveground storage tanks (ASTs) located on-Site.

### 5.3 Adjoining and Surrounding Properties Reconnaissance

#### 5.3.1 Adjoining Properties

During the Site reconnaissance, TRC viewed the adjoining properties from the Site and publicly accessible areas (e.g., public roadways, etc.).
Table 5.2 - Adjoining Properties Reconnaissance

<table>
<thead>
<tr>
<th>Direction from Site</th>
<th>Current Land Use Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>North</td>
<td>The Site is bordered to the north by West 41st Avenue followed by a high-rise residential/commercial building.</td>
</tr>
<tr>
<td>East</td>
<td>The Site is bordered to the east by a mid-rise commercial building followed by a high-rise residential building, the overpass ramp to the Port Authority (PA) bus terminal and Dyer Avenue.</td>
</tr>
<tr>
<td>South</td>
<td>The Site is bordered to the south by PA bus terminal overpass and West 40th Street followed by a fenced in construction area. Several monitoring wells as well as a transformer vault were observed on the south adjoining sidewalk.</td>
</tr>
<tr>
<td>West</td>
<td>The Site is bordered to the west by 10th Avenue followed by a midrise building that is currently undergoing construction. A large pad-mounted transformer was observed on the northwest corner of the block. Monitoring wells were observed on the eastern sidewalk along 10th Avenue between 40th and 41st street.</td>
</tr>
</tbody>
</table>

5.3.2 Surrounding Properties

The surrounding properties are generally mixed commercial and residential. Historically the area was zoned industrial and commercial and consisted primarily of low and mid-rise buildings; however, the area is undergoing rezoning as part of the redevelopment of the Hudson Yards, which extends from approximately 30th Street to 42nd Street and from 8th Avenue to the Hudson River, and encompass the Site. Rezoning will bring high-rise commercial and residential real estate to the area.
6.0 INTERVIEWS

The following persons were interviewed to obtain historically and/or environmentally-pertinent information regarding RECs associated with the Site.

- Mr. Nick Nilio, Director of Operations, 2 years – *Key Site Manager* (as defined by the ASTM standard and identified by the property User)
- Mr. Nunzi Cuzzupoli, Director of Facilities, 8 years

The information provided by each is discussed and referenced in the text or provided below. Other references and sources of information are included in *Appendix E*. 
7.0 FINDINGS, OPINIONS AND CONCLUSIONS

Potential findings can include RECs, historical RECs (HRECs), controlled RECs (CRECs) and de minimis conditions, pursuant to the ASTM E 1527-13 standard.

RECs are defined as the presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: (1) due to any release to the environment; (2) under conditions indicative of a release to the environment; or (3) under conditions that pose a material threat of a future release to the environment.

CRECs are defined as a REC resulting from a past release of hazardous substances or petroleum products that has been addressed to the satisfaction of the applicable regulatory authority (for example, as evidenced by the issuance of a no further action letter or equivalent, or meeting risk-based criteria established by regulatory authority), with hazardous substances or petroleum products allowed to remain in place subject to the implementation of required controls (for example, property use restrictions, activity and use limitations, institutional controls, or engineering controls).

HRECs are defined as a past release of any hazardous substances or petroleum products that has occurred in connection with the property and has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted use criteria established by a regulatory authority, without subjecting the property to any required controls (for example, property use restrictions, activity and use limitations, institutional controls, or engineering controls).

De minimis conditions are defined as a condition that generally does not present a threat to human health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies. Conditions determined to be de minimis conditions are not RECs nor CRECs.

TRC has performed a Phase I ESA in conformance with the scope and limitations of ASTM E 1527-13 at the property located at 455 West 40th Street, New York, New York (Site), see Appendices F and G. Deviations from this standard are described in Sections 1.3 and 7.6 of this report.

7.1 RECs and CRECs

This assessment has revealed no evidence of RECs (including CRECs) in connection with the Site except for the following:

On-Site RECs:

- The review of the regulatory agency database report identified the Site in the Historic Automobile Stations database. Additionally, the review of the historic Sanborn Maps confirm the historic presence of two filling stations and an automobile repair shop. One of the filling stations on the northwest corner of the Site operated from approximately...
1950 until at least 1987. Historic Site use for automobile repair and filling stations are considered RECs.

- The review of the regulatory agency database report identified two NYSDEC reported spills associated with the Site. In 2004, petroleum impacted soils were reportedly identified during soil borings drilled on the Site in association with the No. 7 subway extension. Additionally, petroleum impacted soil and perched water/groundwater were encountered during excavations associated with rate renovations performed in 2007. Petroleum impacted soil and groundwater are considered RECs.

- There is an active 10,000-gallon fuel oil underground storage tank (UST) on-Site. The presence of a 10,000-gallon fuel oil UST is considered a REC.

- Structures were formerly on-Site and demolished prior to the construction of the current Site building. Historic fill of unknown origin and suspect buried structures have the potential to impact the Site property. The likely presence of historic fill and buried structures is considered a REC.

Off-Site RECs:

- Review of the regulatory agency database revealed that petroleum releases to soil were observed during a pre-closure investigation performed in the vicinity of the No. 6 fuel oil UST located on the east adjoining site. A spill was reported to the NYSDEC and groundwater monitoring wells were installed in the vicinity of the UST to monitor for the presence of petroleum impacts. Reportedly, the wells were monitored for several years and the spill was closed by the NYSDEC. However, petroleum impacts to soil remain in the vicinity of the UST and this is considered a REC.

- Review of the regulatory agency database report revealed that the east adjoining site is listed in the RCRA database as a CESQG for generation of hazardous waste. The current and historic generation of hazardous waste at this site is considered a REC.

- Review of a previous Phase I Environmental Site Assessment performed at the east adjoining property revealed that the site was previously utilized as an automobile repair trade school. Historic site uses of the east adjoining property for automobile repair is considered a REC.

- The review of historic Sanborn fire insurance maps revealed that coal yards were present on a property to the east of the Site from at least 1890 to approximately 1899 and the northeast adjoining property from at least 1950 to approximately 1968; a laundry facility, “Steam Laundry”, was present on a property to the east of the Site along 41st Street from at least 1930 to approximately 1950; an upholsterer was present on a property to the east of the Site along 40th Street from approximately 1911 to approximately 1930; and “Iron Works” was present on a property to the east of the Site along 40th Street from at least 1930 to approximately 1950. These historic uses of adjoining properties are considered RECs.
• Review of the regulatory database report identified the west adjoining property as a historic automobile station and a CESQG. There is a NYSDEC reported spill associated with the property as well. Petroleum impacted soils were encountered in 1995. Reportedly, wells were installed and monitored for several years. Historic fill and impacted soils were excavated for off-site disposal during the redevelopment of the site. A vapor barrier and waterproofing system was installed beneath the footprint of the current building. The spill case was closed in 2014, however, the historic use of the western adjoining property as an automobile station, the historic generation of hazardous waste and the presence of petroleum impacted soils and groundwater are considered a RECs.

• Review of the regulatory agency database report identified that two Con Edison service boxes located on the west adjoining sidewalks and associated with the Site address are listed in the RCRA database as CESQGs for generation of hazardous waste. The historic generation of hazardous waste is considered a REC.

Recommendations

TRC understands that the proposed redevelopment plans for the Site may include demolition of the existing structure and possible subsurface excavation. Consequently, TRC recommends the following actions to support the proposed demolition and redevelopment of the Site:

• A Phase II Environmental Site Investigation (ESI) should be conducted to determine if there are any subsurface impacts due to historic usage of the Site and surrounding properties. The Phase II ESI should include additional research regarding the reported on-Site spill. As the Site has an E-Designation, the NYCOER E-Designation Program process will be followed. The E-Designation Program requires submittal and review and approval of Phase II ESI Work Plans, Remedial Action Plans and Closure Reports in order to receive a Notice of Satisfaction from the NYCDOB.

• Prior to demolition an Asbestos and Regulated Materials Survey should be performed. This survey should include identifying, quantifying, sampling and analyzing materials suspected of containing asbestos. Inventories of other regulated and hazardous materials, such as Universal and Hazardous wastes should be performed. Potentially PCB-containing building materials (e.g., caulk/glazing) should be identified, quantified, sampled, and analyzed. Based on the results of these surveys the following should be performed:

  o A comprehensive asbestos survey of the Site building should be conducted to confirm the presence and quantities of ACM on the Site. Previous asbestos surveys and renovation plans from the 2007 renovation should be reviewed to define the scope of the survey. All asbestos should be abated, handled and disposed of in accordance with local, state, and federal asbestos regulations.
The potential for LBP exists with respect to the on-Site structure. Prior to general construction activities, building materials with potential LBP should be sampled and tested to determine if the paint would be classified as LBP, as defined by applicable laws and regulations. If LBP is present, the appropriate controls and measures must be instituted during demolition activities to protect Site workers and ensure that any removed LBP materials are appropriately managed and disposed of.

Building materials with regulated components (i.e., fluorescent light bulbs and ballasts, mercury switches, electronic waste, fire extinguishers, etc.) must be gathered, packaged, and disposed or recycled in accordance with applicable laws and regulations prior to any demolition activities.

7.2 HRECs

This assessment has revealed no evidence of HRECs in connection with the Site.

7.3 De Minimis Conditions

This assessment has revealed no evidence of de minimis conditions in connection with the Site.

7.4 Data Gaps

TRC has made an appropriate inquiry into the commonly known and reasonably ascertainable resources concerning the historical ownership and use of the Site back to the first development per 40 CFR Part 312.24 (Reviews of Historical Sources of Information). Data gaps identified during this assessment include the following:

1. Property area history was not conducted in 5-year intervals. However, sufficient information about the history of the Site and surrounding area could be obtained from the available historical Sanborn Maps, aerial photographs, city directories, and local records, and this data gap is not likely to alter the conclusions of this report.

7.5 Other Noteworthy Issues

Other noteworthy issues identified during this Phase I ESA that, while not strictly a REC, HREC, CREC, or de minimis condition, in TRC’s opinion warrant further discussion include the following and are discussed in detail in Section 9.0:

- Suspect ACM, LBP, and building materials with regulated components were identified during the Site reconnaissance. The presence of ACM, LBP and building materials with regulated components at the Site is considered and environmental condition.
7.6 Limiting Conditions and Deviations

7.6.1 Accuracy and Completeness

The ASTM E 1527-13 standard recognizes inherent limitations for Phase I ESAs that apply to this report, including:

- Uncertainty Not Eliminated – No Phase I ESA can wholly eliminate uncertainty regarding the potential for RECs in connection with a property. Data gaps identified during this Phase I ESA are listed in Section 7.5.

- Not Exhaustive – A Phase I ESA is not an exhaustive investigation.

- Past Uses of the Property – A review of standard historical sources at intervals less than five years is not required.

The Client is advised that the Phase I ESA conducted at the Site is a limited inquiry into a property’s environmental status, cannot wholly eliminate uncertainty, and is not an exhaustive assessment to discover every potential source of environmental liability at the Site. Therefore, TRC does not make a statement i) of warranty or guarantee, express or implied for any specific use; ii) that the Site is free of RECs or environmental impairment; iii) that the Site is “clean”; or iv) that impairments, if any, are limited to those that were discovered while TRC was performing the Phase I ESA. This limiting statement is not meant to compromise the findings of this report; rather, it is meant as a statement of limitations within the ASTM standard and intended scope of this assessment. Specific limiting conditions identified during the Site reconnaissance are described in Section 5.1. Subsurface conditions may differ from the conditions implied by surface observations, and can be evaluated more thoroughly through intrusive techniques that are beyond the scope of this assessment. Information in this report is not intended to be used as a construction document and should not be used for demolition, renovation, or other construction purposes.

This report presents TRC’s site reconnaissance observations, findings, and conclusions as they existed at the time of the Site reconnaissance. TRC makes no representation or warranty that the past or current operations at the property are, or have been, in compliance with all applicable federal, state and local laws, regulations and codes. TRC makes no guarantees as to the accuracy or completeness of information obtained from others during the course of this Phase I ESA report. It is possible that information exists beyond the scope of this assessment, or that information was not provided to TRC. Additional information subsequently provided, discovered, or produced may alter findings or conclusions made in this Phase I ESA report. TRC is under no obligation to update this report to reflect such subsequent information. The findings presented in this report are based upon reasonably ascertainable information and observed Site conditions at the time of the assessment.

This report does not warrant against future operations or conditions, nor does it warrant against operations or conditions present of a type or at a location not assessed. Regardless of the
findings stated in this report, TRC is not responsible for consequences or conditions arising from facts that were not fully disclosed to TRC during the assessment.

An independent data research company provided the government agency database referenced in this report. Information regarding surrounding area properties was requested for approximate minimum search distances and was assumed to be correct and complete unless obviously contradicted by TRC’s observations or other credible referenced sources reviewed during the assessment.

TRC is not a professional title insurance or land surveyor firm and makes no guarantee, explicit or implied, that any land title records acquired or reviewed, or any physical descriptions or depictions of the property in this report, represent a comprehensive definition or precise delineation of property ownership or boundaries.

7.6.2 Warranties and Representations

This report does not warrant against: (1) operations or conditions which were not evident from visual observations or historical information provided; (2) conditions which could only be determined by physical sampling or other intrusive investigation techniques; (3) locations other than the client-provided addresses and/or legal parcel description; or (4) information regarding off-site location(s) (with possible impact to the Site) not published in publicly available records.

7.6.3 Continued Validity/User Reliance

This report is presumed to be valid, in accordance with, and subject to, the limitations specified in the ASTM E 1527-13 standard, for a period of 180 days from completion, or until the Client obtains specific information that may materially alter a finding, opinion, or conclusion in this report, or until the Client is notified by TRC that it has obtained specific information that may materially alter a finding, opinion, or conclusion in this report. Additionally, pursuant to the ASTM E 1527-13 standard, this report is presumed valid if completed less than 180 days prior to the date of acquisition of the property or (for transactions not involving an acquisition) the date of the intended transaction.

7.6.4 Significant Assumptions

During this Phase I ESA, TRC relied on database information; interviews with Site representatives, regulatory officials, and other individuals having knowledge of Site operations; and information provided by the User as requested in our authorized Scope of Work. TRC has assumed that the information provided is true and accurate. Reliance on electronic database search reports is subject to the limitations set forth in those reports. TRC did not independently verify the information provided. TRC found no reason to question the validity of the information received unless explicitly noted elsewhere in this report. If other information is discovered and/or if previous reports exist that were not provided to TRC, our conclusions may not be valid.

9.0 ADDITIONAL SERVICES

At the request of the Client and described in the proposed Scope of Work (see Section 1.1), TRC performed limited visual inspections for asbestos-containing materials (ACM), lead-based paint (LBP), and other regulated materials. Below is a summary of the findings.

9.1 Asbestos-Containing Materials (ACM)

TRC conducted a limited visual survey for the presence of suspect ACM within the Site. The intent of the survey was to identify exposed suspect ACM through preliminary non-destructive observations. No sampling of suspect ACM was performed during this investigation. Based upon the age of the three buildings 1961 (building A), 1912 (building B) and 1968 (building C), it is likely that numerous building components are or were ACM. According to Mr. Nilio, the buildings underwent a full renovation in 2007, during which an ACM abatement was performed. The observable suspect-ACM was in good condition. No reports or further documentation of the abatement activities were provided. As such, it is not known what was/was not addressed. As such, all potentially suspect ACM are considered ACM unless documentation establishing otherwise can be provided. The suspect ACM consist of:

- Piping wrap/elbows
- Piping joint compound
- Vinyl floor tiles
- Window caulk and other caulk (may also contain PCBs)
- Window glazing (may also contain PCBs)
- Rolled roofing
- Roof flashing
- Fire Doors
- Roofing mastic
- Electrical systems (wiring and panels)

A thorough review of previous survey data and renovation plans and a comprehensive pre-demolition survey of these suspected ACM, including sampling and analysis should be performed prior to any demolition activities.

9.2 Lead-Based Paint (LBP)

During the site inspection, a limited visual assessment of all accessible painted surfaces was performed. No sampling or intrusive work was performed, as this is outside the scope of this Phase I ESA. No exterior painted surfaces were identified during the limited visual assessment. The interior painted surfaces were found to be in good condition; with no peeling and chipping. Based on the age of the Site buildings, it is likely that materials original to building contain LBP. The buildings were renovated in 2007; therefore, significant removals of LBP coated building materials likely occurred. Remaining LBP coated building materials may have been painted over. A thorough assessment for LBP, should be performed in anticipation of demolition activities.
9.3 Other Regulated Materials

TRC performed a limited visual inspection of the Site to identify other materials or material components that would be considered regulated and therefore would require specialized handling, disposal, and recycling. The following table presents the regulated materials identified during the inspection and the associated environmental concern.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property. Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in **bold italics** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL: Also known as Superfund, the National Priority List database is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund program. The source of this database is the U.S. EPA.

A review of the NPL list, as provided by EDR, and dated 03/26/2015 has revealed that there is 1 NPL site within approximately 1 mile of the target property.

Federal CERCLIS list

CERCLIS: The Comprehensive Environmental Response, Compensation and Liability Information System contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation and Liability Act (CERCLA). CERCLIS contains sites which are either proposed to or on the National Priorities List (NPL) and sites which are in the screening and assessment phase for possible inclusion on the NPL.

A review of the CERCLIS list, as provided by EDR, and dated 10/25/2013 has revealed that there is 1

**Federal CERCLIS NFRAP site List**

CERC-NFRAP: Archived sites are sites that have been removed and archived from the inventory of CERCLIS sites. Archived status indicates that, to the best of EPA’s knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list this site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. This decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be a potential NPL site.

A review of the CERC-NFRAP list, as provided by EDR, and dated 10/25/2013 has revealed that there is 1 CERC-NFRAP site within approximately 0.5 miles of the target property.

**Federal RCRA generators list**

RCRA-LQG: RCRAInfo is EPA’s comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

A review of the RCRA-LQG list, as provided by EDR, and dated 03/10/2015 has revealed that there are 9 RCRA-LQG sites within approximately 0.25 miles of the target property.

EXECUTIVE SUMMARY

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 03/10/2015 has revealed that there are 8 RCRA-SQG sites within approximately 0.25 miles of the target property.

RCRA-CESQG: RCRAInfo is EPA’s comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

A review of the RCRA-CESQG list, as provided by EDR, and dated 03/10/2015 has revealed that there are 78 RCRA-CESQG sites within approximately 0.25 miles of the target property.

Federal institutional controls / engineering controls registries

US ENG CONTROLS: A listing of sites with engineering controls in place.

A review of the US ENG CONTROLS list, as provided by EDR, and dated 03/16/2015 has revealed that there is 1 US ENG CONTROLS site within approximately 0.5 miles of the target property.

State- and tribal - equivalent CERCLIS

NY SHWS: The State Hazardous Waste Sites records are the states’ equivalent to CERCLIS. These sites may or may not already be listed on the federal CERCLIS list. Priority sites planned for cleanup using state funds (state equivalent of Superfund) are identified along with sites where cleanup will be paid for by potentially responsible parties. The data come from the Department of Environmental Conservation’s Inactive Hazardous waste Disposal Sites in New York State.

A review of the NY SHWS list, as provided by EDR, and dated 06/26/2015 has revealed that there is 1 NY SHWS site within approximately 1 mile of the target property.

State and tribal landfill and/or solid waste disposal site lists

NY SWF/LF: The Solid Waste Facilities/Landfill Sites records typically contain an inventory of solid waste disposal facilities or landfills in a particular state. The data come from the list.

A review of the NY SWF/LF list, as provided by EDR, and dated 06/24/2015 has revealed that there are
EXECUTIVE SUMMARY

2 NY SWF/LF sites within approximately 0.5 miles of the target property.

State and tribal leaking storage tank lists

NY LTANKS: Leaking Storage Tank Incident Reports. These records contain an inventory of reported leaking storage tank incidents reported from 4/1/86 through the most recent update. They can be either leaking underground storage tanks or leaking aboveground storage tanks. The causes of the incidents are tank test failures, tank failures or tank overfills.

A review of the NY LTANKS list, as provided by EDR, and dated 07/21/2015 has revealed that there are 121 NY LTANKS sites within approximately 0.5 miles of the target property.

State and tribal registered storage tank lists

NY TANKS: This database contains records of facilities that are or have been regulated under Bulk Storage Program. Tank information for these facilities may not be releasable by the state agency.

A review of the NY TANKS list, as provided by EDR, and dated 06/24/2015 has revealed that there are 4 NY TANKS sites within approximately 0.25 miles of the target property.

NY CBS UST: Chemical Bulk Storage Database. Registration data collected as required by 6 NYCRR Part 596. It includes facilities storing hazardous substances listed in 6 NYCRR Part 597, in aboveground tanks with capacities of 185 gallons or greater, and/or in underground tanks of any size. Includes facilities registered (and closed) since effective date of CBS regulations (July 15, 1988) through the date request is processed.

A review of the NY CBS UST list, as provided by EDR, and dated 01/01/2002 has revealed that there are 2 NY CBS UST sites within approximately 0.25 miles of the target property.

NY CBS AST: Chemical Bulk Storage Database. Registration data collected as required by 6 NYCRR Part 596. It includes facilities storing hazardous substances listed in 6 NYCRR Part 597, in aboveground tanks with capacities of 185 gallons or greater, and/or in underground tanks of any size. Includes facilities registered (and closed) since effective date of CBS regulations (July 15, 1988) through the date request is processed.

A review of the NY CBS AST list, as provided by EDR, and dated 01/01/2002 has revealed that there are 2 NY CBS AST sites within approximately 0.25 miles of the target property.

TC4381152.2s  EXECUTIVE SUMMARY 65
NY CBS: These facilities store regulated hazardous substances in aboveground tanks with capacities of 185 gallons or greater, and/or in underground tanks of any size.

A review of the NY CBS list, as provided by EDR, and dated 06/24/2015 has revealed that there are 4 NY CBS sites within approximately 0.25 miles of the target property.

State and tribal institutional control / engineering control registries
NY ENG CONTROLS: Environmental Remediation sites that have engineering controls in place.

A review of the NY ENG CONTROLS list, as provided by EDR, and dated 06/26/2015 has revealed that there is 1 NY ENG CONTROLS site within approximately 0.5 miles of the target property.
Environmental Remediation sites that have institutional controls in place.

A review of the NY INST CONTROL list, as provided by EDR, and dated 06/26/2015 has revealed that there is 1 NY INST CONTROL site within approximately 0.5 miles of the target property.

Records of Emergency Release Reports

NY Spills: Data collected on spills reported to NYSDEC. is required by one or more of the following:
Article 12 of the Navigation Law, 6 NYCRR Section 613.8 (from PBS regs), or 6 NYCRR Section 595.2 (from CBS regs). It includes spills active as of April 1, 1986, as well as spills occurring since this date.

A review of the NY Spills list, as provided by EDR, and dated 07/21/2015 has revealed that there are 661 NY Spills sites within approximately 0.5 miles of the target property.

Other Ascertainable Records

RCRA NonGen / NLR: RCRAInfo is EPA’s comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 03/10/2015 has revealed that there are 75 RCRA NonGen / NLR sites within approximately 0.25 miles of the target property.

CONSENT: Major Legal settlements that establish responsibility and standards for cleanup at NPL (superfund) sites. Released periodically by U.S. District Courts after settlement by parties to litigation matters.

A review of the CONSENT list, as provided by EDR, and dated 12/31/2014 has revealed that there is 1 CONSENT site within approximately 1 mile of the target property.

ROD: Record of Decision. ROD documents mandate a permanent remedy at an NPL (Superfund) site containing technical and health information to aid the cleanup.

A review of the ROD list, as provided by EDR, and dated 11/25/2013 has revealed that there is 1 ROD site within approximately 1 mile of the target property.

NY HSWDS: The List includes any known or suspected hazardous substance waste disposal sites. Also included are sites delisted from the Registry of Inactive Hazardous Waste Disposal Sites and non-registry sites that U.S. EPA Preliminary Assessment (PA) reports or Site Investigation (SI) reports were prepared. Hazardous Substance Waste Disposal Sites are eligible to be Superfund sites now that the New York State Superfund has been refinanced and changed. This means that the study inventory has served its purpose and will no longer be maintained as a separate entity. The latest version of the study is frozen in time. The sites on the study will not automatically be made superfund sites, rather each site will be further evaluated for listing in the registry. So overtime they will be added to the registry or not.

A review of the NY HSWDS list, as provided by EDR, and dated 01/01/2003 has revealed that there is 1 NY HSWDS site within approximately 0.5 miles of the target property.

NY MANIFEST: Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a TSD facility.

A review of the NY MANIFEST list, as provided by EDR, and dated 05/01/2015 has revealed that there are 201 NY MANIFEST sites within approximately 0.25 miles of the target property.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR’s researchers. Manufactured gas sites were used in the United States from the 1800’s to 1950’s to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

A review of the EDR MGP list, as provided by EDR, has revealed that there are 4 EDR MGP sites within approximately 1 mile of the target property.

EDR US Hist Auto Stat: EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR’s review was limited to those categories of sources that might, in EDR’s opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as “High Risk Historical Records”, or HRHR. EDR’s HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR US Hist Auto Stat list, as provided by EDR, has revealed that there are 67 EDR US Hist Auto Stat sites within approximately 0.25 miles of the target property.

EDR US Hist Cleaners: EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR’s review was limited to those categories of sources that might, in EDR’s opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as “High Risk Historical Records”, or HRHR. EDR’s HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR US Hist Cleaners list, as provided by EDR, has revealed that there are 52 EDR US Hist Cleaners sites within approximately 0.5 miles of the target property.

**EDR RECOVERED GOVERNMENT ARCHIVES**

*Exclusive Recovered Govt. Archives*

NY RGA LF: The EDR Recovered Government Archive Landfill database provides a list of landfills derived from historical databases and includes many records that no longer appear in current government lists. Compiled from Records formerly available from the Department of Environmental Conservation in New York.

A review of the NY RGA LF list, as provided by EDR, has revealed that there is 1 NY RGA LF site within approximately 0.5 miles of the target property.

Administrator has determined that CERCLA funds may be used for remedial action feasibility study to evaluate alternative remedial actions under CERCLA. The various dredging alternatives for a demonstration project. EPA has prepared an Environmental Impact Statement in October 1982 evaluating the remnant areas from erosion. In September 1980, Congress passed an amendment to the Clean Water Act (CWA) that included the Hudson River PCB Reclamation Demonstration Project. Under this legislation, the EPA Administrator could authorize a 75 percent grant, not to exceed 20 million. EPA issued a final Environmental Impact Statement in October 1982 evaluating various dredging alternatives for a demonstration project. EPA has prepared a feasibility study to evaluate alternative remedial actions under CERCLA. The Administrator has determined that CERCLA funds may be used for remedial action.

**Summary Details:**
Conditions at listing (September 1983): The Hudson River PCBs Site is a 40-mile stretch of the Hudson River between Mechanicville and Fort Edward, New York. General Electric Co. discharged an estimated 1.1 million pounds of PCBs into this stretch of river. The State has identified 40 hot spots, defined as sediments contaminated with greater than 50 parts per million (ppm) of PCBs. Also included in the site are five remnant areas, which are river sediments exposed when the level of the river was lowered due to removal of the Fort Edward Dam. The State has taken initial measures to stabilize the remnant areas from erosion. In September 1980, Congress passed an amendment to the Clean Water Act (CWA) that included the Hudson River PCB Reclamation Demonstration Project. Under this legislation, the EPA Administrator could authorize a 75 percent grant, not to exceed 20 million. EPA issued a final Environmental Impact Statement in October 1982 evaluating various dredging alternatives for a demonstration project. EPA has prepared a feasibility study to evaluate alternative remedial actions under CERCLA. The Administrator has determined that CERCLA funds may be used for remedial action.
HUDSON RIVER PCBS  (Continued)

at the remnant areas and for evaluating the effectiveness of the water supply system at Waterford, New York. Status June 1984): EPA has completed a draft feasibility study identifying alternatives for remedial action. A search for parties potentially responsible for wastes associated with the site has been completed, and EPA has sent letters to two potentially responsible parties notifying them of possible legal action under CERCLA.

Site Description: The Hudson River PCBs Site includes a nearly 200 river-mile stretch of the Hudson River in eastern New York State from the Village of Hudson Falls to the Battery in New York City. The Hudson River has been designated an American Heritage River because of its important role in American history and culture. This federal Superfund Record of Decision (ROD) addresses the risks to people and ecological receptors associated with polychlorinated biphenyls (PCBs) in the in-place sediments of the Upper Hudson River. The Site is divided into the Upper Hudson River which is the length of river between Hudson Falls and the Federal Dam at Troy, New York and the Lower Hudson River which is the length of river between Federal Dam at Troy and the Battery. For purposes of this project, EPA further divided the Upper Hudson River area into three main sections known as River Section 1, River Section 2, and River Section 3. The Site also includes five Remnant Deposits, which are areas of PCB-contaminated sediment that became exposed after the river water level dropped following removal of the Fort Edward Dam in 1973. The Upper Hudson River portion of the Site extends from the Fenimore Bridge in Hudson Falls to the Federal Dam at Troy, a distance of just over 43 river miles. The Lower Hudson River extends from the Federal Dam to the southern tip of Manhattan at the Battery in New York City. The Mid-Hudson River, which is primarily a subset of the Lower Hudson River, extends from the Federal Dam at Troy to just south of Poughkeepsie. The predominant sources of PCB contamination to the Upper Hudson River were two capacitor manufacturing plants owned and operated by GE. The plants are located adjacent to or near the Hudson River in the Village of Hudson Falls and the Town of Fort Edward. Over a 30-year period, the plants discharged a substantial amount of PCBs into the river. At the GE Hudson Falls plant, leakage of non-aqueous phase PCB-bearing oils through bedrock to the river continues to be a source of PCB contamination. Regarding the former outfall to the Hudson River from the GE Fort Edward plant, New York State Department of Environmental Conservation (NYSDEC) issued a Record of Decision in January 2000 that calls for the excavation of PCB-contaminated soil and sediment in this area of the Upper Hudson River shoreline in order to eliminate this source of PCBs to the river. EPA's analysis assumes a significantly reduced PCB loading to the river from these sources once the State's plans for remediation are implemented. PCBs, the chemicals of concern addressed in this decision document, have been classified by EPA as probable human carcinogens. They are also linked to other serious non-cancer adverse health effects based on observations in animals and emerging evidence in humans. Once discharged from the GE plants, the PCBs adhered to river sediment and accumulated downstream as they settled in impounded pools and other depositional areas. Historic fish and sediment data indicated PCBs were
HUDSON RIVER PCBS (Continued)

accumulating downstream of the old Fort Edward Dam as well as accumulating behind the dam. The removal of the dam in 1973 resulted in a remobilization and downstream distribution of PCBs that had accumulated behind the dam.

Historically, the highest PCB sediment concentrations have been detected in the cohesive sediments within the Upper Hudson River. River scouring/erosion and other mechanisms have mobilized PCB-contaminated sediments from the extensive cohesive deposits, redepositing them farther downstream all the way to the Battery. The preponderance of data indicates that burial of contaminated sediment by cleaner materials is not universally or uniformly occurring. Data also indicate that contaminated sediments in River Sections 1, 2 and 3 continue to serve as the major source of PCBs to the water column and the fish within the Upper Hudson River. During an approximate 30-year period ending in 1977, PCBs were used in capacitor manufacturing operations Hudson Falls and Fort Edward, New York facilities. PCB oils were discharged both directly and indirectly from these plants into the Hudson River. This included both non-permitted and permitted discharges. Even after permits were received in 1975, permit exceedances occurred. Estimates of the total quantity of PCBs discharged directly from the two plants into the river from the 1940s to 1977 are as high as 1,330,000 pounds (about 605,000 kg). Many of the PCBs discharged to the river adhered to sediments and accumulated with the sediments as they settled in the impounded pool behind the Fort Edward Dam, as well as other depositional areas farther downstream. Because of its deteriorating condition, the Fort Edward Dam was removed in 1973. Five areas of PCB-contaminated sediments were exposed due to the lowering of the river water level when the Fort Edward Dam was removed. These five areas are known as the Remnant Deposits. During subsequent floods, PCB-contaminated sediments from the Fort Edward Dam area were scoured and transported downstream. EPA notified the company that had the two plants of the remedy selected in the 1984 ROD and offered the company the opportunity to implement the selected remedy with respect to the Remnant Deposits and the Waterford drinking water supply evaluation. The company declined EPA’s offer. NYSDEC, with funding provided by EPA, conducted the evaluation at the Waterford Water Works. In addition, NYSDEC prepared a design for the in-place containment of the Remnant Deposits. This design was completed in 1988. In March 1989, the company offered to assume responsibility for the implementation of the in-place containment remedy for the Remnant Deposits. EPA issued a September 27, 1989 Administrative Order on Consent to the company which required the company to prepare a remedial design report for the construction of access roads to the Remnant Deposits and to submit a design for the in-place containment of the Remnant Deposits incorporating the NYSDEC-prepared design, plus any EPA-approved refinements to that design. EPA also issued a September 27, 1989 Administrative Order to the company requiring the company to construct and maintain the access roads to the Remnant Deposits. The company constructed the in-place containment of the Remnant Deposits under a 1990 Consent Decree with EPA. EPA will evaluate the need for further remedial action for the Remnant Deposits after completion of a 5-year review of the Remnant Deposit containment remedy, performed pursuant to CERCLA ?121(c). The company’s manufacturing plants in Hudson Falls and Fort Edward are listed under the New York State Inactive Hazardous Waste Disposal Sites Remedial program. The company currently is conducting remedial activities near the Hudson Falls and Fort Edward plants pursuant to Orders on Consent with NYSDEC. The company has thus far declined to implement the January 2000 NYSDEC Record of Decision for the Fort Edward plant Outfall 004. The NYSDEC is conducting the remedial design for that ROD. As one of America’s great rivers, the Hudson has played and will continue to play a major role in the history, culture, and economy of the area. The Hudson has been designated an American Heritage River because of its important role in American history and culture. Current and reasonably-anticipated future land use and surface water
use are described below. Current land use includes a variety of residential, commercial and industrial activities. Use of the river and lands surrounding the river are projected to remain the same. At this time, no changes in future land use are known, nor are any new uses expected. The Site passes through 14 different counties as the river flows to its final discharge point in New York Harbor. Four counties (Albany, Washington, Rensselaer, and Saratoga) lie adjacent to the more highly contaminated portions (areas of proposed active remediation in River Sections 1, 2 and 3) of the Upper Hudson River between Troy (Federal Dam) and Hudson Falls. Within these four counties, forests and farmlands surround urban centers and historic villages. There are apple orchards and dairy farms, parks, nature preserves and gardens. In addition to the GE Hudson Falls and Fort Edward plants, the area is home to technology companies, oil service companies and food companies. Saratoga and Washington Counties have experienced population growth between 1990 and 1999 of 10.2 percent and 1.4 percent, respectively, while Rensselaer and Albany Counties have experienced population declines of 1.9 percent and 0.3 percent, respectively. Total population of these four counties, according to July 1999 estimates by the US Department of Commerce Bureau of the Census, is just under 700,000. Warren County, in which the City of Glens Falls is located, has a population of just over 60,000 and is just to the northwest of the Hudson River PCBs Site. A Record of Decision (ROD) addressing operable unit 1 (OU 01) was completed in September 1984. A Record of Decision addressing OU 2 was completed in February 2002.

  - Site name: FAST TOWING & AUTO REPAIR
  - Classification: Not a generator, verified
- Date form received by agency: 07/08/1999
  - Site name: FAST TOWING & AUTO REPAIR
  - Classification: Not a generator, verified
- Date form received by agency: 07/27/1995
  - Site name: FAST TOWING & AUTO REPAIR
  - Classification: Small Quantity Generator
  - Waste code: D000
  - Waste name: Not Defined
  - Waste code: D001
  - Waste name: IGNITABLE WASTE
  - Waste code: D018
  - Waste name: BENZENE

### NY MANIFEST:
- EPA ID: NYR000009746
- Country: USA
- Location Address 1: 10TH AVE
- Location Address 2: Not reported
- Location City: NEW YORK
- Location State: NY
- Location Zip Code: 11201
- Location Zip Code 4: Not reported

### Mailing Info:
- Name: SOLIL MGMT
- Contact: JED MYERS
- Address: 640 5TH AVE
- City/State/Zip: NEW YORK, NY 10019
- Country: USA
- Phone: 212-265-2280

### Manifest:
- Document ID: NYB4126383
- Manifest Status: Completed copy
- Trans 1 State ID: Not reported
- Trans 2 State ID: Not reported
- Generator Ship Date: 08/11/1995
- Trans 1 Recv Date: 08/11/1995

### Violation Status: No violations found
### FAST TOWING & AUTO REPAIR (Continued)

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Spiller Company: 001
Contact Name: MS JEFFREY
Contact Phone: (212) 363-4223
DEC Memo:
Prior to Sept, 2004 data translation this spill Lead_DEC Field was "TIBBE"10/10/03 1030 Hrs - Sawyer - I called the Lewis Berger Group and Katie Jefferyes advised me that they were subcontractors for the Jersey Boring and Drilling. The drilling was done for investigation for NYCMTA maping for and addition to the 7 train. This spill will be given to Mark Tibbe. 11/12/10 - spill re-assigned from Tibbe to Joe O'Connell11/28/11 - Obligado - Spill re-assigned from O'connell to Obligado4/10/13 - Raphael Ketani. I researched this spill case. The only site in the vicinity of the above spill that could generate contamination is spill number 9503865. This is a former gas station at 543-551 10th Avenue, Manhattan at the intersection of 10th Avenue and West 41st Street. They were removing tanks from the old gas station and found contaminated soil. Groundwater monitoring is ongoing. Development plans are "in the works." The DEC project manager is Kumar Patel in the Region 2 Spills Unit.4/11/13 - Raphael Ketani. I made an unannounced site visit. The location is a fenced in lot with an old, one story service building on it. The site was an old gas station. Except for the service building, there was nothing left above ground. I saw the tops of two groundwater monitoring wells. I took some pictures and left the site.4/16/13 - Raphael Ketani. I contacted Toni Watts of NYCT by e-mail and asked her for any information that NYCT would have regarding the site.4/25/13 - Raphael Ketani. I spoke to Ms. Watts today. She said that she had researched the spill number in the NYCT records, but did not find any information.4/26/13 - Raphael Ketani. As there was no evidence of a spill on the sidewalk, and as the gas station site is being monitored as an active spill through a DEC case manager, I am closing spill case #0307082 effective today.

Remarks: diesel spill occured on sidewalk at location

DEC Memo:  
Prior to Sept, 2004 data translation this spill Lead_DEC Field was "O'CONNELL"e2mis no. 152263: found approx. 125 gallons of green unknown fluid mixed with water. Two samples taken, clean up pending lab results. Lab Sequence Number: 04-01457-001 PCB <1 ppm Lab Sequence Number: 04-01463-001 The sample does not match any current Con Ed standard. Lab Sequence Number: 04-01465-001 Flash Point, PMCC >140 deg FClean Harbors reported that the manhole has approx. 1500 gallons of fluid and not the 125 gallons originally reported. They stated that they would not be able to pump the liquid into drums. They would have to pump the liquid into their truck. They stated that they would hold the truck until Monday, 3/1/04 when thereresults of the antifreeze test
Tank Test:

Material:

Remarks:

125 Gal. of unknown Green liquid mixed with water. Sean from Con Ed says they are running test and pretty sure this is not an oil. Less than 1ppm PCB’s and flashpoint is greater than 140 degrees. Will update when the results are obtained.

(212) 265-1577/78/79email: sorinir@solil.com3:41 PM:- spoke with Ms. Chen. she mentioned that City of NY leased this property and they work with NYC EDC.Dena Linn ChenHudson Yard Development Corp.Ph. (212) 971-5609email: dchen@hydc.org4:20 PM:- sent letter to Mr. Nitu requiring to submit Phase I and Phase II reports, according to the letter dated 09/19/08, by the end of 07/02/10. informed him that if these reports are not available by 07/02/10, then case will be referred to legal. letter emailed to Mr. Nitu and Ms. Chen.06/29/10-Hiralkumar Patel.11:03 AM:- left message for Mr. Nitu reminding that reports are due on 07/02/10.07/20/10-Hiralkumar Patel. received email from Mr. Kelly (at 5:23 PM on 05/19/10) from Atlantic Environmental Solutions, Inc. they have been hired by Solli management and currently preparing Phase I which will be submitted by end of 07/23/10. Mr. Kelly has reviewed a Phase II report prepared by Parson Brinkerhoff on behalf of the MTA. the Phase II report shows low levels of semi volatile organic compounds and metals in the site soils, consistent with historic fill materials used to raise the elevation of the property in the past. no gasoline constituents were identified in the soil samples collected. three temporary groundwater samples were collected during the Parsons Phase II. one of these samples contained low levels of benzene, slightly in excess of the groundwater standard. it is not clear if this is due to the former use of the property as a gas station, or is coming from off site. a more in depth Phase II will be proposed to determine the source of this contamination.Seamus KellyAtlantic Environmental Solutions, Inc.Ph. (210) 876-9400 (O) (210) 360-1440 Fax (210) 876-9438email: skelly@solil.com7/27/10-Hiralkumar Patel.1:28 PM:- received email from Mr. Kelly. they have submitted report to their client for feedback. he will submit report soon.08/10/10-Hiralkumar Patel.1:21 PM:- received Phase I report (including copy of Phase II done by MTA’s contractor in 2005) from Mr. Kelly. abstract of Phase I done by Atlantic Environmental:- Block/Lot #: 1069/29 and 34- lot is currently identified as 547-551 10th ave, but has historically included addresses from 537-551 10th ave- the subject property is
547 10TH AVENUE (Continued)

currently utilized as a MTA construction yard- the property is improved with one structure, formerly utilized as an auto repair shop- where it is not covered with structures, the lot is covered by asphalt, concrete and dirt- the subject property is bound to the west by a church, to the south by W 40th street followed by a bus parking lot, to the east by 10th ave followed by a multistory building occupied by Covenant House New York, to the north by W 41st street followed by residential and commercial properties- local topography is generally flat sloping gently to the south- property elevation is approx. 23 ft above mean sea level- sanborn map 1989:- subject property is identified as developed with five story residential buildings identified as 537 through 551 10th ave. the adjacent property to the west is developed with a church and a school, a furniture factory and a coal yard- sanborn map 1899:- no significant change on the subject property, coal yard and a furniture factory is no longer on map- sanborn map 1911:- the property identified as 539 10th ave on the subject property is identified as a 'Chine Laundry'. no other changes- sanborn map 1930:- no changes- sanborn map 1950:- a gasoline filling station with four USTs is identified on the subject property at the addresses 547-551 10th ave. a 'Tin Shop' is identified at 541 10th ave. filling stations are shown on the north and south corners of the property to the east- sanborn map 1968:- the buildings at addresses 539-545 10th ave have been demolished. the gasoline filling station remains on the northern portion of the subject property. the property to the east is identified as a Narcotics Rehabilitation Center', with a filling station on the northern portion- sanborn map 1979 to 1988:- no change- sanborn map 1990:- the subject property is shown to be improved with the filling station and a second building, denoted 'Auto Repair'. the southern portion of the lot is shown as parking- sanborn map 1991 to 1993:- no change- sanborn map 1994:- the four USTs are no longer shown at the subject property- sanborn map 1995 and 1996:- no change- sanborn map 2001:- the subject property is no longer shown as filling station and is just denoted as auto repair- no change after 2001- identified 55 gal drums in the on-site building (which could be used by MTA); number of these drums were not labeled- also observed containers of compressor lubricant and kerosene- a compressed gas cylinder storage cage was observed outside of on-site building- no evidence of ASTs or USTs noticed during site inspection- during the site inspection, MTA contractor reported that they had inadvertently accessed an underground vault, which may have been a previously undiscovered UST- in-ground hydraulic lifts were observed within the former service building at the site- found three monitoring wells during site inspection (could be installed by MTA in 2005)- in 1995, eight USTs, 83 tons of contaminated soils and 434 gallons of contaminated water were removed- PB Team (MTA's environmental consultant) did Phase II in 2005 abstract of Phase II done by MTA's contractor- investigation done in 2005- installed total of ten borings (GP-1 to GP-10) to the refusal- installed boring to 20 ft at GP-1, 32 ft at GP-2, 27.5 ft at GP-3, 24 ft at GP-4, 16 ft at GP-5, 28 ft at GP-6, 16 ft at GP-7, 24.5 ft at GP-8, 30 ft at GP-9 and 28 ft at GP-10- collected one composite sample (for entire boring length) from each boring- as per boring logs, a structural fill material (building debris, bricks and cinders) found up to 16 ft bg in almost all borings- no visual evidence of contamination observed in soil from borings- found petroleum odors from 10-20 ft in GP-1, 16-24 ft in GP-2, 9-27 ft in GP-3 and 10-20 ft in GP-4- found maximum PID of 14 ppm at 12-16 ft in...
GP-1, 1.5 ppm at 16-20 ft in GP-2, 15.9 ppm at 12-16 ft in GP-3 and 3 ppm at 10-12 ft in GP-4- oily sheen observed at 16-20 ft depth in
GP-3, but only 9 ppm recorded on PID- as per sanborn map from 1950,
four gasoline tanks were located in northern portion of the site in
area where borings GP-1 to GP-4 were installed

----------------------- collected three water samples: two from
temporary groundwater monitoring points (at GP-2 and GP-9) and one
from existing monitoring well (FD-303W)- groundwater beneath the site
is expected to flow to the west, towards the Hudson River- no VOC
contamination found in any soil or groundwater samples- found some
SVOC contamination in almost all samples (which could be result of
fill material)- the northern section of the site would be excavated
approx. 75 ft bg for a new systems building to support the proposed
tenth ave station of the No. 7 subway extension- these construction
activities would occur primarily below grade through mining (drill
and blasting) and excavation (cut-and-cover)- the No. 7 subway
extension running tunnel under W 41st street, just north of the site,
would be mined by Tunnel Boring Machine09/03/10-Hiralkumar Patel.
4:44 PM:- sent letter to Mr. Nitu requiring scaled site map (including
former/current tank systems and well/boring locations), soil
investigation in the area of hydraulic lifts and soil/groundwater
delineation via installation of monitoring wells around former
gasoline tank systems. asked Mr. Nitu to submit site map and results
of soil investigation in the area of hydraulic lifts by end of
10/15/10 and a work plan for soil/groundwater investigation around
former gasoline tank systems by end of 10/29/10. letter emailed to
Mr. Nitu, Ms. Chen (at Hudson Yard development) and Mr.
Kelly.09/28/10-Hiralkumar Patel.3:43 PM:- received call from Mr.
Kelly requesting time extension to submit results of soil
investigation in area of hydraulic lifts. instead of 10/15/10, he
proposed to submit report and work plan on 10/29/10. approved Mr.
Kelly's request.10/13/10-Hiralkumar Patel.1:16 PM:- received email
from Mr. Kelly including work plan for soil/gw investigation. Mr.
Kelly proposed to install three monitoring wells within the vicinity
of the former tank field. wells will be installed to a depth of 30 ft
bg. Mr. Kelly proposed to submit investigation report by the end of
12/20/10. Mr. Kelly also mentioned that they have conducted soil
investigation in hydraulic lifts area and waiting for lab
results.10/15/10-Hiralkumar Patel.1:23 PM:- left message for (and
sent email to) Mr. Kelly. informed him that work plan is not approved
as doesn't include information regarding former dispenser islands
and remote fill ports. asked him to submit site map with these locations;
informed him that the department may require additional borings/wells
around former dispenser island/remote fill ports.10/29/10-Hiralkumar
Patel.4:44 PM:- received email from Mr. Kelly including revised work
plan. he included a site map with former dispenser islands. as per
site map, dispenser islands were in same area as tanks. Mr. Kelly
propose to install four monitoring wells: three in former tank field
area and one adjacent to the southern perimeter wall of the former
auto shop. this fourth well will be installed to investigate
groundwater contamination identified in temporary well points
installed during the hydraulic lift investigation. each well will be
installed to a depth of 30 ft bg. Mr. Kelly propose to submit report
by the end of 01/28/11.11/01/10-Hiralkumar Patel.9:22 AM:- received
report for investigation done around hydraulic lifts. abstract:- two
hydraulic lifts and associated underground hydraulic oil tank-
hydraulic oil tank was found adjacent to northern-most lift and has
product in it- installed four borings around two lifts- boring SB-1 was installed to 6 ft bg and boring SB-3 was installed to 7 ft depth where refusal encountered; no petroleum odors or PID were detected- boring SB-2 (adjacent to hydraulic oil cylinder) and SB-4 were installed to 20 ft depth- groundwater was found at 13-14 ft bg in borings SB-2 and SB-4- no odors or PID readings noted upto 12 ft depth in borings SB-2 and SB-4- high PID readings found below 13 ft depth in borings SB-2 and SB-4- collected total of four soil samples: two from SB-2 (5 ft and 12 ft) from two from SB-4 (5 ft and 13 ft)- collected two water samples: one from SB-2 and one from SB-4- staining and petroleum odor extended to 20 ft bg in borings SB-2 and SB-4- no contamination found in soil samples- found minor VOC contamination in groundwater samplesgroundwater analyticals:

readings: depth SB-2 SB-4 (ppm)

- Odors/PID readings found below water table in SB-2 and SB-4, further investigation is needed in area around hydraulic lifts. also, samples were not analyzed for MTBE.
- 11:51 AM: spoke with Mr. Kelly. informed him that the department requires complete delineation of contamination. as high PID readings were found to 20 ft depth, asked Mr. Kelly to continue borings, during well installation, until hit clean soil. Mr. Kelly mentioned that MTA’s contractor found refusal at 30 ft depth. informed him that if there is no refusal at 30 ft depth and soil shows sign of contamination, then boring must be continued until finds clean soil or refusal. whichever comes first. asked Mr. Kelly to collect soil samples from deepest dry, highest PID and deepest clean zone. also asked him to analyze samples for MTBE as it wasn’t included in recent investigation. informed him that as no soil contamination found during investigation around lifts, the department does not require any investigation inside the shop at this time, but may require additional investigation inside the shop based on results of investigation around tank field.11/22/10-Hiralkumar Patel.3:24 PM: spoke with Mr. Kelly. they are waiting for driller’s schedule. they are planning to do well installation by 12/09/10. Mr. Kelly mentioned that lab did analyzed previous samples for MTBE, but did not reported. so lab is analyzing samples again (which is out of its holding time) and will send results.11/30/10-Hiralkumar Patel.2:49 PM: received email from Mr. Kelly including revised lab report which includes results of MTBE. 10 ppb of MTBE found in groundwater sample. Mr. Kelly mentioned that required wells for additional investigation will probably be installed on 12/08/10. he will confirmed the schedule.12/07/10-Hiralkumar Patel.9:37 AM: received call from Mr. Kelly. due to schedule conflicts, well installation will start on 12/27/10.10:33 PM: sent email to Mr. Kelly inquiring updates.4:33 PM: received email from Mr. Kelly. he is working on report and will submit by next week.04/19/11-Hiralkumar Patel.10:45 AM: spoke with Mr. Kelly. he mentioned that report is ready and were sent to property manager for review. currently, they are discussing about findings.10:49 AM: spoke with Mr. Nitu. he mentioned that he is the property manager, but Joe Grabowski handling the spill issue. informed Mr. Nitu that...

investigation report must be submitted to the Department on or before 04/22/11.10:54 AM: sent email to Mr. Nitu and asked him to submit report by 04/22/11. informed him that the department may not approve any more time extension. email copied to Mr. Kelly.3:26 PM: received report from Mr. Kelly. abstract: installed four borings to approx. 27 ft bg and borings were converted into monitoring wells (MW-1 through MW-4). organic decomposition or peat layer was identified at 27 ft depth due to possibility of contamination in the shallow aquifer, and the likelihood that the peat layer was acting as a confining layer, the soil borings were not advanced any further due to the presence of the peat confining layer all four wells were set at a depth of approx. 25 ft bg. wells were installed with 15 ft of screen and 10 ft of casing total of seven soil samples were submitted for analysis SVOCs identified in the site soils are consistent with historic fill material contamination found contamination in soil and groundwater samples groundwater found at around 13 ft bg. ------------------------ groundwater flow towards the northeast ------------------------ found high PID readings right above water table in MW-2 (290 ppm at 12 ft bg) and below water table in MW-3 (190 ppm at 22 ft bg) and MW-4 (840 ppm at 15 ft bg) less than ------------------------ recommended further investigation to delineate the soil and groundwater contamination soil analyticals:

--23 high PID readings observed under water table: 190 ppm at 22 ft in MW-3 and 840 ppm at 15 ft in MW-4, but found less than 25 ppm below these high PID depths. also found organic decomposition or peat layer at 27 ft depth. also as per Phase I, in 1995, eight USTs, 83 tons of contaminated soils and 434 gallons of contaminated water were removed from the site discussed with DEC Austin as gasoline tank systems were removed in 1995, soil contamination found below 12 ft and only MTBE and based on level of contamination in groundwater samples, Austin asked for quarterly monitoring of groundwater for two more rounds including wells survey and tidal survey. 04/22/11-Hiralkumar Patel.11:50 AM: sent letter to Mr. Nitu requiring tidal survey and quarterly groundwater monitoring (including well survey each quarter) and sampling. letter emailed to Mr. Nitu, Mr. Kelly and Joe Grabowski (jgrabowski@solil.com) at Solil.05/20/11-Hiralkumar Patel.12:25 PM: received email from Jeff Anderson from Atlantic environmental including a letter requesting 90 days extension for submission of tidal survey and quarterly monitoring report. he mentioned that property owner is currently negotiating property sale agreement with a brownfield developer.05/26/11-Hiralkumar Patel.11:14 AM: left message for Jeff at Atlantic.11:36 AM: received call from Jeff. Jeff mentioned that property owner doesn't want to have anymore new data during sale negotiation as it could change anything, informed him that as property sale is only in negotiation phase and no confirmed
schedule available for site redevelopment, the department does not approve 90 day extension and requires to submit tidal survey result by end of 06/24/11. also informed him that the first quarterly report is due on 07/22/11 (three months from 04/22/11 when letter was sent out). 11:42 AM: sent email to Mr. Nitu and informed him that the 90 day extension can not be approved. asked him to submit tidal survey by 06/24/11 and first quarterly groundwater monitoring report by 07/22/11. email copied to Jeff and Mr. Kelly at Atlantic. 06/07/11-Hiralakumar Patel. received message from Mr. Kelly (at 1:43 PM on 06/02/11). 11:00 AM: spoke with Mr. Kelly. he mentioned that well tidal survey has been scheduled on 06/27/11. a preliminary tidal survey data will be submitted by 07/01/11, wells will be sampled on 06/28/11 and a combined first quarter GW monitoring report (including tidal survey and sample results) will be submitted by 07/29/11. 07/29/11-Hiralakumar Patel. 3:16 PM: received tidal survey result and first quarterly groundwater monitoring report from Mr. Kelly. abstract: wells MW-1, MW-2 and MW-3 were used for tidal survey and were sampled. well MW-4 was neither used in tidal survey nor a sample collected due to free product in well. water level elevation did not change significantly during the survey period. maximum elevation change was 0.2 ft and did not correspond to teh tidal cycle. it is assumed that the water elevation change is associated with the traffic flow on 10th ave, adjacent to the site less than ----. ground water samples were analyzed for VOCs and SVOCs. product sample was collected from MW-4 for fingerprint analysis. fingerprint analysis indicate that the product in well MW-4 closely approximates #2 fuel oil and may have been degraded through weathering. recommends product removal via vacuum extraction. found minor contamination in water samples. groundwater analyticals:

```
MW-1       MW-2       MW-3   Benzene
---------   --------   --------

MW-4       MTBE       45ET

```

ert Butyl Alcohol (TBA)-----------------13208/04/11-Hiralakumar Patel. 3:08 PM: spoke with Mr. Kelly and asked him about product removal from MW-4. Mr. Kelly mentioned that he is waiting for approval from property manager. 3:10 PM: spoke with Mr. Nitu. he mentioned that Joe Grabowski from his office is handling this project. 3:13 PM: left message for Mr. Grabowski and informed him that product from well MW-4 must be removed by 08/10/11. also informed him that the department requires further delineation of contamination around MW-4 to find out source of the plume. Joe Grabowski "project incharge in management office." Solil Management Ph. (212) 265-1577 Ext. 417 email: jgrabowski@solil.com 3:54 PM: sent email to Mr. Grabowski requiring to guage and remove product from well MW-4 by the end of 08/10/11. also asked him to conduct bi-weekly gauging/product removal for next three months and to submit guaging event report, alongwith second quarterly groundwater sampling report, by the end of 10/31/11. informed him that the department may requires additional investigation after reviewing the report. email copied to Mr. Kelly, Mr. Anderson (Atlantic) and Mr. Nitu. 08/05/11-Hiralakumar Patel. 1:41 PM: received call from Mr. Kelly. as he is out of office next week, he requested one week extension to pump out product from well MW-4, approved his request and informed him that well must be gauged and product must be removed by 08/17/11. 09/13/11-Hiralakumar Patel. received message from Michelle (at 2:11 PM on 09/12/11) from AKRF. Michelle Lapin.
547 10TH AVENUE (Continued)

Inc. Ph. (646) 388-9520 email: mlapin@akrf.com

11:23 AM: left message for Mr. Kelly inquiring updates.
11:25 AM: spoke with Michelle. she mentioned that AKRF has been hired by a leasee who is planning to construct a residential building with either 1 or 2 story basement. As property owner and leasee are still negotiating their contract, Michelle was not allowed to release their client’s information. she mentioned that the site has e-designation and AKRF is preparing a work plan (for Phase II investigation) to submit to NYC DEP. she will submit copy of work plan to DEC also and will send their client’s information at that time. she mentioned that their client will do required remediation. informed her that as contract (between owner and leasee) is still under negotiation, the department requires to continue well gauging and monitoring as planned earlier.

2:07 PM: received message from Mr. Kelly.
09/14/11-Hiral Kumar Patel.
12:38 PM: left message for Mr. Kelly.
2:56 PM: received call from Michelle with their client’s information. she mentioned that construction will start most probably in mid 2012. Michelle will submit a work plan for Phase II investigation, within two weeks. she mentioned that product found in well MW-4 during recent gauging, she asked to suspend quarterly groundwater monitoring and reduce frequency of well gauging/product removal as they will install boring throughout the site. asked Michelle to include these in work plan for review, until then well gauging and quarterly monitoring is in effect.

**“leasee and developer”** 805 3rd Ave. 7th Floor New York, NY 10022 Attn.: Matthew Lobron
Ph. (646) 519-6031 email: mlobron@extelldev.com

3:08 PM: left message for Mr. Lobron.
09/15/11-Hiral Kumar Patel.
2:57 PM: received message from Mr. Lobron. he confirmed that they are going to develop the site. 10/31/11-Hiral Kumar Patel.
4:43 PM: received email from Mr. Kelly including well gauging report. abstract: all four wells were gauged for five times from 08/16/11 to 10/28/11 and everytime, product found only in well MW-4.

product thickness in well MW-4:
date----------thickness (in ft) 08/16/11----------0.408/30/11----------0.509/12/11----------0.610/11/11----------0.310/28/11----------0.4- during vacuum extraction, removed total of 362 gal oil/mix on 08/16/11, 2,370 gal oil/mix on 09/12/11 and 942 gal oil/water mix on 10/28/11.
Mr. Kelly recommends that the gauging continue as a monthly event for the next quarter as the product level appears to be diminishing, but the product level is the same. 11/14/11-Hiral Kumar Patel.
4:32 PM: sent email to Mr. Kelly and asked him to submit result of quarterly groundwater sampling. email copied to Jeffrey Anderson (Atlantic Env), Joe Grabowski (Solil Management), Mr. Lobron, Mike Novak (Atlantic Env) and Ms. Lapin.
4:34 PM: received call from Mr. Kelly. he mentioned that the site has been leased to developer and he was told that developer’s consultant (AKRF) will do groundwater sampling.
4:36 PM: spoke with Ms. Lapin. she mentioned that due to change in development plans, she had to change investigation work plan, which is now almost ready. she mentioned that they need to submit work plan to NYC OER also. informed her that based on consistent product level in well MW-4. the Department requires additional groundwater investigation upgradient of well MW-4. so to avoid duplicate work. informed her that the investigation work plan must be submitted by the end of 11/1/11.

4:47 PM: sent email to Ms. Lapin and asked her to submit work plan by the end of 11/18/11. informed her that the bi-weekly well gauging/product removal must be continued until a remedial action plan is approved. email copied to
Jeffrey Anderson, Joe Grabowski, Mr. Lobron, Mike Novak and Mr. Kelly. 11/15/11-Hiralkumar Patel. 4:37 PM: received email from Mr. Lapin including a work plan. Abstract: Extell entered into a long-term lease for the site and plans to redevelop the site with a 45-story building containing approx. 600 residential units and ground level retail- development of the site will include soil excavation for the cellar level and for foundation- the majority of the cellar level will be excavated to 13 ft bg, with a small pile cap area excavated to a depth of 16 ft; the remaining area of the cellar level (including the electric switch gear room and elevator pits) will be excavated to 18 ft with small pile cap area to a depth of 21 ft. Extell plans to initiate redevelopment in the first half of 2012. Extell will be taking the lead to address and resolve the open spill less than ______- site also has NYC E-designation- as boring/temporary wells will be installed during investigation, requests to suspend quarterly groundwater sampling requirement- proposes to install up to 14 soil borings to a depth of 21 ft bg- proposes to install either a test pit or soil borings, depending on the result of GPR survey, at/around well location MW-4- test pit will extend to the water table, or deeper, if possible- existing monitoring wells will be sampled- an organic peat layer was reported approx. 27 ft bg, which may generate methane, therefore, methane will be monitored during subsurface investigation- two soil samples will be collected from each sampling location from above the water table based on field observations or PID readings- temporary well points will be installed in five of the soil borings and groundwater samples will be collected from temporary well points and existing monitoring wells- soil and groundwater samples will be analyzed for full list VOCs and full list SVOCs the proposed work plan is unacceptable for following reasons: as per the work plan, it is ‘assumed’ that product recovery efforts for MW-4 will continue as stipulated by NYSDEC. need to know who is going to do bi-weekly well gauging and product removal- no boring/well is proposed southwest of the well MW-4 which is upgradient area. need at least one boring/well southwest of MW-4 for delineation of free product found in MW-4- proposes to collect two soil samples from borings from above water table, the department requires collection of three soil samples: highest PID, deepest dry and deepest clean if contamination extends below water table 11/16/11-Hiralkumar Patel. 10:33 AM: sent email to Ms. Lapin and asked her about who is going to perform bi-weekly well gauging and product removal. also asked her to add boring/well in area southwest of the well MW-4, which is upgradient from the well. informed her that the department requires collection of three soil samples from boring where contamination extends below water table: highest PID, deepest dry and deepest clean. asked her to submit a revised work plan. email copied to Mr. Lobron. 12:39 PM: received email from Ms. Lapin. she mentioned that AKRF is taking over well gauging/product removal. they will go to site tomorrow. Ms. Lapin will send revised work plan once they get comments on proposed work plan from NYC OER. 11/18/11-Hiralkumar Patel. 4:13 PM: received email from Ms. Lapin. they gauged wells and found 1/4 inch product in well MW-4 only. 11/22/11-Hiralkumar Patel. 3:40 PM: received email from Ms. Lapin including well gauging table and site map including additional boring location. during gauging, AKRF found three additional wells (W1, W1-40 and W2) which were installed in 2007 as part of the geotechnical investigation for the No. 7 line extension project. as these wells were installed for geotechnical investigation, no
information data collected. as only 0.02 ft product found in well
MW-4, Ms. Lapin proposed to install an absorbent sock instead of
vacuum pumping. she proposed to change socks
bi-weekly. 11/25/11-Hiralkumar Patel. 1:15 PM:- sent email to Ms.
Lapin. informed her that as per the site map, only four soil borings
and four temporary wells will be installed, but as per text in the
work plan, she proposed to install total of 14 borings. asked her to
clarify this. also asked her about boring locations GP-1 to GP-10 as
don't know when those were installed. 11/29/11-Hiralkumar Patel. 11:14
AM:- received email from Ms. Lapin. she mentioned that the proposed
soil borings and temporary wells are in blue and not numbered. the
discrepancy in the number is:- one boring/well was left off the
southwestern corner of the site, which has been added- the shaded
area surrounding MW-4 comprises either test pits or up to 6 borings,
depending on the results of the GPR survey. "Up to 14 borings/wells"
includes 6 borings at this location. this number is now "up to 15"
with the additional boring/well location requested on southwest of
MW-4. GP-1 to GP-10 are the previous borings advanced by PB in 2005.
the figure had incorrectly shown them as "GB" in the legend. that has
been corrected. 12/06/11-Hiralkumar Patel. 3:44 PM:- received email
from Ms. Lapin including a revised work plan and a well gauging data.
well MW-4 was gauged on 12/02/11 and found 0.07 ft product. an
absorbent sock was installed in well MW-4 and will be replaced during
a geophysical survey scheduled for early next week. revised work plan
addresses previous concerns and includes installation of five
soil-gas borings (soil-gas samples will be collected from approx. 5
to 6 ft bg) and fifteen soil borings. 12/09/11-Hiralkumar Patel. 4:24
PM:- sent work plan approval letter to Mr. Grabowski and Mr. Lobron.
informed them the department no longer requires quarterly gw
monitoring/sampling, but requires continuation of bi-weekly
monitoring and product removal. letter emailed to Mr. Grabowski, Mr.
Lobron and Ms. Lapin. 01/31/12-Hiralkumar Patel. 4:34 PM:- received
investigation report from Ms. Lapin. abstract:- US geological survey
reports indicate that bedrock beneath the site is expected at a depth
of approx. 30 ft bg- soil beneath the site was observed consist of
fill material comprisin sand and silt with concrete, gravel, brick,
asphalt, wood and ash to depths of approx. 12 ft bg- groundwater
gauging was conducted from existing on-site wells MW-1 through MW-4,
FD-303W, W1, W1-40 and W2 on a weekly to bi-weekly basis- due to
presence of free product previously identified in well MW-4, an
absorbent sock was added to the well on 12/06/11- gauging events
subsequent to adding the absorben sock to well MW-4 have not
identified any mesurable free product- absorbent socks removed from
well MW-4 have shown approx. 3 to 6 inches of an oily sheen absorbed
into the hydrophobic material- a geophysical survey was performed-
two small square-shaped anomalies were identified in the southern
portion of the site approx. 15 ft from the southern property line
(Anomaly 1 & 2)- approx. 30 ft north of the first set of anomalies
along southern line, a trench-shaped anomaly was identified in an
east-west direction toward 10th Ave (Anomaly 3)- similar
trench-shaped anomaly was identified in the same east-west direction
approx. 15 ft south of the automotive repair building (Anomaly 4)- a
large anomaly measuring approx. 15 ft long by 6 ft wide was
identified in the central portion of the site in the vicinity of the
suspected vault location (Anomaly 5)- additional anomalies identified
included two small square-shaped anomalies on the eastern side of the
site - one in line with the trench-shaped anomaly south of the repair
contamination was not found in soil samples (except few very minor groundwater was encountered between 13 and 16 ft bg- VOC through MW-4) and from temporary wells TW-7, TW-8 and TW-9- identified in groundwater sampled from each of the wells (MW-1 observes on water table at temporary well TW-9- petroleum odors were gasoline-line odor was identified in boring SB-9- petroleum sheen table in borings SB-6, SB-7 and SB-8- mixed petroleum and were observed at 13-15 ft bg within SB-11 and SB-11A- gasoline-like odors in the northeastern portion of the site- petroleum-like odors were advanced immediately west of the well MW-4 and boring SB-8 advanced in the northeastern portion of the site- petroleum-like odors were observed at 13-15 ft bg within SB-11 and SB-11A- gasoline-like odors were observed at 13-15 ft and in the vicinity of the groundwater table in borings SB-6, SB-7 and SB-8- mixed petroleum and gasoline-line odor was identified in boring SB-9- petroleum sheen observed on water table at temporary well TW-9- petroleum odors were identified in groundwater sampled from each of the wells (MW-1 through MW-4) and from temporary wells TW-7, TW-8 and TW-9- groundwater was encountered between 13 and 16 ft bg- VOC contamination was not found in soil samples (except few very minor

547 10TH AVENUE (Continued)
values), but SVOC compounds found above limit which could be result of backfill material (ash): VOC compounds found in groundwater samples:

02/02/12-Hiralkumar Patel 10:53 AM: spoke with Ms. Lapin, asked her about further investigation of the waste pit inside the repair shop. informed her that if excavation happens soon (within couple of months), then further investigation can be done after on-site building is demolished, otherwise requires further investigation of the waste pit. asked her to find out work schedule for on-site building demolition and excavation. also asked to find out whether site will be excavated to the property line.11:34 AM: sent email to Ms. Lapin and asked to submit update (about redevelopment) by 02/08/12. email copied to Mr. Lobron. 02/08/12-Hiralkumar Patel 11:44 AM: received call from Ms. Lapin. she is in contact with Mr. Lobron and his attorney regarding investigation/remediation of waste pit in repair shop. as owner’s attorney is out of office today, she will call back tomorrow with more updates. 02/01/12-Hiralkumar Patel. received email from Ms. Lapin (at 4:59 PM on 02/09/12) including a response regarding waste oil pit investigation. Ms. Lapin mentioned that waste oil pit was likely last used in approx. 1995 when the gasoline station/automobile repair facility ceased operations. she does not suspect any leak from the oil pit as only BTEX found in groundwater sample from the closest sample location TW-9 and no SVOCs found. she has gauged all wells on 02/06/12 and found no free phase product in any well. they replaced absorbent sock in MW-4. she proposes to monitor on-site wells monthly until the site redevelopment occurs. as per her, construction is scheduled to commence in the Fall of 2012 at which time, the former repair building will be demolished and waste pit will be excavated. she proposes to remove product from wells, if any, via vac truck. 02/24/12-Hiralkumar Patel 11:11 PM: sent letter to Mr. Grabowski and Mr. Lobron. informed them the department agrees with the recommendation of monthly monitoring and removal of free product (if applicable) from existing wells until site redevelopment occurs. also informed them that the department does not require excavation of waste oil pit at this time. asked them to submit a monthly monitoring report. informed them the department may require additional investigation/remediation after reviewing the reports. letter emailed to Mr. Grabowski, Mr. Lobron and Ms. Lapin. 07/19/12-Hiralkumar Patel 3:01 PM: spoke with Ms. Lapin and inquired about monthly gauging report. she mentioned that they gauged existing well monthly and found nothing. she will send data by tomorrow morning. 3:19 PM: received email from Ms. Lapin including monthly gauging report. wells gauged monthly and found oily sheen on absorbent sock (between 0.5 inch and 7 inches) from well MW-4. 07/20/12-Hiralkumar Patel met with Shaminder Chawla (NYC OER) in DEC office. he mentioned that AKRF has submitted soil-vapor investigation results and RAP. he will ask OER project manager to forward available documents, for review. 07/23/12-Hiralkumar Patel 4:43 PM: sent email to Mr. Chawla.
and asked to submit available documents for review. 07/30/12-Hiralkumar Patel. 4:32 PM:- left message for Mr. Chawla. 08/03/12-Hiralkumar Patel. 8:28 AM:- received email from Mr. Chawla including copy of remedial investigation work plan dated Dec. 2011. Mr. Chawla asked to contact Breanna Gribble, project manager in NYC OER. Breanna GribbleNYC OERP. (212) 442-7126email: BGribble@dep.nyc.gov work plan, that Mr. Chawla sent, was previously submitted to DEC. 08/24/12-Hiralkumar Patel. 3:21 PM:- received email from Ms. Lapin including monthly gauging report, wells gauged on 08/16/12 and found 6 inches of oily sheen on absorbent sock from well MW-4.10/01/12-Hiralkumar Patel. received email from Ms. Lapin (at 5:08 PM on 09/28/12) including monthly gauging report. wells gauged on 09/20/12 and found 3 inches of oily sheen on absorbent sock from well MW-4.11/20/12-Hiralkumar Patel. 12:15 PM:- received email from Ms. Lapin including monthly gauging report. wells were gauged on 10/17/12 and 11/15/12. on 10/17/12, the absorbent sock in MW-4 was found to have not been in touch with the water table. on 11/15/12, found 3 inches of oily sheen on absorbent sock from well MW-4.12/26/12-Hiralkumar Patel. received email from Ms. Lapin (at 5:26 PM on 12/13/12) including monthly gauging report. wells were gauged on 12/13/12. found 5 inches of oily sheen on absorbent sock from well MW-4. Ms. Lapin mentioned that they got approval for NYC BCP program and have sent RIR and RAP and awaiting comments to the RAP. once approved from city, she will submit copy to DEC. 01/16/13-Hiralkumar Patel. 1:27 PM:- received email from Michelle Chawla including well gauging report. wells were gauged on 12/13/12 and 01/14/13. during both monitoring events, approx. 5 inches of sheen observed when the absorbent sock in MW-4 was removed and replaced. 02/01/13-Hiralkumar Patel. received draft remedial action work plan, including construction health and safety plan, from AKRF. abstract:- site is identified as Block 1069, Lots 29 and 34- following redevelopment, the site will also occupy Block 1069, Lot 9136, which is an air volume lot over the west-adjacent property-proposed future use of the site will consists of a 52 story, approx. 727,000 gross sq. ft. residential building with one sub-grade level that will include utility rooms, storage space, the superintendent’s office, a possible management/leasing office and possible tenant amenities and ground floor retail space- the proposed building footprint will occupy the entirety of the site- the majority of the cellar level will be excavated to 13 ft below existing grade, with small pile cap areas excavated to a depth of 16 ft. the elevator pits located in the cellar level will be excavated to approx. 24 ft with small pile cap areas to a depth of 31 ft- additional excavation will be conducted in the vicinity of soil boring SB-8 to remove the lead hotspot, and in the vicinity of borings SB-11 and SB-11A to address petroleum and PAH contaminated soil- each of the planned hotspot removals will be completed as 10 ft long by 10 ft wide excavations centered on the boring locations and extending to 16 ft bg- will collect endpoint samples- will install a vapor/waterproofing barrier system beneath the building slab and outside of foundation walls- the base of the building will be below the water table and there is no potential for migration and accumulation of soil vapors beneath the building slab- will collect product sample, if detected, for fingerprint analysis- approx. 8 month remediation period is anticipated less than -------02/06/13-Hiralkumar Patel. 1:31 PM:- left message for Dustin at AKRF. informed him that all documents must be submitted to DEC (not only NYC OER) for review and approval. asked
him to submit final RAWP and work schedule.02/07/13-Hiralkumar Patel.1:35 PM:- received call from Ms. Gribble from NYC OER. discussed about the RAWP. she mentioned that work plan is in public review stage. they are still waiting for documents for "e" designation for noise. if there is no comments from public, OER will issue notice to proceed. she will call once this notice ready.02/21/13-Hiralkumar Patel.4:06 PM:- received message from Shaminder Chawla from NYC OER.02/25/13-Hiralkumar Patel.2:01 PM:- spoke with Mr. Chawla at OER. discussed about DEC requirements of endpoint samples (as per DER-10) and sample analytical methods (8260/8270). he will include this in comment to RAWP review.03/07/13-Hiralkumar Patel.2:15 PM:- received email from Ms. Gribble requesting call back regarding endpoint sampling.03/08/13-Hiralkumar Patel.11:08 AM:- spoke with Ms. Gribble. she mentioned that there will be shoring at property boundaries and all soils will be removed within shoring, to 15 ft bg. so no endpoint sidewall samples are possible. informed her that endpoint bottom samples must be collected as per DER-10.03/12/13-Hiralkumar Patel.10:03 AM:- received email from Dustin inquiring about endpoint sample frequency.03/19/13-Hiralkumar Patel.9:51 AM:- left message for Dustin. informed him that endpoint samples must be collected as per DER-10. also asked him to submit final work plan.04/05/13-Hiralkumar Patel. received final remedial action work plan from Dustin.04/22/13-Hiralkumar Patel.1:37 PM:- sent email to Dustin and asked to inform once project begins. email copied to Michelle and Ms. Gribble.07/03/13-Hiralkumar Patel.3:46 PM:- received email from Dustin including gauging data. since Jan. 2013, about 4 inches of light oily sheen observed on absorbent sock in well MW-4. no product found in any well. Dustin stated that waste classification sampling was done recently. they are coordinating with NYC OER to obtain excavation and foundation permits from NYC DOB. pre-construction meeting will be scheduled once permits received.08/22/13-Hiralkumar Patel.11:46 AM:- received email from Shaminder Chawla from NYC OER, including meeting roster and summary of yesterday’s pre-construction meeting. - developer is ready to start work at this site within next two weeks. - still waiting on DEP dewatering permit. - work will be performed in stages. - initial cut will be removal of soil from top 7 to eight feet, then contractor will install caissons (two months). - total soil removal is 16 to 17,000 cubic yards. - all soils will be shipped to NJ and PA. - AKRF will provide continuous VOC and dust monitoring. - end point sampling in accordance with DER-10 around waste fuel oil tank. - AKRF has been directed to send a copy of daily reports09/06/13-Hiralkumar Patel. received email from Dustin (at 4:03 PM on 09/05/13) including well gauging report, which is last gauging report prior to site construction. Dustin mentioned that earth work is set to being middle to late next week (pending permits), they will start from suspected waste oil pit area. he will submit weekly report, at end of each week.09/16/13-Hiralkumar Patel.1:27 PM:- received email from Dustin. he mentioned that excavation of suspected waste oil pit will begin tomorrow.09/17/13-Hiralkumar Patel.2:17 PM:- received email from Dustin. during test pit excavation this morning, they found a 550 gal steel waste oil UST in where where suspected waste oil pit located. no evidence of holes or pitting noted on tank. tank collected some rain water from an opening on top of the tank. no former piping runs were connected to the tank. due to the product storage, this tank will be registered. no evidence of a historic release from this tank was identified beneath or adjacent to tank’s
The tank. approx. 6 inches of oil-water mixture was present in the south of the tank and a small hole was observed on the south side of the tank. Evidence of petroleum contaminated soil was encountered immediately located in close proximity to the groundwater table at the site. The bottom of the tank was wide and was discovered approx. 7.5 ft bg. The tank was approx. 9 ft long by 4 ft wide and was approximately five foot cut is completed throughout the site (to avoid too many or any confusing submittals). 10/01/13-Hiralkumar Patel. 10:13 AM:- received email from Dustin including daily report. they removed both 550 gal tanks. they also excavated test pits to investigate the existing foundation wall next to the west-adjacent church building (for underpinning) and along the eastern site boundary. No evidence of contamination noted in test pits. 10/03/13-Hiralkumar Patel. 10:34 AM:- received email from Dustin including daily report. they removed approx. 276 gal of oil-water mixture from UST and hydraulic lifts. 09/26/13-Hiralkumar Patel. 10:34 AM:- received email from Dustin including daily report. they removed approx. 276 gal of oil-water mixture from UST and hydraulic lifts. 09/26/13-Hiralkumar Patel. 7:57 PM: - received email from Dustin (at 7:57 PM on 09/25/13). During excavation activities in the northwestern corner of the site, an additional approximately 550-gallon steel suspected waste oil UST was encountered north of the former automotive repair building. the tank was fully intact (no evidence of holes, pitting, etc.), and contained some oily water. No former piping runs were connected to the tank and no evidence of soil contamination was observed beneath the location of the tank. During excavation activities immediately south of the former automotive repair building, an approximately 550-gallon steel heating oil UST was also encountered. the tank was empty but was observed to contain thin, spotty streaks of degraded heating oil inside of the tank carcass. No evidence of contamination was observed in the soil beneath the location of the tank. Endpoint soil samples were collected after removal of tanks due to possibility of finding more tanks. Dustin mentioned that PBS application will be submitted after an approximately five foot cut is completed throughout the site (to avoid too many or any confusing submittals). 10/01/13-Hiralkumar Patel. 10:13 AM:- received email from Dustin including daily report. They removed both 550 gal tanks. they also excavated test pits to investigate the existing foundation wall next to the west-adjacent church building (for underpinning) and along the eastern site boundary. No evidence of contamination noted in test pits. 10/03/13-Hiralkumar Patel. 10:34 AM:- received email from Dustin including daily report for 10/02/13. 10/03/13-Hiralkumar Patel. 7:57 AM:- received email from Dustin including daily report for 10/03/13, 10/04/13 and 10/07/13. On 10/04/13, investigative excavation activities were performed in WC-9 up to a depth of 13 ft bg. Petroleum-like odor was detected in soil at the groundwater interface (approx. 13 ft bg). Petroleum-impacted material was placed back into the excavation at its originating depth and backfilled with overburden material. 10/10/13-Hiralkumar Patel. 4:48 PM:- received email from Dustin, they found additional approx. 1,500 gal suspected fuel oil UST, located south of the former automotive repair building. This is fourth tank found at the site. 10/15/13-Hiralkumar Patel. received email from Dustin (at 9:51 AM on 10/14/13) including daily status report for Oct. 8, 9, 10 and 11. On 10/08/13, crew found previously unknown, approx. 1,500 gal steel fuel oil UST in northern portion of grid WC-4. the tank measured approx. 15 ft long by 4 ft wide and was discovered approx. 7.5 ft bg. the tank was approx. 9 ft south of the existing church building wall. Bottom of the tank was located in close proximity to the groundwater table at the site. Evidence of petroleum contaminated soil was encountered immediately south of the tank and a small hole was observed on the south side of the tank. approx. 6 inches of oil-water mixture was present in the...
bottom of the tank. The 1,500 gal UST was removed on 10/11/13. Soil was not excavated from beneath the former UST location due to the need to maintain the site grade to allow for the drilling of caissons along the western property boundary (to prevent any potential undermining of the west-adjacent church building during excavation activities). 10/22/13-Hiralkumar Patel. received email from Dustin (at 4:40 PM on 10/21/13) including daily reports from 10/14/13 to 10/18/13. Contaminated soil noted in grids WC-4, WC-5&7 and WC-8, during underpinning of existing church building to the west. 10/29/13-Hiralkumar Patel. 4:10 AM:- received email from Dustin including daily reports from 10/21/13 to 10/25/13. 11/06/13-Hiralkumar Patel. received email from Dustin (at 1:20 PM on 11/05/13) including daily reports from 10/28/13 to 11/02/13. 11/12/13-Hiralkumar Patel. 9:39 AM:- received email from Dustin including daily reports from 11/04/13 to 11/08/13. 11/26/13-Hiralkumar Patel. received email from Dustin (at 5:26 PM on 11/21/13) including daily reports from 11/11/13 to 11/15/13. 11/27/13-Hiralkumar Patel. 7:32 AM:- received email from Dustin including daily reports from 11/18/13 to 11/22/13. 12/05/13-Hiralkumar Patel. received email from Dustin (at 5:27 PM on 12/04/13) including daily reports from 11/25/13 to 12/29/13. During excavation for installation of corrugated metal piles along the adjacent church site to the west, petroleum odors were noted in soil; however, area was backfilled and no stockpile was generated. Impacted soil will be excavated for off-site disposal at a later stage for pile cap construction. 12/12/13-Hiralkumar Patel. 3:54 PM:- received email from Dustin including daily reports from 12/02/13 to 12/06/13. 12/20/13-Hiralkumar Patel. 8:04 AM:- received email from Dustin including daily reports from 12/09/13 to 12/13/13. 12/24/13-Hiralkumar Patel. 11:49 AM:- received email from Dustin including daily reports from 12/16/13 to 12/20/13. 01/02/14-Hiralkumar Patel. received email from Dustin (at 12:04 PM on 12/31/13) including daily reports from 12/23/13 to 12/27/13. 01/09/14-Hiralkumar Patel. received email from Dustin (at 5:12 PM on 01/08/14) including daily reports from 12/30/13 to 01/04/14. 01/15/14-Hiralkumar Patel. 9:40 PM:- received email from Dustin including daily reports from 01/06/14 to 01/11/14. 01/24/14-Hiralkumar Patel. received email from Dustin (at 5:09 PM on 01/23/14) including daily reports from 01/13/14 to 01/18/14. Some of the excavated soil from grids WC-4 and WC-9 exhibited evidence of petroleum odors and staining and no or low-level PID readings. Impacted soil was segregated for off-site disposal. 01/29/14-Hiralkumar Patel. 6:56 AM:- received email from Dustin including daily reports from 01/20/14 to 01/25/14. Some of the excavated soil from grids WC-4, WC-5&7 and WC-9 exhibited evidence of petroleum odors and/or staining and low-level PID readings. Impacted soil was segregated for off-site disposal. 01/30/14-Hiralkumar Patel. received email from Dustin (at 6:14 PM on 01/29/14). He mentioned that after proper stabilization, they can now excavate to 16 ft bg in area of former borings SB-11 and SB-11A where some deeper SVOC contamination was noted. He also mentioned that during field work in Oct. 2013, they found a 1,500 gal fuel oil UST in the vicinity of these borings. After removing contaminated soil, endpoint samples will be collected as per DER-10 for 8260/8270 analyses. 10:04 AM:- received call from Dustin to discuss sampling approach in western area where former borings SB-11/11A were located and where a 1,500 gal UST was found. Informed him that based on available information, the proposed approach looks fine. AKRF is planning to collect

Endpoint samples tomorrow. Asked Dustin about excavation in area of well MW-4 where free phase product found last year. He mentioned that area of MW-4 is currently used as ramp to get access to other parts of the site. Ashutosh Sharma, AKRF Ph. (917) 842-6781.

- **04/28/14 to 05/02/14**: Received daily reports from Dustin including daily status report from 04/28/14 to 05/02/14, 05/15/14-Hiralkumar Patel.
- **05/08/14**: Received email from Dustin including daily status report from 05/08/14.
- **05/12/14 to 05/16/14**: Received daily status report from 05/12/14 to 05/16/14.
- **05/19/14 to 05/23/14**: Received email from Dustin including hand sketch with three proposed well locations for groundwater monitoring.
- **06/16/14**: Received daily status report from 06/16/14.
- **06/20/14**: Received message from Dustin (at 1:26 PM on 06/20/14). Spoke with Dustin about possibility of fourth well along W 41st Street. Dustin mentioned that due to subway extension project (7-line), they could not install well along 41st street. Informed Dustin that based on available information, three proposed well locations looks fine. 08/20/14-Hiralkumar Patel.
Dustin (at 8:29 AM on 07/08/14) including daily status report from 06/16/14 to 06/20/14.received email from Dustin (at 5:24 PM on 07/24/14) including daily status report for 07/23/14. he mentioned that two of the three proposed wells (MW-1 and MW-2) were installed on the eastern side of the site along 10th Ave. groundwater was encountered at depths of approx. 12-13 ft bg. both wells were installed to a depth of approx. 26 ft bg. no petroleum odors or PID readings were encountered on any of the soil samples/drift cuttings during installation activities. no soil samples were collected for lab analysis.received email from Dustin (at 6:13 PM on 07/28/14) including daily status report for 07/25/14 and 07/28/14. on 07/28/14, the third proposed well was installed along W 40th Street, immediately southwest of the property. refusal encountered at 17 to 18 ft bg in three borings. the 2-inch well was installed to a depth of approx. 18 ft bg. no petroleum odors or PID readings were encountered on any of the soil samples/drift cuttings during installation activities. no soil samples were collected for lab analysis.09/30/14-Hiral Kumar Patel.10:10 AM.- received call from Dustin inquiring about any record of registration of old motor fuel tanks that were removed in 1995. as there is no record for those tanks, asked Dustin to include old tank's information on PBS application. Dustin mentioned that NYC OER is currently reviewing draft remedial action report. he will submit final report, once he has comments from OER. he has collected first quarterly groundwater samples from three new wells and will submit that report also. asked Dustin to collect minimum of three quarterly rounds of groundwater samples.11/04/14-Hiral Kumar Patel. received email from Dustin (at 6:31 PM on 11/03/14) including first quarterly gw monitoring report. abstract:- three (3) 2-inch monitoring wells (MW-1 through MW-3) were installed- well MW-1 was completed to a depth of approx. 26 ft bg with screen from 11 to 26 ft bg- well MW-2 was completed to a depth of approx. 26.5 ft bg with screen from 11.5 to 26.5 ft bg- well MW-3 was completed to a depth of approx. 18 ft bg with screen from 8 to 18 ft bg- groundwater was found between 12 and 13 ft bg- first round of quarterly groundwater sampling was conducted on 08/07/14- no free-phase product was detected in any of the three wells- localized groundwater flow direction to the northeast. ------- minor VOC contamination noted in groundwater samples (max: 102 ppb xylene in MW-2)12/04/14-Hiral Kumar Patel. received email from Shaminder (at 4:23 PM on 12/03/14) from NYC OER, including sampling result summary table for groundwater sampling on 11/11/14. low level of VOCs detected in groundwater sample (max: 38 ppb Xylene in MW-1). Shaminder asked about additional work needed to close the spill.12/05/14-Hiral Kumar Patel.8:33 AM.- sent email to Shaminder at NYC OER. informed him that the department has asked for minimum of three quarterly groundwater sampling and has received only 1st quarterly sampling report in Nov 2014 (for sampling occurred in Aug 2014). email copied to Dustin.1:43 PM.- received email from Dustin including link to final remedial action report.- excavated and removed historic fill and other contaminated soils- excavation was completed to a depth of at least 13 ft bg across the site. aditional excavation was conducted in the northern portion of the site to depths upto 20 ft bg- removed one (1) 1,500 gal fuel oil UST, two (2) 550 gal fuel oil USTs, one (1) 550 gal waste oil UST and two underground hydraulic lifts that were encountered in the northwestern portion of the site during excavation- collected and analyzed endpoint samples- installed a vapor barrier/waterproofing system.
547 10TH AVENUE (Continued)

beneath the footprint of the building and behind the foundation walls- no contamination noted in endpoint samples 12/17/14-Hiralkumar Patel. 3:45 PM:- received email from Dustin including 2nd quarterly groundwater sampling report. groundwater samples were collected from three wells on 11/11/14. no free phase product found in wells. minor VOCs detected (maximum 32 ppb Toluene in MW-1) in groundwater samples. Dustin recommended spill closure based on remedial actions taken at the site and results of groundwater monitoring. 12/19/14-Hiralkumar Patel. based on available information, case closed. 1:01 PM:- sent spill closure letter to Extell Development. letter emailed to Dustin, Joseph Montano (JMontano@extelldev.com), Laura Kirschbaum (LKirschbaum@extelldev.com), Ryan Masters (RMasters@extelldev.com) and Mr. Chawla. 02/03/15-Hiralkumar Patel. received email from Dustin (at 5:07 PM on 02/02/15) including well closure letter. **e-designation**

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

DEC Memo: Prior to Sept, 2004 data translation this spill Lead_DEC Field was "KRIMGOLD"01/26/04Reassigned from Rommel to Austin02/17/04: Reassigned from AUSTIN to KRIMGOLD.3/15/05. J.Krimgold reviewed a letter dated December 2, 2004 from AKRF. The letter stated that three tanks along with contaminated soil were removed from this site. However, post-excavation samples were not obtained and a new building was constructed at this site. AKRF was requesting a spill case closure.3/1/5/05. J.Krimgold called AKRF and spoke to Andrew Rudko. Requested any supporting documentation showing that tanks and contaminated soil were indeed removed and disposed properly.04/13/06- Case was transferred from Jake Krimgold to Koon Tang,10/8/10 - Austin - Reassigned from Tang to Spills staff - end

**Contact Name:** (718) 476-6288

**DEC Memo:** Spoke with FD Hazmat Chief Rogers. He indicated that they emptied the saddle tank into 2 85 gallon drums and left the drums at the scene to be picked up by the tow truck. He said he explained it to the truck driver that it is their responsibility to remove the drums. Drum location is 440 41st street. Besides this, few gallons spilled on the street which was cleaned up with speedy dry. No drain was impacted. Diesel ran over a con ed manhole FD did not open up the manhole instead, notified ConEdision about the incident. Chief Rogers can be reached @(718)476-6288. Case closed. (sr)

**Remarks:** Saddle tank punctured appor 30 gallons onto side of raod, no sewrs affected speedy dry has been applied.

DEC Memo: 2004 spill next door (fill pipe on tank???) Bovis Developers is gutting the building. In basement pump room they broke under the floor and found an oil water mix. They think the oil may be coming from a building next door. Also a possibility of an old, old gas station on the site. Covenant House (Youth shelter non-for-profit) owns both buildings. 3/13/07 - Raphael Ketani. According to Property Shark, the site is part of a large property with the address 456-464 W. 41 Street, block and lot 01050/0001. The official address is 538 10 Avenue. Covenant House owns the entire property. There is no PBS case for the site. There was a spill case for the site from 2004, #0404424. It was opened on 7/24/04 and closed on 10/6/05. It involved soil sampling by the NYCTA for a #7 train extension and the discovery of contaminated soil. The soil was removed. 3/14/07 - Raphael Ketani. I made a scheduled site visit and met Gerald Tiss V.P. of JLC Environmental Consultants (212) 420-8119. He showed me the site. I saw the fill port, vent pipe, and stick port for the UST. There is a UST under the sidewalk that serves the site’s building and one next to the tank. The stick port is in the driveway that runs to the back of 460 W. 41 Street. The fuel line from the tank to the boiler also runs under the driveway. Mr. Tiss pointed out where the tank was located under the sidewalk. He said that the tank was replaced in 2004 (this doesn’t match the information from case #0404424). We went inside and down the stairs. The ppb Ray PID meter detected 115 ppb of vapors, but they were working with all kinds of materials throughout the building. I looked at a groundwater location under some plywood boards that was situated about mid-way down a hallway in the basement and another groundwater location near the landing to the basement stairs. Both locations looked like they had just groundwater. The engineer from Bovis Developers told me that the water level goes up and down with the tides (the building also fronts on 10th Avenue and they are a few blocks from the Hudson River). Lastly, we looked at a section of open floor in a pump room. There were several pools of black oil floating on top of the groundwater. The pools were no larger than about 18 inches long and were not connected to each other. The engineer from Bovis told me that the groundwater here doesn’t move with the tides. Mr. Tiss asked what should be done. I told him that the oil should be recovered and then the hole should be monitored for more oil. I added that if the oil keeps coming back, then the source will have to be found. He said he understood this. I also told him that if the oil keeps coming back, then I would be suspicious of the tank system and that it should be tested to see if...
it is leaking. He agreed to do this. 3/26/07 - Raphael Ketani. Mr. Tiss called to say that they will begin pumping the pit where the small pools of oil showed up and see what follows. I told him that the tank was never tightness tested. He said he knows this and will address the tank system if the oil keeps returning. 3/28/07 - Raphael Ketani. Mr. Tiss called to say that they started the recovery pump and have already collected a little oil. He said that they will keep an eye on things and keep me informed.

4/3/07 - Raphael Ketani. I spoke to Mr. Tiss (cell (917) 617-3894). He told me that now there are only occasional dime size spots of oil in the water. I asked him whether the tank system had ever been registered. He said he wasn't aware that it had. I told him to have the tank system tested and to register the tank. I told him that DEC needed a copy of the tank system results. He said he would have the testing done and register the tank.

4/10/07 - Raphael Ketani. Mr. Tiss called to say that they don't see any more oil spots on the water in the hole. I told him they can close the hole up and set a date to test the tank system and register the tank. He said he will do this.

4/27/07 - Raphael Ketani. Today I received a letter from Gerald Tiss of JLC Environmental regarding the site. The letter discussed the oil in the trench in the pump room, the collection of the oil with groundwater (approx. 3000 gals.), permission granted from DEC to backfill the trench after no more oil was visible, and a request by DEC to test the tank system. The letter also states that a manifest was attached for the liquids that were collected, but it was not included.

7/13/07 - Raphael Ketani. The letter also states that a manifest was attached for the liquids that were collected, but it was not included.

Today I received a letter from Gerald Tiss of JLC Environmental regarding the site. The letter discussed the oil in the trench in the pump room, the collection of the oil with groundwater (approx. 3000 gals.), permission granted from DEC to backfill the trench after no more oil was visible, and a request by DEC to test the tank system. The letter also states that a manifest was attached for the liquids that were collected, but it was not included.

7/13/07 - Raphael Ketani. I made contact with Mr. Tiss. He said that the tank system passed once they replaced the vent pipe. However, Covenant House has not paid him for his work. So he wont submit the passing test report to DEC. Also, Covenant House has not registered the tank with the DEC.

10/4/07 - Raphael Ketani. I tried to get ahold of Mr. Tiss, but could only leave a voice mail on his cell phone. I checked the PBS database, but the tank wasn't registered. Mr. Tiss called back and said he still hasn't been paid. He said that all of the paperwork is ready to go. He will call them again.

1/29/07 - Raphael Ketani. I spoke to Mr. Tiss. He said that his client finally paid most of the money he was owed and so he released the paperwork to them. He said they are reviewing the documentation right now. Once they have determined that everything is satisfactory, then he will send me the paperwork.

1/9/08 - Raphael Ketani. I spoke to Mr. Tiss (cell (917) 617-3894). He said that Covenant House had received the document for their review months ago and he hasn't heard anything from them. He said he will call them again and ask what is happening.

1/25/08 - Raphael Ketani. Mr. Tiss called again. He said that he hasn't heard anything from Covenant House and they haven't paid him. I told him that I will send another letter to them with stronger language.

1/28/08 - Raphael Ketani. I sent a standard CSL with a 2 week due date to Bruce Henry, Executive Director, Covenant House (212) 613-0300.

2/12/08 - Raphael Ketani. To date, I have not received a response from Mr. Henry or anyone else at Covenant House by mail, e-mail, or phone. Therefore, I am sending out a stronger worded letter with a return receipt. I will give a due date of 3/3/08. The letter will state that legal action will be taken if there is no response by the due date.

Randall Austin, Chief of the Spills Unit at Region 2, came up to me and told me to hold off sending the letter. He asked that I talk to Mr. Henry and try to find out why Covenant House is not responding. Mr. Austin said that if Mr. Henry doesn't cooperate, then I should contact our Div. of Legal Affairs.

I tried to
COVENANT HOUSE (Continued)

get the phone number to Mr. Henry by contacting Mr. Tiss, but he said to contact Shawn at his office. Shawn told me he will find the number and give it to me. 2/13/08 - Raphael Ketani. I tried to contact Mr. Henry, but could only leave a message. 2/15/08 - Raphael Ketani. I tried to contact Mr. Henry, but could only leave a message. 2/19/08 - Raphael Ketani. I tried to contact Mr. Henry, but could only leave a message. 2/21/08 - Raphael Ketani. Today, I received a call from Ryan Quinn and a colleague of his from BOVIS Lend Lease. He said that he was responding to a request by David Gregorio (212) 613-0377 of Covenant House to resolve the matter of the missing documentation that DEC needs. He asked what the missing documentation was. I told him that DEC needed a report regarding the removal of the oil contaminated water with a disposal manifest, a timed tank system pressure or vacuum test report, and a PBS registration form with a copy of the deed and a check. They said that they will talk to JLC, their subcontractor, and try to straighten the matter out. I told them there still is the matter of the unregistered tank and that I will have to act on this violation. They said they understood.

2/22/08 - Raphael Ketani. As per a meeting between Lou Oliva, Regional Attorney for Region 2, Randall Austin, head of the Spills Unit, and myself on 2/20/08, I am submitting a Case Initiation Form to Mr. Austin for his approval and signature. 2/26/08 - Raphael Ketani. Mr. Ryan Quinn of BOVIS called to inquire as to whether DEC had received any documentation from JLC. I told him "No." He said he will talk to JLC. 4/8/08 - Raphael Ketani. I spoke to Mr. Tiss. He said that the PBS registration was sent to Albany with a check. He said the report was sent there, too. I told him that Region 2 needed a copy of the report. He said that he will send it to me. He said that the tank system passed the test. I asked him whether he had the phone number to BOVIS. He said that I would be better off calling Manhattan Demo and speaking to Mike at (917) 578-3874. He said that BOVIS hired Manhattan Demo and Manhattan Demo hired JLC. 7/23/08 - Raphael Ketani. I spoke to Mr. Tiss (917) 617-3894. I asked him where the investigation report was. I told him DEC still had an open spill case. He responded and sounded surprised. I told him that we needed a tank test report, a manifest for the contaminated water that was removed, and a PBS registration for the tank. He said that it was sent. I told him that the report and the PBS were sent to Albany. He said that the PBS was kicked back, but he resent it to Albany. He said he will send a copy of the investigation report and tank test results. 8/18/08 - Raphael Ketani. The case is being prepared for transfer due to a case realignment within the unit. The DEC needs to receive the investigation/remediation report and the revised PBS registration. 10/29/09 - Zhune. JLC sent a report dated 04/23/07 describing the oil remediation process that took place at Covenant House-460 W 41st street. At the conclusion of the remediation, approximately 3000 gallons of contaminated groundwater was removed from the subject property. The UST and line were pressure test and passed the test. A waste manifest for liquid collected is included in this report. Spill closed

Tank Status: Tank Converted to Non-Regulated Use
Material Name: Tank Converted to Non-Regulated Use
Capacity Gallons: 2500
Install Date: 03/01/1991
Date Tank Closed: 11/01/1995
Registered: True
Tank Location: Underground
Tank Type: Equivalent technology
Material Code: 0009
Common Name of Substance: Gasoline

Tightness Test Method: NN
Date Test: Not reported
Next Test Date: Not reported
Pipe Model: Not reported
Modified By: TRANSLAT
Last Modified: 03/04/2004

Equipment Records:
- A00 - Tank Internal Protection - None
- J02 - Dispenser - Suction Dispenser
- B00 - Tank External Protection - None
- D06 - Pipe Type - Fiberglass Reinforced Plastic (FRP)
- G04 - Tank Secondary Containment - Double-Walled (Underground)

#### DEC Memo:

Prior to Sept. 2004 data translation this spill Lead_DEC Field was "TIPPLE"8/19/04 work ongoing)// report to be submitted to DEC once it is completed.10-06-05: NYCT was performing soil borings for the #7 line extension. Contamination was discovered in the boring in front of this location. See spill #0404424. Boring log and notes in eDocs. MCT.06/19/06: This spill is transferred from Mr. Koon Tang to Q.Abidi.Called to Mr. Michael Feeley (973)496-3467 left message to call me back regarding spill.11/06/04: Called Mr. Michael Feeley and left message to call me back regarding information of the spill.

-QA11/10/06: Called Mr. Mike Feeley he said to contact Ms. Rose Pelino (Environmental Management)AZIS Company at (973)496-3447. Called Ms. Rose Pelino and left message to call me back.Mr. Philip Angle (Environmental Management, Parsippany, NJ) called me back and
said they removed the tank in August 2005. He will mail me the soil sample report. -QA01/22/07: Called Mr. Phillips Angle at (973)496-6942 and left message to call me back regarding soil sample report of the spill. -QA02/05/07: Called Mr. Phil Angle to discuss regarding information of this spill. I requested him to send me Electronic version Pdf of the report and owner’s name address phone number and e-mail address. He said he will send these informations very soon. -QA02/14/07: Reviewed report of UST Closure by Langan Engineering and Environmental Services. At the time of removal of tank, Excavated two drums of petroleum contaminated soil (500 pounds in quantity(). After taking End-point samples, Excavated area has been filled by clean soil. All end-point soil samples are clean. On the basis of provided data of Langan Engineering DEC staff closed the spill. Approval to close the spill has been taken from Mr. Jon Kolleeny supervisor. -QA

Remarks: soil borings as part of a phase 2 the spill is beleived yo be associated with under ground fuel oil tank and NYC DOB records state it was closed in place under direction of NYC fire dept. in 1993 and the tank is under the side walk not in the buildings basement

MANHOLE 43263 (Continued)

DEC Memo: e2mis # 153525G, Williams#78618 Senior Field Operator found approx. 10 gallons of unknown oil on approx. 200 gallons of water in M43263. The source and cause of the spill is unknown at this time. There was no fire or smoke involved with this spill. There were no sewers or waterways affected. There is no sewer connection or concrete sump in M43. There are no substantial cracks that are visible. There will be two samples taken, one for PCBs and one for ID. G. Williams#78618 used absorbent pads in M3263 to try to pick up some of the unknown oil. The cleanup is pending. L. Walpole#41785 FOD Supervisor changed the reported amount from 10 gallons to 5 gallons of unknown oil. Lab Sequence Number: 04-03982-001: Insufficient amount of sample extracted to perform oil identification. Lab Sequence Number: 04-03981-001: PCBs < 1 ppm On 5/24/04 at 06:05 J. Pelzer # 06470 Underground/Cleanup supervisor called to report that the cleanup was completed at 05:30. There was no visible sign of the source as per J. Pelzer.

Remarks: 10 gallons of unknown oil on 200 gallons of water.

### Site Details

**Name:** VILLAGE AUTOMOTIVE  
**Year:** 2010  
**Address:** 516 W 39TH ST

### Handler Activities Summary:

- **U.S. importer of hazardous waste:** No
- **Mixed waste (haz. and radioactive):** No
- **Recycler of hazardous waste:** No
- **Transporter of hazardous waste:** No
- **Treater, storer or disposer of HW:** No
- **Underground injection activity:** No
- **On-site burner exemption:** No
- **Furnace exemption:** No
- **Used oil burner:** No
- **Used oil processor:** No
- **User oil refiner:** No
- **Used oil fuel marketer to burner:** No
- **Used oil Specification marketer:** No
- **Used oil transfer facility:** No
- **Used oil transporter:** No

<td>DEC Memo:</td>
<td>On 2/12/04 at 10:16 F. Versaggi # 11945 of Substations called to report that he found a spill of blue gue (dielectric fluid) at 10:10. This was at 5 W. 41 St. (W42 St Substation). He reports that 4 oz. of fluid came from the &quot;B&quot; phase pothead on feeder 16M81 (41 north position). The substance is on the metal floor and contained in the cubicle. He found it while doing maintenance on the feeder. He hung a tag # S-01293. He is going to turn this into the I&amp;A dept. for repairs &amp; a cleanup. He states that as per generated knowledge it is a non-pcb substance. No sewers or waterways were affected. 3/4/04 I&amp;A crew arrived on the 4-12 shift and repaired pothead and cleaned up spill used pads and simple green. Leak is no longer active. Spill can be closedamd</td>
</tr>

**DEC Memo:**

- 01/10/08 - See eDoks for Con Ed report detailing cleanup and closure.160727. Found @ 21:25 hrs. Called E/V desk @ 21:27 hrs. TR2 - W 41 ST 521 (W 42 ST S/S) 38M42. Joseph Pitre 12477 Senior Substation Operator was doing an inspection at this location and found that a pipe that leads to selector compartment was leaking. He found that 1 Qt of transformer oil had dripped to concrete pad mount. He has contained the spill and has used oil pads to take up same. And also has put down pads at same location. Final clean up cannot be done till feeder 38M42 is de-energized. No smoke or fire involved in this incident. No sewer or waterway affected by this spill. No injuries involved in this incident. Weather had no affect. No measuring device was used to determine the amount of the spill. Source and cause of spill pipe going to selector compartment. No samples taken, but reports Lab Sequence # 03-05654. Yellow Tag 0054429 has been hung at location. Logger F.Curtis 38078. CIG called spoke to M.Piropato 16699 @ 22:00 hrs. Logger F.Curtis 38078

Contact Phone: (212) 580-8383
DEC Memo: e2mis no 159461. J.Pitre#12477 reported the can on Capacitor Bank#1 had blown up, there was a spill of 16 oz. total, 12 oz. were in the metal compartment of the Capacitor Bank#1 and 4 oz. went in to a drain. J. Pitre#12477 does not know were the drain leads to, he is in the process of trying to find out. There was a release into a drain. A yellow environmental tag numbered #005428 was hung on Capacitor Bank#1. J. Pitre#12477 states that a drain block was put in place to prevent any further release into the drain and containment devices are in place to prevent leakage from the metal compartment. The cleanup is pending equipment deenergization and repair or replacement of the can. 06/28/05 at 10:17. J. Pitre#12477, notified the control center on 06/28/05 at 10:15hrs. to report that the drain is connected to a combined sewer. Logger: M. Casalta#12684. 6/28/05. As per my inspection. The operator noticed a sheen on the rainwater that went into the combined sewer drain. He put a drain blocker on the drain and put absorbent pads on the oil. The leaking capacitors were replaced with new ones and the oil was cleaned with pads and simple green. I inspected the drains and found no sign of oil.

Remarks: P. Keelan Closed. 9-1-05. George Breen

<td>DEC Memo:</td>
<td>e2mis no 159444J.Pitre found 16 oz. of dielectric fluid on asphalt that leaked from Capacitor Bank#5. The spill is contained on the asphalt. There was no sewers or waterways were affected. The source and cause of the spill is a leak from the can on Capacitor Bank#5. A yellow environmental tag numbered #0005427, was hung on Capacitor Bank #5. There was no initial cleanup action taken. The cleanup is pending feeder deenergization and repair of the leak by Substation Maintenance.6/28/05. On the 11-7 shift last night, substation maintenance removed the leaking capacitor and replaced it with a new unit. the oil was cleaned up using simple green and oil pads. P. Keelan. Closed. 8-31-05. Spiller Company: ERT
Spiller Name: ERT
Reported to W. Lee at 09:29 hrs. that he found at 09:20 hrs. approx. one (1) gallon of transformer oil had spilled onto the concrete pad and bluestone from a 55 gallon drum located at the West 42nd Street Substation. The street address of the substation is 521 W. 42nd Street. The drum was in place as an engineering control collecting oil leaking from the secondary throat of Transformer #5. There was water and oil in the 55gal drum. The water froze in the drum causing the drum to crack, which in turn spilled the water and oil onto the concrete pad and bluestone. Only approx. 1 quart of oil spilled onto the bluestone and the remainder spilled onto the concrete pad. The source of the spill is the oil from transformer #5 and the cause is a leak from a cracked steel drum. No sewer or waterway was affected. No samples taken since there is generator knowledge of the spill. Prior PCB historical data is less than 1.0 ppm as per lab sequence #03-05654, dated 7/8/200. The initial cleanup action was started at 09:20 hrs. Maintenance will use Citrus Clean to clean up the spill and they will put the cracked drum into another containment drum. The affected bluestone will be removed and disposed of properly. The S/S Operator will call back when the cleanup is completed. 13:08 hrs. that the cleanup was completed at 11:20 hrs. The active spill will remain open under the original incident. This spill from the secondary containment can be closed out.

Remarks: A DRUM WAS BEING USED AS AN ENGINEERING TOOL COLLECTING OIL THAT WAS LEAKING TRANSFORMER #5 WATER IN DRUM FROZE CRACKING THE DRUM. SPILLED UNTO BLUESTONE AND CONCRETE PCB IS LESS THAN 1 PART PER MILLION. NO SMOKE, FIRE, WATERWAYS OR [PRIVATE PROPERTY.. CON ED #151982

Willing Responsible Party. Corrective action taken.

DEC Memo: Con Ed e2mis #149327:7/16/03While performing a station inspection I found approx 1 ounce of feeder oil leak out of an oil line for the Bucholtz relay onto bluestone. Source FDR 38M43. No samples taken Non PCB fdr oil. Operator informed. The bluestone will be removed and a valvebag will be placed on oil line.10/14/03Supervisor Mike Butchar informed me that the barksdale lines have been removed from the vault. I inspected the sight and confirmed that they are removed and can no longer be a source of a leak.

Prior to Sept 2004 data translation this spill Lead_DEC Field was "O'CONNELL"e2mis no. 144-526:8-13-02 @ 15:04E Alvarado #18791 reports that while doing an inspection @ w 42 st sub station he discovered 1 oz of insulatum had leaked from c phase pot head in cap bank #5 onto the concrete floor. No smoke or fire was or is involved. No sewer or waterway affected. No injuries. Weather had no affect. No measuring device was used to determine the amount of the spill. Source of spill is the pot head and the cause is unknown. No private property affected. Environmental yellow tag #s00290 was applied. No water, askarel or sump involved. No substantial cracks. No dielectric filled feeder in the structure. No samples to be taken.
### W 42ND ST SUBSTATION TR #10 (Continued)

initial cleanup action taken. Cleanup is pending removal of the cap bank from service. T. Garcia #80482, Associate Specialist, SSO - at 11:33 a.m. 9/9/2002, I was informed by Patrick Keelan, Sr. Environmental Specialist #19995 of SSO that the leaking unit was replaced. This incident can be CLOSE out. This information is per Michael Butchar, Supervisors SSO #20259 email also dated 9/9/002.

Remarks:
con ed # 144526 no to all 5 questions c-phase pot head on cap bank #5 shut is required to repair that will scheduled for a later time

DEC Memo: Prior to Sept. 2004 data translation this spill Lead_DEC Field was
"O'CONNELL"NOTE: This is the "Master Spill Number" for Transformer
#10. It is to remain open until all repairs on this equipment and
remediation are completed. (JHO, 3/24/06)8/1/08: As per 9/18/06
agreement between NYSDEC and Con Edison, approved engineering
controls (valve bags, drip pans, absorbents, etc.) are in place and
are being maintained for minor drips and small leaks. See eDocs for
final emis report. Close out. (JHO)~~~~~~~~~~~~~~~~~~~~~~~~~~Con Ed
e2mis #137021 (master):Frank Versaggi #11945, Substation Operator
found at 13:50 hrs. approx. 1/2 gallon of transformer oil had leaked
from the selector compartment of transformer #10 onto the concrete
pad and bluestone at the West 42nd Street Substation. It appears that
the leak is coming from the selector compartment door. No samples
taken due to generator knowledge and previous PCB history which
indicates < 1.0 ppm as per lab sequence #99-09978. Substation
maintenance on location and started the cleanup at 14:00 hrs. All
State Power Vac was called in to remove the contaminated bluestone.On
May 10, 2002 NYSDEC O'Connell and Foley, along with Con Ed Hanebuth,
Susco inspected this leak and found that the leak had not been
repaired. This continues to leak into
containment.~~~~~~~~~~~~~~~~~~~~~~~~~~~e2mis no. 151992 (sub):2/5/04
@ 11:45 hrs.Joe Pitre #12477, Senior Substation Operator found at
10:00 hrs. approx. 2 1/2 gallons of transformer oil leaked from the
selector compartment of Transformer #10. He discovered the leak coming
from one of the steel cover plates on the Selector compartment. He
believes that the plate is loose. The oil leaked onto the concrete
pad and the bluestone. Approx. 1/2 gallon leaked onto the bluestone.
Prior PCB historical data indicated less than 1.0 ppm as per lab
sequence #03-05654, dated 7/8/03. The cleanup was started at 10:15
hrs. by Substation maintenance personnel.Update: 2/5/04Joe Pitre
#12477 reported at 13:08 hrs. that the cleanup was completed at 12:10
hrs. Substation maintenance is presently investigating how to repair
the leak.

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Handler Activities Summary:

- U.S. importer of hazardous waste: No
- Mixed waste (haz. and radioactive): No
- Recycler of hazardous waste: No
- Transporter of hazardous waste: No
- Treater, storer or disposer of HW: No
- Underground injection activity: No
- On-site burner exemption: No
- Furnace exemption: No
- Used oil fuel burner: No
- Used oil processor: No
- User oil refiner: No
- Used oil fuel marketer to burner: No
- Used oil Specification marketer: No
- Used oil transfer facility: No
- Used oil transporter: No

Violation Status: No violations found

Classification: Conditionally Exempt Small Quantity Generator
Description: Handler: generates 100 kg or less of hazardous waste per calendar month, and accumulates 1000 kg or less of hazardous waste at any time; or generates 1 kg or less of acutely hazardous waste per calendar month, and accumulates at any time: 1 kg or less of acutely hazardous waste; or 100 kg or less of any residue or contaminated soil, waste or other debris resulting from the cleanup of a spill, into or onto any land or water, of acutely hazardous waste; or generates 100 kg or less of any residue or contaminated soil, waste or other debris resulting from the cleanup of a spill, into or on any land or water, of acutely hazardous waste during any calendar month, and accumulates at any time: 1 kg or less of acutely hazardous waste; or 100 kg or less of any residue or contaminated soil, waste or other debris resulting from
CON EDISON SERVICE BOX: 7620 (Continued)

handler Activities Summary:

U.S. importer of hazardous waste: No
Mixed waste (haz. and radioactive): No
Recycler of hazardous waste: No
Transporter of hazardous waste: No
Treater, storer or disposer of HW: No
Underground injection activity: No
On-site burner exemption: No
Furnace exemption: No
Used oil fuel burner: No
Used oil processor: No
User oil refiner: No
Used oil fuel marketer to burner: No
Used oil Specification marketer: No
Used oil transfer facility: No
Used oil transporter: No

Violation Status: No violations found

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

| DEC Memo: | This was a formal spill call for a site Ryan Piper “unofficially” was asked to visit 2 days ago. At the time Ryan said the site was a typical construction site and the “green” water was actually clear water in a puddle with a greenish cement dust layer on the bottom of the puddle. No smell, no spill found. Closed |
| Remarks: | AT THIS CONSTRUCTION SITE FOUND GREENISH WATER, UNSURE WHAT IT IS WOULD LIKE DEC TO LOOK AT |

DEC Memo: 03/01/09- Zhune spoke to jeff Bohlan from Envirotech 631-924-3001. He sent the following e-mail: EnviroTrac Ltd. is working on behalf of Verizon New York, Inc. for the construction of a FiOs Garage at the subject property. During construction activities, a total of 3 underground storage tanks (USTs) of unknown size were encountered along with petroleum-impacted soil. Verizon is leasing the property from Rockrose. Please send all correspondence to Rockrose Development Corp. 06/10/10-Zhune spoke to Jeff. He said DEC will get the final report by the end of next week. The Phase I ------------ESA completly in october 2005 identified the following recognized environmental condition(RECs):1.- Prior uses of the site include the storage of coal and the operation of a truck washing station.Sulfuric acid was also stored on the western periphery of the site. 2.- Gasoline storage tanks were present on the site between 1930 and 1950.-Open leaking UST gasoline spill involved the release of petroleum products to groundwater sites in close proximity to (within 400 feet) and potentially upgradient of the site. Open spill # 9709152 involved the release of 60.00 gallon of wasteoil/used oil at a site approximately 0.15 mile downgradient from the site. The Phase II ------------Twelve soil boring(SB-01 through SB-12) were advanced until shallow bedrock was encountered. A total of eleven (11) subsurface soil samples were collected within the unsaturated zone at each soil boring location except of SB-01. The analytical soil results indicated that sample SB-08(4-5') showed VOC's ( benzene 70 ug/kg, and total xylenes 4100 ug/kg) exceeding the RSCO. SVOC's ( Phenol, Methylphenol, naphthalene, debenzofluran, phenothrene, fluoranthen, pyrene, benzo(a)anthracene,
benzo(b)fluoranthene,benzo(k)fluoranthene, chrysene, benzo(a)pyrene,
benzo(a,h)anthracene were detested in sample SB-05(3.5-4.5) and SV

TC4381152.2s  Page 297
CONSTRUCTION SITE (Continued)

550-gallon gasoline USTs, (1) 550-gallon diesel UST, one(1) 330-gallon gasoline UST, 20-gallon gasoline UST and one (1) 10-gallon gasoline UST and all subsurface piping were removed from this site. Following removal of petroleum-impacted soil a total of eight(8) post-excaetion soil samples were collected for the (6) 550-gallon gasoline at each sidewalk and two bottom locations of the UST excavation. (4) soil samples were collected from the (4) varying sized UST at each sidewalk. No bottom samples could be collected due to the presence of bedrock at the bottom of the varying-sized USTs. The analytical results indicated no VOCs detected above the NYSDEC (TAGM)#4046 RSCOs for samples collected from the excavation of the aix(6) 550-gallon gasoline UST. No VOCs were detected for the (4) samples collected from the excavation of the (4) mixed size UST excavation. SVOCs (Benzo(a)anthracene 3,400 ug/kg, Benzo(a)pyrene 3,200 ug/kg, Benzo (b) fluoranthene 3,600 ug/kg, Benzo (K) fluoranthene 1,300 ug/kg, Chrysene 3,000 ug/kg, Dibenzo(a,h)anthracene 560 ug/kg) were detected at low concentrations slightly exceeding RSCOs in the soil sample collected from the sidewalk #2 and SVOCs (Benzo(a)pyrene 310 ug/kg) were detected at low concentration slightly exceeding RSCOs from soil sample collected from the sidewalk #3. Groundwater was not encountered during excavation activities. spill Closed.

Remarks:
WHILE REMOVING PAVEMENT TWO UNKNOWN TANKS WERE FOUND- MAY HAVE BEEN BUS DEPOT. CLEAN UP PENDING

DEC Memo: 09/10/09 - See eDocs for Con Ed report detailing cleanup and closure.e2mis no 150941W. Varela notice on tranformer bank #4 the A-phase flange was leaking, at a drip rate of 3 drops per minute. An undetermine amount leaked onto bluestone which lays on top of a concrete pad. Feeder 38M42T. No sewer/waterways affected. Source: transformer Cause; leakLeak is contained. Environmental tag #005426.Update: A Metal tray was placed under the leaking flange to contain spill and the oily bluestone was removed.Update: 06-03-05Operator W. Varela gave me an exact amount of dielectric fluid which was leaked onto the bluestone, that amount was 8 oz.
Remarks: 3 drops per minute into a drip pan: leaking from a flange: no to 5 questions: coned # 158941

DEC Memo: Prior to Sept, 2004 data translation this spill Lead DEC Field was "FOLEY"Con Ed e2mis #138519 Notes:7-26-01 @ 08:30. This report was taken by R Pagano #48703 and was logged by J Moran #01182. S Tercovich reports that while inspecting Transformer #4 located at w 42 st sub station at 521 w 41 st, he discovered 4 gallons of dielectric fluid had leaked from a nitrogen relief valve on the transformer. Spill is on concrete transformer pad and bluestone. Structure does have oil filled equipment. There is a dielectric filled feeder in the structure. Chem lab to take samples. Historic samples show 3ppm pcb, Lab sequence # 95-05859. Cleanup is in progress. Update 7-26-01 @ 09:40 . S Tercovich #12959 reports that cleanup is complete. 4 gallons of liquid removed and 100 pounds of bluestone removed in a 20 gallon drum , 1 drum of ppe and debris. Oil absorbent pads and rags used with simple green to do cleanup. Spill is not being closed out, pending lab results.Update 7/27/2001 @ 01:15 HRSLab results for Lab sequence # 01-07713-001Date Approved - 7/27/2001. DEC Memo: Prior to Sept. 2004 data translation this spill Lead_DEC Field was
"O'CONNELL"10/13/06 - spill closed based on report in eDocs.
(JHO)-------------------------------Con Ed e2mis #142641:On 05/03/02 at
app. 16:31 C. Budveit # 99902 reported that at approx. 16:00 he
found approx. 4 oz. of dielectric fluid had leaked out of the
insulator connector on the B phase leg from feeder 38m41
(transformer# 8) on bluestone. Oil pads were placed down to contain
spill until it can be cleaned up. Spill tag # s00827 was installed.
No samples taken because of prior sample history as per employee.
Employee was doing a station inspection.T. Belfor, Associate
Specialist, SSO, #80482, reviewed report on 5/6/02 at 12:48 p.m.
E-mail sent to Supervisor of station, Michael Butchar #20259
requesting finalization and clean-up for Closure.Michael Butchar,
Supervisor, SSO responded on Tuesday, May 7th, 2002 that the above
spill was cleaned up on May 3th, 2002 at 1700 hours.

Remarks:
4 OUNCED LEAKED OUT OF INSULATOR CONNECTOR ON B PHASE LEG FROM FEEDER 38M41 ONTO BLUE STONE.PADS PUT DOWN UNTIL IT CAN BE CLEANED .

- No

### Used oil transporter:
- No

### Violation Status:
- No violations found

### FINDS:
- Registry ID: 110055469096

### Environmental Interest/Information System
- RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

BROWNFIELDS:
Program: BCP
Site Code: 460494
Acres: 2.296
HW Code: C231077
SWIS: 3101
Town: New York City
Update By: MJKOMORO
Site Description: Site Location: The site is located at 536 West 41st Street in New York City, New York County and consists of one tax parcel. Historically this was a number of lots which were recently consolidated into one lot which is 2.296 acres in size. The site is located in the Hell's Kitchen neighborhood. Site Features: The site has a one to two story brick and concrete building with a partial basement and an asphalt-paved parking lot. Unused Amtrak tunnels and the No.7 train extension tunnels are located approximately 25 to 30 feet beneath the ground surface. It is bordered by a utility building to the north, a church and abandoned gas station to the east, bus parking to the south, and a NYC Transit Authority bus depot to the west. Current Zoning and Land Use: The on-site building is currently unoccupied, the site is zoned C6-4 which is a mixed commercial/residential zone. Mixed use residential/commercial sites are located to the west of the site. Commercial buildings are located to the north while to the east are two churches and an abandoned commercial site. North east of the site are condominiums and a police station. Past Use of the Site: The site uses have included a new car dealership, a bottling company and warehouse, an auto repair station, and a filling station in the past. Site Geology and Hydrogeology: The surface topography slopes down to the east and is approximately 20 feet above mean sea level. Due to the topography, it is expected that groundwater would flow from the southwest towards the Hudson River. However, the groundwater flow can be affected by factors such as bedrock, fill and other factors. Depth to groundwater ranges from 13 to 19 feet below ground surface. Depth to bedrock ranges from 4 feet.
The site is currently vacant and entirely covered with building foundations. Therefore, contact with contaminated soil or groundwater is not expected. Contaminated groundwater at the site is not used for drinking or other purposes and the site is served by a public water supply that obtains water from a different source not affected by this contamination. Volatile organic compound in the groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into overlying building and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. Because the site is vacant, the inhalation of site-related contaminants due to soil vapor intrusion does not represent a current concern. Furthermore, environmental sampling indicates soil vapor intrusion as a result of this site is not a concern for off-site buildings.

thought he received a NFA letter. I asked him if they installed
groundwater monitoring wells, and he said yes, there were three. I
asked him to please submit documentation of the wells and sampling to
the Department. He will review his files and archives and call me
back tomorrow. 6/14/10 - Obligado - I sent a letter to DHL Express
with an electronic cc to Eric Telemaque requiring the sampling of the
3 monitoring wells at the site and submission of a report to the
Department within 60 days. 8/5/10 - Obligado - Steve Sohny called
from DHL 859-391-5204. He said he is going to track down the report
of the ground water sampling and send it to me.11/5/10 - Obligado - I
received a voice mail from Eric Telemaque. They attempted to sample
the wells and 2 of the 3 wells had free product. Thicknesses were 6”
and 2”. He thinks its #4 heating oil because the #4 heating oil tank
had holes it it. He will submit a letter report recommending
monitoring and vacuum extraction. 6/7/11 - Obligado - I spoke with
Eric Telemaque. He will submit a report documenting well gauging
and VEFRing product. I requested a site plan showing well locations as
well as to superimpose former source areas which were excavation
areas and UST areas. He said I should expect a report next week.
7/27/11 - Obligado - I reviewed a letter report documenting gauging
and product recovery. Only 0.005 ft product in one of three wells. I
emailed letter to DHL and Emteque requiring monthly gauging and
quarterly sampling. A quarterly monitoring report is due in 90 days.
10/6/11 - Obligado - Quarterly report submitted. The north well had
free phase product with thickness of 0.05 ft, and was not sampled.
The south well had total VoCs of 1690 including benzene concentration
of 1300 ug/L. The east well had 931 ug/L. The south and east wells
had low level SVOC exceedences as well. 10/11/12 - Obligado - I sent
an email to Jay Hawkes requesting subsequent quarterly
reports.10/2/13 - Obligado - I sent an email to Jay Hawkes, Eric
Telemaque, Hugh Danielson of DHL requiring submission of overdue
reports.10/3/13 - Obligado - I received a response from Mr. Danielson
of DHL. He said he thought the matter was resolved. I told him the
spill case is still open and there are 3 wells at the site, one with
free product and 2 with groundwater contamination.2/26/14 - Obligado
- Sue to lack of cooperation and untimely report submissions, I sent
an stipulation Agreement to Mr. Danielson requiring signature within
30 days of receipt.2/27/14 - Obligado - I spoke to Hugh Danielson. He
said the DHL address has changed. New address is DHL Express (USA),
Inc.236 Wendel H. Ford Blvd Erlinger, KY 41018 Attn: Hugh
Danielson3/21/14 - Obligado - I had a conference call with DHL and
consultant WCD. We discussed STIP and CAP requirements. According to
WCD consultant Wes, he gauged all 3 wells recently and found product
in all three wells with a max thickness of 0.3 ft. They will need to
delineate and recover product to the extent feasible and demonstrate
reduction in contaminant levels. After the call, I received an email
from Hugh danielson stating that he sent the signed STIP and that I
would receive it Monday.4/3/14 - Obligado - STIP executed by Lannon
on 3/31/14 - Emailed copy to Hugh Danielson and Wes.4/28/14 -
Obligado - Phone call from Andreas Eisenburg. He gauged the site on
the 16th. All three wells have product. Well # 3 had the most product
with 0.3 ft. Samples were GC fingerprinted. He sent me a summary
email and request an extension for the submission of report due to
delay in surveying. I sent approval email for extension.

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

DEC Memo: Prior to Sept. 2004 data translation this spill Lead_DEC Field was "TIPPLE*11/22/02 Rommel - duty officerContaminated soil letter mailed requiring submittal of summary report before 1/15/02.3:59 Spoke to
Henry Gold Strategic Environmental Solutions, Suite 1500, 118-35
Queens Blvd, Forest Hills, NY 11375 fax: 718-520-8306- who is working
for the owner of the property, Fred Howard, Howard International, 500
W37th Street, NY, NY 10018 in association with a pending property
transaction. They encountered contaminated soil and what appears to
be two 550 gallon (possibly diesel) USTs at the property. Mr. Gold
believes that there was a Phase I Assessment completed (by another
company) that indicated that either a garage or a car rental facility
was previously located at this property. Henry will register the tanks
prior to removal on Monday and will submit the results of the
subsurface investigation to Michelle Tipple. 4/25/2003 Site
Investigation and Tank Closure report submitted April 2003 by
Strategic Environmental Solutions reviewed, NFA letter sent with
caveat that health and safety plan necessary for future excavations
on this property. 4/30/2003 SAME AS SPILL # 0203762---BOTH #’S CLOSED
Remarks:
while doing a sub surface investigation contaminated soil was found &
as they investigated they found 2 improperly abandoned tanks on the
property that were not known about

### Classification:
Conditionally Exempt Small Quantity Generator

### Description:
Handler: generates 100 kg or less of hazardous waste per calendar month, and accumulates 1000 kg or less of hazardous waste at any time; or generates 1 kg or less of acutely hazardous waste per calendar month, and accumulates at any time: 1 kg or less of acutely hazardous waste; or 100 kg or less of any residue or contaminated soil, waste or other debris resulting from the cleanup of a spill, into or on any land or water, of acutely hazardous waste; or generates 100 kg or less of any residue or contaminated soil, waste or other debris resulting from the cleanup of a spill, into or on any land or water, of acutely hazardous waste during any calendar month, and accumulates at any time: 1 kg or less of acutely hazardous waste; or 100 kg or less of any residue or contaminated soil, waste or other debris resulting from the cleanup of a spill, into or on any land or water, of acutely hazardous waste

#### Handler Activities Summary:

**U.S. importer of hazardous waste:** No  
**Mixed waste (haz. and radioactive):** No  
**Recycler of hazardous waste:** No  
**Transporter of hazardous waste:** No  
**Treater, storer or disposer of HW:** No  
**Underground injection activity:** No  
**On-site burner exemption:** No  
**Furnace exemption:** No  
**Used oil fuel burner:** No  
**Used oil processor:** No  
**User oil refiner:** No  
**Used oil fuel marketer to burner:** No  
**Used oil Specification marketer:** No  
**Used oil transfer facility:** No  
**Used oil transporter:** No

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

### Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Contact Name: MARK GODICK
Contact Phone: (914) 949-7336
DEC Memo: 9/6/05-Vought-Desk Duty Officer-Sent out groundwater contamination letter to owner on spill report. Upon reception of report determination will be made whether gasoline or fuel oil contamination so project manager can be assigned. 4/26/06 - Austin - AKRF submitted a supplemental Phase 2 (dated 1/18/06), a RAP, and a HASP (both dated 3/1/06) for this site. Documents and project transferred to Ketani for review and follow up - end 4/26/06 - Raphael Ketani. Today I received the 11/9/05 Phase II Environmental SIR, the 1/18/06 Supplemental Phase II Environmental SIR, the 3/1/06 Remedial Action Plan and Construction HASP for the site. 4/27/06 - Raphael Ketani.
Today, I sent out a letter approving both SIRs and the RAP. In addition, the letter stated that 2 additional groundwater monitoring wells should be installed and monitored for 2 rounds of sampling. Then a report must be issued with the results. 7/5/06 - Raphael Ketani. I tried to reach Mark Godick of AKRF (914) 949-7336 regarding progress at the site, but could only leave a message. 7/10/06 - Raphael Ketani. Mr. Godick called to say that they are still doing source removal, but the wells will probably not be installed until September when excavation will take place and be completed. I told Mr. Godick that would be fine. 8/17/06 - Raphael Ketani. I spoke to Mr. Godick at his NYC number (646) 388-9534. He said that they are not scheduled to remove the soil and excavate down to bedrock until some time in September. He said he will keep me posted. 9/7/06 - Raphael Ketani. I reached Mr. Godick at his White Plains office. He said construction is delayed due to the need to get some NYC permits. However, he will let me know when they are ready to start. 11/13/06 - Raphael Ketani. I left a voice mail for Mr. Godick requesting information on progress made. Mr. Godick returned my call and said that everything is being held up by the lack of a construction contractor to do the digging and the rest of the work. There is a shortage of contractors. The new start date is now January or February 2007. 2/6/07 - Raphael Ketani. Mr. Godick called to say that construction will start sometime in the next 2 weeks at the site. The owners finally have a contractor for the work. 4/11/07 - Raphael Ketani. I reached Mr. Godick. He said that digging is still taking place at the site. They have removed almost all of the soil they need to in order to construct the foundation. Now they are removing the contaminated rock. However, the rock is very hard and so progress is very slow. He said that they are digging and cutting down to 25 feet below grade and once all of the soil and rock is removed, then the report will be submitted. 4/24/07 - Raphael Ketani. I visited the site after work hours. I could not get into the site, but took 3 pictures. Drilling and blasting is taking place at this time. Part of the site is very deep. Next to one building that is on West 39 Street they are drilling and blasting. The rock is granite and looks to be very hard. I did not see any signs of groundwater. 4/26/07 - Raphael Ketani. I tried to reach Mr. Godick to discuss the groundwater issue and the coming report, but could only leave a voice mail. Mr. Godick returned my call. We discussed the groundwater and report issues. I told him that the site doesn’t seem to have any water and I asked whether he was using well points to keep it dry. Mr. Godick said that the site is completely dry naturally. He has not had any groundwater issues. He added that all of the soil and historical fill, and tanks were removed a while ago. He said he will send the site completion
report, anyway, because he has to send it to DEP. I told him that would be good for our records. I told him DEC is closing its spill case today and that I will send DEP a letter just to keep them in the loop. He said to send the letter to Gary Heath, NYC DEP, 59-17 Junction Blvd., Flushing, NY 11373.I composed a draft closure letter and submitted it to Randall Austin, Chief Spills Unit Region 2, for approval. Based upon my site inspection on 4/24/07, the Phase II SIR, the Supplemental Phase II SIR, and my conversation with Mr. Godick today, I am closing the spill case. However, DEC is holding off sending the NFA letter until the closure report is received, as per Mr. Austin’s instructions.5/23/07 - Raphael Ketani. I tried to reach Mr. Godick to remind him to send the closure report, but I could only leave a voice mail.6/25/07 - Raphael Ketani. I spoke to Mr. Godick and asked him where the closure report was. He said that they still haven’t finished installing the vapor barrier. He added that once they’re finished with this and the rest of the foundation work, then the closure report will be written and sent. 7/20/07 - Raphael Ketani. There has been no communication from Mr. Godick, nor the receipt for the closure report. So I am still holding off sending the NFA letter.

Remarks: Contam. found during a phase 2 investigation. Suspected UST in that area. Groundwater was affected. Any kind of clean up will be pending the investigation.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

FIS (New York - Facility Information System) is New York’s Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

- DEC Memo: 09/28/10-Zhune. The phase I dated November 2,2007 and Limited Subsurface Investigation Report dated October 2009 were reviewed. A total of eight soil borings were located base and upland areas of the Amtrack right of way. Nine soil samples were collected from the borings. The analytical soil samples results indicated that four Vocs(Ethylbenzene, Methylene Chloride, Toluene, Total Xylenes) were detected above the NYSDEC (RSCOs). The following 5VOCs(Benzo(a)anthracene, Benzo(a) pyrene, Benzo(b)fluoranthene, Benzo(g,h,i)perelyne, Benzo(k)fluoranthene, Chrysene, Dibenzo(a,h)anthracene, Indeno were detected above the NYSDEC (RSCOs) Five pesticides( 4,4'-DDT, beta-BHC, Endosulfan sulfate, Heptachlor, Heptachlor epoxide)were detected above the NYSDEC(RSCOs). The following metals (Arsenic, Beryllium, Cadmium, Chromium, Copper, Iron, Nickel, Zinc, Mercury were detected above the NYSDEC (RSCOs) The groundwater analytical report indicated two Vocs (1,1-Dichloroethane, Trichloroethene) slightly exceeding the NYSDEC(RSCOs). The following SVOs(Benzo(a)anthracene, Benzo(a) pyrene, Benzo(b)fluoranthene, Benzo(g,h,i)perelyne, Benzo(k)fluoranthene,Indeno).Eleven Pesticides(4,4'-DDD,4,4'-DDTE,4'-DDT, Aldrin, Alpha BHC,
FUTURE HOLIDAY INN OVER AMTRAK (Continued)

Beta-BHC, Delta-BHC, Diedrin, Endrin, Gama BHC (Lindane), Heptachlor epoxide. The following Metals (Aluminum, Cobalt, Iron, Manganese, Sodium, Nickel, Lead, Vanadium, Zinc and Mercury) were detected above the NYSDEC regulatory limits. PCBs were not detected in any of the groundwater samples collected. 9/30/10 - Vought Reviewed analytical reports with DEC Zhune at her request. Soil analyticals show PAH compounds as well as metals contamination including maximum concentrations of: 6750 ppm Pb, 2.8 ppm Hg, 19.6 ppm As, 4.10 ppm Cd. Groundwater shows maximum contaminant concentrations of: 10 ppb DCE, 7 ppb PCE, 6 ppb TCE, 3210 ppb Pb and 1.5 ppb Hg. Vought reviewed analyticals with DEC O'Connell who noted that further report review to be performed and meeting set up with DEC Cozzy to discuss potential P-Site listing due to metal contamination in soil and groundwater. Note also that as per email dated 9/29/10 from environmental consultant (Sean Dunn - EBI Consulting - Ph: 617-715-1868 cell: 781-552-9953) that he is seeking spill closure due to "relatively low levels of contamination detected, the absence of sensitive or environmental human receptors to the contamination, the nature of the proposed development and the likely source of contamination being railroad operations at the property and migration from off-Site properties". Vought reviewed file for metals and chlorinated solvent contamination sources and results: Phase I ESA (EBI Consulting - Joanna Miller) - 11/2/07. Phase I performed due to property transaction. Site is .46 acres in size. Lot was located below grade and had "abandoned portion of the Penn Central Railroad Tracks" with no structures onsite. Proposed development is for two hotel buildings including a "13-story, 198 room Holiday Inn Express" and the second hotel (unnamed as of time of report) will include a "12-story, 144 room hotel located at 506-512 West 44th Street". No current manufacturing or industrial operations on site at time of Phase I. Owner at time of Phase I is SCW West, LLC. "Natural vegetation and subsurface bedrock formations lie along the eastern and western perimeters from ground surface to street level. The eastern and western boundaries are further defined by the adjacent properties facades, consisting of multi-story brick buildings". Northeast of site across 44th Street is a school playground, northwest across 44th Street is a Hess Station, a hotel to the south across 43rd St, an apartment building to the southeast and to the southwest, an Avis Car Rental to the west. From around 1890-1930 the property was occupied by multi-level dwellings and small stores and after 1940 was occupied by the railroad tracks. Historical surrounding property use included a printer, piano factory, "chinese laundry" and paint store. Report recommends limited subsurface investigation due to industrial use of property. Limited Subsurface Investigation Report (EBI Consulting) - 10/23/09. Groundwater flow to the east-southeast. Eight soil borings installed via hand auger "at the base and upland areas of the Amtrak right of way" including collection of soil samples and the installation of four monitoring wells via HSA/Air Rotary and boring locations "were selected based on proposed foundation pillar locations and Amtrak instructions". Bedrock encountered at 2-6'bg. Groundwater at 1-3'bg in four monitoring wells. Groundwater samples collected and stabilization of TDS parameters shows approximately 1230 umhos/cm for specific conductivity suggesting turbid samples. Soil analyticals show no TAGM 4046 RSCO exceedence for petroleum VOCs, show PAH exceedences in samples from B1 thru B4, maximum metal concentrations of: 6750 ppm Pb(HA-3), 2.8 ppm Hg(HA-2), 19.6 ppm As(HA-3), 4.1 ppb Cd(HA-3). Report
FUTURE HOLIDAY INN OVER AMTRAK (Continued)

recommends management of contaminated soil removed during piling installation. No additional spills or adjacent spills in UIS, no potential metals source in EPA Envirofacts website or in RCRA E-Smart. 10/1/20-Vought-E-doc'd file and sent email with appointment to DEC O'Connell and DEC Cozzy with summary site plans. Vought received email from DEC Cozzy that Site does not classify as P-Site. Vought spoke with O'Connell and Section A has no further requirements with respect to metals contamination. Vought informed Zhune of same. 10/04/10 Zhune. Discussed with Vought and Based on the no known release of oil or hazardous material at the subject property. Spill Closed.

Remarks: PHASE 2 RESULTS SHOWING CONTAMINATED SOIL AND GROUND WATER CLEAN UP PENDING.

NEW YORK, NY 10036

Owner/operator country: US
Owner/operator telephone: (212) 244-0328
Legal status: Private
Owner/Operator Type: Owner
Owner/Op start date: Not reported
Owner/Op end date: Not reported

Handler Activities Summary:
U.S. importer of hazardous waste: No
Mixed waste (haz. and radioactive): No
Recycler of hazardous waste: No
Transporter of hazardous waste: No
Treater, storer or disposer of HW: No
Underground injection activity: No
On-site burner exemption: No
Furnace exemption: No
Used oil fuel burner: No
Used oil processor: No
User oil refiner: No
Used oil fuel marketer to burner: No
Used oil Specification marketer: No
Used oil transfer facility: No
Used oil transporter: No

Historical Generators:
Date form received by agency: 01/01/2006
Site name: OMNI CLEANERS CORP
Classification: Conditionally Exempt Small Quantity Generator

Date form received by agency: 07/07/1995
Site name: OMNI CLEANERS CORP
Classification: Conditionally Exempt Small Quantity Generator

Waste code: F002
Waste name: THE FOLLOWING SPENT HALOGENATED SOLVENTS: TETRACHLOROETHYLENE, METHYLENE CHLORIDE, TRICHLOROETHYLENE, 1,1,1-TRICHLOROETHANE, CHLOROBENZENE, 1,1,2-TRICHLORO-1,2,2-TRIFLUOROETHANE, ORTHO-DICHLOROBENZENE, TRICHLOROFUOROMETHANE, AND 1,1,2, TRICHLOROETHANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Violation Status: No violations found

A decision was made to postpone the cleanup until after 17:00 hrs. (5:00 p.m.) when he will close. Arrangements were made to re-schedule the tanker, vactor truck and underground crews for 17:00 hrs. Lab Sequence #02-03661-001 Date Approved: 4/30/02 @ 06:20 hrs. TOTAL PCB 25 ppm. CIG Rich Roach #03494 notified at 13:58 hrs. that this incident is being re-classified from a "Spill - De Minimus (24 hour underground)" to "Spill - Oil (unknown type)" since the cleanup would not be completed in 24 hours. UPDATE: 4/30/02 @ 13:20 hrs. Pete Murphy, clerical staff, W.28th Street reported at 12:50 hrs. that the only available crews to do the cleanup would be the crews coming in at 19:00 hrs. tonight. Since this incident started at 01:05 hrs. on 4/30/02 there would not be sufficient time to complete the cleanup within the 24 hour time frame. The Environmental Desk, therefore, made a decision at 13:00 hrs. to de-classify this from a "Spill - De Minimus (24 hour underground)" to "Spill - Oil (unknown type)" since the cleanup would not be completed in 24 hours. The cleanup is still being scheduled for 19:00 hrs. R. Pellegrino #38620 CIG Rich Roach #03494 notified at 13:58 hrs. that this incident is being re-classified from a "Spill - De Minimus (24 hour underground)" to "Spill - Oil (unknown type)" since the cleanup would not be completed in 24 hours. R. Pellegrino #38620 UPDATE 5/1/2002 @ 04:33 HRSSpoke to J Seleski #20525, Operating UG Supervisor and he informed me that the cleanup was completed @ 04:00 HRS on 5/1/2002. 250 gallons of oil and water mix was removed by the tanker and one(1) drum of solid waste including PPE’s, diapers and rags was removed. The structure was including PPE’s, diapers and rags was removed. The structure was

**BAPTIST CHURCH (Continued)**

DER Facility ID: 344509
DEC Memo: Church thought they were using more oil than usual. Hired ProTest to pressure test the tank (outside/buried 1080 gal)(Non-PBS site). Tank could not hold any pressure (gross failure). ProTest is working with the church to set up temp tanks and will begin the process of opening the old tank to see how much of a problem there is. Tank has been pumped and cleaned. Soilboring will be conducted shortly. 5/5/08- DECP per reviewed closure report. As per report, tank was cut open and inspected. No holes were identified in tank. Geporbe investigation revealed no vocs and no elevated SVOCs. Tank will be abandoned and new tank will be installed in basement. Closed. see e-docs if warranted.

Remarks: GROSS LEAK

Mindy Horowitz: "We have contacted our client to ascertain when the Horowitz will follow up on site status. 4/12/07: Received email from Assessment report submission due 3/30/07. 4/3/07: Emailed Mindy possible, will occur in early 2007 after building demolition. 12/4/06: Received letter indicating that delineation is not low. Borings will be installed following building demolition in early 2007. 11/14/06: Received call from Fleming Lee Shue. Soil borings possible presence of a transformer and hydraulic lifts on the property. 11/6/06: Sent delineation required investigation workplan. Four soil borings will be performed surrounding the former UST location. A soil sample from directly below the floor and from the interval with the highest PID reading will be collected from each boring. The report noted the possible presence of a transformer and hydraulic lifts on the property. 11/14/06: Received call from Fleming Lee Shue. Soil borings installation is not possible because clearance in basement is too low. Borings will be installed following building demolition in early 2007. 12/4/06: Received letter indicating that delineation is not possible, will occur in early 2007 after building demolition. Assessment report submission due 3/30/07. 4/3/07: Emailed Mindy Horowitz to follow up on site status. 4/12/07: Received email from Mindy Horowitz: "We have contacted our client to ascertain when the
building will be demolished, allowing us to install the proposed soil borings. I will let you know as soon as I've heard something. Please call me with any questions."

5/2/07: Received email from Matthew Carroll: "The building at 493-497 Tenth Avenue is scheduled to be demolished next week, May 7 through May 11. The following week we will be conducting a site walkover to determine what type of drill rig we can use to collect the required samples around the tank. I will contact you when we have scheduled the sampling event."

5/24/07: Left phone message for Mindy Horowitz to followup on site status.6/4/07: Spoke to Matthew Carroll (matthew@flemingleeshue.com, Fleming-Lee Shue, Inc. 158 West 29th Street, 9th Floor, New York, NY 10001, T: 212-675-3225, F: 212-675-3224). Building was demolished. The subbasement has not been cleared. He is waiting for the sub basement to be cleared to identify tank location, and sample.

7/30/07: Spoke to Matthew Carroll. Slab has not been removed yet. Site will be excavated to bedrock, and then 10-15 ft of bedrock will be removed. Endpoint samples will be collected, and the presence of bedrock fractures will be noted.

9/5/07: Emailed Matthew Carroll for an update on demolition and investigation.9/11/07: Received email from Matthew Carroll, site is being excavated, soil samples will be collected. Sent letter requiring endpoint bottom samples for every 900 square ft, and sidewall samples for every 30 linear ft. 9/13/07: Spoke to Matt. Three endpoint samples will be collected on Monday. Ten to 15 ft of bedrock will be removed. Groundwater has not been encountered below portion of site where the bedrock has been removed already.9/18/07: Site inspection by DEC Kann, Feng, and Chandra. 3/27/08: Left voice message for Matthew Carroll. The final report is overdue.4/9/08: Spoke to Matthew Carroll. He will submit a letter report with an update on site status.5/20/08 - Carlson: Left voice message for Matthew Carroll.7/2/08 - Carlson: Approved Investigation Plan for installation of two off-site borings. Remedial Investigation Report due 9/2/08.7/8/08 - Carlson: Received email from Matthew Carroll (matthew@flemingleeshue.com). Requirements of 7/2/08 letter will be met.9/3/08 - Carlson: Received Remedial Action Report. No VOCs were detected in off-site borings in former tank location. Low level SVOCs were detected. Review file for case closure.9/9/08 - Carlson: Case closed. NFA letter issued.

Remarks: LAB REPORT REVEALED HIGH LEVELS OF HYDROCARBONS BELOW TANK & IN EXCAVATED SOIL - PB LEVELS WERE ALSO HIGH - FLASH PT > 160 DEG F - SPILLER AGREED TO SUBMIT MORE INFO & REMEDIATE SITE IF NECESSARY.

Prior to Sept, 2004 data translation this spill Lead_DEC Field was "O'CONNELL"Con Ed e2mis #126171:7/7/99 12:30M. AMERLING # 20393

- REPORTS THAT HE FOUND 15 GAL. OF TRANSFORMER OIL LEAKING FROM THE TOP OF THE TRANSFORMER # 6 ON FEEDER 38M44, AT THE RATE OF 30 DROPS PER MINUTE. HE PUT DOWN PADS, PIGS, AND ABSORBANT. THERE WAS NO WATER OR WATERWAYS ORSEWERS INVOLVED IT IS CONTAINED. BLUESTONE WAS INVOLVED.M. AMERLING WILL BE CALLING CHEM LAB TO TAKE A SAMPLE. A TAG WAS HUNG, # S01308. E.BYALICK # 40075 TOOK THE REPORT, AND CALLED ERT WALLACE. AND CIG ROMAERO # 09880. 08-JUL-1999SUPERVISOR HANSON REPORTS THE OIL SEEM TO HAVE COME FROM THE PRESSURE RELEASE DEVICE. THE AFFECTED BLUESTONE WAS REMOVED. A 4 FOOT X 1 FOOT, 6" DEEP WAS REMOVED AND PLACED IN BARRELS FOR DISPOSAL. THE CEMENT PAD WAS SCRUBBED W/ SIMPLEX GREEN. THE SIDE OF THE TRANSFORMER WAS ALSO CLEANED. AN OUTAGE IS REQUIRED TO CLEAN THE TOP OF THE TRANSFORMER. AT THAT TIME, THE TRANSFORMER GROUP WILL DETERMINE IF ANY REPAIRS ARE NECESSARY.
REQUIRED. IT APPEARS THAT THE SPILL OCCURRED DUE TO THE PRESSURE RELIEF DEVICE OPERATING WHEN THE OIL PRESSURE INCREASED DUE TO EXCESSIVE HEAT. SAMPLES WERE TAKEN. LAB SEQUENCE NUMBER 99-07045.

RESULTS TO FOLLOW.

- SAMPLE TYPE: OIL None <1.00 PPM
- EQUIPMENT: TR #9 MAIN BODY NITRO GAS
- QAQC ID: 06-199907061720
- Station Supervisor G. Toto performed an inspection on 29-NOV-2000 and returned the following with regards to this transformer:
- 119254 TR6 No Leak Observed - TR6 was taken out last year to repair all Leaks on 124769 TR6 No Leaks Observed - TR6 was taken out last year to repair all leaks. 126171 TR6 No Leaks Observed - TR6 was taken out last year to repair all leaks. The incident status will be changed to closed. 02-15-02

This incident has been closed and sent to NYS DEC for final approval.

On May 10, 2002 NYSDEC O'Connell and Foley, along with Con Ed Hanebuth, Susco inspected this leak and found that the leak had been repaired. There was no apparent staining on the bluestone associated with this incident.

Remarks: TRANSFORMER FAILED CAUSING SPILL HAS BEEN CONTAINED CLEAN UP WILL BEGIN ASAP

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

MAP FINDINGS

Site Elevation

EDR ID Number Database(s) EPA ID Number

LNAPL collected from TRC-SB1 exhibit characteristics of an unknown analysis. The results of the fingerprint analysis performed on the March 1, 2011 and submitted to the laboratory for fingerprint at boring location TRC-SB1. A sample of the LNAPL was collected on (LNAPL) was identified on groundwater (perched water above bedrock) TRC-SB12 and TRC-SB13. In addition, Light Non-Aqueous Phase Liquid contamination observed in the analytical data from the samples and submitted for laboratory analysis. There was no evidence of building and sidewalk and a total of 17 soil samples were collected 400ug/m³ respectively. Eighteen soil borings were advanced in the site sampling for VOC's. Petroleum and chlorinated solvent compounds were installation of five (5) sub-slab vapor samples were collected and analyzed for VOC's. Petroleum and chlorinated solvent compounds were detected at concentrations exceeding the standards. The concentration of TCE in two samples TRC-SG3 and TRC-SG5 exceeded the corresponding AGV of 100 ug/m³ at concentrations of 490ug/m³ and 570ug/m³ respectively. The concentration of TCE in two samples TRC-SG3 and TRC-SG5 exceeded the corresponding AGV of 5 ug/m³ at concentrations of 150ug/m³ and 400ug/m³ respectively. Eighteen soil borings were advanced in the site building and sidewalk and a total of 17 soil samples were collected and submitted for laboratory analysis. There was no evidence of contamination observed in the analytical data from the samples collected from the soil borings with the exception of observations of petroleum impacts (elevated PID readings, petroleum odors, staining, in samples collected from soil borings TRC-SB1, TRC-SB4, TRC-SB9, TRC-SB12 and TRC-SB13. In addition, Light Non-Aqueous Phase Liquid (LNAPL) was identified on groundwater (perched water above bedrock) at boring location TRC-SB1. A sample of the LNAPL was collected on March 1, 2011 and submitted to the laboratory for fingerprint analysis. The results of the fingerprint analysis performed on the LNAPL collected from TRC-SB1 exhibit characteristics of an unknown.

Contact Phone: Not reported
DEC Memo: 06/29/11-Zhune spoke to Greg Shkuda from ERM 631-756-8947. Site is a NYC public library annex. Library is not in use (not allow people there). During Phase II investigation 20 soil borings were installed. Crude oil (unrefined oil) was found in one of the soil borings. The Forensic analysis results are going to be send to the Department. Charles Guder from TRC Engineer Inc. emailed the Phase I and phase II for the proposed primary/intermediate and high school located at 521 west 43rd street. The site is being considered for use as a new primary/intermediate public school and high school. The site is currently developed with a six story document storage building, with a basement owned by the New York Public Library. The existing six-story building will be converted to a seven-story school building for development of the school and the foundation is planned to remain in place. Phase I. - It was performed by TRC Engineers Inc. on September 21, 2010. The following recognized conditions (RECs) were identified in the phase I: 1.- Several structures were present on the Site prior to construction of the existing building. As a result, historic fill material from demolition of the prior structures may be beneath the site. 2.- The historic use of the site for varnish and machinery storage; a garage with one 550-gallon gasoline UST; machinery, lighting, and drug and pharmaceutical companies; a printing press; a motor repair shop; and, other manufacturing operations. 3.- There are Two (2) #2 fuel oil aboveground storage tanks on the Site, a 10,000-gallon AST and a 1,400-gallon AST. Oil stannning was observed associated with the 10,000-gallon AST, the fill line for the 10,000-gallon AST was recently replaced, a tird vent line was observed outside the building along west 44th street and the condition and location of the 1,400-galon #2 fuel oil tank is unknown. 4.- Stannning was observed on the building surface including the basement floor, presumably associated with leak from building equipment (i.e. potential petroleum product). 5.- The Site is a generator of hazardous wastes, including fluorescent light bulb crushing operations, and is listed in the Resource Conservation and Recovery Information System Generator/Trans (RCRIS Gen/Trans) database as a small quantity generator (SQG) (NYR000105007). Phase II. - It was performed by TRC Engineer Inc. on July 21, 2010. Included the installation of five (5) sub-slab vapor samples were collected and analyzed for VOC’s. Petroleum and chlorinated solvent compounds were detected at concentrations exceeding the standards. The concentration of PCE in samples TRC-SG3 and TRC-SG5 exceeded the corresponding AGV of 100 ug/m³ at concentrations of 490 ug/m³ and 570 ug/m³ respectively. The concentration of TCE in two samples TRC-SG3 and TRC-SG5 exceeded the corresponding AGV of 5 ug/m³ at concentrations of 150 ug/m³ and 400 ug/m³ respectively. Eighteen soil borings were advanced in the site building and sidewalk and a total of 17 soil samples were collected and submitted for laboratory analysis. There was no evidence of contamination observed in the analytical data from the samples collected from the soil borings with the exception of observations of petroleum impacts (elevated PID readings, petroleum odors, staining, in samples collected from soil borings TRC-SB1, TRC-SB4, TRC-SB9, TRC-SB12 and TRC-SB13. In addition, Light Non-Aqueous Phase Liquid (LNAPL) was identified on groundwater (perched water above bedrock) at boring location TRC-SB1. A sample of the LNAPL was collected on March 1, 2011 and submitted to the laboratory for fingerprint analysis. The results of the fingerprint analysis performed on the LNAPL collected from TRC-SB1 exhibit characteristics of an unknown.
motor oil an also a non-calibrated fuel type. Two bedrock groundwater monitoring wells were installed in the sidewalks outside the site building. Two (2) groundwater samples representative of the bedrock aquifer were collected from each monitoring well. There were no VOC’s, SVOC’s, metals, cyanide, PCBs or pesticides detected above the Class GA Values in groundwater collected from the bedrock aquifer. Five metals (arsenic, cadmium, total cadmium, lead and mercury) were detected at concentration greater than unrestricted Use SCCs in three (3) soil samples; TRC-SB2 (Arsenic: 29.8mg/kg, cadmium: 13.3mg/kg, Total Cadmium: 143mg/kg, TRC-SB4 (Total Chromium: 143mg/kg, Lead: 106mg/kg, Mercury: 0.383), TRC-SB6 (Total Chromium: 33.1mg/kg). 02/07/12 Mike Hughes is going to meet with Down Hetrick and Joseph Crua to decide whether they want formal plan for the "geo vent". 02/07/12- J. Vought and Zhune called Lee Guterman to inform her about current situation. Lee noticed concerns about confirmation of vapor mitigation, Indoor, ambient sampling, or pressure field extension measurements. 02/13/12 = Jane O’Connell sent the following e-mail. I discussed the results with Bob C. Thus far there is no groundwater contamination from chlorinated VOCs (as per TRC’s July 21, 2011 Phase II report), and DOH has already weighed in on the soil vapor issue, so there is really nothing for me to pursue at this point. I saw by your draft letter that you will be requesting additional soil and groundwater sampling from SCA. Once you receive that data please pass along to me and I will review to see if there are any possible sources to pursue. 04/26/12- Charles Gudder from TRC sent copy of RAP to Mike Hughes from NYCDOH for review including the following: At the request of the NYSDEC, attached is the Remedial Action Plan for Beacon High School. Please let me know if you would also like a hard copy 05/16/12 Mike Hughes sent the following email. reviewed the attached workplan. The proposed work appears consistent with our guidance and I have no comments at this time.

Remarks:
lab results show contamination

DEC Memo: 1/21/05 Sangesland spoke with Bernie DeLeo of Port Authority Facilities Dept at the Bus Depot (tel # 212-502-2472) He said there was a leak in the warming fluid used within the driving ramps connecting the 2nd & 3rd floors of the Bus Depot with the Lincoln Tunnel. A material known as "Savaloid"?? (could not find it on internet) is some type of oil/liquid which is heated up and then pumped through the system to warm up the ramps and prevent the formation of ice. Some where in the ramp, there is a leak which is dripping this product onto 9th Ave. NYPD has closed 9th Ave and Port Authority has spread Speedie Dry to absorb what has already fallen. Mr. DeLeo says that Port Authority is trying to locate the spill source and will stop the leak ASAP. 07/12/06: spill on street, already cleaned up, DEP involved, assume leak was repaired. close

Remarks: OIL LEAKINGH FROM PORT AUTHORITY RAMP UNTO STREET: STREET HAS BEEN CLOSED AND POLICE ON SCENE:

DEC Memo: Prior to Sept, 2004 data translation this spill Lead_DEC Field was
"ZHITOMIRSKY"URS PERFORMED INVESTIGATION. NO FURTHER ACTION REQUIRED.
10/11/2005 According to Jane Staten (URS)URS submitted ISRP on
10/18/1999. Contamination was a result of fire in 1987 and not from
the former UST.ISRP recommended NFA for the site. On August 17, 1999
AZ approved this recommendation. On October 18, 1999, NFA letter was
issued. AZ
Remarks: CALLER COMPANY TESTED SOIL FOR AN UNDERGROUND FUEL TANK CLOSURE AND
THEY JUST RECEIVED THE RESULTS TODAY THAT THE SOIL IS CONTAMINATED

OF DIELECTRICFLUID HAD LEAKED FROM FEEDER JOINT ON WEST WALL OF MANHOLE7/7/03 The signed 50 to 499 ppm and < 1 pound spill Cleanup Checklist was received from Matt Ketschke, Manager UG South, on July 3, 2003. Based on the information contained in this checklist, the following are the details of the cleanup: All liquids and loose solids were removed from the structure surface. All the contaminated surfaces of the structure that contained the spill were doubled washed with Silks and rinsed. Two ounces of oil was recovered. Waste generated was transported by a Con Edison maintenance vehicle under the "One-Trip Rule" to the 28 St. Yard. Con Edison employee, Stanly Taylor directed the cleanup. The cleanup was completed at 13:50 hrs. on 10/21/2000.

**Remarks:** DISCOVERED 2 OZS OF CABLE OIL, CLEAN UP IS IN PROGRESS CON ED #134039

Contact Phone: (212) 594-5408
Dec Memo: 6/24/15 TJD Teleconference with notifier - he states cooking oil leaking from adjacent Mexican restaurant possibly associated with a failed grease trap. DEP communications was contacted (initially had referred caller to DEC hotline) - DeMeo requested spill be referred to industrial waste division for follow-up reported condition is under DEP jurisdiction. No further action by DEC required. Spill closed.
Remarks: Some type of oil seeping through the wall of the connecting next door restaurant and into the caller restaurant. Unknown material and reason. Requesting callback for guidance.

.handler Activities Summary:

U.S. importer of hazardous waste: No
Mixed waste (haz. and radioactive): No
Recycler of hazardous waste: No
Transporter of hazardous waste: No
Treater, storer or disposer of HW: No
Underground injection activity: No
On-site burner exemption: No
Furnace exemption: No
Used oil fuel burner: No
Used oil processor: No
User oil refiner: No
Used oil fuel marketer to burner: No
Used oil Specification marketer: No
Used oil transfer facility: No
Used oil transporter: No

Violation Status: No violations found
Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

### Spill Details

**Spill Number/Closed Date:** 0312362 / 7/13/2004  
**Spill Date:** 2/6/2004

**Spill Cause:** Equipment Failure  
**Spill Class:** Known release with minimal potential for fire or hazard. DEC Response. Willing Responsible Party. Corrective action taken.

### DEC Memo

Prior to Sept. 2004 data translation this spill Lead_DEC Field was "SAWYER"Sangesland spoke with Anthony Lara at PTC. He said there was a crack in the fill line approx 2ft in from the foundation wall along the basement ceiling. This crack caused a leak into a basement hallway approx 3' x 12' and 3inches deep. Area is dammed with drysol. Vac truck is coming soon... PTC says the floor will be washed and the pipe will be repaired.Spill is under control. 2/9/2004 Sangesland spoke with Anthony Lara. Initial Cleanup at site was complete. PTC put in a bid to fix the fill pipe.3/8/04 Tipple updating//Response env has been retained by Castle Oil to complete the remediation.7/13/04 - Sawyer - Received the remediation data and disposal information from Response Environmental. End point sample analysis shows there are no elevated level of petroleum constituents above TAGM levels. No further action needed. Closed.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

DEC Memo: Prior to Sept, 2004 data translation this spill Lead_DEC Field was "FOLEY"*E2MIS 135013On 01/08/01 at 06:30 J. Pirrello #12120 crew chief of cable gang found that cable truck # 60582 was leaking hydraulic fluid. He discovered this at 400 W. 42 St. and it had started leaking at the S/W/C of W. 41 St. & 9 Ave at that time the entire length of the spill was barricaded & contained to the street with no sewers or waterways affected. At that time a cleanup was started, Mr. Pirrello will notify when cleanup is compete. The total amount of spill is 7 gallons. The cleanup people were George Rosario # 11464, Joe Rotondi # 11602, Joe Napolitano # 19711 al of the cable gang. Mr. Pirrello has contacted transportation & they are on the way. This call came in on 01/08/01 at 06:34 and at this time there in no more hydraulic fluid leaking from the truck. This job was reported to CIG M. Schlagel # 18276 at07:24 before it was logged into E2MIS because of a computer problem which was verified by Brian Keegan of the Con- Ed help desk& was logged in at 10:4501/08/01 at 08:36 J. Pirrello reports that the cleanup is complete. R. Bruns # 2110612/19/2002A review of the Transportation Department records shows that the repair of the hydraulic leak on vehicle 60582 was completed 1/18/2001.

Remarks: FAULTY FILTER, CLEAN UP IN PROGRESS. TRUCK # 60582.

#### Handler Activities Summary:
- U.S. importer of hazardous waste: No
- Mixed waste (haz. and radioactive): No
- Recycler of hazardous waste: No
- Transporter of hazardous waste: No
- Treater, storer or disposer of HW: No
- Underground injection activity: No
- On-site burner exemption: No
- Furnace exemption: No
- Used oil fuel burner: No
- Used oil processor: No
- User oil refiner: No
- Used oil fuel marketer to burner: No
- Used oil Specification marketer: No
- Used oil transfer facility: No
Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.
