</table>
On July 7, 2014, petroleum-impacted soil was discovered during excavation activities near the eastern site boundary. The impacted soil was adjacent to an about 5 by 5-foot brick masonry elevator shaft containing a hydraulic lift apparatus, including an about 10-foot long steel piston. Langan field staff noted that the piston was leaking hydraulic oil and that soil within the elevator shaft at about 10 ft bgs exhibited petroleum-like staining and odor, and PID readings of up to 0.3 parts per million (ppm). As a result of these observations, Langan contacted the NYSDEC Spill Hotline on July 7, 2014, to report a petroleum release. The spill was assigned NYSDEC spill no. 1403699. The site is “e” designated and all remedial actions conducted at the site fulfills the remedial objectives defined in the NYC Office of Environmental Remediation (OER)-approved January 2014 Remedial Action Plan (RAP) and September 29, 2014 RAP Stipulation List which complies with applicable standards, criteria, and guidance and conforms to applicable laws and regulations. The OER case manager was also notified, and the findings were summarized in daily report. During remediation/construction activities, all daily field reports were emailed to OER. The remedial actions at the site consisted of, implementation of community air monitoring program; establishment of Track 1 soil cleanup objectives (all soil/fill was excavated throughout the site to bedrock); screening of excavated material for indications of impacts by visual, olfactory, and instrumental inspection; waste characterization; transportation and disposal of historic fill and native material at permitted facilities; construction of an engineered composite covers system consisting of a 12 to 24-inch concrete building slab; and installation of a vapor barrier below building slabs and outside foundation walls using 46-mil thick Grace Preprufe and 60-mil thick Bituthene System 4000. Langan is currently finalizing the Remedial Closure Report that describes and documents the remedial activities for OER submittal. Petroleum-impacted soil was fully delineated and segregated from other material on site and stockpiled on two layers of 8-mil polyethylene sheeting, was kept covered at all times with an appropriately anchored layer of 8-mil polyethylene sheeting, and was routinely inspected. Upon receipt of the approval letter from the disposal facility, one truck load, 17.98 tons, of petroleum-impacted material was transported to Blanchard on September 17, 2014. See attached for facility approval letter, Part 364 transporter permit, and copy of the countersigned manifest for the petroleum impacted material. Endpoint sampling was not required since all on-site soil was removed to bedrock, and sidewall endpoint sampling was not possible because the SOE structures covered the sidewalls. contamination found during excavation/clean up pending
Tank Test:

**Handler Activities Summary:**
- U.S. importer of hazardous waste: No

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

MANHOLE #56655 (Continued) S106126763

41027 was applied. Water is standing, no visual water movement. No sewer connection as per conduit plate 26-e-4. Sump not verified. No substantial cracks. No dielectric filled feeder. Access anytime. 2 liquid samples were taken by R Pecoraro # 44162 from the spill, 1 for id and 1 for pcb. Sample priority "E". Chain of custody # cc16680. Cleanup is going to be scheduled for 12-01-03 @ 23:00 due to the location of the structure. Update 12/03/03 Analysis indicate substance similar to petroleum filling. Cleanup completed 12/3/03. Source of spill could not be located.

Remarks: CLEAN UP WON'T BEGIN UNTIL APPROX 23:00 DUE TO VEHICLES PARKED NEAR SITE. CALLER ANSWERED NO TO ALL 5 QUESTIONS ON THE CONED OFF-HOUR REPORTING FORM.

- Material FA: Petroleum
- Quantity: 1
- Units: Gallons
- Recovered: No
- Resource Affected: Not reported
- Oxygenate: False

Tank Test:

MANHOLE #56655 (Continued) S106126763

41027 was applied. Water is standing, no visual water movement. No sewer connection as per conduit plate 26-e-4. Sump not verified. No substantial cracks. No dielectric filled feeder. Access anytime. 2 liquid samples were taken by R Pecoraro # 44162 from the spill, 1 for id and 1 for pcb. Sample priority "E". Chain of custody # cc16680. Cleanup is going to be scheduled for 12-01-03 @ 23:00 due to the location of the structure. Update 12/03/03 Analysis indicate substance similar to petroleum filling. Cleanup completed 12/3/03. Source of spill could not be located.

Remarks: CLEAN UP WON'T BEGIN UNTIL APPROX 23:00 DUE TO VEHICLES PARKED NEAR SITE. CALLER ANSWERED NO TO ALL 5 QUESTIONS ON THE CONED OFF-HOUR REPORTING FORM.

Tank Test:
other debris resulting from the cleanup of a spill, into or on any
land or water, of acutely hazardous waste; or generates 100 kg or less
of any residue or contaminated soil, waste or other debris resulting
from the cleanup of a spill, into or on any land or water, of acutely
hazardous waste during any calendar month, and accumulates at any
time: 1 kg or less of acutely hazardous waste; or 100 kg or less of
any residue or contaminated soil, waste or other debris resulting from
the cleanup of a spill, into or on any land or water, of acutely
hazardous waste.

Handler Activities Summary:

U.S. importer of hazardous waste: No
Mixed waste (haz. and radioactive): No
Recycler of hazardous waste: No
Transporter of hazardous waste: No
Treater, storer or disposer of HW: No
Underground injection activity: No
On-site burner exemption: No
Furnace exemption: No
Used oil fuel burner: No
Used oil processor: No
User oil refiner: No
Used oil fuel marketer to burner: No
Used oil Specification marketer: No
Used oil transfer facility: No
Used oil transporter: No

Violation Status: No violations found

CONDO COMPLEX (Continued)

Streetno PBS record found. Other spill # 0011844 was reported on 02/02/2001 as contamination found during removal of two (2) 550 gal gasoline tanks. Case closed.

3:44 PM: Spoke with Dot at Milro. She received call from Chris from Milro Services (water/mold company) who found 20 ft by 20 ft room with about 5 ft of water. Chris mentioned that there is some petroleum odors when the basement hatch is open.

3:50 PM: Received email from Dot including pics. Pics shows reddish shade on water. 02/02/15-Hiralkumar Patel.

8:45 AM: Visited site. Met Mr. Charvet, chief engineer at the site. The building was built in 2008. Site has one 275 gal AST for emergency generator, in small sub-basement pit, which is the lowest point in basement. Tank pit is currently filled with water. Petroleum odors noted in the pit, but no odors were noted in basement. Water level in the pit is not dropping. No sheen noted on the water. Asked Mr. Charvet to remove contaminated water and test the tank system. Carlos Charvet "building engineer" Ph. (609) 903-1101 email: ccharvet1226@gmail.com

02/03/15-Hiralkumar Patel.

11:33 AM: Spoke with Joe at Milro. They pumped out 2,600 gal oil/water mix yesterday. 11:36 AM: Spoke with Mr. Charvet. He mentioned that Milro is coming back tomorrow to finish the cleanup and other required work. 04/10/15-Hiralkumar Patel.

1:47 PM: Spoke with Mr. Charvet. He confirmed that Milro completed the cleanup and has painted the tank room. 1:48 PM: Left message for Paul at Milro. 04/20/15-Hiralkumar Patel.

3:04 PM: Received call from Dot. She mentioned that oil spill occurred from two buckets in the tank vault due to water flooding into the vault. There was no leak from the tank system. Milro cleaned out the vault and sealed it. Case closed.

Remarks: City shut water off in area - when turned on, something caused a leak of fuel oil into basement - discovered today when access panel taken off and water/fuel oil mix noted

Prior to Sept, 2004 data translation this spill Lead_DEC Field was
"ROMMEL"5/14/01 TJD Reviewed summary report detailing tank removal and
associated contaminated soils. Spoke w/Paul Ciminello of Ecosystems
Strategies, Inc. to discuss report including; insufficient sampling &
missing analytical data. Mr. Ciminello stated a new building is being
constructed at the site and additional work may not be possible.
Awaiting revised report.12/9/03 TJD Spill reassigned Demeo >>>
Rommel3/14/05 - Mr. Charles G. Merritt sent a letter w/a 2001 tank
closure report and request for a spill closure, as per Randy Austin.
I called Mr. Merritt back and told him that Tim DeMeo in DEC has
reviewed the report and DEC requires additional data to make a
determination for closure. (KST)3/14/05- Spill reassigned to I. Islam
by KST.4/18/05- Mailed a letter to Mr. Merritt asking for a revised
Investigation Summary Report after thorough investigation by June
30/05. It's noted here that Ecosytems Strategies, Inc. (ESI) was the
previous consultant who prepared the Summary (Tank Closure) Report and
was retained by The Producing Co., 145W 45th St., NY, NY and the
current consultant is Merritt Consulting Engineers, Inc., retained by
a Bank who financed to Dev. the property. - II.6/8/05- Attorney John
Curran (at 212-508-6717) called to extend the June 30/05 deadline for
submission of the required ISR by one more month. Advised him to send
us a formal request for time extension. - II6/22/05- Received letter
(dt. 6/14/05) from the Attorney requesting formal time extension for
required submittal until Aug. 19/05. He also mentioned in the letter
that the entire site is now developed with a new 15-story building
for which foundation excavation removed residual contaminated soil,
if any. However, time extension has been approved and asked to submit
a site-specific technical report prepared by a NYS P.E along with
drawings, plans, etc. in support of their claim by the extended
deadline. - II8/29/05- Reviewed the Technical Analysis Report dt.
August 12, 2005 prepared by Galdun Frankel (G. F.) Envtl. on the
previously prepared UST Removal report by ESI in Feb.2001 and
re-submitted by Merritt Engineering dt. March 9, 2005. Based on the
information provided and analyses made by G. F. Envtl., it is believed
that the petroleum contamination did not extend beyond the underlying
bedrock and the foundation excavation of the building-in-place approx.
20' deep has removed any staining or residual surface contamination
of the bedrock, and GW was not encountered. As such, the spill case
is hereby closed. - II

Remarks:
2 550 GALLON TANKS WERE REMOVED ON TUESDAY & CONTAMINATION WAS
NOTICED UNDER THE CONTAINMENT UNIT TODAY - SOIL HAS BEEN REMOVED &
STOCK PILED ON SITE TO BE REMOVED EARLY NEXT WEEK
BETWEEN 9TH & 10TH AV (Continued)

Quantity: 0

Prior to Sept, 2004 data translation this spill Lead_DEC Field was
*FOLEY*Con Ed e2mis #146832.1/21 @ 09:40Comerford # 08212 I & A OS, reported to me at 09:25 that while doing primary connections in M-62499, he discovered approx 5 gallons unknown oil and 100 gallons water in the structure. No sewer/waterway affected, no fire/smoke involved, no injuries, no private property affected and weather did not contribute to spill. The source and cause of the spill are unknown at this time. No visual movement on the standing water, no substantial cracks observed in the structure. Environmental tag # 16916 was hung. Two samples will be taken of PCB and ID and Courier will be called by Finder for Chem Lab analysis. The Chain of Custody # AA 21264 will be used. No Parking Amtime in Loading zone. No initial cleanup action is being taken at this time. Cleanup will be scheduled ASAP as availability of crews dictate.1/21 @ 11:00 HRSCleanup set up for toady @ 15:00. Clean Harbors was notified and faxed documentation. UG forces notified that they are required to be on site for cleanup. Notified F Romano of Clean Harbors cleanup and Emailed info EPA # NYP 004 104 4641/21/03 17:07 Received lab results. Lab Sequence Number: 03-00549-001 Chain of Custody ID: AA21264
Aroclor 1242 < 1.0 ppm EPA 608/8082 Aroclor 1254 < 1.0 ppm EPA 608/8082 Aroclor 1248 < 1.0 ppm EPA 608/8082 Aroclor 1260 < 1.0 ppm EPA 608/8082 21/23/03 Received lab results. Lab Sequence Number: 03-00550-001 Date Approved: 1/21/2003 Incident Number: 146832 Date Received: 1/21/2003
Analysis indicates the presence of a substance similar to a dielectric fluid, and lubricating oil.1/21/03 23:15 Al Guerrero of Clean Harbors called to report that the cleanup will not be completed at this time because his equipment is freezing up. He will have have a crew come on 1/22/03 in the afternoon to complete it. He states that it is 75% complete as of now. He removed 6 drums of sludge & other debris. He removed 55 gallons of water/oil mixture. The structure was only washed 1x at this point. The crew was: R. Sanchez, b. Jamison, K. Moreno, all of clean harbors. Due to this it will be changed to a dielectric spill & not a 24 hr.m1/22/03 21:08 Al Guerrero of Clean harbors called to report that the cleanup was completed at 21:00. He states that there was 4 more drums of waste generated from this cleanup. The structure was double washed wth citrus cleaner & the spill tag # 16916 was removed. The cleanup crew was: R. Sanchez, b. Jamison, K. Moreno all from clean Harbors. Remarks: SPILL IN MANHOLE ON TOP OF 100 GALLONS OF WATER IN THE PROCESS OF BEING CLEANED UP ALMOST COMPLETE CON EDISON REF # 146832 DUE TO EQUIPT FREEZING UP JOB WILL NOT BE COMPLETED UNTIL WEDNESDAY JAN 22ND APPROX IN THE AFTERNOON

- **DEC Memo:** Prior to Sept. 2004 data translation this spill Lead DEC Field was "O’CONNELL’Con ed e2mis notes:Found spill approx 100gals unknown oil in V-3412 FDR-26M45, crew unable to determine source of spill...no water no visible movement of spill, found sump pump plugged in, crew does not know if pump was running...crew pulled plug as a precaution, pcb sample taken, crews on site--found trap to be dry...no impact to waterway or sewer. Drained transformer with >49ppm Astoria tanker. Also drained floor of approximately 350 gallons of oil/water mixture. In accordance with Astoria tanker driver removed 740 gallons total from vault and floor. Capacity of transformer in accordance with nameplate data is 395 gallons. Also, transformer had pressure. No release to waterways. I&A checked sump piping - no oil in piping. Partial cleanup complete by draining vault and using oil absorbant and oil absorbant pads to soak up free oil. Generated and removed 1 55 gallon >49ppm solid waste drum. Disconnect of transformer also completed. Aroclor = 1260, pcb = 201 ppm Aroclor #1260 pcb count 201 ppm Not reported

**Remarks:** oil in vault and some possibly entered a sewer system. clean up crews enroute.

DEC Memo: 12/30/05 - A letter was sent to the property owner requesting all
available information regarding steps taken to address the spill case.
MERCHANDISING WORKSHOP (Continued)

(J. Moras). 4/2/09 - Austin - Transferred from Needs Reassignment to Patel for further work to remediate and close - end
04/13/09 - Hiralkumar Patel went to site for inspection. Met with door keeper. He has no idea about tank. There is a 20 story building at the site. 04/28/10 - Hiralkumar Patel. Alternate address: 544-550 West 43rd Street. No other spills. PBS #: 2-370258. As per PBS record, site had 7,500 gal #2 oil AST in vault with access. Tank was removed in May 1999. Property owner (as per ACRIS): The Government of the People’s Republic of China (PRC) 520 12th Avenue New York, NY 10036. 04/29/10 - Hiralkumar Patel. 10:24 AM - Spoke with Baolin Guo at China Construction America, construction company who built on-site building about 8-9 years ago. Mr. Guo doesn’t know anything about spill case. Baolin Guo. China Construction America. Ph. (201) 876-2788. Email: guo_baolin@chinaconstruction.us 10:31 AM - Spoke with Zheng Xuan (212-244-9392 Ext. 9006) at Chinese consulate office. He doesn’t know anything about spill case. 11:20 AM - After discussing with DEC Austin, sent email to Mr. Guo with copy of spill report and asked him to send information about spill cleanup and excavation depth for new building foundation. 2:56 PM - Received message from Tony Chu (917-470-1261) from China Construction. 05/04/10 - Hiralkumar Patel. 11:25 AM - Spoke with Mr. Chu. He mentioned that they demolished old 5 story building with 6 ft deep cellar and then they built new 23 story building with 1 story basement (about 9 ft deep). He mentioned that no bedrock was encountered in excavation and no contamination observed. As per Mr. Chu, they did not remove any tank from the site. New building was finished in 2003. Currently, site has small heating oil tank for emergency generator. Case closed based on following: As per PBS record, site had AST in vault with access tank removed in 1999 - As per caller’s remarks, spill happened as contractor hit possible oil line - As per contractor, no soil contamination observed during work and they dug 2-3 ft more that previous basement depth.

Remarks:
CALLER REPORTING A SPILL OF MATERIAL FROM A CONTRACTOR DIGGING AND STRUCK A POSSIBLE OIL LINE. EITHER #6 OR #4 OIL NO CLEAN UP AS OF YET AND NO CALLBACK

DEC Memo: Prior to Sept, 2004 data translation this spill Lead_DEC Field was
"ROMMEL"*Called Affected Party (Kathy) and got history regarding the
vapor problem. She said that this is an ongoing problem w/ gasateria.
They have been asked to do something about the problem by the DEC.
According to Kathy, they dug a hole to help the problem and left it
open. She said that the rain washed away the excavated material.
Kathy had opened the doors to the basement to vent the vapors before
they built up. She felt that the venting was working fine and she
didn’t need any further response. She wanted to follow J. Rommel’s
instructions to call in these incidents. SS Transferred to J.
Rommel10/17/2003-Vought-see spill #8909614 at same location. This
spill closed by Vought.

Remarks: they have gas fumes at the residential apartment building at 480
tenth ave. they opened up the ground at the gas station and the dirt
was was washed away by rain today, the fumes went into the basement of
the apartment complex. No FD is on the scene. 212-279-4079-clinton
housing development is where the complaint is

DEC Memo: Prior to Sept, 2004 data translation this spill Lead_DEC Field was
"DEMO"9/27/02 TJDOverfill of UST, product came out of vent and into
garden bed. Spoke with Hess Oil who have stated driver spoke to
building person prior to delivery and obtained a signature on form
indicating tank had available capacity to accept volume of intended
delivery. Hess Oil did remain on site and driver assisted in clean-up
using spill kit from rig. Builing personnel also worked on cleanup.
Soils were reported to be impacted. Demeo spoke with Director of
Operations for building (Marney Burke 212 629 5990). Building was
directed to retain contractor or have building personnel containerize
impacted soils and remove off-site for proper disposal. Manifests
have been required prior to spill closure. 4/28/03 Disposal documents
received from Eastmond. No further Action required.
Remarks: TANK OVERFILL AT ABOVE LOCATION. CLEANUP IS IN PROGRESS AT TIME OF
CALL AND ALL MATERIAL IS EXPECTED TO BE RECOVERED. RESPONSIBILITY FOR
SPILL IS STILL UNDER INVESTIGATION.

Lot Remediation Date: Not reported

Description: Window Wall Attenuation & Alternate Ventilation
Lot Remediation Date: Not reported
Historically the site use included residential, commercial, industrial and manufacturing. As early as 1890, the site contained six 5-story and one 4-story commercial and/or residential structures. By 1911, the site was occupied with an iron works (southwest portion of the Site), a carpenters shop, five 5-story, two 4-story and two 3-story residential dwellings with basements and commercial space on the lower levels. The carpenters shop and the ironworks were no longer present by 1930 and 1950, respectively. By 1968, the Lincoln Tunnel approach retaining wall was installed along the western border of the site, and the site had been redeveloped with four 5-story buildings, one 4-story building and a 1- or 2-story building. From approximately 1930 to 1968 the site was home to a plumbing business as well as a painter. The 4-story building was no longer present by 1988. The four 5-story buildings were demolished after 1991. The 1-
Because the site is vacant, the inhalation of site-related the indoor air of buildings, is referred to as soil vapor intrusion. which is similar to the movement of radon gas from the subsurface into overlying buildings and affects the indoor air quality. This process, vapor (air spaces within the soil), which in turn may move into Volatile organic compounds in the groundwater may move into the soil served by a public water supply that is not contaminated by this site. are not drinking the contaminated groundwater because the area is majority of the site is covered with buildings and pavement. People Direct contact with contaminants in the soil is unlikely because the Health Problem: Nature and Extent of Contamination: Soil: Investigations performed in 2006 and 2012 showed site soils contain elevated semi-volatile organic compounds (SVOCs) and metals indicative of historic fill. The depth of the historic fill varies across the site from three to 15 feet deep. SVOCs exceeding restricted residential soil cleanup objectives (RRSCOs) include benzo-a-anthracene, benzo-a-pyrene, benzo-b-fluoranthene, benzo-k-fluoranthene, chrysene, dibenzo(a,h)anthracene, and indeno(1,2,3-cd)pyrene. Several SVOCs were found at levels on the order of 25 to 50 ppm. Metals exceeding RRSCOs include lead, with a maximum detection 9,000 parts per million (ppm) vs. RRSCO of 400 ppm and barium, with a maximum detection of 615 ppm vs. RRSCO of 400 ppm.) Groundwater: Groundwater sampling showed noted two volatile organic compounds (VOC) in an on-site well near the upgradient property line; chlorobenzene was detected at 29 parts per billion (ppb) vs a standard of 5 ppb and 1,4-dichlorobenzene was detected at 97 ppb vs a standard of 3 ppb. These compounds were not found in site soils. Several metals were noted in unfiltered groundwater samples (e.g., lead, barium, arsenic, etc.) which was attributed to turbidity in the samples. Subsequently, filtered groundwater sampling was performed and the only metals noted were naturally-occurring (e.g., iron, manganese, magnesium and sodium). Soil vapor: Several VOCs, including, but not limited to, benzene, ethylbenzene, toluene, xylene, 1,3-Butadiene, 2-butanone (MEK) and tetrachloroethylene (PCE) were detected in soil vapor. PCE was the only chlorinated VOC detected in soil vapor, which was found in one sample at a concentration of 84.7 micrograms per cubic meter (ug/m3). None of these compounds were found in site soils or groundwater. Health Problem: Direct contact with contaminants in the soil is unlikely because the majority of the site is covered with buildings and pavement. People are not drinking the contaminated groundwater because the area is served by a public water supply that is not contaminated by this site. Volatile organic compounds in the groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. Because the site is vacant, the inhalation of site-related
HUDSON MEWS PROPERTY - MARTY FINE PARCEL  (Continued)

contaminants due to soil vapor intrusion does not represent a current

cconcern.

**Environmental Interest/Information System**

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

DEC Memo: DE CPiper spoke ith ROb Hill. Faultly valve in boiler room caused approx 30 gallons to spill to boiler room floor. Right way has limited crew onsite already and will be sending an additional support truck and helper. Speedy dry has been spread and needs to be picked up. Unsure if sump was affected. Followup for closure needed. Assigned to DEC Demeo for followup.

Remarks: Spill from the boiler. Cleanup crew enroute.

Tank Info:

Tank Number: 001
Tank Id: 52762
Material Code: 0001
Common Name of Substance: #2 Fuel Oil (On-Site Consumption)

Equipment Records:

A00 - Tank Internal Protection - None
D01 - Pipe Type - Steel/Carbon Steel/Iron
I05 - Overfill - Vent Whistle
J02 - Dispenser - Suction Dispenser
L09 - Piping Leak Detection - Exempt Suction Piping
B00 - Tank External Protection - None
C01 - Pipe Location - Aboveground
E00 - Piping Secondary Containment - None
H00 - Tank Leak Detection - None
F00 - Pipe External Protection - None
G03 - Tank Secondary Containment - Vault (w/o access)
K01 - Spill Prevention - Catch Basin

Tank Location: 4
Tank Type: Steel/Carbon Steel/Iron
Tank Status: In Service
Pipe Model: Not reported
Install Date: 01/14/1985

Classification: Large Quantity Generator
Description: Handler: generates 1,000 kg or more of hazardous waste during any calendar month; or generates more than 1 kg of acutely hazardous waste during any calendar month; or generates more than 100 kg of any residue or contaminated soil, waste or other debris resulting from the cleanup of a spill, into or on any land or water, of acutely hazardous waste during any calendar month; or generates 1 kg or less of acutely hazardous waste during any calendar month, and accumulates more than 1 kg of acutely hazardous waste at any time; or generates 100 kg or less of any residue or contaminated soil, waste or other debris resulting
from the cleanup of a spill, into or on any land or water, of acutely hazardous waste during any calendar month, and accumulates more than 100 kg of that material at any time

Handler Activities Summary:
U.S. importer of hazardous waste: No
Mixed waste (haz. and radioactive): No
Recycler of hazardous waste: No
Transporter of hazardous waste: No
Treater, storer or disposer of HW: No
Underground injection activity: No
On-site burner exemption: No
Furnace exemption: No
Used oil fuel burner: No
Used oil processor: No
PUBLIC SCHOOL 51M (Continued) 1014473127

User oil refiner: No
Used oil fuel marketer to burner: No
Used oil Specification marketer: No
Used oil transfer facility: No
Used oil transporter: No

**Description:** Handler: Non-Generators do not presently generate hazardous waste
Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

STYLE MANG & CO (Continued)

Transporter of hazardous waste: No
Treater, storer or disposer of HW: No
Underground injection activity: No
On-site burner exemption: No
Furnace exemption: No
Used oil fuel burner: No
Used oil processor: No
User oil refiner: No
Used oil fuel marketer to burner: No
Used oil Specification marketer: No

DEC Memo: Rockrose Development Corporation 666 5th Ave Suite 5108 NY, NY 10103  
Joespeh Flannigan 07/14/10 Closure report in edocs. During construction activities,a 4" pipe was discovered 1' below the surface. The pipe was cut and approx 0.5 gallon #6 oil was released to the surrounding. The pipe was situated on concrete foundation. AARCO cut and cleaned the pipe with vacuum truck. Pipe sealed with cement. Area of the spill was excavated and contaminated soil was removed. No impact to the subsurface was observed. Case closed. (sr)  
Remarks: Caller reporting a spill of .5 gallon of #6 fuel oil to soil. Clean up is pending.

4/28/05

Delta will delineate the soil impacts beneath the product dispensers. 

4/19/04 Received SHAR. On 3/17/04, four borings were advanced by Geoprobe in the vicinity of the dispensers. DTW 13-20' bgs. Nine soil samples were collected at the depth interval exhibiting the highest PID reading or immediately above the water table. SB-1 (3.5-4.5'), SB-1 (17-18'), SB-2 (19-20'), SB-3 (2.5-3.5'), SB-3 (12-13'), SB-4 (2.5-3.5'), SB-4 (7-8'), SB-4 (12-13'). Analysis by 8260 showed hits for VOCs above cleanup levels in five of nine soil samples in all four borings. Total BTEX conc ranged from ND (SB-1, 3.5-4.5' and SB-2, 3.5-4.5') to 1,076,900 ppb in SB-4 (12-13'). The four borings were converted to 1" temporary wells. Four groundwater samples were collected and analyzed for VOCs. DTW 18-24' bgs. MWs were advanced to 23-26' bgs. Temporary wells were removed. No LNAPL was detected. Total BTEX ranged from 3,732 ppb (MW-1) to 45,380 ppb (MW-4). Total VOC range from 17,061 ppb (MW-2) to 69,062 ppb (MW-1). MTBE ranged from 9,050 ppb (MW-4) to 64,600 ppb (MW-1). 12/21/04 40Q4 report received (samples collected 11/23/04). BTEX ranged from 38 ppb (MW-5) to 38810 ppb (MW-1). MTBE ranged from 33 ppb (MW-5) to 174000 ppb (MW-1). DTW approx 12-15' bgs. 6/28/04 Investigation report received. On 4/23/04, one 1" well (MW-3) was installed through existing soil boring SB-3 and one 2" well (MW-4) was installed through previously advanced soil boring SB-4. Wells were advanced to 25.5 and 26.5' respectively. GW was encountered at 17.15' bgs in MW-3 and 17' bgs in MW-4. No soil samples collected due to previous investigation. On 5/24/04, three 2"
wells (MW-1, MW-2, MW-5) were installed to 24', 20', and 20' respectively. GW encountered at 11.7' and 16.8' bgs. Four soil samples were collected. Hits for VOCs in SB-5/MW-2(10-11'), SB-5/MW-2(12-13'). On 5/28/04, five GW samples were collected. GW was identified at 11'-14.5' bgs. Flow was interpreted as NW. BTEX ranged from 74ppb(MW-5) to 45550ppb(MW-4). MTBE from 19ppb(MW-5) to 192000ppb(MW-1). DTW 11-14'bgs. Need to delineate downgradient and sidegradient. 3/10/05 Received 1Q05 monitoring report. BTEX ranged from 65ppb(MW-5) to 38730ppb(MW-4). MTBE from 12ppb(MW-5) to 204000ppb(MW-1). 3/15/05 Issued sidewalk permit letter to install three MWs along the west sidewalk of 4th Ave. 4/15/05 Stip issued. Due 4/29/05. 4/21/05 Received stip signed by C. Wein on 4/19/05. 4/27/05 Portfolio meeting- Vadose and saturated soil impacts at northern border and SW portion of property. PS #51 300' NW. Impacts across street (total BTEX 100ppb). Service station and taxi stand on Sanborns for property across street. 4/28/05 Stip executed by T. Kunkel. An Investigation Summary report is due 6/27/05. RAP due 8/26/05. 6/13/05 Received subsurface hydrocarbon assessment report dated 6/7/05. MW-6, 7, 8 installed off-site. Soil results show impacts at MW-7(11-12'bgs & 15-16'bgs). Adjacent to U-Haul and Taxi Stand with garage. Total BTEX in GW was 1ppb(MW-6), 272ppb(MW-7) and ND(MW-8). MTBE concentrations were 2ppb(MW-6), 3ppb(MW-7) and 13ppb(MW-8). 6/24/05 Received Investigation summary report dated 6/22/05. On-site vadose zone soil impacts in and around dispensers are from historical release. Elevated MTBE concentrations in MW-1 and MW-2 may be related to more recent release. This is also supported by analysis of BTEX ratios. Off-site soil and GW impacts were detected across 4th Ave at MW-7 and MW-8, which appear to be from U-Haul or taxi stand (impacts as shallow as 11'bgs). 9/6/05 Received well installation report documenting installation of EW-1, MW-9 and MW-10. MPE pilot conducted 8/16/05. Pilot test feasibility report to be submitted. 12/30/05 Received 3Q05 monitoring report. DTW 11.37-14.90' bgs. BTEX ranged from ND(MW-8) to 50320ppb(MW-4). MTBE ranged from 5.1ppb(MW-6) to 170000ppb(MW-1). 2/23/06 Received letter from Delta requesting extension to stip and summarizing MPE pilot test results which was conducted in 8/05. Since 8/05, Delta has tried to identify an appropriate remedial alternative to address site impacts within the vadose, smear and saturated zones on-site. On 11/4/05, Delta sampled on and off-site wells for geochemical parameters and stable carbon isotope ratio analysis. Delta is currently reviewing the results as they relate to the potential use of aerobic stimulation (sparging). Request extension to submit RAP by 5/14/06. 3/9/06 4Q05- DTW 11.96-14.63'bgs. BTEX ranged from ND(MW-8) to 44200ppb(MW-4). MTBE ranged from 1ppb(MW-8) to 81900ppb(MW-10). 3/16/06 Met with BP and Delta. MW-6, 7, 8 installed in 4/05. Pilot for MPE completed in 8/05 which determined it is not an option. Geochemical sampling completed 10/05 which showed no degradation. DTW 11.5-14.5'bgs. Very high MTBE concentrations. Sensitive receptors include utility vaults along 4th Ave. Delta was planning to submit biosparg proposal. Nic Kremevec, BP, requested Delta look into something more aggressive. 5/9/06 Received feasibility pilot testing and analysis report for Multi-Phase Extraction on a Remedial Action Plan. 6/8/2006 - Feng - project reassigned to RJFeng. (RJF) 7/28/2006 - Feng - Quarterly Monitoring Report, 1Q2006, 6/6/2006, submitted by Delta. As of sampling on 3/8/2006, groundwater
flows to northwest at the depth of 10.89' to 15.17' bg. 11 monitoring wells. W-1, 9,350 ppb BTEX (3,410 ppb B, 1,050 ppb T, 1,480 ppb E, 3,410 ppb X), 21,100 ppb MTBE. W-2, 2,840 ppb BTEX (1,170 ppb B, 163 ppb T, 811 ppb E, 696 ppb X), 3,330 ppb MTBE. W-3, 20,990 ppb BTEX (3,070 ppb B, 6,800 ppb T, 2,120 ppb E, 9,000 ppb X), 10,400 ppb MTBE. W-4, 38,920 ppb BTEX (4,400 ppb B, 17,300 ppb T, 3,220 ppb E, 14,000 ppb X), 33,500 ppb MTBE. W-5, 35.4 ppb BTEX, 4.6 ppb MTBE. W-6, 1.42 ppb BTEX, 4.6 ppb MTBE. W-7, 677 ppb BTEX (22.8 ppb B, 8.9 ppb T, 304 ppb E, 341 ppb X), 8.1 ppb MTBE. W-8, ND. W-9, 16,780 ppb BTEX (2,180 ppb B, 1,890 ppb T, 2,210 ppb E, 10,500 ppb X), 14,200 ppb MTBE. W-10, 17,760 ppb BTEX (3,810 ppb B, 3,180 ppb T, 2,890 ppb E, 7,880 ppb X), 44,900 ppb MTBE. EW-1, 12,180 ppb BTEX (2,110 ppb B, 1,780 ppb T, 1,940 ppb E, 6,350 ppb X), 8,260 ppb MTBE. (RJF)8/1/2006 - Feng - Remedial Action Plan, 5/8/2006, submitted by Delta Environmental. Delta proposed MultiPhase Extraction System to be installed to address FP, soil vapor and gw contamination. Delta conducted pilot test twice. The 1st time it was concluded that "The results of this MPE pilot event conflicted with the expected response from the site's lithology". During the 2nd pilot test, 5 air samples collected at specific intervals to quantify specific vapor VOC concentration being removed. The recovery rates are 0.19 lb/hr BTEX, 0.091 lbs/hr MTBE, 4.89 lbs/hr TPH. For the groundwater drawdown reading, W-9 at 0.28' which located 5 feet away from EW-1. Delta explained that "The limited groundwater drawdown ROI from extraction well EW-1 is likely due to the more transmissive subsurface soils which allow more significant groundwater recharge into the cone of depression generated by MPE operation at the extraction well EW-1". The system components included 4 extraction wells, phase separator, liquid ring pump, system control panel, for vapor and liquid treatment are being designed. System flow chart is provided. By running the MPE, there is better hydraulic control and source removal. RAP is approved conditionally: 1) add the air exhaust in the system flow chart. 2) reinstall the MW-1, MW-3 and MW-4 due to their screen interval starts at the water table or below the water table. 3) Investigate the impact to the subway tunnel right next to the station (N, R and F trains run along 4th Ave). (RJF)8/2/2006 - Feng - Approval of MPE letter sent to BP and cc to Delta. (RJF)9/26/2006 - Feng - Quarterly Monitoring Report, 2Q2006, 9/7/2006, by Delta. Sampled and monitored on 6/19/2006. DTW 10.60' to 14.42' bg, flows to northwest at the depth of 10.89' to 15.17' bg. 10 of 11 monitoring wells were sampled. MW-2 was not accessible. MW-1, 8,012 ppb BTEX, 28,200 ppb MTBE. MW-3, 16,430 ppb BTEX, 8,540 ppb MTBE. MW-4, 37,250 ppb BTEX, 32,400 ppb MTBE. MW-5, 59.1 ppb BTEX, 5.4 ppb MTBE. MW-6, 0.25 ppb BTEX, 2.8 ppb MTBE. MW-7, 569 ppb BTEX, 6.1 ppb MTBE. MW-8, BTEX ND, 0.71 ppb MTBE. MW-9, 10,688 ppb BTEX, 4,620 ppb MTBE. MW-10, 21,300 ppb BTEX, 63,500 ppb MTBE. EW-1, 8,055 ppb BTEX, 5,250 ppb MTBE. (RJF) 9/28/2006 - Feng - Portfolio meeting with BP and Delta. Plan changed for this site. On 8/2006, Delta had the plan in place for redevelopment and construction of high rise building. There will be multi-story basement, USTs will be pulled and additional soil will be removed. Construction schedule will be confirmed and remedial plan will start from the groundwater quality after tanks removal. (RJF)3/6/3007 - Feng - 3Q2006, 12/21/2006. Groundwater sampled and gauged 9/13/2006. 11 monitoring wells were sampled. DTW 10.68' to 14.96' bg. Flows northwest. LNAPL in MW-9 (0.12'). MW-1, 9,350 ppb BTEX, 21,100 ppb MTBE. MW-2, 2,840 ppb BTEX, 3,330 ppb MTBE. MW-3, 20,990 ppb BTEX, 10,400 ppb MTBE. MW-4, 38,920 ppb BTEX, 33,500 ppb MTBE. MW-5, 35.4

**CON ED - V 3685 (Continued)**

ppb BTEX, 4.6 ppb MTBE. MW-6, 1.42 ppb BTEX, 4.6 ppb MTBE. MW-7, 677 ppb BTEX, 8.1 ppb MTBE. MW-8, 16,780 ppb BTEX, 14,200 ppb MTBE. MW-10, 17,760 ppb BTEX, 44,900 ppb MTBE. EW-1, 12,180 ppb BTEX, 8,260 ppb MTBE. Email Delta for status on tank pull, site development and RAP. (RJF)3/6/3007 - Feng - Updates from D. Greffenius (Delta), the USTs, piping, and dispenser removals will begin on Monday, March 12, 2007. Alvin Petroleum is the contractor. 3/6/2007 - Feng - email from D. Taylor (Delta), USTs will be removed and endpoint samples will be taken and Closure report will be submitted. Delta are currently in touch with the site owner who hasn't yet provided the development schedule. (RJF)7/24/2007 - Feng - 4Q2006, 4/30/2007, Groundwater sampled 12/7/2006. All 11 monitoring wells were sampled. DTW 10.42’ to 14.17” bg. Flows to northwest. No LNAPL. MW-1, 7,750 ppb BTEX, 9,800 ppb MTBE. MW-2, 2,754 ppb BTEX, 1,340 ppb MTBE. MW-3, 10,370 ppb BTEX, 5,350 ppb MTBE. MW-4, 31,030 ppb BTEX, 14,300 ppb MTBE. MW-5, 47.7 ppb BTEX, 4.4 ppb MTBE. MW-6, 1.94 ppb BTEX, 4 ppb MTBE. MW-7, 650 ppb BTEX, 4.7 ppb MTBE. MW-8, BTEX ND, less than 1 ppb MTBE. MW-9, 9,510 ppb BTEX, 3,630 ppb MTBE. MW-10, 17,180 ppb BTEX, 15,900 ppb MTBE. EW-1, 9,850 ppb BTEX, 3,640 ppb MTBE. (RJF)7/27/2007 - Feng - 1Q2007, 5/7/2007. Groundwater sampled 3/7/2007. 9/11 monitoring wells were sampled. DTW 11.51’ to 14.6’ bg. Flows to north-northwest. No LNAPL. MW-1, 6,936 ppb BTEX, 4,930 ppb MTBE. MW-2, 2,820 ppb BTEX, 632 ppb MTBE. MW-3, not accessible. MW-4, 40,800 ppb BTEX, 34,800 ppb MTBE. MW-5, well not located. MW-6, ND. MW-7, 468 ppb BTEX, 3.1 ppb MTBE. MW-8, ND. MW-9, 9,160 ppb BTEX, 2,230 ppb MTBE. MW-10, 24,490 ppb BTEX, 7,960 ppb MTBE. EW-1, 10,430 ppb BTEX, 2,460 ppb MTBE. (RJF)7/31/2007 - Feng - Underground Storage Tank Excavation Assessment Report, 4/26/2007, by Delta. Between 3/12/2007 and 3/15/2007, 4 (4,000-gallon) double-walled steel gasoline USTs and 1 (4,000-gallon) double walled steel abandoned UST from a single tank cavity on the central portion of the site were excavated. The abandoned UST was filled with concrete slurry. Upon excavation, the tanks were observed to be in good condition with no visible holes or areas of pitting. Between 3/16/2007 to 3/20/2007, 4 pump island dispensers and the associated product piping were excavated and removed. On 3/12/2007, 1 hydraulic lift was removed. 25 over-excavation soil samples were collected. High contamination detected in soil samples. For USTs excavation, the total BTEX range from ND (SW-17) to 1,796,700 ug/kg in SW-5 (9’), the total VOCs ranged from 205 ug/kg in SW-14 (9’) to 2,826,170 ug/kg in SW-5 (9’). For the pump islands and piping excavation, total BTEX concentration ranged from ND in B-3 (12-12.5’) to 327,700 ug/kg in B-2 (12-12.5’), the total VOCs concentration ranged from ND in B-3 to 659,890 ug/kg in B2 (12-12.5’). For the hydraulic lift excavation, no SVOCs exceedance. Groundwater encountered at a depth of 13’ bg. 1 groundwater sample was taken from MW-4, 40,800 ppb ug/L BTEX, 34,800 ug/L MTBE. On 3/28-29/2007, 795.24 tons of soil was generated during the over excavation activities. The soil was transported an disposed at the Clean Earth of Philadelphia (CEP). The excavations were backfilled with the Certified Clean Fill. 8/1/2007 - Feng - Letter to Kevin Endriss (BP) requiring RAP and the construction details. Due 10/1/2007. (RJF)10/10/2007 - Feng - Portfolio meeting with BP and Delta. Potentially developing the site. Tanks closure done and soil over-excavated. Drill at the side near the subway to inspect for impact on the subway tunnel. The new development may need to excavate down to 30 feet bg. Development schedule is unknown at this point. Delta will submit a work plan for proposing MPE events on 2” wells.
for short term remediation. (RJF)12/10/2007 - Feng - Call from potential buyer and inquired about the site status. DEC stated the requirement of gw and soil remediation, plus the soil vapor mitigation. Buying is in process. (RJF)11/11/2008 - Feng - Reviewed various documents submitted by HydroTech. 1) Phase I Environmental Site Assessment Report, dated 10/12/2007. Some Recognized Environmental Concerns were identified: the "E" Designation listing of the site for HAZMAT, historical utilization of the site as an auto repair facility and a gasoline station; presence of an open NYSDEC spill at the site; presence of elevated levels of VOCs in the soil and groundwater at the site at concentrations exceeding regulatory standards; inconsistent PBS information. 2) Investigation Work Plan, dated 11/27/2007. Investigation were proposed to be conducted in addressing the "E" Designation. HydroTech proposed GPR Survey to scan for any subsurface anomalies such as unknown tanks; to install 12 soil borings and 2 soil samples will be taken from each soil boring; and 3 groundwater probes will be installed for groundwater sampling. Site plan with proposed soil boring location is provided. 3) Site Investigation Report, dated 12/20/2007. The GPR Survey did not identify any significant anomalies. Gasoline contaminated soil is present in the shallow soil in the northern and northwestern portions of the site. The gasoline contamination extends vertically to the deeper depths of the soil and horizontally to the northwestern boundary and western portion of the site. Soil samples collected from HTE-SP-2, 662,600 ppb VOCs at 2'-4', 934,900 ppb VOCs at 10'-12'. Groundwater was encountered at 12 feet bg and flows to northwest. The compounds detected in the groundwater plume are mainly gasoline compounds, range ND to 79,300 ug/L. 4) Remedial Action Plan, 12/14/2007. HydroTech proposed to have 1) soil excavation, down to 12'; 2) installation vapor barrier and sub-slab venting system; 3) RAP for groundwater will be submitted to NYSDEC. 5) Floor Plans for the new building. The new building will be occupied the whole site. Called Yash Saha (HydroTech). The excavation will cover the whole site and down to 12'-14', no dewatering is planned. DEC required the vapor barrier and sub-slab venting system design, groundwater remediation. HydorTech will submit a RAP including the soil excavation, groundwater remediation, and soil vapor mitigation shortly. (RJF)2/7/2008 - Feng - Reviewed the Revised RAP, 1/31/2008, by HydroTech. HydroTech proposed: 1) soil excavation; 2) installation of vapor barrier and sub-slab venting system; 3) RegenOx and ORC injections for groundwater remediation. Reviewed also the 3Q2007 quarterly report. During the tank excavation activities in 3/2007, monitoring wells MW-1, MW-5, MW-9 and EW-1 were destroyed. 7/11 wells were sampled. BTEX range 73 ppb (MW-6) to 15,260 ppb (MW-4). MTBE range 18 ppb (MW-6) to 47,200 ppb (MW-4). Emailed HydroTech the comments and questions. (RJF)2/15/2008 - Feng - Stipulation Agreement by Katan Group. Due back 3/7/2008. (RJF)2/27/2008 - Feng - Received signed Stipulation Agreement. Sent for RD's signature. (RJF)3/3/2008 - Feng - Reviewed comments and questions. (RJF)2/15/2008 - Feng - Stipulation Agreement was signed. Katan Group and HydroTech will submit a RAP including the soil vapor barrier and sub-slab venting system design, groundwater remediation. DEC require the vapor barrier to be extended vertically to the surface grade through the foundation walls and more RegenOx injection points to be installed. Revised the vapor barrier design and the injection diagram will be submitted within 10 days. (RJF)3/7/2008 - Feng - Spoke to D. Greffenius (Delta). BP will also oversee the remediation progress occurring onsite. An addendum letter/plan will be submitted for post-exavation sampling.
dewatering plan in case dewatering is needed, and monitoring plan after the construction. BP will still continue to comply with the Stipulation between BP and DEC. (RJF)3/13/2008 - Feng - Stipulation Agreement executed 2/28/2008. (RJF)4/17/2008 - Feng - Email to HydroTech regarding the notification of chemox injection to EPA UIC program. HydroTech contacted EPA and it may take 30 days to have EPA review the details of the injections. Letter for offsite soil vapor point to HydroTech. 4/18/2008 - Feng - Call from HydroTech (Yash). HydroTech will inject the ORC while installing the soil vapor points. ORC will be injected at the sidewalk across the 4th Ave and some onsite injection points. (RJF)4/24/2008 - Feng - email from Yash Saha (HydroTech). HydroTech has finished the onsite ORC injection and the soil gas implants offsite. (RJF)5/1/2008 - Feng - Site visit. Met with Carlos Quinonez from HydroTech. The tech team was late. The work will be rescheduled. 5/2/2008 - Feng - Site visit and met with Yash Saha. Started RegenOx injection using GeoProbe. The intended injection points were marked. It will be drilled down to 25 feet and the RegenOx will be injected into the 25 feet to 16 feet. Planned to finish 10 point today. Offsite soil vapor sampling also ongoing. According to Yash, there will be some dewatering activities along with the development. Dewatering water will need to be treated. Met with D. Greffenius (Delta) in DEC office. Received the IRAP. (RJF)5/9/2008 - Feng - cc-d the EPA Underground Injection Control section's letter to Katan group for authorization to inject RegenOx and ORC. (RJF)6/12/2008 - Feng - Called from Yash (HydroTech). All the RegenOx injections are completed at this time. They started the site excavation on 6/4/2008, so far at 8 feet bg, and had some foundation pillars installed. The elevator shaft part has not worked on yet. At this time, no work on site, but may excavate deeper later on. DEC still requires groundwater samples to confirm the effectiveness of the RegenOx, taken gw samples from the previous baseline sampling points. 6/16/2008 - Feng - 4Q2008, 3/18/2008, by Delta. The monitoring well network was gauged and sampled on 1/17/2008. 7 wells. DTW 11.01' to 14.88' bg. Flows to northwest. BTEX range ND to 18,500 ppb (MW-10). MTBE range ND to 21,000 ppb (MW-4). 6/18/2008 - Feng - Portfolio meeting with BP and Delta. In 6/2008, soil removal is about 4,600 tons. Delta is submitting the final version of IRAP. The exhaust blowers planned for building’s lower parking levels will control vapors. No sub slab venting system might be installed since the basement is so close to water table. Conference call with BP/Delta, Katan/HydroTech will be scheduled. (RJF)7/28/2008 - Conference call with Delta (D. Greffenius and G. Hinshalwood) and HydroTech (Rachel). Delta and HydroTech will be sending the brief summary of the site status. (RJF)9/17/2008 - Vapor complaint from the resident across the street. DEC has contacted and required the developer (Perry Soskin from Katan Group) and the RP (BP) to immediately mitigate the vapor by today. Mr. Soskin from Katan Group and David Greffenius from Delta called back. Delta and EnviroTrac will be onsite and lay the plastic sheeting on the area today. They will there around 4:30pm. Tomorrow they will cover with a few loads of fills and more plastic sheeting on top of the fills if necessary. Called the resident David Simonoff and informed him that the responsible party will be onsite start taking of the odor today and DEC will continue to monitor the situation. (RJF)9/17/2008 - Site visit and met with Delta and EnviroTrac. The north portion of property near the 5th Street is filled with water, half foot to one foot deep. Delta and EnviroTrac lay the plastic sheeting on the
water area with some product, next to 4th Ave and east portion. A vacuum truck will be mobilized tomorrow morning and remove the water before the backfills. (RJF)10/16/2008 - Letter to Katan Group and BP Crude Oils requiring the developer/RP to submit a Revised RAP which includes monitoring wells installation around the property to access the current and during construction groundwater condition, dewatering plan, post construction remediation plan if necessary, and post construction groundwater monitoring plan. Revised RAP due 11/17/2008. The Department notifies the city agencies, DOB, DEP, and DOH on the site status and its intended development. (RJF)10/29/2008 - 1Q2008, 7/25/2008, by Delta. Vacant. The monitoring well network was gauged and sampled on 3/6/2008. During tank excavation activities in 3/2007, MW-1, MW-5, MW-9, and EW-1 were destroyed. Due to construction onsite during first quarter 2008, all onsite wells are covered with soil and gravel and are suspected to be destroyed. 3 were gauged (offsite wells). No LNAPL. DTW 14.04’ to 14.78’ bg. Flows to northwest. 3 were sampled. BTEX range ND to 407 ug/L (MW-7). MTBE range ND to 2.8 ug/L (MW-6). 2Q2008, 9/29/2008, by Delta. Vacant. The monitoring wells were gauged and sampled 6/30/2008. 3 offsite wells were gauged. No LNAPL. DTW 13.48’ to 14.12’ bg. Flows to northwest. 3 wells were sampled. BTEX range ND to 486 ug/L (MW-7). MTBE range ND to 1.9 ug/L (MW-6). (RJF)11/10/2008 - Vapor complaint received from resident adjacent to the site. Visited the site, no access because the site was locked. Walked around the site and did not observe odor. No PID reading. Water retained in the open excavation again. (RJF)11/10/2008 - Email to Bill Bogdon approving the 60 days extension for RAP. (RJF)11/12/2008 - Delta and EnviroTrac were onsite to mitigate the vapor. A vac truck was mobilized and vac out the product in the property line area and water. Delta and EnviroTrac will then cover the area with product and rest of the water. They will come back tomorrow to see if water level rise again. Soil backfill may be done if necessary. (RJF)12/10/2008 - Email from David Greffenius (Delta)*Please note that Delta and EnviroTrac, on behalf of Atlantic Richfield, will be transporting additional backfill to the 363 4th Avenue, Brooklyn site this Friday, December 12, 2008, in order to fill-in the remaining standing (ground) water at this site for the purpose of preventing another vapor complaint by the residents in this neighborhood. Our plan will be identical to our last effort: we will cover the standing water with plastic (where it is safe to do so), and then cover the plastic/water with between 4 and 6 loads of recycled concrete aggregate (RCA) backfill.*12/17/2008 - Spoke with David Greffenius (Delta). The excavation where been with water is backfilled. The product seems coming back again. Might need to investigate the adjacent parking lot. (RJF)12/18/2008 - Visited the site and met with David Greffenius. The site is backfilled in most of the area with water. Some water is still retained near the back apartment building. No product was seen this time. David will stop by regularly to check if there is any recharge of the product. SanBorn maps may be reviewed for the parking lot next door. (RJF)1/20/2009 - Met with Domenick Tonacchia (Tona Development), Bill Bogdon (Tona Development), Kevin Kleaka (Impact Environmental), and phone conference with David Greffenius (Delta). There will no watering. The building will be covered the entire site with cellar, no subcellar. There will be changes for the new building since they are trying to avoid dewatering process. DEC required an investigation work plan for both onsite and offshore by 2/2009. (RJF)3/20/2009 - Reviewed Investigation Work Plan, dated 3/3/2009, by Delta.
proposes to install 7 monitoring wells at the sidewalks around the perimeter of the site. Work to be scheduled and RI report to be due within 90 days, 6/19/2009. Work Plan is approved. Letter to BP and cc to Delta. (RJF) 3/23/2009 - Reviewed the Investigation Work Plan, dated 2/2009, by Leggette, Brashears & Graham, Inc (LBG). LBG proposes to install 4 monitoring wells onsite within the perimeter. Comments to LBG and Tona Development via email. see comments in eDoc. (RJF) 3/24/2009 - Reviewed LBG’s responses to the comments on the IWP, uploaded in eDocs. Additional comments on the responses were sent to LBG and Tona Development, in eDocs. (RJF) 4/3/2009 - Reviewed the Updated IWP, via email on 3/25/2009, by LBG. Previous comments are addressed. Work plan to be approved. Letter to Tona Development and LBG. 4/3/2009 - Conference call with BP, Delta, Tona Development and LBG. The offsite wells installation will be started within 2 weeks. The onsite will be within 1 week. Tona Development will advance some test pits to verify the real water table and will notify BP 2 days in advance so BP could send a field technician to the site. Changes to the development plan will be made, the basement slab will be above water table. DEC require the RAP should include the vapor barrier and SSDS. Stipulation agreement will be sent to Tona Development. (RJF) 4/6/2009 - Stipulation Agreement to 267 Sixth Street, LLC. eDocs. (RJF) 4/28/2009 - Conference call with Tona Development and Delta. The onsite wells are installed and the report will be sent to DEC and Delta. Sewer line is identified beneath the sidewalk. A Con Ed oil line is also identified between the sidewalk and the site and might be extended into the site. Hand clearance will be made during the installation of the offsite wells. The test pits were advanced down to 9-10 feet below current grade, and found groundwater at 5 feet in one of them. Construction excavation will be above/at water table. Tona will be moving the soil around this week to make the ramp for the machines entrance. A plan to suppress the possible odor shall be in place before the excavation. And soil shall be tested for disposal and this enable the soil to be disposed immediated when being generated. Delta will review the Tona’s recent investigation report to come up the IRAP, remedy to be proposed depend on the current site condition, soil and groundwater residual. Next updates call will be held upon the submission of IRAP. (RJF) 7/7/2009 - Reviewed Subsurface Investigation Report, dated 5/13/2009, by Leggette, Brashears & Graham, Inc. On April 9, 2009, the groundwater monitoring wells were installed onsite. Soil samples were collected continuously through the boring from the excavation grade to approximately 15 feet below the excavation grade. The final boring depth is approximately 20 feet below the historical grade of the site. The wells were surveyed. DTW 4.54' to 10.55'. no product was encountered, but film was observed. Soil samples run for VOCs and SVOCs. VOCs and SVOCs exceedances were detected, unit in ug/kg. MW-21, 10-15 feet, 920 benzene, 770 toluene, 30,000 ethylbenzene, 22,700 xylenes. MW-22, 5-10 feet, 6,200 benzene, 100,000 toluene, 120,000 ethylbenzene, 400,000 xylene, 1,100 MTBE.MW-25, 10-15 feet, 1,500 benzene, 11,000 toluene, 43,000 ethylbenzene, 183,000 xylene. Groundwater samples were run for VOCs and SVOCs. Exceedances were detected, unit in ug/L. MW-21, 360 benzene, 300 toluene, 1,300 ethylbenzene, 1,480 xylene, 610 MTBE. MW-22, 230 benzene, 3,700 toluene, 2,300 ethylbenzene, 7,900 xylene, 28 MTBE. MW-25, 1,200 benzene, 620 toluene, 3,500 ethylbenzene, 6,200 xylene, 1,100 MTBE. And SVOCs were also detected in these wells. Compared to the historical soil and groundwater concentration levels, data show down
trend for most of the wells. The data gained from this investigation will be used in preparing of the IRAP. Email BP and Delta for the status of the IRAP. (RJF)7/14/2009 - Conference call with Tona Development, BP and Delta. Delta is putting together the LBG’s report data and the new building plan, the IRAP will be submitted next week. Delta is also going through the MTA permitting process to have the wells installed at the sidewalk along 4th Ave. There are probably 3-4 feet of soil to be removed, no dewatering. Film = sheet in LBG’s report. DEC required there are shall be wells being able to monitor the effectiveness of Delta’s proposed remedy. BP will gauge and sample the onsite wells after the perimeter wells are in.

(RJF)1/12/2010 - Reviewed Subsurface Hydrocarbon Assessment Report Addendum, dated October 29, 2009, by Delta. On June 19, 2009, EnviroTrac, on behalf of Atlantic Richfield and under the direction of Delta, installed one permanent two-inch monitoring well (MW-13) at the northeast sidewalk of 6th Street using Geoprobe 6610 hollow-stem auger drill rig with direct push, macro-core sampling capability.

MW-13 was drilled to 18 feet and groundwater was encountered at 12 feet. 2 soil samples were collected. MW-13 (11.5-12’), VOCs ND. MW-13 (19.5-20’), VOCs ND. On September 21, 2009, MW-13 as well as the monitoring wells onsite MW-20, MW-21, MW-22, MW-23, MW-24 and MW-15 were gauged and sampled. DTW 6.31’ to 12.63’ bg. NO LNAPL. unit in ug/L. MW-13, ND. MW-20, 7.6 benzene, 26 MTBE, 6 isopropylbenzene, 9.4 n-propylbenzene, 1,250 ethylbenzene, 860 xylene, 2,750 BTEX, 430 MTBE, 34 n-butylbenzene, 18 sec-butylbenzene, 87 isopropylbenzene, 10 p-isopropylbenzene, 520 naphthalene, 240 n-propylbenzene, 590 1,2,4-trimethylbenzene, 140 1,3,5-trimethylbenzene, 4,819 total VOCs. MW-22, 140 benzene, 810 toluene, 1,450 ethylbenzene, 420 xylene, 2,820 BTEX, 76 MTBE, 11 n-butylbenzene, 32 isopropylbenzene, 7.1 p-isopropylbenzene, 260 naphthalene, 60 n-propylbenzene, 250 1,2,4-trimethylbenzene, 100 1,3,5-trimethylbenzene, 3,621 total VOCs.

MW-23, ND. MW-24, 21 MTBE, 27 total VOCs. MW-25, 1,100 benzene, 440 toluene, 2,790 ethylbenzene, 2,600 xylene, 6,930 BTEX, 390 MTBE, 25 n-butylbenzene, 15J sec-butylbenzene, 170 isopropylbenzene, 14J p-isopropylbenzene, 280 naphthalene, 300 n-propylbenzene, 830 1,2,4-trimethylbenzene, 400 1,3,5-trimethylbenzene, 9,354 total VOCs.

Off-site Monitoring Well Abandonment Report, dated December 30, 2009, by Delta. On October 21, 2009, EnviroTrac, on behalf of Atlantic Richfield, abandoned offsite wells MW-6, MW-7 and MW-8 by 1) removing the bolt-down cover and riser cap from each well; 2) tremmie-filling each well screen and riser pipe with Portland cement/bentonite slurry from the bottom of the well to 5 feet bg using a grout pump; and 3) filling the top 5 feet of riser pipe and the flush-mount cover of the each well with Portland cement to the groundwater surface. (RJF)3/10/2010 - Neil Steven (646-542-4312) from Law Enforcement Region 2 called. Odor complaint from the residents. He went to the site yesterday, there was strong odor and dark product. Email to Nick Onufrak (BP), Bill Bogdon (Tona Development) and David Greffenius (Delta).”Bill and Nick, DEC received a odor complaint from the nearby residents for this site. Our ECO went to the site yesterday and he said there was strong odor and dark product was witnessed. You MUST send someone out there TODAY, to take pictures, sample the product, remove the product and mitigate the
4/12/2010 - letter to NYC DOB, DOH, DEP notifying the open excavation complaint issue in a timely fashion and the spill remediation.

4/9/2010 - Letter from BP committing to address the odor pumping operation tomorrow and site backfilling is scheduled for next week.

4/8/2010 - email from David Greffenius. EnviroTrac will begin water fuel oil USTs were registered at the subject site from 1990 forward. underground storage tank (UST) registration records, no diesel or probably released within the last two years. Based on BP's was determined to be a relatively "fresh" diesel/fuel oil product sample collected from the top of the standing water, the floating oil Letter Report. Based on the fingerprinting forensic analysis of the from David Greffenius and attached with LNAPL Forensic Analysis DEC requires arrangements to complete this task immediately. Email to be pumping out the water and completely fill the excavation to grade. the only way could be rectified in order to prevent future impacts to the area residents as well as reduce and/or eliminate future complaints. The only way could be pumping out the water and completely fill the excavation to grade. DEC requires arrangements to complete this task immediately. Email from David Greffenius and attached with LNAPL Forensic Analysis Letter Report. Based on the fingerprinting forensic analysis of the sample collected from the top of the standing water, the floating oil was determined to be a relatively "fresh" diesel/fuel oil product probably released within the last two years. Based on BP's underground storage tank (UST) registration records, no diesel or fuel oil USTs were registered at the subject site from 1990 forward. 4/8/2010 - email from David Greffenius. EnviroTrac will begin water pumping operation tomorrow and site backfilling is scheduled for next week. 4/9/2010 - Letter from BP committing to address the odor complaint issue in a timely fashion and the spill remediation. 4/12/2010 - letter to NYC DOB, DOH, DEP notifying the open excavation
issue at the site. 4/13/2010 - email from David Greffenius. Additional water pumping and removal, and site backfilling activities are scheduled to begin on Thursday, April 15. They are planning to bring in 1,000-1,500 yards of additional backfill material to the site (1,500-2,500 tons) over a 2-3 days period. checked spill
97-05330 at 278 6th Street. No investigation has been done at this site. PBS record 2-603857 at 383-393 4th Ave 278 6th Street show one 550-gallon kerosene (#1 fuel oil), one 275-gallon #2 fuel oil, one 4,000-gallon diesel, and one 4,000-gallon gasoline were removed in 3/2008. But no tanks closure report in file. 4/14/2010 - DEC Zhune called the owner of 278 6th Street. The property is sold already and he will call the consultant who did the closure to send the report in. 6/8/2010 - DEC responds to the Dailey News inquiry. Documentation of the backfill of the excavation including 3 photos taken after the backfill on 4/19/2010 were received from Delta. As seen from the photos, the backfill is up to the street level, and the monitoring wells are still in place. 6/9/2010 - DEC inspected the site around 9am and took some photos. No petroleum odors noticed. NO sign of contaminated soil was found. 4Q2009, 3/2/2010, by EnviroTrac. Currently a vacant lot. The monitoring well network was gauged and sampled on 12/28/2009. Due to site flooding several wells were inaccessible during the 12/2009 event (MW-21, MW-22, MW-23, MW-24 were under water) and were subsequently gauged and sampled on 1/22/2010. 6 wells were gauged. No LNAPL. DTW 3.76 - 12.82 (below existing grade?). Flows to northwest. historic flows to south. 6 wells were sampled. MW-24 was under water, not sampled. Max benzene 490 ug/L (MW-25). Max BTEX 2,820 ug/L (MW-25). Max MTBE 120 ug/L (MW-25). 1Q2010, 5/17/2010, by EnviroTrac. The monitoring well network was gauged and monitored on 3/25/2010. 7 wells were gauged. NO LNAPL. DTW 2.19 - 10.23 (below existing grade?). Flows to northwest. 7 wells were sampled. Max benzene 9.1 ug/L (MW-22). Max BTEX 248.6 ug/L (MW-21). Max MTBE 10 ug/L (MW-24). 7/20/2010 - Reviewed Remediation Work Plan for Chemical Oxidation Solution Pilot Application, dated July 12, 2010, by Delta. During the week of June 21, 2010, Delta installed 6 soil borings in the portion near the 4th Ave. SB-8 (12-13), 1,302,600 ug/kg total VOCs. SB-8 (20-21), 12,568 total VOCs. SB-9 (8-10), 1,884 total VOCs. SB-9 (19-20), 525 VOCs. SB-10 (7.5-10), 828,240 VOCs. SB-10 (15-16), 217 total VOCs. MW-14 (11-12), 167,549 total VOCs. MW-14 (17-18), 15,788 total VOCs. MW-15 (7.5-10), 318,470 total VOCs. MW-15 (14-15), 15,908 total VOCs. Soil borings turned into MW-14, MW-15 and MW-16. soil sample was not recovered and therefore no sample was collected for MW-16.
Delta proposes to inject iron activated sodium persulfate and a pilot will be conducted first. 2 application wells AW-1 and AW-2 will be installed in the northwest portion of the site. The application wells will be installed to 15 feet bg with 10 feet 4-inch diameter screen. 500 gallon of sodium persulfate/EDTA-chelated Fe(II) solution (0.50 kg/gal/0.01 kg/gal EDTA-Fe(II) as Fe) will be added into the two application wells. Surrounding wells MW-15, MW-16 and MW-22 will be monitored. Pre-application sampling will be included BTEX/MTBE, sulfate, DO, pH, ORP, and alkalinity. Sampling will be also conducted the day of the application, following day, and weekly for 2 weeks. Anticipated the pilot to be conducted the final week of 7/2010. ChemOx pilot work plan is approved. Report due 8/2010.10/26/10 The site is temporarily reassigned to Alex Zhitomirsky as per V. Brevdo and M. Tibbe. I went to the site today. There is some standing water and some residential garbage at the site. I could not smell any odor.
An e-mail with my findings was sent to V. Brevdo and M. Tibbe. AZ 4/11/2011 - Spill transferred back to JFeng. 6/24/2011 - On June 24, 2011, DEC reviewed the work plan proposing full scale ChemOx injection. Then DEC was also notified by the developer that they have financing coming into place and plan again to develop the site. A conference call was held on June 28th with BP, its consultant, and the property developer. The developer is planning to construct a building with a full basement that will cover the entire footprint of the property; with the basement only to a depth at which dewatering will not be needed. As such, BP will need to change plans - the developer agreed to provide us with their construction drawings, and BP agreed to provide a work plan for a focused investigation to determine whether they could over-excavate to remove remaining impacts; we also spoke about the need for continued gw monitoring which would likely need to include wells in the basement.8/1/2011 - Reviewed Soil Investigation Work Plan, dated 7/14/2011, by Antea Group. 8 soil borings were proposed in order to identify remaining soil contamination. Comments: the drilling should be beyond the historical contamination depth until hitting clean soil; sewer information in the sidewalk of 4th Ave; the 1997 misfiled oil burner replacement Block 987 Lot 11, but address 363 4th Ave; and if this site is a e-designated site under NYC DEP. 8/9/2011 - meeting with BP and Antea Group. Discussed the submitted IWP. DEC required the drilling down to the clean depth in order to vertically profile of the soil and identify remaining soil contamination. Revised IWP will be submitted. 9/9/2011 - reviewed additional revision of the IWP submitted via email by Antea Group on 9/5/2011. "reduced" PID reading is defined as immeasurable reading. So soil samples from the water table interface, highest PID reading, reduced PID reading, and 3 feet below reduced PID reading will be taken. 9/9/2011 - approved IWP for installing 8 soil borings to assess the current soil condition. Report due 12/2011, 10/27/2011 - 2Q2011, 9/7/2011, by Antea Group. The groundwater samples were collected on June 6, 2011. 10 wells were sampled. NO LNAPL. BTEX concentration increased from the last quarterly sampling results. MW-14, 36,320 ug/L BTEX, less than 25 ug/L MTBE. MW-15, 8,230 ug/L BTEX, less than 5.0 ug/L MTBE. MW-21, 1,060 ug/L BTEX, 97 ug/L MTBE. MW-25, 195 ug/L BTEX, 21 ug/L MTBE. 11/22/11 - Raphael Ketani. Arnie Fleming of Fleming-Lee-Shue (212) 675-3225 called me today about the case. He said that FLS is the consultant for the new developer. The site has an "E" designation. He said that BP is moving slowly on remediating the site. However, the site was excavated and oil flowed out from the east wall. Mr. Fleming stated that there is a yard area that belongs to the condominium building next door and that this would be a good place to do the investigation. However, the condominium has not been cooperative about letting BP’s crew on the neighboring property. I told Mr. Fleming to send DEC the contact information for the condominium and we will pursue acquiring access for an investigation on their property. He said that he will. 11/22/2011 - As per Ketani, spill 11-10410 was generated for the offsite issue. 11/23/2011 - sent via email to Naftali Group LLC the stipulation agreement along with corrective action plan. As per DEC Ketani, sent letter notifying petroleum contamination at 270 Fifth Street and required investigation. Response is required within 15 days in receipt of the letter. Letter was sent to: 270 Fifth Street Corp. 270 Fifth Street Brooklyn, NY 11215BPC Management84 Livingston Street Brooklyn, NY 1120111/29/2011 - Reviewed Investigation Summary Report, dated
October 28, 2011, by Antea Group. 6 soil borings were installed in the central portion and western portion along 4th Ave of the site. The borings were advanced to 20 to 30 feet bgs where a peat layer was encountered. Very high total VOCs and SVOCs were detected in various location. For total VOCs in soil samples ug/kg, SB-26 (7.5-9) 54,300, (15-16) dark NAPL stain 17,801, (20-21), 30.2, SB-29 (10-11) 155,380, (13.75-14.25) odd staining 236,111, (27-28) 26.19, SB-30 (7.25-8.25) staining 251,429, (22.33-22.66) stain with product 18,287, (25-26.33) 23,781. SB-31 (3.5-4) 108,609, (9-10) odor sheen on acetate 1,017,620, (29-30) 8,217. SB-32 (3.5-4) 2,990, (10-15) 17,024, (20-22) 334.7. For SVOCs, SB-26 (15-16) 1,907,400. SB-30 (22.33-22.66) 1,653,800. Antea concluded that soil contamination were identified in the central area of the site and along western border by 4th Ave. Varied depth 3.5 to greater than 20’ and soil staining showed visible evidence of a heavier than gasoline grade of hydrocarbon in some location. Excavation alone may not be possible to remediate. Will propose vapor barrier and SSDS and development of a post construction remediation strategy to address the impacts. 11/30/2011 - letter to BP and requiring a RAWP to be submitted by 1/2012. DEC require the contaminated soil to be excavated, install hydraulic barrier to prevent site recontamination by the seeping oil, and vapor barrier + SSDS for the future building. The letter which was sent to the apartment building was attached as per DEC Paul John’s request.

12/9/11 - Raphael Ketani. Today there was a conference call with Arnie Fleming of Fleming Lee Shue, Hassan Hussein, head of the Hazardous Materials Unit, June Feng, project manager, and myself. Mr. Fleming commented about the oil seep that was coming in from the east side of the property. I told him that the DEC wanted BP to excavate about 16 feet at each location that showed excessive contamination (above CP-51 standards). Mr. Fleming said that BP had made a determination that these locations were too deep to excavate. Wells would be put in the sidewalk. Mr. Fleming also stated that he had bad experiences with installing wells through a vapor barrier. Once you open the wells to sample them, then the vapors come out and the VOCs are suddenly high in the building. He added that his client, the latest developer, was willing to install a 150 foot long curtain to prevent the oil from seeping onto the property. They would excavate to 10 feet below grade, the foundation level, and drive sheeting along the east border. He suggested ordering a STIP for his client to hold him as responsible for installing the 150 foot long curtain wall. He said that he believed that chemical oxidation can work. The soil is sandy. He can use pressure pulse technology to treat the contamination. Mr. Fleming went on to describe how this technology works and the benefits. After this, the conference ended.

12/15/11 - Raphael Ketani. Today I received a response letter from Mr. Onufrek of Atlantic Richfield Company (ARCO). In the letter, Mr. Onufrek states that he is responding to DEC’s 11/30/11 letter requesting a RAWP describing the excavation of the contaminated soil and the construction of a barrier in order to prevent the oil from the neighboring condo building from migrating onto the subject former BP property. Mr. Onufrek writes that ARCO disagrees with taking any responsibility for any off site oil that is migrating onto the property. However, he also wrote that the site owner, 267 Sixth Street LLC, is willing to pay for the barrier. ARCO will submit a RAWP for only excavating the contaminated soil at the site.

12/16/11 - Raphael Ketani. I sent a response letter stating that ARCO should submit a RAWP just for the excavation. However, I added that the
containment and cleanup of the off site oil should be worked out between 267 Sixth Street LLC, 267 Development LLC and the owners of the neighboring condo building (270 5th Street), responsible party: ARCO (BP #13397) owner of site: 267 Sixth Street LLC developer: 267 Development LLC neighbor: 270 5th Street (condo) 12/27/11 - Raphael Ketani. Kevin McGuinness (developer's consultant) (212) 675-3225 called. He said that the developer and BP have reached an agreement regarding the retaining wall for holding back the oil on the east side of the property. BP will submit a work plan for only the west side excavation and the developer will submit a work plan for only the retaining wall construction. This was being done because the developer is under a short time constraint whereby he has to start work by a certain date. I told Mr. McGuinness that the submission of two work plans was fine. Mr. McGuinness responded that the DEC should receive the wall work plan by January 9, 2012. I asked him who was the owner of the site. He said that it was still BP. 1/5/12 - Raphael Ketani. I received the 1/4/12 Hydraulic Barrier RAP from Fleming Lee Shue for preventing the seepage of oil onto the site from the property to the east. I found the RAP to be acceptable for installing the steel sheet piling wall. I sent a letter to Mr. McGuinness stating this and an e-mail. I also had received the 1/3/12 Remedial Action Plan - Chemical Oxidation from the Antea Group. The basis of the plan was to use chemical oxidation and soil vapor intrusion to remove the contamination from the soil and the groundwater. Within the plan, there were diagrams showing the installation of piping for accessing the wells remotely after the site is developed and a building is constructed. The idea was that remediation would continue after site development. This I did not believe was a good plan. The reason being that if the treatment methods didn't perform as expected, then there would be no other options for the remediation, except natural attenuation. From the 9/28/-29/11 sample data in the work plan, the locations of concern for the soil contamination were SB-26 and SB-29 to SB-32. SB-26 = 7.5'-9' 54,300 ppb total VOCs; 15'-16' 17,801 ppb total VOCs and 1,907,400 ppb total SVOCs SB-29 = 10'-11' 155,380 ppb total VOCs; 13.75'-14.25' 236,111 ppb total VOCs SB-30 = 7.25'-8.25' 251,429 ppb total VOCs; 22.33'-22.56' 18,287 ppb total VOCs and 1,653,800 ppb total SVOCs; 25'-26.33' 23,781 ppb total VOCs SB-31 = 1.5'-4' 108,699 ppb total VOCs; 9'-10' 1,017,620 ppb total VOCs; 29.65'-30' 8,217 ppb total VOCs SB-32 = 10'-15' 17,024 ppb total VOCs The locations of concern for the groundwater contamination were MW-14 (3/10/11 NAPL; 9/6/11 34,880 ppb total VOCs) and MW-15 (9/6/11 3,022 ppb total VOCs). I sent a letter approving the 1/3/12 RAP - Chemical Oxidation for conducting the work before the property construction. I disapproved the installation of the remote conduit piping before the building construction. In the letter, I also let the Antea Group know that they have to come up with an alternative method of remediation in the event that the treatment methods fail to achieve a level of remediation that is at or below the standards. 1/10/12 - Raphael Ketani. I sent an addendum letter to my 1/9/12 letter regarding the Chemical Oxidation RAP. In this letter, I stated that Atlantic Richfield has to delineate the off site groundwater contamination, as depicted in the last diagram in the 1/3/12 Chemical Oxidation RAP. The diagram shows a hot spot of 16,385 ppb of total BTEX that abuts the fencing on the northwest side (4th Avenue). In the letter, I added that if the chemical treatments don't reduce the soil and groundwater contamination to or below the CP-S1 standards, then they should consider excavation. Mr. Fleming
(212) 675-3225 called in the morning. He tried to convince me to let
the building be constructed first and have the piping for the
solution treatment wells installed at the same time before the
remediation takes place. I told him that my experience has shown me
that this method doesn’t usually work. I added that if the treatment
solutions don’t work, then everyone is stuck with high contamination
below the new building. Mr. Fleming said that the developer is under
a deadline to start the construction or else he will lose the money.
I told Mr. Fleming that the idea of treating the soil and groundwater
after the construction was unacceptable. Later in the morning Mr.
Fleming called again. He said that the sheet piles could be made to
go down more than 10 feet. He also stated that they could excavate
the site generally down to 14 feet with no problems, excavate some
small hot spots to 16 feet, and, if necessary, then drive the piling
deeper and excavate further down. I told him this sounded alright.
Mr. Fleming closed the conversation by stating that he will have a
conference call with his client and Atlantic Richfield in a few
minutes to discuss the plan. 1/19/12 - Raphael Ketani. Mr. Fleming
(212) 675-3225 called today. We had a 30 minute phone conversation
regarding the site. He argued for having DEC give a verbal approval
to allow the construction company to put in piles and excavate
generally to 10 feet down. He said that, at that point, they would
dig out the contaminated soil in places down to 13 feet (this was 3
feet shallower than he had told me before). Then BP would inject lots
of treatment solution into the soil in order to break down the
contamination. After this, access piping would be installed for
possible future injections and groundwater monitoring. Then the
building would be built. I told Mr. Fleming that with the building
constructed, you can’t take confirmatory soil samples in order to see
whether the treatment solutions did the job of reducing the
contamination. Mr. Fleming stated that we would know whether the
contamination has been sufficiently reduced by monitoring the
groundwater. If the groundwater concentrations are low, then the
treatments are being successful. He added that more treatments would
be able to take place if needed. I told Mr. Fleming that all of the
hot spots should be dug out. That’s the best way to deal with this.
Mr. Fleming said that the edge of the property is right up against an
8 foot NYC sewer main and this main is between the site and the
subway. I told Mr. Fleming that he had never stated this before. He
said that he found this out yesterday when the owner sent him the
building drawings. I asked him how deep this sewer was. He said that
being 8 feet, it’s one of Brooklyn’s main sewers. So it must be at
least 15 below grade. Mr. Fleming added that he had spoken to the NYC
OER and had asked them what would satisfy their requirements for
remediation of the site. He said that they told him “Whatever DEC
wants." I told Mr. Fleming that this was not an answer and that we
always want the contamination cleaned up first. Mr. Fleming said that
his client was willing to wait several months for the injected
solutions to do their work and then build. However, if this is going
to drag on for a year or two, then his client will just walk away
from the project. I told Mr. Fleming to send the DEC a letter
describing what he is proposing with lots of pictures, diagrams and
drawings showing the sewer and I will take a look at his proposal.
However, I stated, “I will not promise him anything over the phone.”
He said that this didn’t sound good, but he will send me the
plan. 1/20/12 - Raphael Ketani. Mr. Fleming (212) 675-3225 called me
today. He said that he had spoken to his client and had worked out a
plan whereby treatment solution injection and confirmatory soil sampling would be possible even with the foundation in place. I asked him how he would accomplish this. He said that 12 inch access ports would be built into the foundation so that drilling can take place in order to inject treatment solutions and take confirmatory samples. Then I asked him how additional treatment solution injections would take place. Mr. Fleming stated that special wells would be installed into the sidewalk that would have very long risers which would curve under the foundation and go into the water table. I told him to send me plans showing the access ports, the 8 foot sewer and the groundwater sampling wells. Mr. Fleming said that he will later in the day, Mr. Fleming sent me the plans (4/2/09 foundation plan and 1/29/12 groundwater well sampling plan). 1/23/12 - Raphael Ketani. I reviewed the plans and my notes from my conversations with Mr. Fleming on 1/19/12 and 1/20/12 and before. I sent Mr. Onufriak of ARCO, Mr. Hinshalwood of Antea and Mr. McGuinness of Fleming Lee Shue a letter approving the plan to construct the 12 inch diameter access ports and the groundwater monitoring wells with the very long risers. I stated in the letter that they should try to dig out as much of the contamination as is possible before embarking on the foundation construction. I included copies of the boring and well locations for every boring and well that had elevated VOCs and SVOCs since the project had begun. I also included copies of the DEC 1/9/12 letter warning of possible damage to the subway tunnel walls if they use sodium persulfate, and that they should include a work schedule for each step of the access port and well construction, and foundation construction. 1/30/12 - Raphael Ketani. Dan Cole of the NYC Office of Environmental Remediation (212) 341-0964 called regarding the site. He stated that he wanted to have the owner install a much thicker vapor barrier that would be impervious to product, also. I asked him how thick a barrier. He said 20 MILS. I told him to send a letter to the owners with a "c-c" to me (after the owners agree to this) stating that the barrier will be 20 MILS. Mr. Cole said that he will. I received an e-mail from Mr. Cole as a "c-c." The e-mail was sent to Toni Finger of Kramer Levin (presumably the developer's lawyer). It stated that the OER needed several things in order to close out its review for the site: notarized affidavit from the buyer stating that the previously issued DOB job number will be used for development of the project; information about how the 20 MIL vapor barrier will be installed; a signed and stamped letter from Karl Fischer summarizing the full project description. Upon receipt of the above information, the OER will issue a Notice of No Objection. 2/1/12 - Raphael Ketani. On 1/31/12 and 2/1/12, the Naftali 1/31/12 OER Notice to Proceed, the Witek 1/30/12 Affidavit, the KFA Architects 1/30/12 Affidavit and the 1/12 Grace Letter were sent to Mr. Cole. On 1/31/12, Mr. Cole sent a Notice of No Objection to Mr. Finger for DOB Job No. NB-310071294.2/21/12 - Raphael Ketani. Peter Helseth of Fleming-Lee Shue sent an e-mail containing a document describing the use of steel sheet piling in combination with a sealant. This barrier system would be used to prevent oil from seeping onto the site. I responded back by stating that it was the responsibility of the consultant and the developer to make sure that the barrier is appropriate and efficacious. 2/24/12 - Raphael Ketani. Today, I received a letter from Gordon Hinshalwood, PhD. of Antea Group. In the letter Dr. Hinshalwood stated that the 1/3/12 Remedial Action Plan - Chemical Oxidation was being implemented. Excavation will take place generally to 13 feet below grade, and deeper where it is feasible to remove...
more contaminated soil. The additional soil impacts and the
historical groundwater impacts were expected to be addressed by the
actions described in the Remedial Action Plan. In addition,
redevelopment is scheduled for 2/20/12. Once the basement level
excavation is complete, then the ISCO application wells, associated
piping and monitoring wells will be installed within 30 days. Also,
during this time, the SSDS, vapor barrier and soil sampling access
ports will be installed. Redevelopment will be completed in 12 to 24
months. After this time, the soil sampling ports will be sealed and
the ability to evaluate the treatments will be very limited. The
remedial activities schedule was included in the letter. The first
round of solution applications will take place within 14 days of
installing the wells. Three additional rounds of solution application
are indicated (if this many will be necessary to treat the
contamination). Post application soil and groundwater sampling will
take place one month after each application. So Dr. Hinshalwood
expects the entire remediation process to take no more than 12 months
following the initial phase of construction. 2/27/12 - Raphael Ketani.
I sent an e-mail to Dr. Hinshalwood again warning him about the use
of sodium persulfate near a subway structure and to contact the NYCT
about its use at the site. I also again asked for the soil
descriptions and calculations that were used to determine how much
treatment solution would be necessary to remediate the contamination.
I contacted the NYCT about the intended use of sodium persulfate by
Antea Group, but I could only leave a message. Later, Dr. Hinshalwood
called me in response to my e-mail. He said that Antea had contacted
the NYCT regarding the proposed treatment solution injections and
they are in the process for getting a permit to do the injections.
Also, we discussed what type of information the DEC wanted in order
to understand whether the solution injections will proceed as
planned. Dr. Hinshalwood will send an addendum letter with the
information. 3/1/12 - Raphael Ketani. Peter Helseth, P.E. of
Fleming-Lee Shue sent me an e-mail with an attachment showing an
alternative product for use as a hydraulic barrier. 3/2/12 - Raphael
Ketani. Dr. Hinshalwood sent me an e-mail today. He stated that Clean
Earth of Carteret, NJ will be the destination for the contaminated
soil that will be excavated. No soil will leave the site until he has
an acceptance letter from Clean Earth. 3/12/12 - Raphael Ketani. Dr.
Hinshalwood sent me the "Addendum to Proposed Schedule for
Implementation of Remedial Action Plan" dated 3/12/12 and produced by
Antea Group. In the RAP, Dr. Hinshalwood explained that a permit
application to use sodium persulfate was submitted to the NYCT on
2/22/12. Boring logs and Rockware software were used to create cross
sections of the site. The soils are predominantly sand and silty sand
with peat in the central portion of the site. Soil porosity varies
from 25% to 30%. Permeability is from 10-2 to 10-4 darcys, but is
highly variable. Cross sectional diagrams were provided which
depicted the lateral distribution of the sand, silty sand and peat in
the subsurface. He also explained that a pilot test was conducted in
the northwest corner of the property in the vicinity of MW-15 and
MW-16. The treatment solution was injected into the 4' to 14'
interval. It was found that AW-2 would only accept 150 gals. of
solution over the course of a day. While AW-1 would accept up to 280
gals. of solution per day. Dr. Hinshalwood stated that, given the
limited reagent volume to be used, it will not affect the subway. The
volumes to be used per injection well will likely be 150 to 300 gals.
per day. The solution density will be no more than 0.5 kg/gal. The
CON ED - V 3685 (Continued)

Mr. Fleming said that this was presently being discussed as he let his contractor do the excavation and back bill the condo. They weren't moving. I told Mr. Fleming to suggest to Mr. Naftali that they install 13 feet high steel sheeting when they found free product running into the site from the neighbor's soil. They also saw that the future building foundation. The wall will be deep enough to stop the migration of the oil from the condo property which is appearing at 10 to 13 feet below grade. I told Mr. Fleming that this would be fine and to send me a new work plan. Mr. Fleming said that they are anxious to start the work and the DEC will receive the plan very soon.

4/25/12 - Raphael Ketani. Mr. Fleming (212) 675-3225 called today. He said that they had wanted to drive the steel sheet piling between the neighboring condo building and the site. However, they found out that the building had already been damaged from vibrations caused by the previous demolition and excavation work to remove the old gas station. The condo building was built in 1911 and can't take any vibrations. The NYC Dept of Buildings has required that seismometers be placed next to the building in order to measure the vibrations. If there are significant vibrations, then all work will have to stop.

Mr. Fleming said that this would make it impossible to install the steel sheeting as originally planned. However, he had an alternative method in mind. As the water table is about 20 feet down, he told me that after they have removed the cover soil down to 10 feet below grade, the construction company can dig a trench that extends 10 feet deeper along the property boundary with the condo property. Once this trench is constructed they will hand install, not drive, steel sheeting such that they will have a wall that is 20 feet high. The base of the steel wall will be below the water table and will be keyed into the future building foundation. The wall will be deep enough to stop the migration of the oil from the condo property which is appearing at 10 to 13 feet below grade. I told Mr. Fleming that this would be fine and to send me a new work plan. Mr. Fleming said that they are anxious to start the work and the DEC will receive the plan very soon.

4/25/12 - Raphael Ketani. Mr. Fleming (212) 675-3225 called today. He said that they had wanted to drive the steel sheet piling between the neighboring condo building and the site. However, they found out that the building had already been damaged from vibrations caused by the previous demolition and excavation work to remove the old gas station. The condo building was built in 1911 and can't take any vibrations. The NYC Dept of Buildings has required that seismometers be placed next to the building in order to measure the vibrations. If there are significant vibrations, then all work will have to stop.
already has his equipment and trucks on site. After this, the conversation ended. 5/2/12 - Raphael Ketani. Arnie Fleming of Fleming Lee Shue called. He is the consultant for the developer of the neighboring site to the west (363 4th Avenue; #8901904). He said that he was at the co-op site yesterday and the contractors had emptied and cleaned out the tank. Because of this, the oil seepage onto 363 4th Avenue had stopped. The tank on the co-op property was a 1,000 gals. and was 2 feet away from the border between the two properties. No piping was found associated with the tank. Mr. Fleming said that he was dewatering his client’s property and no oil was flowing in. However, he told Mr. Yu of Yu & Associates that he should start digging out the contaminated soil around the tank as he will stop dewatering and then Yu & Associates will have to do their own dewatering in order to remove the contaminated soil. Mr. Yu said that he was waiting for the co-op board to meet in order to give him a decision regarding whether he can proceed with the remediation work. Mr. Yu also state that an oil sample was sent off for fingerprinting. So everyone is waiting for the results. Mr. Fleming said that he emphasized to Mr. Yu that he should take advantage of the present dewatering because it will save him some money. Also, I sent an e-mail to Mr. Fleming stating that the steel sheeting didn’t need to be installed as no oil was seeping onto the property and because the only purpose for installing the sheeting was to prevent the seepage. Later today, Rodney Rivera from the Regional Direction office of Region 2 came to the DER floor. He said that there had been a dust and petroleum odor complaint by someone from the co-op next door to Channel 11 News. Mr. Rivera was trying to find out what was happening at the site. I spoke to him and told him that this was the first time that I had been told there were dust and odor problems at the site. I also explained that excavation work was supposed to take place as part of the remediation of the site. However, I also told Mr. Rivera that the UST under the co-op property had just been cleaned out and had leaked oil into the ground. So this may also be a source of odors. Next, I spoke to one of the supervisors in the Spills Unit and he ordered a person in his unit to go and investigate the complaint. Next, I contacted Mr. Fleming (212) 675-3225. He said that he is aware that there are odors, but there isn’t a significant problem with the dust. However, they are usually mild. However, there are instances of strong odors when they dig in the site to put the pile caps for the foundation. These odors usually affect a resident in the first floor of the co-op as his apartment is right next to the digging. Mr. Fleming also stated that this person’s apartment is 5 feet from the newly discovered UST which was just cleaned out. So there will be odors when the soil is dug out in this location. A consultant from PAL Environmental is walking around the site with a PID meter and checking the odor levels. The first floor apartment was investigated for odors, but they are mild. I told Mr. Fleming that he will have to come up with a solution to the odor problem in order to alleviate the issue for this resident. Mr. Fleming said that he will send the DEC a plan in writing, but they will first try sealing the person’s windows with plastic and caulk so that there are no air leaks. Maybe this will solve the problem. I asked Mr. Fleming what he and his crew are doing about the odors. Mr. Fleming said that the odors only happen with the initial dig into a location and then they quickly dissipate. However, he is using biosolve (a masking agent). Also, Fleming Lee Shue is now starting to dig out the hot spots. I asked Mr. Fleming to keep me informed. He said that he will.
Spill investigator contacted DER from the site and reported back that presently there were no odors. 5/7/12 - Raphael Ketani. Vanessa Meer of Yu & Associates (201) 791-0075, 116 called today and left a message. I tried to return her call, but could only leave a responding message. 5/8/12 - Raphael Ketani. I spoke to Mr. Fleming (212) 675-3225 today. I told him that there had been another odor complaint and the EPA was now involved. He said that the neighbor who had been complaining was moved into a hotel across the street from his apartment building. I told him that was fine and I asked who had arranged this. He said that it was the contractor. I asked Mr. Fleming to find out the name of the person who was affected by the odors. Mr. Fleming said that he will. Mr. Fleming added that the odors are of gasoline, not fuel oil. So everytime they dig, some odors appear. He said that he has a guy walking around the site with a PID meter and checking that there are no exceedences of the 10 ppm standard. However, if there are, then the work stops to let the odors dissipate. An odor suppressing material was put down, but it's not very effective. Mr. Fleming added that the NYC DOB came by and stopped the work. There's a stop work order. He doesn't know why this happened, but they usually don't get involved in odor complaints. On another note, Mr. Fleming said that they are presently dewatering the site and the water table has been depressed 3 feet. So, if the contractors from Yu & Associates want to, now is the time to dig out the soil contamination. I told Mr. Fleming that the co-op may not be ready to remediate the spill. 5/9/12 - Raphael Ketani. I spoke to Ryan Piper, EG I of the Region Spills Unit, about the latest odor incident. He said that the odor incident was called into the Spills Hotline by the NYC DEP. The incident was assigned spill number 1200916. Mr. Piper told me that he went to the site, but didn't find any odors. I told him that the citizen who had been complaining about odors in his apartment had been moved to a hotel. I asked him whether he knew the name of the citizen. Mr. Piper said that he didn't. However, he said that the spill case had been closed and referred back to this one. Tona Construction and Management, 615 Baltic Street, Brooklyn, 11217 is the construction company. The contact is Michael Izzo, General Superintendent, at (718) 399-3800/cell (718) 825-9309. 5/11/12 - Raphael Ketani. Steve Sangesland, Duty Desk Officer for the Region 2 Spills Unit, gave me a note that Matt Law (718) 593-9028 had tried to contact someone at the DEC regarding odors from the former BP station. I spoke to Mr. Law at length about the site, about the nature of the contamination (that is was just gasoline) and about the procedures for monitoring and managing the vapors and odors. He said that he was concerned that something else had contaminated the site, other than gasoline. I asked him whether he was the resident who had been moved to the hotel. Mr. Law said that he was not and that he lives on the other side of the building from the site. He stated that he was glad that the DEC was aware of the situation and that the contractors were managing the odors. I explained that they are working to get rid of the contamination as fast as possible in order to alleviate the odors and that the building that will be built will have a vapor barrier and a passive vapor venting system. So this building will be safe to live in. With that, Mr. Law thanked me for all of the information and the conversation ended. 5/18/12 - Raphael Ketani. I received a copy of a letter today by e-mail from Antea Group. The letter was dated 5/16/12 and was sent by Antea Group in response to comments by the NYCT regarding the use of sodium persulfate to treat the contamination and...
the extent of the contamination. I reviewed the letter. From its contents, I determined that Antea Group had adequately responded to the NYCT’s comments and concerns. 5/30/12 - Raphael Ketani. I received an e-mail today from Peter Helseth of Fleming Lee Shue. He stated that most of the foundation elements have been constructed on the site and the area for the foundation walls has been capped with clean stone. There is no more exposed soil, nor excavating taking place. So air monitoring has been stopped. 6/7/12 - Raphael Ketani. I received a call from Jay Solomon (212) 661-9400, the attorney for the Shepherd family that had been moved out of apartment 1G at 270 5th Street. He said that when the foundation was laid at the construction site next door, lots of oil vapors entered the apartment and the parents and two kids had to be moved into a hotel temporarily. However, he added that the foundation work has been finished. I told Mr. Solomon to contact the company responsible for the air monitoring and have them do a followup indoor air inspection just to be sure everything is alright. He said that the vapors had come from the construction site. I told him that the vapors would more likely come from the 1,080 gal. UST site because there is lots of contaminated soil there and this location is much closer to apartment 1G. Mr. Solomon didn’t comment on this. I added that once the tank is removed, the contamination in the soil is exposed and the oil will vaporize. In any event, I said, it would be good to have a followup indoor air survey done of the apartment. I told him that Fleming Lee Shue was the consultant in charge of setting up the air monitoring and he should contact them. With that, the conversation ended. I tried to contact Mr. Fleming (212) 675-3225 regarding the attorney’s request for another indoor air inspection, but I could only leave a message. Mr. Helseth from Fleming Lee Shue called in response to my message. He said that Mr. Fleming was out today, but he will take care of anything that’s an issue. I explained that Mr. Solomon had called and wanted a vapor survey performed in his client’s apartment. Mr. Helseth said that this will be done. I added that a vapor survey should also be done in the hallway outside the apartment, outside the building itself and next to the excavation area for the 1,080 UST. Mr. Helseth said that this will be done. Later, Mr. Fleming called. We discussed the issue of doing a PID survey in the Shepherd’s apartment. I told him that the DEC also wanted a survey inside the building’s hallway, just outside the apartment, just outside the apartment in order to get the ambient air concentrations, then next to the UST removal site and finally next to the border of the two concerned properties (condo and excavation site). Mr. Fleming said that he will talk to his client about this. Some time later, Mr. Fleming left a phone message that all parties had agreed to do the vapor surveying. The co-op board was being contacted and it was hoped that the surveying will take place tomorrow, 6/8/12. Mr. Fleming stated that he will keep me posted. 6/8/12 - Raphael Ketani. Mr. Fleming (212) 675-3225 called me regarding doing the vapor testing inside apartment 1G at the co-op and outside at the UST excavation location. Mr. Fleming told me that the lawyer told him not to enter the property and that Yu & Associates will do the work. I told Mr. Fleming that it didn’t matter who was going to do the testing, just that the DEC gets the data. Later, I contacted Mr. Leung (201) 791-0075/cell (201) 310-2501 and explained that I wanted Yu & Associates to do the vapor survey. Mr. Leung said that more than one resident had been complaining about vapors from the BP site a while ago. I asked him whether they still were complaining. He said “No.” Mr. Leung added that nothing is
Friday (June 15), we completed the installation of the ISCO with the RAP that was approved by the NYSDEC on March 15th, last been a little while since we discussed this project. In accordance Hinshalwood, I thought this update was appropriate. I realize it’s follow-up to the conversation you had yesterday with Gordon Chris Meyer of Antea Group sent me the following e-mail:As a project. With this, the conversation ended. 6/19/12 - Raphael Ketani. talk to Chris Meyer (914) 495-9937, the portfolio manager, about the would be fine. As an alternate, Dr. Hinshalwood said, I could also regarding the project and the solution injecting. I told him that doing the injections wood not be possible as the floor would be Hinshalwood that was correct, but Mr. Fleming had lead me to believe that doing the injections woud not be possible as the floor would be completed. Dr. Hinshalwood said that they would bore through the floor to install the needed wells. He added that he was not the project manager anymore. He said that the new project manager is Tim Fisher (914) 495-9935. He said that he will have Mr. Fisher call me regarding the project and the solution injecting. I told him that would be fine. As an alternate, Dr. Hinshalwood said, I could also talk to Chris Meyer (914) 495-9937, the portfolio manager, about the project. With this, the conversation ended. 6/19/12 - Raphael Ketani. Chris Meyer of Antea Group sent me the following e-mail:As a follow-up to the conversation you had yesterday with Gordon Hinshalwood, I thought this update was appropriate. I realize it’s been a little while since we discussed this project. In accordance with the RAP that was approved by the NYSDEC on March 15th, last Friday (June 15), we completed the installation of the ISCO
application wells and ground water monitoring wells along the western property boundary. Installation of the sub slab depressurization piping and soil vapor barrier was also completed last Friday by the developer. Per the email approval you provided to the developer on May 2, the steel sheeting was not installed by the developer. Yesterday (June 18), the developer poured the concrete slab for the building. Today, we are collecting baseline readings from the newly installed monitoring wells present along the western property boundary, as requested by the Transit Authority (TA). At this time we are in the process of coordinating the first ISCO application. We do not have a definitive schedule of when the first application will occur, but we expect it will be in July 6/25/12 - Raphael Ketani. Mr. Meyer sent me an e-mail stating that the first ISCO is scheduled for Thursday, 6/28/12. 7/9/12 - Raphael Ketani. Mr. Fleming (212) 675-3225 called to say that the first injections took place about a week ago. 8/16/12 - Raphael Ketani. Mr. Fleming sent me an e-mail stating that BP installed the groundwater treatment injection pipes and performed the first injection about two weeks ago. However, they were not keeping him in the loop. The building is progressing and is well above grade. 8/22/12 - Raphael Ketani. I responded to Mr. Fleming’s last e-mail and stated that there was a meeting with staff from BP yesterday. They had indicated that the building construction is moving forward and that 3 rounds of injections had already taken place. They were concerned that groundwater injection and confirmatory soil sampling access could be lost as the construction was moving so quickly that the access portals will be closed soon. I added that the groundwater samples to be taken after the treatment injections must be at or close to GA standards. If they are not, then more treatment will have to take place. If the foundation portals are closed up before the groundwater is sufficiently remediated, then the DEC will contact the NYC DOB and the NYC OER and tell them to hold off on issuing the Certificate of Occupancy. Mr. Fleming called me. He said that the soil confirmation access ports will remain open until next summer. The holes will be closed only just before the owner goes for his Certificate of Occupancy. 10/15/12 - Raphael Ketani. I tried to contact Tim Fisher (914) 495-9935 and Chris Meyer (914) 495-9937 of Antea Group, and Nick Onufra (410) 825-8213 of BP regarding progress at the site and whether confirmatory soil borings had been taken and whether groundwater samples had been taken. However, I could only leave voice messages. Mr. Meyer called me back. The last injection was completed. All 8 applications have been completed. The sodium persulfate solutions and EDTA chelated iron are in the ground. On October 22, Antea is going out to do groundwater and soil confirmatory sampling. 10/18/12 - Raphael Ketani. Mr. Meyer called. He said that due to the crane still being in place for constructing the building, the sampling date has been pushed back to October 24. 10/22/12 - Raphael Ketani. Mr. Meyer (914) 495-9937 called. He said that the soil and groundwater confirmatory sampling has been pushed back to November 5, 2012. The sampling will take 5 to 6 days. 11/12/12 - Raphael Ketani. Mr. Fisher left me the following e-mail message today: Today we are beginning the process of collecting confirmation soil and grab ground water samples from below the building slab at former BP station 13397 to determine if impacts remain following the completion of ISCO applications. We expect site activities to last through this Thursday. 1/9/2013 - Raphael Ketani. A conference call took place today between Nick Onufra of BP-ARCO (410) 825-8213, Chris Meyer (914) 495-9937 and Gordon Hinshalwood (914)
495-9950 of Antea Group and myself. The subjects of the call were the
groundwater and soil sample results and the Certificate of Occupancy
for the building. Mr. Onufrak stated that they had received the soil
and groundwater results after 8 rounds of solution injections had
taken place. The results were not good. There wasn’t much
improvement. They wanted to know whether this would affect the
ability of the building’s owner to get the Certificate of Occupancy.
I told him that the poor results will. I added that you can’t have a
building sitting over a pool of oil. The vapors will travel up the
footings and into the concrete walls of the basement - bypassing the
vapor barrier - and then into the building. Mr. Meyer stated that the
building will have a vapor barrier and a passive venting system. I
told everyone that another way to reduce the contamination has to be
found. I added that I had another case with the same problem and they
can’t get a permanent C of O as they have oil seeping under the
property. Their contamination was known, but the owner built his
building anyway. I also said that the DEC would have to contact the
NYC OER and they would let the NYC DOB know that someone has built on
top of contamination that still exists. I asked whether the
groundwater could be extracted. Mr. Meyer said that the wells can’t
pass a pump down the pipe. I asked whether just pushing a hose down
each well would suffice. Mr. Onufrak and Mr. Meyer said that they
will have to consider what can be done. They will send the DEC the
report with the analytical results. Later, I talked to Dan Cole of the
NYC OER and passed the above case notes to him via e-mail. He
responded back by e-mail.1/10/13 - Raphael Ketani. I responded to Mr.
Cole’s 1/9/13 e-mail (see the e-docs). I stated in the e-mail that a
meeting needed to be held with all parties in order to make everyone
aware of the continuing existence of the oil and contamination below
the site. We would also have to discuss what can be done to resolve
this problem.1/24/13 - Raphael Ketani. The meeting took place as
planned. In attendance were representatives from the owner’s
consulting company, the lawyer for the owner, BP, BP’s consultants,
BP’s lawyer, Dan Cole from the NYC OER and myself. I brought up the
issue that despite the numerous rounds of solution injections, the
Department was informed that the contamination was still about as
concentrated as before. I stated that an alternative means of
remediation needed to be found and employed. Mr. Hinshalwood stated
that only a 5% solution was used for the rounds of injections. As the
site is next to the subway tunnel, this was the strength limit of the
solution that the MTA would approve. I told Mr. Hinshalwood that this
explained why the contamination hadn’t been broken down. I again
insisted that a remediation method be found to reduce or remove the
soil contamination. I also stated that there was product on the water
table. Mr. Onufrak and Mr. Meyer stated that they will start using a
vacuum truck to collect the product from one well where they have
seen free oil. I told them to submit a work plan and I gave them 30
days from today to do so. Mr. Onufrak said that this was enough time.
Mr. Onufrak stated that two wells were destroyed during the building
construction. I told him that the re-installation of the wells must
be part of the work plan. I asked them when I will receive the soil
confirmatory sampling data report. Mr. Meyer said that it was still
going through internal review, but the DEC should receive it soon.
The meeting ended with an agreement to present an alternative means
of remediation. 2/1/13 - Raphael Ketani. Mr. Meyer (914) 495-9937
sent me an e-mail stating that a site visit was made on January 30 to
see whether it was possible to position a vacuum truck near some of
the wells in order to collect the groundwater. A location was found where the vacuum truck could park. So the first vacuum event will take place the week of February 11. Stingers will be used to collect groundwater from the observation wells. 2/7/13 - Raphael Ketani. Mr. Meyer sent me the following e-mail: The first VEFR event is scheduled to take place on Wednesday, February 13th. Six consecutive weekly VEFR events are planned. 2/15/13 - Raphael Ketani. I received the following e-mail from Mr. Meyer: The first VEFR event took place this past Wednesday, February 13th. The next VEFR event is scheduled for Wednesday, February 20th to gain additional information. We will also be submitting a VEFR work plan to you next week. I’ve also attached the report we’ve prepared to summarize a number of activities that were implemented as proposed in the Remedial Action Plan - Chemical Oxidation, dated January 3, 2012, the Proposed Schedule for Implementation of Remedial Action Plan addendum, dated February 22, 2012, and the Addendum to Proposed Schedule for Implementation of Remedial Action Plan, dated March 12, 2012. As such, the post-application sampling results we discussed during our meeting in January, are also presented. 2/19/13 - Raphael Ketani. I finished my review of the Antea Group 2/13/13 Remedial Action Summary Report. From 4/11/12 to 5/25/12, 7386 tons of contaminated soil were excavated and taken to Clean Earth of Carteret, NJ. Between 4/26/12 and 6/19/12, 75,297 gals. of groundwater accumulated on site and this was taken to Lorco Petroleum Services in Elizabeth, NJ as non-hazardous waste. The SSDS system was installed prior to construction of the foundation. It consisted of 4 inch schedule 40 PVC piping with 0.020 slots benaeath the concrete basement slab. The piping was laid down in a layer of 3/4 inch crushed stone that is 4 feet thick with 3 risers extending through the slab, which will be extended to the roof. A Grace Preprufe 300R and 160R/Bithuthene 4000 vapor barrier was installed. Eight (8) soil borings were performed from 5/24/12 to 6/12/12. These borings were turned into wells OW-1A to OW-4A and OW-1B to OW-4B. The borings started at the excavation floor. AW-1A were finished at 16 to 19 feet bgs and AW-1B to AW-8B were finished at 24 to 28 feet bgs. Each well was connected with a 2 inch diameter PVC hose. AW-1 (A,B) to AW-4 (A,B) and AW-7(A,B) were used to treat the soil and the groundwater under the western portion of the site. AW-3 (A,B), AW-6 (A,B) and AW-8 (A,B) were installed to treat the soil and groundwater under the central portion of the site. AW-5 (A,B) were installed in order to treat the soil and groundwater under the southwestern portion of the site. Soil samples were only taken from the deep B series of borings due to the proximity to the shallow A series of borings. No soil samples were taken from AW-1B or AW-7B. The analytical results showed exceedences at AW-2B to AW-4B, AW-6B, AW-8B, OW-1B to OW-4B. On 2/21/12 (dated as 2/21/13 in the report), groundwater samples were collected from MW-13, MW-15, MW-16, MW-20, MW-22 and MW-24. The VOC results for MW-13 were all non-detect. Those for MW-15 were extremely high. MW-16 had VOC results from just a little above the TOGS standards to below the standards. The results
for MW-20 were all a little above the standards. MW-22 had 2 high VOC hits with the rest being low to moderate hits. MW-24 had hits from below to 3 a little above the standards. Pre-injection groundwater samples were taken on 6/19/12 from OW-1A to OW-4A and OW-1B to OW-4B. Each of the samples had exceedences for almost all of the TOGS 1.1.1 standards. All of the samples, except for OW-4B, had very high exceedences for total xylenes and ethylbenzene. OW-1A, OW-2A, OW-1B and OW-2B had very high exceedences for 1,2,4-trimethylbenzene. OW-2A, OW-2B, OW-3A and OW-3B had very high benzene exceedences. OW-1A, OW-2A, OW-2B, OW-3A and OW-3B had very high toluene exceedences. OW-1A, OW-1B, OW-2A and OW-2B had very high naphthalene and 1,3,5-trimethylbenzene exceedences. OW-1A, OW-1B and OW-2A had very high n-propylbenzene exceedences. Eight applications were performed from 6/28/12 to 9/20/12. The sodium persulfate solutions were applied over several rounds at a concentration of 50,000 mg/l for each individual injection. This concentration was required by the NYCT as they were concerned that stronger concentrations would affect the subway tunnel bordering the property under 4th Avenue. About 12,800 gals. of 50,000 mg/l solution was injected with ferrous iron as an activation chemical. Staff at Antea Group calculated that an injected concentration of 130,000 mg/l would degrade to 5,000 mg/l at the property boundary, which would further degrade to 15 mg/l at the tunnel. Post injection, 6 borings were performed from 11/12/12 to 11/14/12 to 26.5 to 38.5 feet bgs. These were SB-33 to SB-38. A seventh boring, SB-39, hit refusal at 17 feet bgs and SB-40 hit a void below ground and could not be completed. The analytical results for the soil samples from the 6 borings all had exceedences. SB-33 had extremely high VOC exceedences and many SVOC exceedences. SB-34 was tested only for VOCs and had high hits. The SB-35 results were a little above standards to non-detect. SB-36 had low to high VOCs and SVOCs exceedences. SB-37 had low VOC hits, but extremely high SVOC exceedences. SB-38 had extremely high VOC hits and low to moderate SVOC exceedences. The median soil contamination total concentrations increased after the injections from 12,330 ppb total VOCs to 22,869 ppb. The mean total soil SVOC concentrations decreased from 14,691 ppb to 3914 ppb. Groundwater samples were taken from 11/12/12 to 11/14/12. SB-33 had many very high VOCs, and SVOC exceedences. SB-34 and SB-35 had high to very high VOCs. The water sample from SB-36 had 5 high VOCs and many high SVOC hits. SB-37 had high to very high VOC hits and low to high SVOC hits. SB-38 had many very high VOCs and also SVOC exceedences. Later, groundwater was sampled on 1/8/13 from OW-1A, OW-1B to OW-4A, OW-4B. The groundwater samples from OW-1B, OW-2A, OW-2B and OW-3B had many very high VOC hits and SVOCs which were mostly non-detect to low hits below TOGS with a few low exceedences. The sample from OW-4A had VOC hits from below the standards to 4 very high exceedences. OW-4B had VOC hits from below the standards to several moderate exceedences. I approved the data in the report as it gave a reasonable picture of the degree of soil and groundwater contamination below the site. However, it will remain to be seen how effective the VEFR events are in reducing the groundwater contamination.2/21/13 - Raphael Ketani. I sent Mr. Hinshalwood (914) 495-9950, Mr. Meyer (914) 495-9937 and Mr. Onufrait (410) 825-8213 an e-mail stating that the DEC wanted groundwater to be sampled from the MW, AW and OW series of wells. Mr. Hinshalwood (914) 495-9950 responded back by e-mail stating that the MW series of wells were destroyed by the foundation construction, except for MW-13 which will be used to monitor the groundwater when the construction ends. Also,
he stated that the AW series of wells were not accessible and wells OW-1A and OW-1B had been destroyed, but will be reinstalled. So only 9 wells will be available for monitoring. The OW series are all along 4th Avenue. MW-13 is along 6th Street along the southern border of the property. 2/25/13 - Raphael Ketani. I received the 2/22/13 Antea Group Vacuum Enhanced Fluid Recovery Work Plan. The purpose of the plan is to extract NAPL and contaminated groundwater. VEFR events will take place weekly. Wells OW-1A to OW-3A will be used for VEFRing. Stinger devices will be used in the wells to collect the total liquids. Vacuuming using a vacuum truck will be undertaken for a single well. During the vacuuming event, the radius of influence (ROI) will be determined. Vacuuming will be conducted for 2 hours at each observation well. At the end of each VEFR event, product and groundwater levels will be gauged. The volume of NAPL and groundwater collected will be measured and recorded. The vacuum will be measured every 30 minutes. Vapor concentrations will be measured every 15 minutes using a PID meter. Before any future solution injection applications are performed, it will be determined whether the ROI extends under the western border of the property. Data from the ROI and the VEFR events will be used to determine whether more extraction wells are needed. 2/26/13 - Raphael Ketani. I found the Vacuum Enhanced Fluid Recovery Work Plan to be acceptable with the comment that the product and groundwater gauging must take place before the VEFR or vacuum events take place. I added that monthly progress update reports must be submitted to the DEC by the third week of the month following the VEFR and vacuum events and gauging. The progress reports must include the NAPL and groundwater elevations, the amount of product recovered and the groundwater flow map. I also added that quarterly groundwater analytical reports must be submitted no later than 30 days following the date of sample collection. The sampling must be for the expanded lists of VOCs and SVOCs. I drafted a letter for the review of Mr. Hussein with the above approval and requirements. Mr. Hussein approved the letter and it was sent out. 3/1/13 - Raphael Ketani. Mr. Meyer (914) 495-9937 sent me the below e-mail today: Three vacuum enhanced fluid recovery events were conducted at former service station 13397 on February 13th, February 20th, and February 27th, 2013. The objective of these events was to recover any NAPL that may have been present (as was evident from a sampling event in one of the observation wells along Fourth Avenue in January), and to explore the potential for ground water recovery using this technology on the existing wells (OW-1 through 3), which are located under the newly-constructed building with remote access ports for sampling located in the sidewalk as proposed in the approved Vacuum Enhanced Fluid Recovery Work Plan dated February 22, 2013. Ground water samples were collected from Observation Wells OW-1A, OW-1B, OW-2B and OW-3B on February 27th and will be compared to the"baseline" ground water samples collected from the observation wells in January 2013 (before the VEFR events) to see if there is any significant change in VOC concentrations. Monitoring well MW-13 is located beneath some temporary infrastructure that is being used as part of the building construction. As such, it could not be sampled. To date, minimal water (115 gallons) and no measurable NAPL was recovered during the three extraction events, indicating that the practical application of this technology for hydraulic control is limited. Additionally, no significant vacuum influence was observed in surrounding wells during any of the extraction events, and vapor recovery was minimal as well, indicating that insufficient air flow...
was induced to mobilize significant vapor mass. Given these results, it is unlikely that this remedial approach will recover significant contaminant mass from the subsurface. At this point, no additional extraction events are planned, pending a review of the results of the ground water samples that were collected. Per your approval letter, we will be providing a more formal summary of these results in the third week of March. As I mentioned in my email on 2/21/13, efforts are also underway for Naftali to replace the two sidewalk wells that were destroyed during their construction activities (OW-1 and OW-3A).

I responded by e-mail stating that the Atlantic Richfield Company and Antea Group had to find a way of recovering the contaminated groundwater, even if this meant installing larger diameter wells or more wells.3/6/13 - Raphael Ketani. Mr. Meyer sent me the contact information for the person at the MTA who approved the sodium persulfate treatment plan. This person is Rajen Udeshi (646) 252-3673.3/7/13 - Raphael Ketani. I spoke Mr. Udeshi. He said that he didn’t do the analysis to determine that a 5% solution was required. He added that he is a Principal Engineer and a structural engineer. However, he is only involved in coordinating the treatment solution application process. Mr. Udeshi told me that Emil Dul (dool), Principal Engineer, MTA Environmental Group, at (646) 252-2405 is the person who calculated what the treatment solution concentration should be. I spoke to Mr. Dul. Mr. Dul said that whenever a treatment project is proposed within 200 feet of an MTA tunnel or such, then the Six Agency rule comes into play. He said that the six agencies include the Fire Department, the NYC DOB and a few others. The rule is administered by the NYC DOB. The engineer or architectural drawings need the approval of the six agencies. He said that some time ago, a meeting took place between the consultants from Antea Group and staff from the MTA to discuss the proposed sodium persulfate treatment plan. Mr. Dul added that the MTA was concerned that the treatment solution not leave the site - in other words, be completely used up - so that the subway tunnel would not be affected. Mr. Dul said that once they had all of the information, then they considered the treatment plan, which included drawings showing the locations of the injections points. Staff from the MTA went over the calculations for obtaining the solution mixture that Antea Group wanted to use and what the expected concentration would be at the property boundary. However, Mr. Dul said, he was not sure of all of the details regarding what had transpired. So he wanted to call me back with the rest of his staff to discuss the matter. I told him that would be fine, but that I still wanted to know who in MTA had decided that a 5% solution was the correct concentration. Mr. Dul responded that Antea Group had proposed this in order to make sure the solution would be used up and to prevent its escape from the site. With that, the conversation ended. Later, Mr. Dul called me back and started a conference call with Derrick Braithwaite and Mary Kong, engineers from the MTA. Mr. Dul lead the conversation. He said that the MTA met with Antea Group on 3/27/12. They discussed the proposed treatment plan. On 5/16/12, the MTA sent Antea Group a letter with many questions regarding the injection plan. Antea Group later responded back. Mr. Dul was emphatic that the MTA never asked Antea Group why they were going to use a 5% solution. He added that they never challenged what Antea Group was proposing. The MTA’s only concern was that the treatment solutions not contact...

The subway tunnel. Ms. Kong stated that they wanted sentinel wells installed (which Antea Group did). Antea Group told them that they modeled the injections and had confidence in the model. Mr. Braithwaite said that he went to the site twice to witness the injections. Mr. Dul stated that the MTA simply doesn't want anything getting near the concrete. As long as the groundwater is non-detect for persulfate, then they are happy. He added that the MTA doesn't approve the outside consultant's plans. They only accept them. With that, the conversation ended.

3/12/13 - Raphael Ketani. Mr. Meyer (consultant to BP) sent me an e-mail stating that wells OW-4A and OW-4B will be replaced today.

3/22/13 - Raphael Ketani. Mr. Meyer sent me the 3/22/13 Antea Group Progress Update Report. VEFR events took place on 2/13, 2/20 and 2/27. The wells used were OW-1A, OW-2A and OW-3A. OW-4A was not used as it had been destroyed. No NAPL was recovered during any of the events. Vapor concentrations in the wells were typically less than 100 ppm during each of the VEFR events.

Groundwater was sampled on 2/27 and 3/7 from OW-1A, OW-1B, OW-2B and OW-3B. BTEX was very high in all of the samples and was up to 9840 ppb. Total VOCs ranged up to 11,321 ppb. The SVOCs were only slightly elevated. On 3/12/13, OW-4A-R and OW-4B-R were installed.

5/9/13 - Raphael Ketani. I spoke to Mr. Meyer (914) 495-9937 today regarding progress at the site. He said that Mr. Naftali, the owner, had replaced two wells that his construction crew had damaged. Presently, Antea is working on a work plan to install 6 new wells for groundwater monitoring and product/groundwater recovery. He said that these new wells will be straight instead of curved and so they will be able to do VEFRing. All of the wells will be installed along 4th Avenue. From the excavation along the sidewalk which took place in the past, Antea now knows where the utilities are. So they will be able to hand clear past the utilities and install the wells. Mr. Meyer said that he had the draft work plan on his desk. The final plan will be sent to the DEC soon.

6/4/13 - Raphael Ketani. I reviewed the 6/20/13 Well Installation Work Plan Notification. Antea Group plans to install up to 11 wells. Five of the wells will be installed in the existing 12 inch diameter sampling ports in the basement, SB-33 to SB-37. Three additional dual nested well clusters are also proposed along 4th Avenue. Each cluster will have a shallow screen from 5 to 20 bgs and a deep screen from 20 to 30 feet bgs. The wells will be 4 inches in diameter. The work is scheduled to start in late July.

I approved the work plan with one comment. This regarded the nested pairs of wells that will be installed along 4th Avenue. The figure enclosed in this document shows that the wells in each pair will be closely spaced laterally. The Department is concerned that this arrangement will allow for groundwater cross communication between each well. The construction must be modified in order to prevent this from happening.

8/6/13 - Raphael Ketani. As per the order of Paul John, Environmental Engineer IV/Regional Remediation Engineer, this BP spill case is being transferred to Jeff Vought in Region 2 Spills. Mr. Vought will be the new case manager effective today.

Remarks: TWO 4K TANKS FAILED PETRO. (1) LR = -0.448 GPH, (2) LR = GROSS.

DEC Memo:

** cross reference to spill #1012171 ** Copy of Oct 2009 Phase 2
report which shows the initial contamination identification is
attached in eDocs.2/17/2011 As per AKRF case manager Keri Cibelli, a
Remedial Action Plan (RAP) and Construction Health and Safety Plan
(CHASP) were submitted to NYCDEP in February 2011 for review. During
the proposed development, contaminated soil will be excavated and
disposed in accordance with applicable requirements.6/15/2011
Sangesland spoke to "concerned neighbor" Mr. Tosh Anderson
212-518-1274. He is a parent of 2 children at an adjacent public
school PS-51 at 520 West 45th St. Mr. Anderson says no construction
work has been started on this section of the property yet. However he
says there is another section of the property (where exactly????)
that is being managed by Fleming Lee Shue which is being excavated
which has a problem with Mercury, Lead, TCE and students and teachers
are getting sick. Is DEC watching work being done at this
site?06/15/11 Spill case reassigned from S. Sangesland to Sharif
Rahman.(sr)06/23/11 I performed site visit on 06/15/11.Soil
evacuation for construction of PS 51M replacement school going on at
525 W 44th Street. This is a SCA managed site.General Contractor:
Turner Construction Company. Environmental Consultant:
CNS(516-932-3228). CNS overseeing the lead contaminated fill material
removal.I asked the onsite personnel from CNS(Mr. Konrad)to forward
DEC a copy of the recent investigation data. Reviewing the report on
Edocs-the Phase II investigation was performed at 515-533 W 44th
Street by Fleming Lee Shue. NYCSCA proposes to construct a new school
facility on site and PS 51 located to the north, would relocate from
the existing building to the new facility. The site(515-533 W 44th St,
block 1073, lot 1) is approx 225 ft by 100 ft.Phase I ESA report
identified Recognized Environmental Conditions(RECs)associated with
use of western portion of the site as metal works establishments
during 1950's. A fill port was noted on the side walk along W 44th
Street. One dry cleaner and two Manufactured Gas Plant sites were
identified in close proximity to the site. Phase II ESI consisted of a
degraphy, nine soil borings, installation of four ground
water monitoring wells, collection of six soil vapor samples(to a
dept of 4 ft bgs),nine soil samples to bed rock refusal(approx 8 ft
bgs)and four ground water samples. Four monitoring wells were
installed outside of the site building, advanced to approx 30 ft
bgs.GW was encountered in the bedrock at depth between 16 to 20 ft.
The geophysical survey did not confirm the presence of USTs. Results
of the soil vapor analysis indicated that TCE(max 160 ug/cubic meter)
and PCE(350 ug/cubic meter) exceeded the NYSDOH's Air Guidance

TC4381152.2s  Page 935
Values. TCE (31 ug/l) was detected in three out of four ground water samples. AKRF recommended that a soil vapor barrier and active sub slab depressurization system should be integrated into the new school design to prevent chlorinated solvent related compounds from entering the new school building. No visual, olfactory or measured evidence of contamination was present in any of the soil sample locations. PID readings were non detect in all borings. No VOCs were detected above NYSDEC’s guidance values. The site is underlain by two to four feet of historic fill consisting of sand with brick, gravel, timber and coal. Soil samples were also analyzed for Total Petroleum Hydrocarbons and RCRA hazardous waste characterization. Metals - Arsenic, lead (8,030 mg/kg), mercury, silver, cadmium were detected in soil samples. I called AKRF and asked them to forward DEC RAP and CHASP which were submitted to NYCDep before 06/24/11. Sent an email to Anna Ciecierska at SCA requesting to send us CAMP, monitoring log along with any recent site characterization report. (sr) 07/21/11 Letter requiring RAP submittal is in edocs. (sr) 08/09/11 Rec’d CAMP data and SSDS drawings and specifications. (sr) 10/27/11 Rec’d Report prepared by TRC in response to our letter dated July 2011. Soil within the footprint of the planned building has been removed to bedrock. SSDS and water proofing (vapor barrier) have been incorporated into the building design. TRC requested closure of the spill case considering there is no known source of contamination on the school construction site. Waste characterization sample results provided. Samples were analyzed for VOCs, SVOCs, PCBs. Analytical results identified typical urban fill material with SVOC and Metal exceedances. As per the report, NYSDOH indicated only a vapor barrier is required in instances where shallow ground water is present at or above the elevation of the basement floor slab. NFA required. Case closed. (sr)

Remarks:
ENVIRONMENTAL BORINGS PRODUCED POSITIVE RESULTS FOR CONTAMINATED SOIL.

- DEC Memo: 11/19/14-Vought-Duty desk officer. Vought called Con Edison ERT (Ph:212-580-8383). Vought spoke to Tony Delgado and gas department was digging trench to install new gas pipe and they discovered black oil and they collected samples and will excavate as much as needed for the pipe. Vought provided email address and requested that sample
CON EDISON CONTAMINATION UNDER 11TH AVE (Continued)

analytics be submitted to Vought. Note that as per google maps
spill is located on 11th avenue and 41st Street in
Manhattan.12/4/14-Vought-Received analyses via email from Con Edison
Skow. Vought added analyses to D2. Analyses noted excavation was on
West 17th Street between 10th and 11th Avenues and samples collected
on 11/20/14. With respect to oil identification, report noted that
"The sample does not match any current Con Ed standard" and that the
soil was not "ignitable". Note as per EMIS spill is on West 17th
Street. Vought searched Spills Database and found no open or closed
spills on either side of 17th Street and area also noted to be at or
adjacent to former MGP sites. Vought discussed site with RSE and as
samples dont match a standard and it is not feasible for further
investigation or remediation spill is closed by Vought. Vought sent
email to Con Ed Skow with these notes and note that spill is closed.

Remarks:
found contamination in excavation/clean up pending crew and sample
results

EPA Region: 02
Classification: Conditionally Exempt Small Quantity Generator
Description: Handler: generates 100 kg or less of hazardous waste per calendar month, and accumulates 1000 kg or less of hazardous waste at any time; or generates 1 kg or less of acutely hazardous waste per calendar month, and accumulates at any time: 1 kg or less of acutely hazardous waste; or 100 kg or less of any residue or contaminated soil, waste or other debris resulting from the cleanup of a spill, into or on any land or water, of acutely hazardous waste; or generates 100 kg or less of any residue or contaminated soil, waste or other debris resulting from the cleanup of a spill, into or on any land or water, of acutely hazardous waste during any calendar month, and accumulates at any time: 1 kg or less of acutely hazardous waste; or 100 kg or less of any residue or contaminated soil, waste or other debris resulting from the cleanup of a spill, into or on any land or water, of acutely hazardous waste

Handler Activities Summary:
U.S. importer of hazardous waste: No
Mixed waste (haz. and radioactive): No
Recycler of hazardous waste: No
Transporter of hazardous waste: No
Treater, storer or disposer of HW: No
Underground injection activity: No
On-site burner exemption: No
Furnace exemption: No
Used oil fuel burner: No
Used oil processor: No
User oil refiner: No
Used oil fuel marketer to burner: No
Used oil Specification marketer: No
Used oil transfer facility: No
Used oil transporter: No

Violation Status: No violations found

FINDS:
Registry ID: 110055468113

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

<td>DEC Memo:</td>
<td>Prior to Sept. 2004 data translation this spill Lead_DEC Field was &quot;O'CONNELL&quot;e2mis no. 152285:Cable crew chief reports that while on location a cable pulling truck spilled 15 gallons of hydraulic fluid. The cause is unknown at this time transportation has been called. The fluid landed onto the asphalt. the cleanup is in progress using diapers, absorbant granuales, &amp; pigs. He reports that the cleanup should take about an hour.R. Legrand called back to report that the cleanup was completed at this time 05:49. As stated before they used absorbant, pads, pigs. The debris will be brought into W. 28 st yard. After further investigating they found that a hose blew, since allfluid is lost a bag was put over hose &amp; taped &amp; the truck is being brought into the yard - no more fluid is leaking out. Working on location and realized that 15 gal of hydraulic fluid had leaked from a cable pulling truck. It is unknown where on the truck the leak is coming from. Cleanup in progress.Con Ed #152285.</td>

**DEC Memo:**

> e2mis no. 158513: On 5/10 @ 17:25 Acevedo # 53317 of I&A reported to me that approx 1 ounce of Dielectric is spilling from a leaky bushing on Transformer in V-5204. There is 200 gallons of water in this structure. The source of the bushing is the leak and the bushing will be taped up with absorbent pads to contain any future spillage. The cause is damaged equipment. There was a spill rate of less than 1 drop per minute but that has been stopped. The spill is in the concrete structure. No sewer/water was affected. The drain seems to be clogged as per the finder. There is no sump pump. Two samples for PCB and ID will be taken from the spill. Chain of Custody # DD 04418 will be used. Environmental tag # 38794 was hung. No cleanup action will be taken at this time. Will wait on the cleanup until Sample results are obtained. 5/11/05 00:42 Received lab results. Lab Sequence Number: 05-04341-001. Equipment: Transformer. Total PCB 27 ppm. Lab Sequence Number: 05-04341-002. Date Approved: 5/11/2005. DESCRIPTION: FLOOR SAMPLE. Total PCB < 1.0 ppm. Update: 05/11/05 @ 13:00 hrs. M. Amari 11090 has called to report that a partial clean up has been done in V5204. The tanker has removed 443 gallons of oil from unit and 600 gallons of water from the vault. Oil absorbent has been put down on floor, and yellow tag remains in vault. Final clean up will be pending removal of water. 6/19/05 13:07 E. Hulser # 39723 Cable supervisor called to report that at 13:00 the cleanup was completed. All debris & liquids was removed by flush truck. The structure was double washed with simple green. The spill tag # 38794 was removed. The cleanup was done by E. Weinstein # 12230. R. Bruns # 21106 Update: 6/30/05 @ 17:25 hrs. Above entry should also state that transformer with leaking bushing was also removed and replaced. A. Drumming # 84163. Closed. 8/11/05. George Breen

**Remarks:**

One ounce of material spilled in the vault on 200 gal of water. Clean up pending resources (crews) No to the five questions. ConEd #158513.

****Unknown if material is PCB or Non PCB**** Rate of leak of one drop per minute****

DEC Memo: Prior to Sept, 2004 data translation this spill Lead_DEC Field was
"O'CONNELL"e2mis no. 130937:5-cubic yards of unknown fluid mixed with
sand in excavation at the n/s W41st St. 300' w/o 11th Ave. excavated
6' of liquid & sand containing possible gas or fuel oil smell. Area
barricaded. Lab Seq. No. 00-03841 PCB <1 ppm Lab Sequence Number:
00-03842 Xylene (Total) 58.6 ppm Benzene 85.3 ppm Toluene 37.1
ppb Ethylbenzene 8.20 ppm Lab Sequence Number: 00-03844 TPH 191 ppm Lab
Sequence Number: 00-03843-001 Flash Point >212 Deg. F 6/8/00
G. Garramone # 46575 Cleanup complete 10:00. Please see incident no.
130874 which is from the same Site. As per Joe Fleigner soil was
disposed off by Waste Management at their PA site and the waste water
was shipped by Allstate Powervac. This is an old MGP site, Soil was
encapsulated by slurry mix and new vault was field constructed.

Remarks: con ed 130937 contractor installing pre-cast manholes and while
excavating soil had an odor of some type of petroleum product

Tank Info:

Tank Number: 004
Tank Id: 11073
Material Code: 0008
Common Name of Substance: Diesel

Equipment Records:

B01 - Tank External Protection - Painted/Asphalt Coating
I04 - Overfill - Product Level Gauge (A/G)
C01 - Pipe Location - Aboveground
F01 - Pipe External Protection - Painted/Asphalt Coating
A00 - Tank Internal Protection - None
D01 - Pipe Type - Steel/Carbon Steel/Iron
G00 - Tank Secondary Containment - None
J02 - Dispenser - Suction Dispenser
H05 - Tank Leak Detection - In-Tank System (ATG)

Tank Location: 3
Tank Type: Steel/Carbon Steel/Iron
Tank Status: Closed - Removed
Pipe Model: Not reported
Install Date: 09/01/1969
Capacity Gallons: 1000
Tightness Test Method: NN
Date Test: Not reported
Next Test Date: Not reported

Tank Info:

Tank Number: 011
Tank ID: 11080
Tank Status: Closed - Removed
Material Name: Closed - Removed
Capacity Gallons: 5000
Install Date: 09/01/1969
Date Tank Closed: 09/01/1996
Registered: True
Tank Location: Underground
Tank Type: Steel/carbon steel
Material Code: 0013
Common Name of Substance: Lube Oil
Tightness Test Method: NN
Date Test: Not reported
Next Test Date: Not reported
Pipe Model: Not reported
Modified By: TRANSLAT
Last Modified: 03/04/2004

DEC Memo: Prior to Sept, 2004 data translation this spill Lead_DEC Field was
"TIBBE"06-27-05: 2 inches of product discovered in the piping sump of
diesel tank #2. Failure of a flex connector on the discharge line.
Product was contained in the secondary piping and relayed to the
sump. The line was repaired. Primary and secondary lines were tested
and passed. NYCT person onsite states that no petroleum contamination
was encountered during excavation too repair line.

Remarks:
LEAK INTO A SUMP AREA, THINK IT IS A LEAKY PIPE, INVESTIGATING CAUSE,
SUMP BELONGS TO DEISEL NUMBER 2 TANK, SUMP AREA IS CONTAINED AND THEY
ARE GOING TO BE CLEANING IT UP, NOTHING WENT TO ENVIRONMENT

Spill Class: Known release that creates potential for fire or hazard. DEC Response. Willing Responsible Party. Corrective action taken.
Prior to Sept. 2004 data translation this spill Lead_DEC Field was "TIBBE". 01/13/95: SPILL REASSIGNED FROM SIGONA TO ZHITOMIRSKY ON 01/13/95. TRANSFERRED FROM HALE TO TIBBE ON 12/28/00. INVESTIGATION ONGOING. Formerly Greyhound. see also 9112032.11/12/10 - spill re-assigned from Tibbe to Joe O’Connell 5/19/11. The spill was reassigned from Joe O’Connell to Linda Ross 2/27/12 - Raphael Ketani. The spill case was transferred to me during February 2012. Monthly progress meetings with the NYCT are taking place. 4/26/12 - Raphael Ketani. Groundwater monitoring and product collection are taking place by URS. 7/26/12 - Raphael Ketani. I was informed today by DER Region 2 staff that there may be comingled spills at the site. During 1983, there was a spill at the site from the USTs under a building. This was when the site was owned by Greyhound Lines Inc. Later, the NYCT bought the property. Then on March 8, 1993, the contractor Warren George was doing some work through the side walk for Con Ed and penetrated a feeder line. The line is right next to the the building with the USTs. The loss of dielectric was later determined to be 4,000 gal. The location of the feeder penetration was at MW-3. I told staff that I would contact Gregory Mathelier of NYCT ([646] 252-3470/gregory.mathelier@nyct.com) and tell him to contact Mathew Madsen ([718] 267-3866/madsenm@coned.com) and Barry Cohen ([718] 204-4252/cohenb@coned.com) of Con Ed in order to coordinate the remediation of the spills. I sent an e-mail to Mr. Mathelier today with the above information and asked him to let me know whether he is successful in contacting Con Ed. I also attached the Con Ed feeder drawings and a few pages from the Greyhound report. 10/5/12 - Raphael Ketani. Today I received the Site Specific Remedial Plan and Design for Surfactant Flushing. I began my review. 10/22/12 - Raphael Ketani. I finished my review of the 10/5/12 SSRP/RD. Product was originally seen in wells URS-MW-7 and URS-MW-9 (southwest corner), which are in the diesel UST vault. Product has most consistently been seen in URS-3 (southwest corner). Product was seen as sheen 11 times at
MK QUILL DEPOT -NYCT (Continued)

URSMW-11. Product has been present as a sheen to 0.01 feet at URSMW-12. In 2004, URS did 3 one well injections of BioSolve at URS-3 and recovered 33 gals. of product. Three more BioSolve injections into URS-3 during 2005 recovered 27 gals. of product. NYCT had 6 more monthly injections done at once a month from September 2005 to March 2006 and recovered 103 gals. of product. Groundwater sampling showed that there was no significant dissolving of the diesel fuel into the water due to the use of the surfactant. Also, the levels of the product at URS-3 were not significantly reduced. About 540 gals. of RegenOx were injected into URSMW-13 as 3 injection events on 10/14/08, 12/17/08 to 12/18/08, and from 2/17/09 to 2/18/09. However, product was still found at URS-3. To determine the feasibility of using excavation as a remedial measure, 4 borings were done. These were GP-16 to GP-19 in the southwestern corner sidewalk. All 4 borings were penetrated fill. Only GP-17 had odors and staining. The petroleum impacts are likely adjacent to the foundation. The foundation goes down 14 feet below grade and has likely kept the product from migrating. The petroleum is in the smear zone and possibly beneath the asphalt at 12th Avenue and 40th Street. The NYCT determined that excavation was not practical for various reasons and the DEC did not require it. The SSRP was designed so reduce the impacts at URSMW-7 and URS-3. URSMW-11 will likely be used for the flushing. Six wells will be used in the program. They will be 4 inch wells. URSMW-15 to 18 will be installed. URSMW-18 will be used as a monitoring well. The other wells and URS-3, URSMW-7 and URSMW-13 will be used for injecting, flushing and extraction. A 3% solution of BioSolve will be injected at 5 gpm. About 133 gals. will be injected per well. URS-3, URSMW-7, URSMW-13 will be used as extraction/hydraulic control wells. The minimum residence time for the solution will be 12 hours following injection. A truck will be used to remove twice the volume injected. Groundwater sampling will take place every two weeks during the flushing program. I found the SSRP/RD to acceptable and drafted a letter for the review of Hassan Hussein, EE III of Unit C in DER Region 2.10/23/12 - Raphael Ketani. Mr. Hussein and I discussed the letter. He told me to send it out and I did. Later, Mr. Mathelier sent me an e-mail stating that the surfactant flushing could not take place this year due to contractual issues. He requested a postponement of the work until May 2013. I responded to his request by approving the postponement.10/22/14 - Raphael Ketani. Mark Freed of the consulting firm Louis Berger ((973) 224-1214/mfreed@louisberger.com) called me and requested information regarding the spill at the bus depot. I extracted the pages from the August 2014 NYCT Monthly Status Report which concerned the spill status and sent them to him by e-mail.

Remarks: CONTAINED IN CLAY SOIL. OIL IN GROUNDWATER WINSTON CONTRACTOR HIRED TO PUMP OIL OUT OF THE CONTAMINATION. (FACILITY SOLD TO MATA/NYCTA)

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource
Conservation and Recovery Act (RCRA) program through the tracking of
events and activities related to facilities that generate, transport,
and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA
program staff to track the notification, permit, compliance, and
corrective action activities required under RCRA.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

**DEC Memo:** Prior to Sept. 2004 data translation this spill Lead_DEC Field was "SUN"11/06/01: MF-R9 OTHER SPILLS AT SITE 9314775, 8807198, CLOSED 9516313, CLOSED, 9604842, CLOSED, 9415731, CLOSED, 02/18/2004 - AUSTIN - REASSIGNED TO SUN10/15/04-On 10/15/04 Sun sent a letter to Michael Matri of Hess requiring by 11/30/04 to submit the following information: 1)Tank Closure Report, 2)Locations of tank and/or line test failure, 3)Subsurface investigation report, including current and historical soil and groundwater analysis, and 4)A surrounding
property sketch including property layout and usage. 10/18/04- On
10/15/04 Sun received from Micael Matri of Hess a Revised Spill
Closure Report, prepared by EnviroTrac, dated December 2002. The
report indicated that Hess removed 2,150 tons of soil from the site.
Out of 20 soil samples collected following the UST removal, VOCs were
detected in excess of their respective TAGM guidelines in only 3
(SP-2, SP-3 ans SP-10). Semi-VOCs were detected above their
respective TAGM guidelines in only 2 of the samples (SP-14 and
SP-20). Since there are no potable water supply well within a
1/4-mile radius of the site and this spill occurred prior to the
removal of the 2,150 tons of soil that Hess removed during the UST
removal, and only few VOC and SVOC concentrations higher than the
NYSDEC standards, this spill is closed.

SPEEDWAY # 7588 (Continued) U003178494

Tank Number: 12
Tank ID: 52312
Tank Status: In Service
Material Name: In Service
Capacity Gallons: 10000
Install Date: 04/01/1997
Date Tank Closed: Not reported
Registered: True
Tank Location: Underground
Tank Type: Equivalent technology
Material Code: 2712
Common Name of Substance: Gasoline/Ethanol

Tightness Test Method: NN
Date Test: Not reported
Next Test Date: Not reported
Pipe Model: Not reported
Modified By: SJVANDEU
Last Modified: 06/09/2015

Equipment Records:
A00 - Tank Internal Protection - None
J01 - Dispenser - Pressurized Dispenser
B04 - Tank External Protection - Fiberglass
E04 - Piping Secondary Containment - Double-Walled (Underground)

Environmental Interest/Information System
AFS (Aerometric Information Retrieval System (AIRS) Facility
HESS S/S #32215 (Continued)

Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

FIS (New York - Facility Information System) is New York’s Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

DEC Memo: Emis# 2396533/6/2015 - Feng - Duty Desk. Spoke to Chris of ERT (212-580-8383). They have lost about 15 gallons of hydraulic fluid to the street from a truck that cleans the manhole. They have shut off the PTO and the leak stopped. The spill has been contained by speedy dry. The transportation team will come to fix the truck. The cleanup is in progress.4/24/15 - Austin - Con Ed contained and cleaned up the spill, and towed away the vehicle for repairs - See document files for further information - Spill closed - end

Remarks: Oil spilled to pavement. Clean up is in progress.

DEC Memo:
ttf ltr sent 1/14/20052/14/2005 Received a letter from Morton Usdan (212-564-2006) saying that he hired a company to work on the tank. If it can be fixed, it will be. If not, it will be abandoned.5/2/2005 Sangesland spoke to Mr. Usdan. He said PTC found a dry leak in the vent line and replaced the line. Tank was retested and passed, no contamination was visible. Sangesland asked Mr. Usdan to submit all of this in writing to DEC. 5/5/2005 Sangesland received a letter from Mark Salamack at Petroleum Tank Cleaners. Tank was originally tested and failed by another company. PTC emptied the 1500 gal tank, isolated the lines and the stickline and vent line were found to leak. The gasket was replaced and then the tank was tested alone and passed. All necessary piping was replaced and no contamination was found. Spill Closed

**FINDINGS**

**Registry ID:** 110004550799

**Handler Activities Summary:**
- U.S. importer of hazardous waste: No
- Mixed waste (haz. and radioactive): No
- Recycler of hazardous waste: No
- Transporter of hazardous waste: No
- Treater, storer or disposer of HW: No
- Underground injection activity: No
- On-site burner exemption: No
- Furnace exemption: No
- Used oil fuel burner: No
- Used oil processor: No
- User oil refiner: No
- Used oil fuel marketer to burner: No
- Used oil Specification marketer: No
- Used oil transfer facility: No
- Used oil transporter: No

**Historical Generators:**

**Date form received by agency:** 01/01/2006
**Site name:** DOWNTOWN IGNITION
**Classification:** Conditionally Exempt Small Quantity Generator

**Date form received by agency:** 02/05/1999
**Site name:** DOWNTOWN IGNITION

  - **Waste name:** IGNITABLE WASTE

- **Waste code:** D006
  - **Waste name:** CADMIUM

- **Waste code:** D008
  - **Waste name:** LEAD

- **Waste code:** D018
  - **Waste name:** BENZENE

- **Waste code:** D027
  - **Waste name:** 1,4-DICHLOROBENZENE

- **Waste code:** D039
  - **Waste name:** TETRACHLOROETHYLENE

- **Waste code:** D040
  - **Waste name:** TRICHLORETHYLENE

**Violation Status:** No violations found

**ENVIRONMENTAL INTEREST/INFORMATION SYSTEM**

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport,
and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

| DEC Memo: Sangesland spoke to Harry Sadeghi of Hess Environmental Dept. He was on site and said a taxi ran over the pump. The sheer valve broke exactly the way it was supposed to. Approx 1/2 gal spilled in the containment area under the pump. FD and Police were on site, everything was cleaned. Island Tank & Pump is on the way to make repairs and test the system. Station is closed until all |

DEC Memo:
06/10/14-Hiralkumar Patel.alternate addresses: 533-541 West 43rd Street, 534-546 West 44th Street'little e' designation for hazmat/noise. -----------PBS #: 2-610875 for 540 West 44th Street. as per PBS record, the site had following tanks:- one (1) 1,000 gal diesel AST in contact with impervious barrier, removed in May 2011- one (1) 180 gal waste oil AST in contact with impervious barrier, removed in May 2011- two (2) 180 gal lube oil ASTs in contact with impervious barrier, removed in May 2011PBS #: 2-296473 and 2-603858 for 541 West 43rd Street. these both PBS numbers are duplicate. as per these PBS records, the site had two (2) 4,000 gal gasoline USTs, removed in Apr. 1999other spill #:s: 1400803 and 1401166.spill # 1400803 was reported on 04/24/2014 due to 5 gal hydraulic oil spill. case still open.spill # 1401166 was reported on 05/05/2014 due to 5 gal waste oil spill. case closed.CREF 546 West 44th Street, LLC. **property owner**1980 Post Oak Blvd., Suite 1600Houston, TX 7705606/10/14-Hiralkumar Patel.2:53 PM-- spoke with Patrick at Langan. this site is being redeveloped and managed by NYC OER (case #: 14CVCP162M). he mentioned that during site excavation, they found a 1,000 gal UST, partially filled with product. the tank was pumped out and removed today by AARCO Environmental. Langan has collected endpoint samples (sidewalls at 10 ft and bottom at 12 ft) today. site will be excavated further down as part of redevelopment.reviewed documents on NYC OER website. during remedial investigation, some SVOC and metal contamination was noted in soil and groundwater samples. chlorinated solvent contamination was noted in soil-vapor samples (maximum in SV5: TCE - 6.13 ug/m3, PCE - 943 ug/m3). groundwater was measured at approx. 12.7 to 16.5 ft bg. as per remedial action work plan dated 08/09/2013, submitted to NYC OER, at least 20 mil thick waterproofing/vapor barrier will be installed beneath the building slabs and along subsurface sidewalls. the building's foundation slab will be at 15 ft bg. dewatering is anticipated during excavation and foundation construction activities since the bottom of the cellar slab will be below groundwater elevations.case assigned to DEC Mahat.8/19/14 : Mahat DEC Mahat contacted Mr. Patric inquiring more about the remediation report. He mentioned that he is working on the spill closure report. He will forward the report as soon as he is done with it.6/19/15: Mahat DEC Mahat contacted Mr. Patric one more time for a closure report. He mentioned that Langan is working on the closure report. It will be forwarded to the Department as soon as it is ready.

Remarks:
During an excavation an abandoned tank and contaminated soil was found. Clean up is in progress.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Prior to Sept. 2004 data translation this spill Lead_DEC Field was "ROMMEL". This spill case was reassigned from DEC (Sigona) to Rommel on 01/07/2004. On December 22, 2000, DEC (Sigona) observed the excavation and removal of 4 x 550 gallon USTs. The contents of 3 x 550 gallon USTs was found to contain a mixture of gasoline and water. 1 x 550 gallon UST contained water only. The excavation was being performed by Fenely & Nicol for Public Parking, Inc. The project was also supervised by DEC contractor EAR under PIN project for New York Auto Service which was impacting the Jacob Javits Center. Does not appear to be related to New York Auto Service spill or have an impact on the Javits Center. 2/24/05-Vought-Spoke with Phillip Rizzuto (973-470-25510) who is agent for property owners. Rizutto asked for status of Tank Closure Report review and Vought required that a copy be sent to DEC for review. Spill transferred from Rommel to Vought. 3/16/05-Vought-Reviewed Tank Closure Report (Fenley & Nicol - Angel Ramirez) dated 1/18/01 and received on 3/2/05. Project was prepared for: Mr. Phil Rizzuto Classic Sanitation Corporation 99 Route 3 Clifton, NJ 07014. Removal and closure of one (275-gallon) fuel oil AST and four (550-gallon) gasoline USTs. Subject site is used as a public parking garage. Three (550-gallon) gasoline USTs were removed from the north-east front of the interior of the building (Tank Area 1) and one (550-gallon) gasoline UST was removed from southwest of Tank Area 1. Depth to groundwater at site estimated to be 20 feet below grade and flow to the west. "Inspector Anthony Sigona of the NYSDEC was present at the time of the excavation to inspect the tanks and excavated area". "The bottom and sidewalls of the excavation consisted of Manhattan Schist and bedrock". "...It was discovered that soil above the tanks exhibited evidence of gasoline contamination". All product lines were removed and disposed. Soil were analyzed for 8260/8270 TCLP as per Sigona. Soil analytics only showed on minor exceedence of napthalene at 11ug/L (Guidance value is 10ug/L). No PID readings were detected. Report recommends No Further Action. Spill closed by Vought due to one minor TAGM 4046 Soil Cleanup Objective exceedence.

Remarks:
DURING TANK REMOVAL SOIL CONTAMINATION HAS BEEN DISCOVERED. CONTAMINATION IS ON TOP OF TANKS. AREA TO BE EXCAVATED AND FURTHER SAMPLING/TESTING TO BE DONE. NO CALL BACK REQUESTED. CALLER HAS BEEN IN CONTACT WITH REGION 2 OFFICE.

**DEC Memo:** Rene Lewis working on a leaking tank. Tank has been drained and cleaned and is now filling with water. Alliance will be checking to see if oil leaked out. 3/27/2012 - Sangesland spoke to Rene Lewis. Tank was tested and failed. Tank was filled with water and water leaked out. Owner signed a proposal to have the tank removed. Rene is planning on pulling the tank on Friday 3/30/2012. They will then begin digging out contamination. 05/29/12 Alliance removed UST from the vault. Removed contaminated soil and debris down to bedrock. Water intruding into the excavation traced back to broken sewer line. Alliance installed/plugged broken line and water stopped. Wall is being recemented. Soil samples were taken from each side of the fill line. Results show VOCs non detect. NFA required. (sr)

**Remarks:** TANK WAS CLEANED AND WATER IS LEAKING BACK INTO IT, WILL BE PRESSURE TESTING TANK IN MEAN TIME. UNKNOWN IF ANY OIL HAS BEEN RELEASED

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

WEST 42ND STREET REDEVELOPMENT PROJECT  
605/615 WEST 42ND STREET DEVELOPMENT  
NEW YORK, NY 10036  

Site 9 of 27 in cluster AI  
BROWNFIELDS:  
Program: BCP  
Site Code: 359250  
Acres: .346  
HW Code: C231051  
SWIS: 3101  
Town: New York City  
Update By: SRHEIGEL  
Site Description: The site is 0.346 acres, identified as tax Block 1090, Lot 23 and located in New York County (Manhattan). The site includes 605 West 42nd Street and 615 West 42nd Street and lies on the north side of West 42nd Street between 11th and 12th Avenues. The site included in the application consists of a three-story garage which is presently abandoned. It is now owned by the volunteer 605 West 42nd Owner LLC who acquired it from Verizon. Prior uses of the site were a coal and coke yard, a can manufacturer and a metal manufacturer. The Sanitary Automatic Candy Corporation and the New York Telephone Company have also occupied the current buildings. The surrounding parcels are currently used for a combination of commercial and residential purposes, such as United Parcel Service (UPS), the Riverbank West Apartment Tower, Mobil filling station (now closed), street-level parking lot and a New York City mounted patrol unit building. Contaminants which are known or suspected to affect soil, groundwater and/or soil gas are petroleum, petroleum related VOCs,
WEST 42ND STREET REDEVELOPMENT PROJECT (Continued)

SVOCs and metals. This site poses a significant threat to the public health as determined by NYSDOH. The Remedial Action Work Plan (RAWP) with Stipulations was approved by the Department on November 5, 2007. Remedial Construction started on December 10, 2007. Construction was halted in September 2008 due to contractual issues. Remedial Construction recommenced in October 2009 and was completed in the summer of 2010. Certificate of Completion issued December 17, 2010.

Previous investigations have revealed the following contamination:

- Elevated levels of volatile organic compounds (VOCs) including numerous exceedances of soil cleanup objectives (SCOs) in the vicinity of three closed in place USTs and the former gasoline dispenser;
- Elevated levels of semi-volatile organic compounds (SVOCs) including naphthalene were detected in samples in the vicinity of the closed in place USTs;
- Elevated levels of other SVOCs in shallow soil were attributed to the presence of historic fill;
- The types and concentrations of VOCs in the groundwater are indicative of petroleum contamination in the area of the USTs. There were exceedances of groundwater standards in samples from wells in the vicinity of the former gasoline dispenser and closed in place USTs;
- Soil gas analytical results revealed elevated concentrations of VOCs at all 14 sampling locations. Total VOC concentrations exceeded NYSDOH's background levels by up to 4 orders of magnitude. A Track 1 unrestricted use remedy was implemented on the site beginning in December 2007 and ending in June 2010. The remedial construction conformed with the requirements of a Part 375 track 1 cleanup and consisted of:
  1. Excavation and removal of soil/fill exceeding Track 1 SCOs;
  2. Removal and treatment of contaminated groundwater by way of construction dewatering;
  3. Appropriate off-site disposal of all material from the site (solid and liquid) in accordance with all Federal, State and Local Rules and Regulations;
  4. Collection and analysis of end-point samples to ascertain achievement of Track 1 SCOs;
  5. Implementation of a Soil Vapor Intrusion Monitoring Plan to establish a baseline for soil vapor along the southern offsite boundary of the Site to ensure there is no potential for soil vapor intrusion into new development, and post-remedial monitoring of groundwater and soil vapor along the southern (downgradient) Site boundary to evaluate the effectiveness of the remedy as it pertains to these media;
  6. Import of materials to be used for backfill in compliance with: (1) chemical limits and other specifications and (2) all Federal, State and local rules and regulations for handling and transport of material;
  7. Placement of a concrete cap and waterproofing system over the entire site to prevent recontamination of the site as part of the foundation elements for the proposed structure.
  8. All responsibilities associated with the Remedial Action, including permitting requirements and pretreatment requirements, will be addressed in accordance with all applicable Federal, State and local rules and regulations. The draft Final Engineering Report was submitted in June 2010 and was finalized in December 2010. A Certificate of Completion was issued December 17, 2010.

Since contaminated soil at the site has been excavated down to bedrock and cleaned up to NYSDEC Part 375 Unrestricted use soil cleanup objectives, no institutional or engineering controls are necessary or will be implemented.

Tank Info:

Tank Number: 001
Tank Id: 62036
Material Code: 0001
Common Name of Substance: #2 Fuel Oil (On-Site Consumption)

Equipment Records:

A00 - Tank Internal Protection - None
D00 - Pipe Type - No Piping
I05 - Overfill - Vent Whistle
J02 - Dispenser - Suction Dispenser
L09 - Piping Leak Detection - Exempt Suction Piping
B00 - Tank External Protection - None
C01 - Pipe Location - Aboveground
H00 - Tank Leak Detection - None
K00 - Spill Prevention - None
F00 - Pipe External Protection - None
G03 - Tank Secondary Containment - Vault (w/o access)

Tank Location: 1
Tank Type: Steel/Carbon Steel/Iron
Tank Status: In Service
Pipe Model: Not reported
Install Date: 05/08/1965
Capacity Gallons: 2500
Tightness Test Method: NN
Date Test: Not reported
Next Test Date: Not reported
Date Tank Closed: Not reported
Register: True

- DEC Memo: 3/8/11 - Raphael Ketani. I spoke to Stuart Knoop (k-noop)(212) 479-5461 of Langan Engineering. He said that Langan had been working on this vacant property as a due diligence effort for a developer, 85 Gotham Organization. He said that the City owns the property. The property is between 10th and 11th Avenues and between West 44th and West 45th Streets. Half of the property was a parking lot and the western side had a taxi service or a gas station. Langan has already done many borings throughout the lot. They did one recent boring and hit 2 feet of oil about 7 to 9 feet below grade. He is sure that they hit the oil well above the groundwater. Mr. Knoop thinks that this is a tank or a vault. They will do test pitting to determine the source of the oil. I told Mr. Knoop to send the DEC the investigation report once they are finished boring and sampling the site. He said that he will.4/8/11 - Raphael Ketani. I spoke to Mr. Knoop (k-noop)(212)
479-5461. He said that the oil that was found previously was from a buried drum that was leaking. This was cleaned up. The area where the drum was found contained lots of buried scrap metal. He went on to say that the significant petroleum impacts were discovered at the western part of site. There they found 11 tanks. All of the contamination is being addressed. Mr. Knoop will send DEC a web address where the RAP and Health and Safety Plan, and other documents regarding the site, can be found and downloaded.4/11/11 - Raphael Ketani. I found the website and downloaded the documents. Many of these documents turned out to be hundreds of pages long. They had been generated by different consulting companies.4/15/11 - Raphael Ketani. I spoke to Mr. Knoop today. I asked him whether the gas tanks had ever been registered. He said that they had not. The gas station ceased operation in the 1960s. The previous owner never registered the tanks. I told Mr. Knoop to have someone start on the paperwork as there may be questions regarding how to list the tanks and the details for each listing. I told him that the paperwork should be ready to go and once his client finalizes the purchase, then the paperwork should be submitted to Albany. He said that this will be done. I asked him whether groundwater was found. He said that groundwater samples were taken, but there were no significant hits in the samples. Mr. Knoop commented that they were hoping to get a response letter from the DEC by the beginning of June. I told him that I will work on the reports over the course of several days and try to get a letter out as soon as possible.4/21/11 - Raphael Ketani. I finished my review of the Langan Engineering 4/8/11 cover letter and the six attachments. My notes for each section are below: Langan Engineering cover letter dated 4/8/11- 1) the 10 USTs will be removed from the western part of the site2) there is no mention of the warehouse property (527 West 44 Street - aka 511-533 West 44 Street=playground and warehouse, respectively); it doesn't seem to be part of the site development3) vapor barrier under buildings A and B; passive venting system under building B; overbuild AMTRAK railroad with building CAttachment F - AKRF 11/7/08 Phase I Environmental Site Assessment-1)5 gas USTs were found on site at the parking lot along 11th Avenue2) fill cap seen in sidewalk at vacant warehouse at 527 West 44 Street (along with playground this part is 513-533 West 44th Street)3) 522 West 45 Street-stable to the west of P.S. 51M (520 West 45 Street); boiler present - there may be a tank4) 520 West 45 Street-P.S. 51M; two 2500 fuel oil ASTs; NY Power Authority generated lead and mercury waste as exempt low level hazardous waste generator5) Sanborn maps indicate that the entire site once contained a foundry, metal works, manufacturing, a taxi terminal, National Gum and Mica, railroad right of way 6) suspect asbestos bearing materials throughout buildings that are still present7) based on the age of the buildings, there is lead paint and PCB bearing ballasts and mercury switches8) there was a gas station at the eastern end of the property9) Consolidated Gas Co. facility was to the west of the property across 11th Avenue with large tanks and coal storage yards (former MGP site)10) property is 25’ to 30’ above mean sea level, railroad is 20’ below grade, Hudson River is about 1,000’ due west11) Figure 2 includes all property west of the gas station, including the AMTRAK right of way and the warehouse on West 44th StreetAttachment E - AKRF October 2009 Phase II -1) Investigation took place September 20092) 2 soil samples from each soil boring, 1 temporary well, GPR survey3) bedrock 6.5’ to 13’ below grade, staining in soil at SB-1 to SB-3 4) soil VOCs below TAGM, SVOCs only benzo

**VACANT LOT (Continued)**

- Investigation of site took place 10/6/2010 to 10/15/2010 (27 soil borings (EB-1 to EB-9, GEB-1 to GEB-18), performed by Laurel Environmental for Langan)
- Chlorinated solvents as soil vapors and groundwater contamination
- Investigation identified tanks and SVOCs of urban fill (collected 11 grab samples and 11 composite soil samples from 0' to 14' below grade)
- 1 grab sample and 1 composite sample collected from each of 9 waste characterization grids
- Soil vapor samples above limits for TCE and PCE - exceeds NYSDOH air guidance, TCE in 3 of 4 groundwater samples, 2 wells had TCE exceedences, TCE higher in upgradient well
- 27 soil borings (EB-1 to EB-9, GEB-1 to GEB-18) had TCE exceedences, TCE higher in upgradient well
- Langan Engineering 4/7/11 Supplemental Waste Characterization Report

**Objectives:**
- Delineate extent of petroleum contamination in soil in the western part of site; evaluate potential presence of tanks; collect groundwater samples; delineate extent of lead contamination in soils in southeast part of site (did 104 borings, 20 test pits, 2 groundwater wells, collect 42 soil samples and 2 groundwater samples)
- SWCI done between 2/16/11 and 3/14/11: 66 borings DB-25 to DB-80; 3 additional borings DB-34S, DB-34N, DB-34W near apparent UST in stable4 (gray and black stains, petroleum odor, PID readings in boreings in west part of site; DB-60 had 1440 ppm vapors at 15'; 2 borings at DB-17-2 at 6' to 8' in southeast area didn't have product
- Spill case #1012171) TP-9, TP-14, TP-17 to 19 revealed 9 USTs in western part of site along 11th Avenue - estimated to be 550 gal.
- Tanks, base of tanks at 7' below grade; gray to black staining under each tank at 9' to 11' 6'; TP-18 had 1,224 ppm vapors, TP-2, TP-5 and TP-13 had gray to black soil in west part of site with PID hits up to 355 ppm; TP-10 conducted at boring DB-17-2 in grid #8; found metal scraps and crushed, leaking drum of oil (spill case #1012171) 6' below grade; test pits nearby had no contamination - bricks, tar, scrap metal, concrete, timber, plastic
- No gas or oil analytes in groundwater

**Attachment B - NYC DEP 3/8/11 RAP and CHASP Approval Letter to NYC HPD:**
- To Patrick Blanchfield of HPD, approving the RAP and CHASP (referred to October 2009 Phase II, March 2011 RAP and Construction HASP by AKRF, and February-June 2009 Phase II by Fleming-Lee Shue)
- March 2011 RAP proposes 20 MIL high density barrier and passive sub-slab ventilation system beneath building B4 RAP approved by Maurice Winter, DEP Director in Site Assessment Attachment A - AKRF March 2011 RAP and CHASP
- Elevation about 25' above mean sea level (railroad right of way about 20' below grade)
10’ below grade, bedrock 2’ to 16’ below grade), groundwater 10’ to 19’ below grade and flow believed to be to the west (Hudson River), development site is taxi company and parking lots in west, stable on north along 45th Street, P.S. 51M on north along 45th Street (east of stable), active AMTRAK railway in east central area (NOTE: not included are the gas station at the east end of the block and the warehouse and playground along West 44th Street). All of the reports are referenced. I spoke briefly to Mr. Knoop (212) 479-5461 about my review. He said that he couldn’t talk at length right now. However, we agreed to talk on Wednesday, April 27, about the project and the reports. I asked him about the warehouse with the chlorinated solvent hits. He said that he thought the project was being handled by the School Construction Authority since it was supposed to be the new site for P.S. 51M. I searched the remediation and spills databases for a case that might involve the warehouse with the PCE and TCE vapors and the TCE in the groundwater. I used the addresses for West 44th Street of 511, 513, 527, and 533. I did not find an active case, nor a closed case. 4/28/11 - Raphael Ketani. Lee Gutterman (718) 472-8000, ext 8502 of the SCA returned my call today. We spoke about the site for the new P.S. 51M school. Ms. Gutterman said that the SCA is currently involved with the site. Due diligence was done. Presently, the demolition of the warehouse is taking place. Ms. Gutterman stated that the site is not the source of the PCE and TCE vapors, nor the TCE in the groundwater. She added that there was no indication of a source on-site, but there were potential sources off-site (i.e. gas station, commercial businesses). The site will be excavated to bedrock. An SSDS vapor management system and a vapor barrier will be installed. Lastly, she said that the vapor and groundwater contamination levels were low enough that she didn’t see a reason why the DEC would get involved. I asked her whether someone from the DEC had ever been involved. She said “No.” Later, I called Ms. Gutterman again. I asked her for a copy of the SSDS and vapor barrier plans. She asked why. I told her that since there is chlorinated solvent contamination and vapors, I needed to send these plans and a copy of the Fleming Lee Shue report to the NYS DOH. After this, we had a discussion about why the DOH was going to receive the documents and their possible involvement and the DEC’s possible involvement in the P.S. 51M school construction project. She asked what the chlorinated solvent threshold was for the DEC to get involved in a site as she did not know that there was one. I told her that I didn’t know of one either and to discuss this with Jane O’Connell, head of the Region 2 Super Fund/Brownfield Unit. Ms. Gutterman said that she will send the documents, but that she has to go through channels first. 5/2/11 - Raphael Ketani. I drafted a letter to Mr. Knoop indicating that any contamination that is found on site and off site must be remediated, whether this is in the soil, bedrock or groundwater. The letter also stated that the USTs must be registered. The letter was approved by Randall Austin, Chief of the Spills Unit, and sent out today. 5/3/11 - Raphael Ketani. Jason Hayes (212) 479-5427 and Mr. Knoop left a message yesterday regarding Gotham West. I tried to return their call today, but could only leave a message. Mr. Hayes and Mr. Knoop returned my call. We talked about the details regarding what should happen if contamination is found and how to manage it. We also discussed looking for and managing contamination that had left the site. Lastly, I reminded them that any USTs which are discovered must be registered with the PBS database. Both Mr. Hayes and Mr. Knoop said they agreed with the DEC.
regarding how the work should proceed. They added that a round of groundwater samples were taken 2 weeks ago. They said that they had looked at the raw data and said that there were no significant hits. I asked them for the data. They said that the DEC will receive a remediation report in the future. 5/10/11 - Raphael Ketani. Mr. Knoop sent me the Langan 5/9/11 Supplemental Groundwater Investigation report by e-mail. I reviewed the report. Seven wells (MW-3 to MW-9) were installed in April 2011. Contaminated soil samples with stains and odors were found at MW-3 (7'-8'), MW-6 (12'-14') and MW-8 (5'-8'). The PID readings were up to 631 ppm. The well screens were installed at 15' to 20' below grade. Groundwater was found at 4.55 to 7.35' elevation. It flows east and then turns due south, exiting the property at MW-6. The wells were developed and then sampled 5 days after development. The samples had 14 to 54 NTUs. All samples were collected on 4/18/11: MW-3: 35 ppb naphthalene, 6 low exceedences of benzo series and related analytes, + chloroform MW-4: 6 low exceedences - 4 of the benzo series and related analytes MW-7: 48 ppb naphthalene and 2 low exceedences MW-8: 3 low benzo series exceedences MW-9: 14 ppb 1,2,4,5 tetramethylbenzene, and 1 low exceedence MW-6: 12 exceedences; 3 exceedences of the methylbenzene series (150 ppb to 180 ppb), 250 ppb total xylenes, 62 ppb acetone, 45 ppb naphthalene, 20 ppb methylene chloride (no other samples with this analyte), 8 ppb chloroform, few other low level exceedence gasoline analytes, 2 ppb tetrachloroethene, 4.2 ppb trichloroethene. Tetrachloroethene and trichloroethene are present in all of the groundwater samples at very low concentrations (i.e. 0.25 ppb). These are believed to be background concentration levels for the area. I sent Mr. Knoop the following response e-mail: I reviewed the Langan 5/9/11 Supplemental Groundwater Investigation report. Staff at the Department have generated the below listed comments: 1) We believe that the time between the date of development and the date of sampling (5 days) was too short to produce representative groundwater samples. Typically, we recommend a minimum waiting period of one month. In the past, we have found that this amount of time allows for movement of disturbed groundwater from the sampling location. 2) Langan did not extend its investigation far enough. MW-6 had the most contaminated groundwater and was situated at the southern boundary of the property. Wells must be installed across the street from the southern boundary in order to determine whether properties are being impacted off site. Again, we must state that groundwater contamination does not stop at property boundaries. 3) After the contaminated soil and groundwater are removed, groundwater monitoring must continue in order to determine whether the contamination persists off site. If it does persist, then a remediation plan must be submitted to the Department describing how this contamination will be addressed. 4) Chlorinated solvent contamination appears to be ubiquitous in the groundwater, but at a very low level. Therefore, the Spills Unit will simply consider the concentrations of tetrachloroethene and trichloroethene to be background contamination and not an indication of a source in the area in question. Should you have any questions or comments, please feel free to contact me. Sincerely, Raphael Ketani, CPGS 5/11 - Raphael Ketani. I made an unannounced site visit. Excavation work was already taking place for the new P.S. 51M. An excavator was digging from on top of a large pile of soil. No odors were apparent from the soil. I could see that a number of concrete footings had been installed. The Gotham West property was just a large, empty parking lot with a fence around it. There were some drums on site within the...
fenced in area. There was noting else to note about Gotham West as nothing was taking place. However, muddy water was draining from the school construction site. I met Sal Abbracciamento, Superintendent from Turner Construction Company (212) 229-6000, and his boss. I talked to them about the muddy water that was running down the street to the city sewer at 11th Avenue and West 44th Street. Mr. Abbracciamento explained that they were aware of the problem and that the hay near us was catching the sediment. However, this was not possible as the hay was too little and it was loose. Muddy water was still getting past the hay. I told him that he had to find a better way to collect the muddy water and dispose of it. I added that the sediment content was not in keeping with the NYCDEP standards for discharging water to a city sewer. He said that he needed to spray the tires of the trucks picking up the soil in order to prevent dust and mud from being spread onto the streets. I told Mr. Abbracciamento that I understood this, but that the present method of dealing with the muddy water was inadequate - he didn't have a SPDES discharge permit, anyway. I left the site and called the NYCDEP Hotline to report the discharge. 6/7/11 - Raphael Ketani. I tried to contact Mr. Knoop (212) 479-5461 regarding the submission of a work plan for conducting further soil and groundwater investigating, but I could only leave a message. Stewart of Langan called me back. He said that four wells will be put in the sidewalks along West 43rd Street. This is in response to the finding of groundwater contamination at MW-6 and will be to check whether contamination is flowing due south and off site. One well will be in the north sidewalk and three in the south sidewalk. Excavation of the site is scheduled for either late summer or early fall 2011. 6/15/11 - Raphael Ketani. Mr. Knoop (212) 479-5461 called. He said that they tried to install wells on the south side of West 43rd Street, but found out that there was a basement under the sidewalk at one location and were restrained by utilities at the other locations. So, 2 wells will be installed on the south side. Their locations will be pushed to the west and the east by the underground issues. I told Mr. Knoop that this was alright. 8/4/11 - Raphael Ketani. I spoke to Mr. Knoop (212) 479-5461. He said that there is still only one well across the street to the south. This is partly because there is a basement under the sidewalk in one location, partly because one land owner refuses to allow Langan to install a well and partly because there are utilities. However, Gotham West is negotiating with one landowner to the south and Mr. Knoop thinks that they will get a chance to install a second well across the street. I asked him about the street to the north. Mr. Knoop said that this well was successfully installed. He will call Gotham West soon and see whether they obtained permission to install the well. 8/16/11 - Raphael Ketani. I received a message yesterday from John of NYC DEP Hazmat (917) 576-8040. He stated that Langan was supervising the excavation and removal of 8 or 9 550 gal. USTs from Gotham West. He said that the tanks contained liquids and that some had spilled onto the ground and had created vapors and odors. Today, I called Mr. Knoop (212) 479-5461 and asked him about the tank removal work that was taking place. Mr. Knoop sounded a little annoyed and stated that he should have remembered that this tank removal work was going to take place as it was in the work plan, and because the tanks were known. I responded that it was stated in Attachment C of the 4/7/11 Supplemental Waste Characterization Report that Langan would evaluate the potential presence of tanks, but not that it was definitely known they were there. I added that the
submission of a work plan or a report never constitutes complete notification to the DEC regarding what will happen. I also said that the DEC always needs to be updated, either through phone messages or through e-mails, when significant work is taking place or when a significant issue arises. I said that the generation of vapors or odors that travel off site is a very significant issue. I added that the public could be affected by these vapors. Mr. Knoop stated they are already taking steps to abate the vapors and odors and to remove the contaminated soil. He added that they will take additional steps to make sure that no vapors or odors leave the site. Mr. Knoop then gave me an update regarding what was taking place. He said that the excavation contractor was draining the tanks before they were removed. They were working westward. Right now, they were in grids #1 and #6. Next, they will move to grid #7. They are still in petroleum impacted soil. The soil and cut up tanks are all going for disposal to Carteret, New Jersey. The tank pulling will take another week or so.

8/18/11 - Raphael Ketani. Mr. Knoop (212) 479-5461 called today. He said that 8 tanks are out of the ground and have been removed. Excavation of the tank areas is now taking place. Biosolve is being sprayed on the ground where odors are present.

8/26/11 - Raphael Ketani. Mr. Knoop sent me the following e-mail: Excavation continued throughout the West 44th Street site this week. Petroleum-impacted soil was removed from the western portion of the site near the former tank locations. It appears that the excavation in that area will extend into bedrock. Soil exposed along the western (Eleventh Avenue) sidewall of the excavation did not appear to be impacted. Four sidewall end-point soil samples were collected from the sidewall above the bedrock prior to the installation of lagging. Non-impacted urban fill was removed from the site east of the former tank areas, and hazardous lead-contaminated soil was removed from the delineated area on the south-central portion of the site. Bedrock removal continues on the northeastern portion of the site. The petroleum-contaminated soil is being disposed at the Clean Earth of Carteret and Bayshore recycling facilities in New Jersey. The hazardous soil is being disposed at the Clean Earth of North Jersey facility. Dust and organic vapor concentrations were within action levels. Periodic on-site dust conditions were addressed with water application. Petroleum odors were not observed. The contractor (Laquila Group) maintains BioSolve on site as an odor suppressant ready to be applied when needed.

8/30/11 - Raphael Ketani. I sent Mr. Knoop an e-mail regarding whether Langan had found PCE and TCE in the soil and groundwater under the Gotham West site where it meets the new P.S. 51M site. I wrote that the Fleming Lee Shue report had indicated the presence of these two contaminants in the soil and in the soil vapor. He responded with the following e-mail: Things are progressing thankfully smoothly. We were indeed provided with the report. It was included with the documentation I provided to you and discussed in AKRF’s Phase II of the property. You and I also spoke briefly about it. Langan and AKRF alone collected and analyzed 28 soil samples from the site for VOCs, and Impact Environmental continues to oversee soil analysis for waste characterization purposes. We’ve also collected 7 groundwater samples. There is no evidence of PCE or TCE soil or groundwater impacts to our site. As such, cVOCs are not considered contaminants of concern on our property. That said, we’re installing vapor proofing in Buildings A and B, and a passive SSDS in Building B as precautionary mitigation measures. I looked back in the case notes and in the AKRF October
2009 Phase II and found that the groundwater sample from MW-6 did indeed have PCE (2 ppb) and TCE (4.2 ppb) hits, and so did the groundwater sample from upgradient MW-9 (1.2 ppb of PCE and 1.6 ppb of TCE). However, there were no such hits in the soil samples taken from borings SB-1 to SB-9. Later, I spoke to Mr. Knoop and we discussed the issue. He said that they are screening the soil that’s being excavated for waste characterization. Mr. Knoop said that PCE and TCE have not been a problem. I reminded him about the PCE and TCE in the sample from MW-6. He said that one downgradient well is in and that another property owner is willing to let Langan install a second well, but the other property owner with a garage is not willing. This property owner wants a bond from Langan assuring him that the well will be removed within a year and that the sidewalk flag will be replaced. Mr. Knoop said that they are still negotiating with this property owner. Mr. Knoop also said that the soil excavation in the western part of the property has gone down to bedrock already. The eastern part of the property will also be excavated to bedrock. After this, the conversation ended.

8/31/11 - Raphael Ketani. I made an unannounced site visit. I met Albert Tashji, environmental engineer and Langan site representative. He showed me the site. I could see that the bedrock and excavation work was proceeding quickly. There was bedrock in the western third and eastern third of the site with a reddish brown soil filled valley in the middle. The first place he pointed out was the area where the 8 or 9 old USTs had been. This was an area that paralleled 11th Avenue and contained soil, not rock. However, there were cut out portions of the bedrock at the very edge of the location where it met the sidewalk along 11th Avenue. I could see that the soil was dark, but there were no odors. Also at this location were large broken up blocks of bedrock. It appeared to be metaquartzite. Next, we walked over to a pile of dark soil. Mr. Tashji said that this soil had come from the area where the USTs used to be. Though we were right next to the pile, I didn’t sense any odors. Mr. Tashji said that odor suppressant liquid had been sprayed on the pile. Next, we went over to the northeast corner of the property where two large chiseling machines were working. I commented that the rock was very hard. Mr. Tashji stated that they have been having a hard time with breaking up the rock and have broken pieces of many machines. At this northeast location, they had chiseled out a large flat platform of white rock. I could see pipes sticking up from the below the bedrock surface. Mr. Tashji said that they are at the design depth for the buildings and are already installing the conduit pipes. The chiseling machines still had a long way to go in order to finish breaking up the rock in this area. After this, we passed by a gasoline fueling area with drums and containers for filling small motorized construction equipment. The area had a protective plywood roof and was about 10 long by 5 feet deep. The sheltered area didn’t have walls to prevent rain from entering. The smell of gasoline was strong and I saw a little gasoline contaminated soil outside the shelter. I told Mr. Tashji to find a better way to contain any gasoline spills before this area becomes a large mess. He said that he will do so. I added that with the chiseling machines working so hard, a hydraulic line is bound to break sooner or later. I told him that there should be absorbent pads, other equipment and a plan to manage hydraulic line spills. He said that he understood what I was saying. After this, I left the site. I passed by the SCA site. Work had stopped for the day. It looked like things were progressing quickly.

9/1/11 - Raphael Ketani. I sent Mr. Knoop (212) 479-5461 an
e-mail stating that the gasoline storage and transfer area has to be better managed and that the spills have to be managed. I also wrote that they should be prepared for hydraulic line failures with the necessary equipment and supplies. Lastly, I asked that the 9 tanks be registered. Mr. Knoop sent me an e-mail in response. He wrote that 10 tanks have been registered. The one at the former stable was pulled by the NYC HPD and 9 were pulled by Laquila (the site construction company) in the western part of the site. Mr. Knoop added that he told the people at Laquila to make sure the gasoline storage area is kept clean and to have material on hand to manage any hydraulic lines that break and spill. The PBS registration is #2-611602. Ten 550 gal. USTs are listed. The site is Gotham West Development at 592 West 44th Street, NY. The site block and lot are 1073 and 1.9/2/11 - Raphael Ketani. Mr. Knoop sent me an e-mail stating that Laquila is ordering a spill kit for any hydraulic line leaks that may take place, the contaminated soil stockpile has been reduced, covered and bermed, and a containment system is being installed around the gasoline transfer area. 10/5/11 - Raphael Ketani. Mr. Knoop (212) 479-5461 called me today. He said that he has been having a lot of trouble siting the off site wells that would be downgradient from the site. He said that they hit a cell in front of one property and two landowners don’t want any wells in front of their property. Mr. Knoop said that one party wants to sell his property soon and so he doesn’t want it to seem as if there are environmental issues with his property - he owns a garage. One landowner is cooperative and is willing to let Langan put a well in the sidewalk in front of his parking lot. Mr. Knoop said that this well would be across the street from the downgradient well to MW-6 that’s already in and a little bit to the east. I told Mr. Knoop to install the one well and we will consider this well and the other sufficient. I told him to develop the wells, let them sit, and then sample them. He said that he will do this. I asked him to also sample MW-6 at the same time. He said that MW-6 was well within the footprint of the excavation and has been destroyed. He added that the construction company had put in well points for dewatering the site. They are about to install the casons. I told Mr. Knoop that the well point pumping will draw in contaminated water from the surrounding subsurface. So the water in the wells may not be representative of subsurface site conditions. Mr. Knoop said that he understood this. I told him to take samples from the two off site wells anyway just so that we can be sure that the PCE and TCE contamination is not originating from the site. He said that the samples will be taken. 11/8/11 - Raphael Ketani. Mr. Knoop (212) 479-5461 called me today. He said that the well across the street from site and a little to the east was sampled. It was clean. However, the well that was in the sidewalk, just downgradient from where MW-6 used to be, was destroyed. He wasn’t sure where to go from here. I told him to send me the data from the new well and I will look over the numbers in light of the information in the case file. Then I will know what the next step is. Mr. Knoop said that would be fine. 11/9/11 - Raphael Ketani. I found an article on the internet regarding Gotham West construction. I put the article in the e-docs. 11/14/11 - Raphael Ketani. Mr. Knoop sent me an e-mail with two attachments. One attachment showed the location of MW-11. The well location appeared to be downgradient from the site and MW-6, which had the highest groundwater contamination. The second attachment contained the analytical results for the water sample from MW-11. They were almost entirely non-detect with the exception of two
very low hits for MTBE and chloroform. Mr. Knoop stated in this
e-mail that Langan will take soil endpoint samples from the walls of
the excavation. He added that the soil analyticals should first be
looked at before anything more is done. I responded back that this
was fine. 1/13/12 - Raphael Ketani. Mr. Knoop (212) 479-5461 sent me
an e-mail with 6 attachments. I began my review. 1/17/12 - Raphael
Ketani. I finished my review of the Off Site Monitoring Well Location
Map, Alpha Analytical 11/01/11 Report, Sidewall Endpoint Sampling
Results Map dated 01/12/12, Bottom Endpoint Sample Results, and Table 2
Sidewall Endpoints Sample Results. Based upon the information in Mr.
Knoop’s 1/13/12 e-mail and the six attachments, I determined that the
contamination had been cleaned up. I sent Mr. Knoop a Spill Closure
Letter. Based upon the information in the case file and the e-docs, I
have determined that the residual contamination does not pose a
threat to the public or the environment. Therefore, I am closing the
case effective today. 1/19/12 - Raphael Ketani. Mr. Knoop sent me a CD
with the disposal manifests. I downloaded the file to the e-docs.

Remarks:
Caller advised investigation in process on Block 1073 lot 1 near
address given. Caller advised is unk type petroleum.

other debris resulting from the cleanup of a spill, into or on any  
land or water, of acutely hazardous waste; or generates 100 kg or less  
of any residue or contaminated soil, waste or other debris resulting  
from the cleanup of a spill, into or on any land or water, of acutely  
hazardous waste during any calendar month, and accumulates at any  
time: 1 kg or less of acutely hazardous waste; or 100 kg or less of  
y any residue or contaminated soil, waste or other debris resulting from  
the cleanup of a spill, into or on any land or water, of acutely  
hazardous waste

Handler Activities Summary:
- U.S. importer of hazardous waste: No
- Mixed waste (haz. and radioactive): No
- Recycler of hazardous waste: No
- Transporter of hazardous waste: No
- Treater, store or disposer of HW: No
- Underground injection activity: No
- On-site burner exemption: No
- Furnace exemption: No
- Used oil fuel burner: No
- Used oil processor: No
- User oil refiner: No
- Used oil fuel marketer to burner: No
- Used oil Specification marketer: No
- Used oil transfer facility: No
- Used oil transporter: No

Violation Status: No violations found

Environmental Interest/Information System
AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of
MOBIL OIL-#17-QDL (Continued) 1000253419

Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

FIS (New York - Facility Information System) is New York’s Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

DEC Memo: Prior to Sept, 2004 data translation this spill Lead_DEC Field was
"HARRINGTON" This spill site has been transferred from DEC Sigona to Remedial Bureau B, on August 4, 2003. This spill site has been consolidated under Spill No. 8806783. Reassigned from O'Dowd on March 1, 2000 DEC's comments regarding a proposed Work Plan for On-Site and Off-Site Investigation by Roux Associates, dated April 30, 2003.

Based on the results of our site visit on March 7, 2003, and evaluation of the proposal by Roux Associates, the DEC accepts ExxonMobil's Work Plan and Schedule to evaluate the on-site and off-site contamination at this location. Exxon-Mobil must now complete the implementation of the Work Plan according to the proposed schedule. The results of this investigation must be compiled into a Subsurface Investigation Report prepared in accordance with Section No. 3, paragraph 3.14 of the Division of Environmental Remediation's Draft DER-10 Technical Guidance for Site Investigation and Remediation, dated December 2002. A complete Remedial Investigation Report must be submitted for DEC review and approval according to the proposed implementation scheduled.

**DEC Memo:**

This spill site has been consolidated under spill no. 88-06783. PBS records indicate that 12 x 550 gallon and 1 x 4,000 gallon USTs closed or removed from this site. 3/7/2003: DEC’s comments regarding a proposed Work Plan for On-Site and Off-Site Investigation by Roux Associates, dated April 30, 2003. Based on the results of our site visit on March 7, 2003, and evaluation of the proposal by Roux Associates, the DEC accepts ExxonMobil’s Work Plan and Schedule to evaluate the on-site and off-site contamination at this location. Exxon-Mobil must now complete the implementation of the Work Plan according to the proposed schedule. The results of this investigation must be compiled into a Subsurface Investigation Report prepared in accordance with Section No. 3, paragraph 3.14 of the Division of Environmental Remediation’s Draft DER-10 Technical Guidance for Site Investigation and Remediation, dated December 2002. A complete Remedial Investigation Report must be submitted for DEC review and approval according to the proposed implementation schedule. (Sigona) 8/4/2003: Site transferred from Sigona to Harrington (central office) for management. (Rommel) 3/8/2004: Sent letter to Exxon Mobil approving the FS work plan. (Harrington) 8/24/2004: Sent letter to Exxon Mobil approving the FS report and the SVE/AS pilot test report. Requested the submission of a CAP. (Harrington) 10/8/2004: Approved CAP. Items included were the initiation of monthly EFR events at monitoring wells exhibiting free product, the submission of an RI work plan to finish delineation of subsurface contamination, submission of a RAP, and completion of quarterly groundwater sampling at all site-related monitoring wells. (Harrington) 1/19/2005: Consent order is executed by the Regional Director. (Harrington) 5/31/2005: Sent letters to Exxon Mobil approving the supplemental RI work plan and the RAP. RAP calls for installation of SVE/AS system and passive bailers to collect free product. (Harrington) 9/12/2005: Sent letter to Exxon Mobil approving SVE/AS plan. Fieldwork for system installation is underway. (Harrington) 11/1/2005: Station has been closed as per divestment effort. UST excavation is underway. (Harrington) 12/1/2005: Sent letter to Exxon Mobil approving the supplemental RI report. SVE/AS system will be up and running by the spring of 2006. (Harrington) 1/31/2006: SVE/AS system has been installed on-site. System is awaiting hook-up to electrical grid by Con-Ed. (Harrington) 2/13/2006: Sent e-mail to Exxon Mobil approving the tank excavation assessment report. (Harrington) 8/29/2006: Sent e-mail to Exxon Mobil approving the SVE/AS System Start-Up Report. AS
system will remain inactive until levels of LPH have been substantially reduced. (Harrington)1/15/2007: Project management assumed by Bureau B. (Harrington)7/24/2007: Project re-assigned to Harrington. (Harrington)8/3/2007: PM visited site with Kleinfielder personnel (Mooney, Meyerhoefer). RAP was approved in Spring of 2007. Sale of property to Moinihan Group set for this Fall. Kleinfielder set to propose dismantling of SVE/AS system due to property transfer and subsequent excavation for new building foundation. (Harrington)8/21/2007: PM approved the shut-down of the SVE/AS system on-site. Construction activities are beginning at the site, which include excavation of the site property and demolition of buildings adjacent to the system compound. (Harrington)3/13/2008: PM conducts site visit with Fleming Lee Shue (FLS) personnel (environmental consultant to the developer - Moinihan Group). Site is to become a 56-story residential unit with basement parking and 1st floor commercial usage. Site takes up the entire block between West 42nd and West 43rd Streets from 11th Avenue west to the existing condo property and the Chinese embassy. Site demolition is complete. Excavation and de-watering activities are on-going. Excavation depth varies throughout the site, but ranges from 8-20' below grade. Contractors are using h-piles with timber stringers and tiebacks for sidewall bracing. Excavation in the area of the former station is @ ~8’ bgs. FLS has proposed a modification to the RAP changing the approved excavation depth from 40’ bgs to 20’ bgs. (Harrington)3/14/2008: PM sends an e-mail to Fleming Lee Shue with comments on the proposed RAP modification. The Department is requiring further details regarding the confirmatory sampling program for both the excavation bottom and sidewalls, installation of new monitoring wells for post-remedial groundwater monitoring (as the old ones were demolished during excavation activities), copies of the de-watering plan and NYCDEP discharge permit, a construction schedule, and monthly progress reports with photos. (Harrington)5/28/2008: PM conducts meeting with Fleming Lee Shue personnel (Matt Carroll). All Department comments regarding the revised RAP as noted above have been addressed to the satisfaction of the PM. PM approves the RAP. (Harrington)12/4/08 - Haggerty: assumed management from Dave Harrington1/16/09 - Haggerty: sent email approval for endpoint sampling results after excavation to the depth of the future building. Some minor semi-volatiles and metals but not enough to warrant further excavation. This is 1 parcel of a large Brownfield project. The remedy for this parcel consists of de-watering to depress the water table enough to excavate any contaminated soils. April 2010 - Project is on hold while the next phase of work is re-bid April 2011: spoke with consultant, they will be submitting a work plan to install soil borings on the sidewalk. Soil samples will be considered “excavation sidewall samples” since the previous excavation had sheeting install at the property boundary. MWS will also be installedMay 2011 - approved work plan for off-site MW installation, excavation sidewall samples via geoprobe sampling and collecting soil and gw samples in the area with a reported sheen at the bottom of the excavationJune 2011 - collected bottom samples and sidewall samples (via Geoprobe). Off-site MW’s will be installed in JulyJuly 2011 - Off-site wells installed 7/20 - 7/21November 2011 - Report overdueDecember 2011 - Spoke with Consultant, Fleming Lee Shue. RP has agreed to pay for the remainder of the off-site work February 2012 - PM will contact the Fleming Lee Shue. They need to complete the off-site investigation before closure.
MOBIL OIL-#17-QDL (Continued)

can be considered April 2012 - no response from FLS June 2012 - spoke with Michael Pisem from the Moinian Group who is developing the property. I gave him 60 days to install the off-site wells and provide the Dept. with the report or I would refer the Spill to OGC. Fleming, Lee, Shue called and said they were authorized by Pisem to complete the investigation December 2012 - still waiting on the report May 2013 - Spoke with Arnie Fleming from FLS. They are the consultant and performed the Off-site investigation. The samples are clean he told me but his client, The Moinian Group, has not paid FLS so he will not submit the results. August 19, 2013 - Finally able to review the Off-Site Investigation Report after the consultant was paid. No contamination has migrated off-site. Since on-site was de-watered for several years for excavation and construction of in entire city block, all source material was removed and any residual groundwater contamination was remediated and documented. Spill closed

Remarks:
TANKS BEING REMOVED WHEN CONTAMINATED SOIL WAS DISCOVERED, SOIL BEING STOCKPILED & WILL BE REMOVED.

RCRAInfo is a national information system that supports the Resource Environmental Interest/Information System.

FINDS:

Registry ID: 110004568691
GASETERIA (Continued)

Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA’s programs. The vision for ICIS is to replace EPA’s independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

Spiller Extension: Not reported
DEC Region: 2
DEC Facility ID: 170710

Prior to Sept. 2004 data translation this spill Lead_DEC Field was "VOUGHT" 5/5/2003-Vought-Called Paula Skryja and spill occurred on 5/3 am. Ten gallons came out of fill port and onto concrete surface. No sewers or drains affected due to immediate placement of spill boom. Spill cleaned using speedy dry which was recovered 12/17/2003-Vought-See spill 8909614 at same location. This spill closed due to existing gasoline contamination remediated under 8909614.

Remarks:
Tank overfill during delivery at above location. Cleanup is in progress and further investigation into cause is pending.

Prior to Sept. 2004 data translation this spill Lead_DEC Field was "VOUGHT"01/05/90: (6) MONITORING WELLS INSTALLED,OIL TANKS BEING TESTED BY CONTRACTORS(TRINITY & FENLEY & NICOL), ALL TANKS PUMPED & CLEANED, REPAIRING WATER MAIN.10/10/2003-Vought-Spoke with LaJuana Smith (works for Clinton Housing-212-967-1644) and she is looking to resolve spill). In Nov 1996 DEC required further work from DEC. Ms Smith will call back on Wed for current site status and will possibly submit FOIL request upon her discussion with bank.10/17/2003-Vought-File review by Vought:Community Board 4 Meeting Notice-2/21/90-Meeting held with DEC, NYFD, NYPD, DCA and NYCDEP to discuss current status and plans of site. Fax to DEC from Gaseteria-2/22/90-Pednaeault Associates (516-467-8477)-Groundwater analyticals from six monitoring wells and two soil disposal piles (no site plan in file). Groundwater analyticals show 275ppb benzene(W1), 341ppb benzene(W2), 327ppb benzene(W3), 448ppb benzene(W4), 158ppb benzene(W5) and 128ppb benzene(W6). Disposal samples show 1433ppb benzene(east pile) and 188ppb benzene(west pile).Groundwater analyticals-5/21/90-Pednaeault Associates-Groundwater analyticals from six monitoring wells (no site plan in file). Groundwater analyticals show 2308ppb benzene(W1), 1091ppb benzene(W2), 680ppb benzene(W3), 385ppb benzene(W4), 736ppb benzene(W5) and 810ppb benzene(w6). Subsurface Investigation-7/90-Environmental Management Services. "In Jan 1990 a subsurface water line broke beneath 10th avenue near the northwest side of the site. Water entered the basement of the adjoining building along with some gasoline." DEC required installation of six monitoring wells on Gaseteria property. Gasoline vapors detected in sewers in building across 10th Avenue. This subsurface investigation consisted of eight soil borings and installation of two additional monitoring wells. Three pump islands serviced by 12 (550-gallon) gasoline USTs and one (2000-gallon) diesel UST. Local topography slopes to the north. Groundwater at depth of 7-9' below grade. Bedrock is 7-11' below grade and slopes downward toward the northwest and southwest corners of site. Groundwater "suspected to flow northward". All wells onsite were set "firmly on bedrock" and "there is not sufficient information available to determine specific groundwater flow". No free product detected in wells. Groundwater appears to flow to 10th Ave towards the USTs. Report recommends groundwater monitoring with possible additional delineation. No soil samples submitted for analysis nor were screened via PID. Letter from DEC to Gaseteria-7/12/90. Letter from DEC (Sigona) to Gaseteria (Oscar Porcelli) requesting subsurface investigation work plan to be approved by the DEC to investigate the presence of gasoline vapors. Plan must be received by the DEC by 7/17/90. Odor complaints in January 1990 and again in July 1990.
Sigona performed site visit on 7/13/90. Fax to DEC-7/17/90. Letter from Environmental Management Services to DEC (Sigona) proposing: 1) investigation of subsurface utilities as potential pathways 2) determination of groundwater flow direction 3) groundwater monitoring 4) installation of six soil borings along western margin of station and installation of two additional monitoring wells. Letter from DEC to Gaseteria-1/5/95. Letter from DEC (Sigona) to Gaseteria (Angel Chang) requiring "cleanup and removal of discharge". Letter also required immediate steps to abate seepage into basement of 403 W 40th Street. Response from Gaseteria required to DEC by 1/15/95. Letter from Gaseteria to DEC-1/20/95. Letter from Gaseteria (Chang) to DEC (Sigona) stating that Gaseteria will: 1) "divert the flow of surface water away from the south wall of the building" 2) install a SVE system in the basement alongside of the south wall between the concrete floor and the building foundation. Gaseteria does not believe "there is a need to install new groundwater monitoring wells or to further develop existing wells.....since the problem appears to be surface related". Sample analyticals from basement of 480 10th Ave-8/96. Soil analyticals show 20664ppb ethylbenzene (sample 48334), 59164ppb xylenes (sample 48334), 11000ppb napthalene (sample 48334). Letter from DEC to Gaseteria-9/10/96. Letter from DEC (Rommel) to Gaseteria (George Esayan). "DEC in possession of analyticals from Clinton Housing (403 W. 40th Street)". Gaseteria required to sample two of the onsite monitoring wells for 8021/8270/lead. Letter from Clinton Housing Development Company-9/11/96. Letter from Clinton (Joseph Tuana) to DEC (Rommel) with copies of analyticals discussed above. Letter from Carl Sulfaro (attorney for Gaseteria) to DEC (Rommel)-9/20/96. Letter stating that Sulfaro "authorized EMS Environmental Services to take two samples of the onsite monitoring wells". Samples will be taken 9/27/96. Groundwater analyticals-10/10/96. Analyticals from MW5 by EMS showing 42.56ppb methylene chloride, 5549ppb benzene, 107.33ppb toluene, 1024.75ppb ethylbenzene, 393.15ppb xylene and 0ppb MTBE. Letter from Clinton (Kathy Prioleau) to DEC (Rommel)-11/11/96. On 10/27/96 "strong fumes entered basement of 480 10th Ave". NYFD onsite. Letter requests that DEC relay information on "testing done at Gaseteria and UST inspection of Gaseteria". Letter from DEC (Romme) to Gaseteria (Sulfaro)-11/25/96. Letter stating that requirements of fax dated 9/10/96 were not met because only one well was sampled and 8270/lead analyses were not performed. Letter requires: 1) submittal of an investigation plan to delineate soil and groundwater contamination 2) source determination 3) installation of three additional monitoring wells 4) installation of an air sampling port on the exhaust line of the venting system and monthly sampling for benzene and THC. Letter states that "action must be taken within 45 days". Letter from DEC (Rommel) to Prioleau (Clinton)-11/26/96. Letter stated that "DEC was never notified" of odor complaints as 11/11/96 letter stated. Also attached to letter was copy of 11/25/96 letter from DEC to Gaseteria. Letter from Gaseteria (Sulfaro) to DEC (Rommel)-1/15/97. Letter stating that Gaseteria "would prefer to perform site investigation, soil removal and/or remediation as needed concurrent with excavation anticipated as part of Federal EPA UST upgrade mandate" and the work is expected to take place in "Spring 1997". Letter from DEC (Rommel) to Gaseteria (Roberto Porcelli)-7/29/98. Letter "serving as final notification of obligations regarding petroleum contamination and vapor incidents". On 8/28/93 petroleum contaminated groundwater infiltrated basement of 490 10th Ave due to
heavy rains. This is the “seventh vapor complaint associated with Gaseteria since Jan 1990”. Letter states that the “Department is allotting 30 days for Gaseteria to satisfy all requirements in DEC letter dated 11/25/96”. Deadline of 8/31/98 given by DEC. Letter from Gaseteria(Seth Friedland) to DEC(Rommel)-8/13/98. Letter stating that “the June 1998 episode was caused by heavy rains and appears to be an isolated event” and that Gaseteria does not agree with Departments conclusions”. Letter stated that the station will be taken out of service on 9/15/98, permanently close the USTs and reinstall upgraded USTs on the northern boundary of the site. Letter from DEC(Rommel) to Gaseteria(Debbie Porcelli)-8/28/98. Letter serving as a “reminder of 8/31/98 deadline”. Letter from Gaseteria(Oscar Porcelli) to DEC(Rommel)-8/28/98. Letter stating that new USTs were ordered and that work will start the second week of September. Gaseteria intends to install four monitoring wells to replace those destroyed by station upgrade and will retain Environmental Management services to develop remedial plan. Letter from DEC(Rommel) to Gaseteria(Oscar Porcelli)-8/31/98. Letter confirming phone conversation where an agreement was reached that Gaseteria will comply with following requirements and complete the tank upgrade prior to 9/30/98. Letter also required that a workplan be submitted prior to 9/4/03 which included 1) complete delineation 2) soil and groundwater sampling plan for use during excavation activities 3) sampling of SVE emissions 4) installation of three monitoring wells into bedrock and 5) cleaning and proper disposal of oil in the building floor drains and all associated discharge points. Letter from Camin Cargo Control(Gaseteria’s Enviro consultant) to Gaseteria-10/5/98. Letter from Camin(Patricia Badding) stating that a site investigation and report shall be prepared. Investigation with Geoprobe and subsequent installation of monitoring wells scheduled for 10/16/98. Soil samples will also be collected during excavation for new USTs. Venting system emissions will also be sampled. “Cleaning and proper disposal of any oil in the building floor drains and all associated discharge points is the responsibility of Gaseteria”. Letter from DEC(Rommel) to Gaseteria(Oscar Porcelli)-10/8/03. Letter acknowledging receipt of Camin 10/5/98 proposal and requiring the following by 10/13/03: 1) Site plan with proposed boring locations 2) discussion of locations 3) discussion of endpoint sampling locations from UST excavation 4) discussion of delineation procedure 5) include MTBE with analyticals 6) collect groundwater samples from Geoprobe locations. Letter from Camin(Badding) to DEC(Rommel)-10/13/03. Submission of 1) site plan with ten boring locations 2) collection of six endpoint soil samples from UST excavation 3) excavation and disposal of contaminated soil encountered during tank installation 4) inclusion of MTBE analyticals 5) collection of groundwater samples (if encountered). Investigation Results from Camin(Badding) to DEC(Rommel)-11/6/98. Results of eight soil borings performed. Soil analyticals show 2149ppb MTBE(SB1), 526ppb benzene(SB2), 188ppb benzene(SB4), 212ppb benzene(SB5), 4576ppb MTBE(SB6), 1458ppb benzene(SB7), 29114ppb naphthalene(SB7), 187ppb benzene(SB8). Groundwater analyticals show 1239ppb benzene(SB4), 1975ppb benzene(SB5), 5360ppb benzene(SB6). Subsurface Investigation Report Camin Badding 908-523-0616 10/16/98. Investigation report including results above of eight soil borings performed. “There is approximately 2-4 inches of contaminated soil at the soil/bedrock interface in soil boring locations SB2, SB4, SB5, SB7 and SB8. Bedrock at depths of 6-11.5’ below grade”. “A sheen was detected on all samples” (groundwater). Venting system was samples on
12/11/98 via a vacuum canister attachment to vent. Removed dispenser island is the proposed location of new USTs. See analyticals above. Venting analyticals show 264ppm TPH and no other volatiles. Baseline Acquisition Assessment Report-10/10/02 Delta Environmental (Brad Fisher). Purpose was to establish baseline conditions prior to proposed lease and raze and rebuild of site by BP. One soil borings performed in 4/02 to depth of 11.5'. Two borings drilled to 24.5" via air rotary and converted to temporary monitoring wells (MW1 and MW2). Delta recommends 1) Gaseteria install permanent monitoring wells to delineate contamination. "It is Delta's understanding that Gaseteria will retain the environmental liability of the subject site until spill closure has been obtained". At time of assessment three USTs on site (two 6000-gallon gasoline USTs and one 6000-gallon diesel UST) and four pump islands with six dispensers. Surrounding area is multiple story apartment buildings. "Groundwater is located within bedrock fractures at depths between approximately 12.5 and 13.5 ft bgs". Former USTS onsite which were CLOSED IN PLACE include two (6000-gallon) gasoline USTs in 1998, one 6000-gallon diesel in 1999, ten 550-gallon gasoline USTs in 1998, one 550-gallon waste oil in 1998 and one 550-gallon fuel oil in 1996. Soil analyticals show 4570ppb xylenes(SB1) and 3970ppb isopropylbenzene(SB1) from depths of 10-11.5'. Groundwater analyticals show 148ppb benzene(MW1), 24800ppb MTBE(MW1) and 30.7ppb benzene(MW2). 10/21/2003-Vought-Reviewed site with DEC (Rommel). Sent Stipulation Agreement with the following requirements: 1) Groundwater delineation via installation of bedrock monitoring wells at former boring locations SB1, SB4, SB5, SB6, SB7 2) Monitoring of vapors and groundwater intrusion 480 10th Ave 3) current status of SVE system and submittal of historic and current SVE effluent samples for benzene analysis or collection of indoor air samples from 480 10th Ave. 10/24/2003-Vought-Called LuJuana Smith (212-967-1644) and left message and explained requirements of 10/21/03 letter. 10/27/2003-Vought-Received message from Steve Muller will be taking indoor air samples from 480 10th Avenue. Vought returned call to Muller (516-395-5957). 10/28/2003-Vought-return call to Steve Muller to discuss indoor air samples. Left message to return call to DEC. Left message for LuJuana Smith to call DEC. Vought spoke with Muller and okayed PID and stated that SUMA sample as per NYSDOH guidance was not necessary until 1) closure of SVE system or 2) PID indications of petroleum vapors followed by subsequent remediation. Vought also instructed Muller to check sumps. Vought spoke to LuJuana Smith who will be sending in FOIL Request for continuous updates on site. Vought also called Muller and gave him LuJuana’s phone (212-967-1644) for access arrangements. 11/6/2003-Vought-Spoke with Steve Muller who was onsite. No PID readings and no olfactory evidence of petroleum and no groundwater infiltration into basement and no product in sump. Muller will produce summary letter and send to DEC. 11/7/2003-Vought-Received Summary Letter from Applied Geosolutions(Muller). Site visit performed on 11/6/03 and inspection of basement at 480 10th Ave. "AGS observed no olfactory detection of odors or vapors consistent with hydrocarbons related to gasoline". PID readings of 4.8ppm were attributed to moisture in basement. Small amount of standing water present near leaking hose. No signs of product in sump. Vapor abatement system unoperational during site visit. Photos of basement submitted with report show no free product or petroleum impact. 11/24/2003-Vought-Received signed STIP from Adam Good(Gaseteria) with revised Corrective Action.
Plan. 11/26/2003- Vought-Spill transferred from Rommel to Vought. 
Vought received call from LuJuana Smith and she requested update.
Vought faxed her copy of 11/7/03 report and letter sent to Gaseteria 
on 10/21/03. Vought submitted STIP for implementation to DEC 
Kunkel. 12/2/2003- Vought-STIP implemented by Kunkel. Copy sent and faxed 
to Good and Muller. 12/17/2003- Vought- See closed spill 0301220 at same 
location. 9/14/04- Vought- New file review by Vought: Letter from Applied 
Geosolutions (Steven Muller 516-395-5957). “On November 6, 2003 
Applied Geosolutions inspected the basement of 480 10th Avenue to 
perform vapor monitoring and to identify the presence of 
groundwater”. “During the inspection AGS observed no olfactory 
detection of odors or vapors consistent with hydrocarbons related to 
gasoline. The air space was monitored with a portable PID indicating 
a measurement of 4.8 ppm… This detection is likely the result of 
low atmosheric pressure followed from periods of rain causing the 
basement to be damp.” The basement floor did not indicate the 
presence of groundwater...” Line and Dispenser Upgrade Report (Delta 
Environmental Brad Fisher 914-765-8180). “This Line and Dispenser 
Report summarizes the results of pump island and product piping 
upgrade assessment activities conducted by Delta Environmental and 
Gasoline Installations on behalf of BP Products North America”. Work 
performed included the removing and installing new spill containment 
boxes beneath each dispenser, removal and replacement of propduct 
piping and installation of electronic line leak detection systems. 
Soil analyticals only show minor TAGM 4046 SVOC exceedences 
attributable to fill. Subsurface Investigation Workplan (Applied 
Geosolutions)- July 2004. Bedrock at depth of 10’ below grade and 
groundwater at depth of 12.5-13.5’ below grade. Report proposes 
installation of four wells via air rotary followed by groundwater 
sampling. Groundwater flow direction not determined as of 
yet. 9/14/04- Vought- Sent letter to Gaseteria approving of Subsurface 
Investigation Workplan. Vought received message from LuJuana Smith 
(212-967-1644) and returned call. Vought spoke to Smith and no 
indication of vapors was noted. Ms. Smith requested info on the 
applicability of the BCP program for 480 10th Avenue and Vought 
replied that was only available if HPD was willing to take 
responsibility of the spill and that she should call Albany for futher 
information. Vought also suggested that she return the call to DEC on 
11/14/04 which is when the workplan results are due to 
DEC. 9/17/04- Vought- Received fax from Applied Geosolutions (Muller). 
"466 10th Avenue-AGS is currently getting drilling quotes and will 
complete the Workplan within the 60 day time 
frame”. 1/6/05- Vought- Reviewed Subsurface Investigation Summary Report 
(Applied Geosolutions) dated December 2004 and received on 1/3/05. 
Location north of USTS not possible due to concrete with rebar.
Installation of three monitoring wells. Groundwater from 7-11’ bgs 
and flow to the west. Groundwater analyticals show 48ppb xylene(MW1), 
13ppb 1,2,4-trimethylbenzene(MW1), 17ppb 1,3,5-trimethylbenzene(MW1), 
26ppb naphalene(MW1), 1400ppb MTBE(MW1), 23ppb MTBE(MW2), and 20ppb 
MTBE(MW3). “The existing groundwater monitoring wells should be 
monitored on a monthly schedule and sampled on a quarterly schedule 
to document changes in groundwater elevation and contaminate 
concentration trends in order to develop and appropriate remedial 
strategy”. DEC requires: 1) installation of monitoring wells on West 
37th Street north northeast of site and downgradient from abandoned 
tankfield along 10th Avenue.1/19/05- Vought- Meeting at DEC with ASR 
Tomasello. Will examine possibility of borings across 10th Avenue
GASETTERIA (Continued)

(map not be possible due to utilities) and also onsite adjacent to 480 10th Avenue. If onsite boring adjacent to 480 10th Avenue is not possible then boring will be installed on 37th Street.2/17/05-Vought-Spoke to Muller and site visit scheduled for 2/24 at 10am to discuss possible well installation locations.2/24/05-Vought-Site meeting with ASR Tomasello and no borings possible across 10th Avenue. Well will be installed onsite under canopy downgradient of abandoned tankfield. Well will also be install on West 37th Street north northeast of site.Obligado- SITE TRANSFERRED FROM VOUGHT TO OBLIGADO10/12/05 - Spoke with Tomasello ASR, requests to talk about closure for sp0206783.10/17/05- Obligado - File Review:Final Subsurface Investigation Report, dated June 2005. 4 monitoring wells installed at the site. Wells were installed into Bedrock down to 25 ft bgs. 3 wells installed in December 2004, one additional well installed in March 2005. Groundwater encountered at approximately 7 to 11 feet. No product encountered. Initial gw samples in Dec. 2004 show ND for Benzene in all wells, 1400 ppb MTBE (MW-1), 23 ppb MTBE (MW@), 20 ppb MTBE (MW-3), 48 ppb Xylene (MW-1). March 2005 gw results show 140 ppb benzene (MW1), 2100 ppb MTBE (MW-1), 26 ppb benzene (MW-3), 16 ppb MTBE (MW-3). June 2005 results show 45 ppb benzene (MW-1), 11 ppb Ethylbenene (MW-1), 750 ppb MTBE (MW-1), 52 ppb benzene (MW4), 10 ppb toluene (MW-4), 170 ppb Napthalene (MW4), 55 ppb MTBE (MW4), 193 ppb xylenes (MW-4).4Q05 Monitoring Report, dated 10/15/05. Ground water analyticals at show 20 ppb benzene (MW-1), 580 ppb MTBE (MW1), 23 ppb MTBE (MW-2), 21 ppb benzene (MW-3), 15 ppb MTBE (MW-3), 16 ppb benzene (MW-4), 52 ppb ethylbenzene (MW-4), 140 ppb MTBE (MW-4). 11/14/05 - Obligado - Site visit with ASR Tomasello. Request to see at least 2 more quarters of monitoring at a minimum.12/8/05 - Obligado - Will do a sensitive receptor survey. Continue monitoring. Only 2 quarters of data at MW4.3/1/06 - Obligado - PPhone call with Chris/STeve, ask that site be monitored quarterly not monthly.4/12/06 - Obligado - review 1Q06 monitoring report. BTEX ND to 33 ppb, MTBE ND to 800 ppb. 11/21/06 - Obligado - Reviewed Closure Petition/Sensitive Receptor Survey. Sent email to ASR denying NFA stating the following:"Due to historical vapor issues in the adjacent apartment, and the presence of benzene above guidance levels in ground water, the Department requires laboratory analyzed vapor samples from either the slab slab system (if operational) or indoor air samples to confirm no vapor intrusion. The Department also requires an additional round of ground water monitoring to confirm benzene and MTBE levels are still decreasing. NYSDOH Vapor Intrusion Guidance should be followed when collecting air samples available at http://www.health.state.ny.us/environmental/investigations/soil_gas/svi_guidance/index.html. Please submit the results of the additional investigation by January 21, 2007."12/1/06 - Obligado - Steve Muller will be onsite today to collect additional data.5/19/09 - Obligado - Meeting with DEC, ASR, GAseteria. They conducted a groundwater monitoring event and a vapor intrusion investigation in the adjacent residential building. According to report no Vapor intrusion was occurring. Ground water results found low levels of BTEX in GW, max 23 ppb and MTBE is continuing to decrease from 1400 ppb in 2004 to 250 ppb in 1Q09. They will submit a workplan for a confirmatory soil boring investigation by 7/31/09.11/20/09 - Obligado - Reviewed a revised Investigation Work Plan. The plan proposes to install 3 monitoring wells at the site. 2 wells are proposed in the area of the former abandoned 550 USTs and one is downgradient of the dispenser
GASETERIA (Continued)

island. I sent a letter to Gaseteria approving the plan.3/22/10 - Obligado - Review the 4th quarter 2009 monitoring report. Max BTEX is 8 ug/L. Max MTBE is 140 ug/L. No LNAPL present.6/14/10 - Obligado - I reviewed the Remedial Investigation Report. 2 Additional soil boring/monitoring wells were installed. 1 soil boring/well location was not completed due utilities in that area. Soil samples were collected from one of the 2 locations, but the other location had shallow bed rock so no soil sample was collected. No soil impacts were detected at the one location where soil was collected. Ground water results showed 13 ppb total BTEX at newly installed MW5. MW6 had no exceedences of TOGs The existing monitoring wells were sampled as well. MW4 had max MTBE at 150 ppb, and BTEX at 14 ppb, and total VOCs were 174 ppb. MW2 had 15.3 ppb BTEX and 11 ppb MTBE. This site has minimal ground water impacts the 6 wells on the site, and lack of evidence of contaminated source soils. Also a VI investigation was previously performed at the adjacent apartment building and no vapor intrusion was determined to be occurring. After discussion with DEC Tibbe, this spill has been closed.

Remarks:
GASOLINE ENTERED BUILDING 478 10TH AVE & SEWER SYSTEM, (3) OFFICE BLDGS (475, 478, 483 10TH AVE) EVACUATED, EXPLOSIVE CONDITIONS IN SEWER, DEC & LOCAL AGENCIES ON SCENE. (SIGONA)

1045 ft. Site 4 of 28 in cluster AH

- Relative: Higher
- Actual: 46 ft.

11/18/08 - Raphael Ketani. I made a site visit. I first went into the apartment building at 454 W. 36 Street because this was the address.
of the spill location that was first listed on the spill report. I talked to the super of this building. He told me that the spill was at 452 W. 36 Street. There were slight oil odors in the interior of 454 W. 36 Street. I went to 452 W. 36 Street and met the super, Franklin Scott. The odors in the building were very low, about 100 ppb total VOCs on the meter or less. He told me that Castle Oil (718) 823-8800, 440 Mamaroneck Avenue, Ste 402, Harrison, NY, 10528 had made the delivery. He said that the delivery man didn’t check to see how much oil was in the tank. He just began filling it as soon as the nozzle was in the fill port. I didn’t notice any oil spillage on the sidewalk in front of the building. I didn’t see the vent pipe either. Mr. Scott said that the vent pipe was in the alleyway in the center between 452 and 454 W. 36 Street. He took me to the alleyway. It was essentially a breeze way, a space, between the two buildings. The vent pipe stuck out from the wall of 452 W. 36 Street. I saw black oil coating the vent pipe, oil soaked soil, oil soaked cinder blocks and lots of Speedi Dri that had been put down by the Fire Department. I asked Mr. Scott whether a clean up company was coming. He said “No.” I asked him for the name of the management company. He said it was Keystone Management (212)684-4141 at 1201 Broadway, NY, 10001. I told him that I will contact both Castle Oil and Keystone and get them to clean up the mess. The owners of the building are Sereno Partners, LLC, 452 W. 36 Street, NY, 10036. I spoke to Rob Hill of Castle Oil. He said that he is sending one of his guys there right now to investigate the situation. He said that BLT delivered the oil on behalf of Castle. However, he said, the building gets only #2 oil, not #6 as was listed on the spill report. I told Mr. Hill that what I saw looked and smelled like #6. I told him that vapors are getting into both buildings and that the DEC wants the spill cleaned up fast. Next, I called up Keystone Management, but could only leave a message on their emergency maintenance mail box. A little while later, Chris Darbidian, Maintenance Director, called me up. He said that Keystone manages the properties from California, even though they have a New York office. He said that the mailing address is: Keystone Management, 15165 Ventura Blvd., Ste 140, Sherman Oaks, CA, 91403. He asked me to send any correspondences to that address. I sent CSLs to both Mr. Hill and Mr. Darbidian. 11/19/08 - Raphael Ketani. Today I called up the 311 New York City number in order to file a notice that the vent pipe was in a place where the whistle could not be heard. The 311 operator took the site address information, my information, and the nature of the complaint. He gave me the DOB complaint number 1242512. Rob Hill of Castle Oil called today. He said that he had a crew of 5 people out at the site cleaning up the oil spill. He said that it was #2 oil and that they filled three and a half drums with oil soaked material. The soil was removed and they found the going tough. He said that there had been other oil spills and the ground had hardened. However, they removed all of the contamination and when they got to the bottom, they discovered that the breezeway had a brick floor. A bioremediation agent was put down on the floor to remove the film of oil that was still present. Mr. Hill also said that the paper chart for the tank was for #4 oil (25 api gravity). So this was corrected. Also, the tank was originally thought to be 2000 gal. capacity, but it is actually 1500 gals. capacity. Mr. Hill added that the spill date was only the second time that Castle had made a delivery to the site. This is a new account. All deliveries are presently stopped until the owners of the site move the vent pipe to the front of the building.

**Site ID:**

*406794*

---

**Remarks:**

**CALLER STATES THAT THERE WAS A TANK OVERFILL TO THE BASEMENT. TANK SIZE IS UNK, SPILL IS CONTAINED AND CLEAN UP IS PENDING. **FDNY IS REQUESTING SPILLS TO RESPOND.**

---

**He will send DEC a cleanup report with manifests and pictures and other documentation.**

December 19, 2008 - Raphael Ketani. Lydia of Keystone Management called requesting more time to get all of the paperwork together for the cleanup report. I gave her until January 2, 2009 to submit the report to DEC. She said that would be fine.

January 2, 2009 - Raphael Ketani. Mr. Hill left a message that he will e-mail me the rest of the documentation that DEC needs for closing the case.

January 5, 2009 - Raphael Ketani. Lydia (212) 684-4141 ext 313 called to say that she spoke to Rob Hill of Castle Oil (718) 579-3413 and he told her that the report will be sent directly to DEC, rather than receiving the report and then forwarding it to DEC. I told her that will be fine. She said that she was just letting me know how things are going.

February 13, 2009 - Raphael Ketani. Lydia called and asked why DEC hadn't closed the spill case. I told her that DEC never received a cleanup/closure report and so we don't know whether the site has been cleaned. I added that if we don't know whether the site has been cleaned, then we must assume the site is still contaminated. I told her that building's status will not change until we receive a report showing that the spill has been cleaned up. She said she will talk to Mr. Hill and have the report sent to DEC.

March 13, 2009 - Raphael Ketani. I tried to contact Ms. Lydia Montoya, but could only leave a voice mail. In the message, I mentioned that the DEC may take legal action if it doesn't receive the cleanup/remediation report very soon.

March 23, 2009 - Raphael Ketani. I received a message from Ms. Montoya that the cleanup report for the site had been sent. I checked my file, but there was nothing in it. So I called up Mr. Hill from Castle Oil (718) 579-3413 and asked him to send the report. He said that he had sent it back in January. I told him that DEC never received it. He said that he will send it by e-mail again.

I never received the report from Mr. Hill. However, Ms. Montoya called and said that she was sending a FAX of the cleanup report cover letter that she received from Mr. Hill. I received the cover letter a little while later.

I called Mr. Hill and told him that, again, I didn't receive the report by e-mail. He said that he didn't understand why as he has my correct e-mail address. He said that he will FAX the report soon.

Mr. Hill FAXed me the cover letter with a manifest, a page regarding the spill and the wrong API chart displayed, the delivery ticket, and a copy of the e-mail page from the 1/7/09 e-mail that he had sent, but that I had never received.

March 24, 2009 - Raphael Ketani. I spoke to Mr. Hill and asked him to send me just several pictures of the cleanup. I told him that he was trying to send too many pictures and that is why I am not receiving the e-mail. He said that that he will send the pictures in two groups, one of 8 pictures and one of 5 pictures. I received two e-mails from Mr. Hill with many pictures.

They were placed in the E-docs. I spoke to Mr. Hill about the stain on the wall. He said that they had tried to pressure wash it, but it didn't clean up. He said that it was devolitized #6 oil and happened before Castle started making deliveries to the site. He said that Castle is delivering #2 oil only. Based upon the pictures that Mr. Hill had sent me, and the cleanup report that was submitted by Castle Oil, I have determined that there are no impacts to the environment and so I am closing the spill case.

**Environmental Interest/Information System**

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA...
program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

**DEC Memo:** Prior to Sept, 2004 data translation this spill Lead_DEC Field was "ROMMEL/3/11/03 - SAMUEL- File available in active unassigned spill files. Investigation work plan approved 1/16/98. Investigation report received 4/1/98 indicates high levels of BTEX in groundwater beneath former pump island. 7/20/98: New owner contact is: Paul Krivacka/Central Parking System 2401 21st Avenue South, Suite 200 Nashville, TN 37212/30/06 Reassigned from Samuel to Rommel 11/30/05 New contact for Kinney Parking is: Colleen Adkins DT Corp PO Box 7143 Sussex, NJ 07461 (800) 977-8265 (973) 702-9010 fax Previous letters and reports were sent to the new consultant, who indicate they will follow up with the requested information. 4/12/06: No response from the new consultant received. NEXT STEP: Contact consultant to require remediation of groundwater contamination documented in the 1998
report. Previous notes by GWHEITZM Spill transferred back to Region 23/10/08 - Austin - Spill assigned to Ahmed for followup -
end04/08/08- Ahmed- Received call and spoke to Victor from AEI (201-332-1844) who is working for potential purchaser. Victor will be
submitting all reports to date via email. As per Victor soil was
excavated and one well was installed previously. Victor is planning
to install two more wells for determination of groundwater flow
direction after DEC review of submittals. 04/08/08- Vought- After review
with DEC Ahmed possible DEC requirements include: 1) delineation of
soil and groundwater contamination via installation of monitoring
wells 2) locations and investigation of pump islands and remote fills,
4) future use of property- SSDS and/or vapor barrier required 5) current
contact information including fax of new owner 6) submission of
surrounding area site plan with property usage and possible sensitive
receptors 7) determination of groundwater flow direction 8) search
spill database for other close/open spills at or near site. 4/14/08 -
Austin - Spoke with Adam Sigerson of Applied Resources (845-626-4894),
a consulting firm working for the owner of this site. He wanted to
know the basics of what would be required for
investigating/remediating this site - submittal needs, cleanup
standards, review turnaround times, etc. I read the 4/8/08 outline
from Vought to him, and then indicated that his client needed to
address who would be doing the remedial investigation - themselves or
the purchaser represented by AEI. I told him once that was clarified
between the two parties, the proposal to meet the above described
objectives should be sent to Ahmed. Mr. Sigerson said that he would
follow up on these issues - end04/16/08- Ahmed- Ahmed started
reviewing reports and correspondance to date sent by Victor of
AEI 1996: Letter from Murali Sagar of Tone Tank & Pump Inc to Michael
Mickalofsky of Kinney System dated 11/18/1996 - Tone Tank performed
soil borings at 429W36th on 11/13/96. Six samples were collected at
soil/bedrock interface for EPA method 8021. The analytical results
for soil sample B1, B2 and B3 collected from 2-550 gallon gasoline
tanks indicate certain elevated values of volatiles from above
guidance values. However soil sample B1, B2 and B3 collected from
1-550 gallon tank indicated no elevated values of volatiles. Tone
Tank communicated with NYSDEC and recommended: 1) Since the soil
samples collected from the 2-550 gallon tank location showed presence
of volatile compounds and they are outside of the building in the
parking lot area, Tone recommended removal of the USTs according to
NYSDEC and NYFD requirements. 2) Since soil samples collected from
1-550 gallon tank didn’t exhibit elevated values of volatiles and it
is inside the building, Tone first recommended closure of the tank
in-place. However after discussion with DEC Kerri-Ann O’Down, Tone
felt that instead of drilling into the bedrock, removal of the tank
would be more economical. Letter from Sagar of Tone Tank to DEC
O’ Dowd on 11/20/1996. UST Closure plan- 1) Since collected soil
samples showed presence of compounds of concern, Tone would remove
the USTs and would register with DEC prior to closure activities.
Tone would also collect soil samples as part of site assessment. 2) Since collected soil samples didn’t show any compounds of concern and the tank passed the tightness test performed on 11/20/1996, Tone would perform closure in-place of the 1-550 gallon UST and the tank would be registered with DEC prior to closure activities. As per DEC O’ Dowd, one sample would be collected from remote fill area after
removal of the remote fill for EPA method 8021. Tone would prepare a
site specific closure report and submit a copy to DEC. Proposal for
soil sampling and contaminated soil removal from Robert Arearo of Tone Tank to Kinney System on 11/21/1996. Report from Trinity Petroleum Systems to Kinney Systems on 9/5/97 - Removed all above ground equipments uncovered and exposed a portion of 1-550 gallon UST, Defumed and sealed tank with approved concrete slurry mix. Back filled, compacted and removed all debris from excavation. Resurface in concrete. Removed and disposed of 430 gallons of non-hazardous contaminated water. Report from Trinity Petroleum Systems to Kinney Systems on 9/5/97 - Removed all above ground equipments uncovered and exposed a portion of 2-550 gallon USTs, Defumed and sealed tank with approved concrete slurry mix. Back filled, compacted and removed all debris from excavation. Resurface in concrete. Removed and disposed of 970 gallons of non-hazardous contaminated water. 04/18/08: Ahmed continued reviewing file. Work Plan prepared by CA Rich Consultants to DEC on Dec 1997 - This work plan was based upon previous sampling and analysis, CA Rich's previous phase I site assessment and telephone discussions with DEC. The site consists of three lots and contains one four-story parking garage, one two-story parking garage and a paved parking lot. CA Rich conducted a Phase I assessment in Nov 1996, identified on-site presence of three unregistered 550-gallon gasoline UST. Two of the tanks were located outside the facility and the other one was inside the garage. Tone Pump & Tank conducted tightness test. The two adjacent exterior USTs reportedly failed and the interior tank passed the tightness test. Tone conducted subsurface sampling which revealed contamination in excess of DEC cleanup criteria in two of three borings around the two exterior tanks. Three boring around the interior tank was ok.

"Remedial action conducted to date has been limited to filling each of the tanks with cement." Scope of Work-CA Rich would install 4-6 borings around the two exterior tanks to confirm the presence and determine the extent of soil contamination. 2-3 additional shallow borings will be drilled along the extent of the remote fill pipe for single interior UST to determine whether any residual contamination associated with fill-line leakage exists. One boring in the exterior parking area would be completed through the unconsolidated soil/fill materials to penetrate the underlying bedrock to a depth of 10 feet below the soil/bedrock interface. If possible, bedrock characterization will be accomplished via coring to determine the competency of the rock. Fax from DEC O'Dowd to Izzo of CA Rich on 1/16/98 - Conditional approval of the Work plan submitted on Dec 97, if CA Rich follow the additional sections needed to add in the work plan as discussed over telephone and also CA Rich would collect groundwater samples if any boring encounter groundwater. Report from CA Rich to DEC on March 1998 - On Feb 11, 1998 CA Rich drilled ten new borings onsite using Geoprobe. Eight of them were drilled around two exterior tanks. The remaining two were drilled along the abandoned remote fill line which formerly serviced the interior UST. Two of the test boring (SS4 and SS6) encountered subsurface fluid at a relatively shallow depths of 10 ft and 11 ft, respectively. Water samples were collected from these two borings and designated WS4 and WS6. "No evidence of floating product was observed at either location." On Feb 12, 1998 one additional test boring (MW1) was drilled in the exterior parking area, to a total depth of 21 ft, 8 ft below the soil/bedrock interface. "No evidence of floating product was observed in the fractured bedrock at this location". Groundwater sample from within the fractured bedrock was collected. Groundwater analyticals:

Letter from Richard of CA Rich to DEC O'Dowd on 7/20/98 “According to Martinkat (DEC), because the property is divided into two separate facilities, each listed under a different address, and the bulk storage capacity at each address does not exceed 1100 gallons, neither facility requires UST registration or closure documentation.” Letter from Richard of CA Rich to DEC O'Dowd on 7/20/98: Change in Owner. New owner contact: Central Parking System, Inc2401 21st Ave SouthSuite 200Nashville, TN 37212 Attn: Mr. Oaul krivacka Ph: 615 297 4255 Fax: 615 292 4082 Letter from DEC O'Dowd to Krivacka of Central Parking on 7/21/98: Upon review of soil and groundwater test reports DEC required the following work to be conducted: pump island be excavated and endpoint samples to be taken and analyzed for EPA 8021 Receptor survey Letter from DEC George Heitzmen to Paul Krivacka of Central Parking on 6/15/05: DEC requested additional information to determine whether additional action was necessary or the spill could be closed. The current state of the spill. Phase II Subsurface Assessment Report Prepared by Summit Environmental on Aug 2007: This property is listed on the NYS Leaking Tanks (LTANKS) database in association with a presence of a confirmed release identified at the property. Summit selected a total of 24 soil boring locations. Groundwater was not encountered in any of the borings. Boring-4: Strong odors were noted bet 8 and 14 feet, with PID readings of 25 ppm at 8 ft, 250 ppm at 9 ft, 1275 ppm at 10 ft, 526 ppm at 12 ft. Auger refusal at 15 ft. Boring-6: Strong odors were noted bet 8 and 12 feet, with PID readings of 45 ppm at 8 ft, 712 ppm at 10 ft, 256 ppm at 12 ft. Auger refusal at 15 ft. Boring-8: Strong odors were noted bet 6 and 13 feet, with PID readings of 40 ppm at 5 ft, 282 ppm at 6 ft, 1267 ppm at 8 ft, 802 ppm at 10 ft, 1275 ppm at 12 ft. Summit recommended that the three USTs be removed from the site. Any soil contamination would be appropriately addressed during the removal process. 5/7/08: Ahmed- Adam Sigerson (845 626 4894) of Summit, consultant of Central Parking called (Ph: 845 626 4894, 845 616 9844 cell) DEC Ahmed. He faxed a FOIL request for prior Work Plan and Investigation Report submitted by CA Rich. Ahmed emailed him the documents at als7@tellurian.net. After reviewing the entire project file Ahmed will discuss with Adams about DEC requirements. 5/15/08: Ahmed- Teleconference between DEC Vought, DEC Ahmed and Summit’s Adam Sigerson. Discussed about the current status and DEC requirements to remediate the site. As per discussion: 1) Summit would update PBS records, if they plan to remove tanks 2) Soil and groundwater samples at boring location SS6 and B23) Install well near B6 and B4 in Summit map and possibly followed by excavation 4) Submit scaled site plan 5) Vapor barrier or SSDS if they plan to change property use in future 6) Correspondence and/or Work Plan by July 15, 2003/31/10-Vought-Received call from and spoke with Adam Siegerson. Seigerson noted that one well was installed to bedrock and groundwater contamination noted up to 15,000 ppm total VOCs. He repeatedly requested site meeting with Vought and Ahmed to discuss remedial options including multiphase extraction (VEFR). Seigerson noted that depth to water is

429 WEST 36TH ST (Continued)  

approximately 27' bg (bedrock surface is 5-13'bg) and well has very poor recharge as it is in rock. Seigerson noted that Summit no longer involved with site and now Environmental Restoration is on-site. Seigerson also noted that owners of property were eventually looking to sell and site development may include a residential building. Site meeting scheduled with DEC Ahmed, Vought and Siegerson on 4/2/10. DEC Ahmed to take lead as per DEC Austin. DEC Possibly To Require: 1) Delineation of Groundwater contamination prior to Consideration of RAP - Any updates on sale of property? (development and removal of contaminated soil next to foundation). If YES- Get contact info for new purchaser, note soil removal requirement and endpoints IF NO- See below - Is delineation possible? Look at possible areas of additional well installation...... If NO- Then DEC will accept VEFR but source must be excavated either through shoring installation OR by new developer (such as holding money in escrow) If YES- Proceed with delineation and submit written RAP for VEFR. -(VEFR will most likely not work if contaminated soil is not excavated due to infiltration) - DEC cannot close spill unless: - decreasing concentrations are observed in groundwater - documentation is received that Vapor barrier and SSD are/will be installed (SSD Not required if contaminated soil is removed) in future development due to contaminated soil still onsite - What date will DEC receive RAP by? 10/31/11-Hiral Kumar Patel, case transferred from DEC Hasan to DEC Patel. 08/13/12-Hiral Kumar Patel, reviewed available documents. 11/18/1996: Preliminary Site Assessment: - on 11/13/96, Tone Tank and Pump, Inc. performed soil borings- collected six soil samples at soil/bedrock interface for 8021 analysis- three samples were collected around outside tanks and three samples were collected around inside tank- two (2) 550 gal tanks were located outside the building in the parking lot- one (1) 550 gal tank located inside the building- found contamination in samples from outside tank area2) 03/30/1998: tank abandonment affidavit:- DBA Trinity Petroleum Systems, Inc. abandoned three (3) 550 gal gasoline tanks on 08/21/19973) 03/31/1998: Soil and Groundwater Testing:- on 02/11/1998, total of ten (10) soil borings were advanced- eight of the borings (SS-1 through SS-8) were drilled around the two exterior tanks- two borings (SS-9 and SS-10) were drilled along the abandoned remote fill line for interior UST- two of the borings (SS-4 and SS-6) encountered subsurface fluid at the relatively shallow depths of 10 ft and 11 ft, respectively. this fluid potentially represents soil/bedrock interflow and may not be indicative of saturated, water table conditions ------- water samples collected from SS-4 (WS-4) and SS-6 (WS-6) on 02/12/1998, one additional boring (MW-1) was advanced in the exterior parking area- boring MW-1 was completed through the unconsolidated soil/fill materials (measured at 0 to 13 ft bg) to purposely penetrate the underlying uppermost bedrock to a depth of 8 ft below the buried soil/bedrock interface - or to a total depth of approx. 21 ft bg- no evidence of floating product was observed in the fractured bedrock-groundwater sample from within the fractured bedrock was collected for analysis- following sample collection, the test boring was backfilled to a depth of one ft into bedrock (14 ft below land surface) where a 2 inch PVC well (MW-1) was installed ------- unconsolidated materials underlying the property consist of fill materials within the upper two to four ft, underlain by a sandy clay, and generally horizontal layers of silts, sands and gravel -------

TC4381152.2s Page 1455
fractured bedrock is encountered at depths ranging from 4 ft to 13 ft bg- soil samples were analyzed via TCLP method- no contamination noted in soil samples- found contamination in water samples

*Based on review- bedrock found at 14 ft in tank excavation- well installed to 45 ft depth with 20 ft of screen (from 25 to 45 ft) and 25 ft screen (from grade to 25 ft)- groundwater during sampling found between 13 and 14 ft bgas per work plan dated 12/05/97 from CA Rich, the subject site is located on two parcels: 429-435 W 36th Street and 430-432 West 37th StreetPBS #: 2-603082. three 550 gal gasoline tanks were closed-in place in Jul. 1997. PBS registration does not include
429 WEST 36TH ST (Continued)

information about a second 550 gal tank found inside the building, during tanks excavation. No other spills reported for these sites. Adam Sigerson- Environmental Restoration LLC. ** Central parking's consultant** Ph. (845) 626-4894 (O) (845) 616-9844 (C) Email: als7@tellurian.net 12:49 PM: spoke with Adam Sigerson at Environmental Restoration LLC. He mentioned that property was sold and they are not involved in this case as per ACRIS record dated 12/01/11, Central Parking Corp. sold property to Extell Development. EXG 430W37 LLC. ** Property owner** c/o Extell Development Company 805 3rd Avenue, 7th Floor New York, NY 10022 Attn.: Asher Schepansky Ph. (212) 712-6000/6110 Fax (212) 712-6100/(212) 644-3922 Email: aschepansky@extelldev.com 12:56 PM: left message for Mr. Schepansky at Extell. 04/10/13–Hiralkumar Patel 3:10 PM: Visited site. Spoke with front desk person at CC Rental, on-site tenant. She asked to contact property manager. The site has four story garage building along W 37th St, two story garage building on W 36th street and open parking lot on west side of these buildings. CC Rental ** On-site tenant** Ph. (212) 239-3333 Reviewed NYC ACRIS, NYC digital tax map and previous investigation site maps and found following: EXG 430W37 LLC owns three lots on block 734: 16 (429-435 W 36th Street), 52 (430-432 W 37th Street) and 55 (434 W 37th Street)- Two interior tanks were located on lot 52- Two exterior tanks were located on lot 16- All three lots are little 'E' designated for hazmat/noise. 04/11/13–Hiralkumar Patel 3:51 PM: Left message for Mr. Schepansky 04/19/13–Hiralkumar Patel 9:13 AM: Received message from Mr. Schepansky 04/22/13–Hiralkumar Patel 10:49 AM: Left message for Mr. Schepansky 04/24/13–Hiralkumar Patel 10:25 AM: Left message for Mr. Schepansky 11:45 AM: Spoke with Mr. Schepansky. He works for property owner and asked to send letter to his attention. He mentioned that current owner purchased this property in Nov. 2011 and has no knowledge of the spill. 11:49 AM: Spoke with Dave Bello at Career Car, current tenant at the site. Informed him about open spill case and required investigation. Dave Bello CC Rental ** Tenant at 430 W 37th St** 12/24 Route 11 South Wayne, NJ 07470 Ph. (212) 239-3333 (973) 882-0310 Email: couriercar@yahoo.com 3:01 PM: Sent available letters/reports/work plans to Mr. Schepansky via DEC file transfer service. 4:08 PM: Sent letter to Mr. Schepansky requiring groundwater sample from existing well MW-2 (installed on 07/29/09). Asked him to submit report by the end of 06/28/13. Letter emailed to Mr. Schepansky and Mr. Bello 05/28/13–Hiralkumar Patel 3:12 PM: Left message for Mr. Schepansky inquiring status of required groundwater sampling. 3:14 PM: Sent email to Mr. Schepansky inquiring about status of required groundwater sampling, email copied to Mr. Bello. 3:37 PM: Received email from Mr. Schepansky. He obtained some proposals and working on it. 06/26/13–Hiralkumar Patel 4:52 PM: Received email from Mr. Schepansky including groundwater sampling report. Abstract: GCI Environmental collected groundwater sample from well MW-1 (formerly known as MW-2) on 06/12/13- groundwater found at 14.2 ft bg (as per well installation log, screen starts at 25 ft bg): No free-phase product or sheen found- found strong gasoline odor-----------------depth of well is 46 ft bg- found VOC contamination in groundwater groundwater

analyticals: -----------------------------------------MW-1 (formerly MW-2)

Benzene------------------------------420Toluene----------------------72Ethylbenzene------------------113,2,4-Trimethylbenzene------8101,3,
5-Trimethylbenzene--------11Naphthalene-----------------210MTBE------
-----------------------------------------------------------------
during three sampling events from existing well in former tank area, contamination level is fluctuating. to establish a trend, quarterly groundwater sampling is required. 06/27/13-Hiralkumar Patel. 3:17 PM: sent letter to Ms. Schepansky requiring quarterly groundwater sampling for minimum of one year. asked him to submit first quarterly groundwater sampling report by the end of 10/11/2013. letter emailed to Mr. Schepansky and Frank Galdun (GCI Environmental Advisory, Inc.). 01/14/14-Hiralkumar Patel. 12:40 PM: received email from Mr. Schepansky including first quarterly groundwater sampling report. abstract: sample was collected on 10/18/13 for VOC analysis only- no free phase product or sheen noted in well- strong gasoline odors were noted in the well- groundwater was found at 15.1 ft bgroundwater analyticals:------------------------MW-1 (formerly MW-2)
Benzene---------------------290Toluene--------------------------28Ethylbenzene------------190Xylene------------------------301,2,
4-Trimethylbenzene--------4501,3,
5-Trimethylbenzene-------10Naphthalene------------------10MTBE------
-----------------------------------------------------------------2501/24/14-Hiralkumar Patel. 3:05 PM: left message for Mr. Schepansky. 3:09 PM: tried contacting Frank at GCI. Frank does not work full time at GCI. left message for Jim at GCI. 3:32 PM: sent email to Mr. Schepansky. informed him that the second quarterly groundwater sampling report is overdue and must be submitted by the end of 01/31/14. 02/04/14-Hiralkumar Patel. received message from Mr. Schepansky (at 5:04 PM on 02/03/14). 10:44 AM: left message for Mr. Schepansky. 02/06/14-Hiralkumar Patel. received email from Mr. Schepansky (at 4:30 PM on 02/05/14). he mentioned that 2nd quarterly gw sampling report will be submitted soon. 02/07/14-Hiralkumar Patel. 1:15 PM: sent email to Mr. Schepansky and asked him to provide date when will the report be submitted. 1:42 PM: received email from Mr. Schepansky stating that report will be submitted by end of next week. 02/19/14-Hiralkumar Patel. 3:02 PM: received email from Mr. Schepansky including groundwater sampling report. abstract: sample was collected on 02/11/14 for VOC analysis only- no free phase product or sheen noted in well- strong gasoline odors were noted in the well- groundwater was found at 15.93 ft bgroundwater analyticals:------------------------MW-1 (formerly MW-2)
Benzene---------------------660Toluene--------------180Ethylbenzene-------1,300Xylene------------------------8271,2,
4-Trimethylbenzene--------7701,3,5-Trimethylbenzene------15003/31/14-Hiralkumar Patel. discussed with DEC Austin. he asked to discussed sample results with DEC Vought. 04/02/14-Hiralkumar Patel. discussed with DEC Vought. spill closed as per DEC Vought, due to excavation of source material to bedrock, decreasing groundwater concentration since source removal, no sensitive receptor adjacent to property, possible capture of groundwater flow due to possible dewatering in Lincoln Tunnel, no planned change of property use and also lined with consistency afores for closure by central office. 11:06 AM: sent spill closure letter to Mr. Schepansky. letter emailed to Mr. Schepansky.

Remarks:
Two 550 gallon tanks out of service since 1985 are being tested to be reopened. Water was put into tanks and they did not hold. Drilling to be done today

Prior to Sept. 2004 data translation this spill Lead_DEC Field was *VOUGHT* Summit Transportation 973-777-0404. Crew is on the way. Fire Dept. is trying to cover spills in basement (most cases like which is contained). May has some spills on drive way. 3,000 gals.12/31/2002-Vought-Site visit by Vought on 12/20/2002. Speedy dry applied to floor and crew collecting impacted material. Spill caused by corroded fill and vent pipe. Spill may have also come out of vent pipe however rain prevented final determination. Spill confined to basement. Spill on poured concrete floor with no cracks or pathways to subsurface. No sewers or drains affected. Spill amount was approximately 40 gallons. Spill closed by Vought.
BEACH LANE MNGT (Continued)

Remarks: poss line rupture, spill is coming through the wall. fd on scene investigating and cleaning up.

- **DEC Memo:**
  
  10/8/09 - Raphael Ketani. Two gallons of diesel fuel were discovered today in a sump for a tank at the Kings Bridge Depot, 465 10th Avenue in Manhattan. I spoke to Christina Ryszewski (646) 252-5777 regarding the spill. She said that the oil leaked from a tank. She didn't know which tank, but that it was now put out of service. She said that the cleanup crew was on their way. She said that I can contact Josephine Brown (718) 566-3415 for more information. I sent a CSL to: Office of System Safety, Environmental Remediation Section, NYC Transit, 2 Broadway, 27th Floor, NY, 10004. 10/9/09 - Raphael Ketani. Ms. Brown
called me today. She said that the oil in the sump for the suction pipe was cleaned up. It was put in the waste oil tank. The secondary was tested and passed. A company is coming to evaluate the subject tank, which is out of service. 6/24/11- DEC Piper retrieved and reviewed repair documentation and passing tightness test for the line. Based on work to date, this spill is closed.

Remarks:
SPILL CONTAINED TO THE SUMP OF THE TANK.

| DEC Memo: | Prior to Sept, 2004 data translation this spill Lead_DEC Field was "O’CONNELL"e2mis no. 142-331;On 4/17/02 at 13:42 R. Valenzuela # 92468 of the flush reported that at 13:30 he found 4 ounces of an unknown oil mixed with 200 gallons of water. This was in manhole-06705 and is located at the NWC W. 36 St. & Deyer Ave. He was there for a followup inspection of this structure. The fluid is from an unknown source & cause. This is the third time cleaning this structure within a 2 week period, the first 2 lab results came back as a light fuel oil, therefore we are requesting a flashpoint. We are making this incident type as a regular spill due to needing the flashpoint in order to clean it. A tag was hung # 37338 and samples were requested for PCB, ID, & flashpoint. Chain of custody |

**Prior to Sept, 2004 data translation this spill Lead_DEC Field was *RODRIGUEZ*’e2mis notes 142261On 4/15/02 at 08:37 J. Deangelo # 51543 of maintenance services called to report that at 04:00 he found 1 qt. of oil on top of 200 gallons of water. This was in manhole-06705 & is
MANHOLE M-06705 (Continued)

located at the NWC W. 36 St. & Dyer Ave. He was there to install fiber optic cable. He was working on acct # 68593. He did not take a sample or hang a tag, however R. Valenzuela & L. First of the environmental dept will be going there this morning to do so and call it in. There is no sewer connection as per conduit plate 24-E-2-
4/15/02 10:30 R. Valenzuela # 92468 called & reported that he had taken 2 samples 1 for pcb & 1 for ID & the chain of custody # is BB-02775. He hung a tag # 35992 Update 4-15-02 @ 17:18 hrs Lab Sequence Number: 02-03149-001 Analysis indicates the presence of a substance similar to a light fuel oil. 4/16 @ 01:36 Lab sequence 02-03148-001 Total PCB < 1.0 PPM. UPDATE 4/16/2002 @ 02:20 Cleanup is complete as of 02:00 Hrs on 4/16/2002. Since the cleanup was "under 50" the liquids were removed by the "Flush / Environmental truck. One (1) drum of rags, diapers and PPE's were removed. The structure was Double-washed and scrubbed with "SLIX". Environmental tag # 35992 was removed.

Remarks:
1 quart unk oil on 200 gallons of water - clean up pending lab results & there is a problem w/ where the manhole is due to heavy traffic in the area - they will start clean up at 9pm tonight - ref # 142261

- DEC Memo: Prior to Sept, 2004 data translation this spill Lead_DEC Field was "VOUGHT"10/25/00 - REASSIGNED FROM O’DOWD TO SANGESLAND,12/2/2003

Transferred from Sangesland to Rommel.1/8/04-Vought-Spill transferred from Rommel to Vought 4/8/04-Vought-Spoke with Mathew Schieferstein (Anson Environmental 631-351-3555). Recently contracted by owners.
Tradewinds were former contractor. Three monitoring wells on-site were abandoned. No groundwater analyticals on file. Vought approved Geoprobe samples at former well locations. Groundwater will be sampled for 8260/8270 and will take deepest dry soil samples or the highest PID. DEC will see report by 6/15/04.

9/23/05-FILE TRANSFERRED FROM VOUGHT TO OBLIGADO

2/6/06 - Obligado - called Anson Environmental, Mathew Schieferstein no longer works there. Company was bought in 7/04. No recollection of this project. Will call back with any information they can dig up.

2/3/06 - Obligado - Received call from Fritzy Gros-Daillon at Anson Environmental. She said Anson in 2004 recommended geoprobe to owners however the owners never approved work. No work was ever done.

10/16/06: This spill is transferred from Mr. Koon Tang to Q. Abidi. Called Steven Rosenbaum at (212) 687-3440 and left message to call me back.

- QA05/15/07: Called Mr. Steven Rosenbaum at (212) 972-0902 to discuss regarding spill. He was not there left message to call me back.

- QA06/19/07: Called Ms. Fitzi Mazzola (Anson Environmental) at (631) 351-3555 to discuss regarding present status of the spill. She said that she will find out about the information of spill with in three four days and then she will call me back.

- QA10/03/07: Called Ms. Firtzi Mazzola (Anson Environmental) to discuss regarding spill. She was not there left message to call me back.

- QA06/26/08: This spill case was transferred to A. Doronova.

- AD11/05/08: Looked in Internet for the owner information without success. Spoke with Mr. Rosenbaum - attorney. Asked him about the owner of the property and contact information. He said that in order to obtain the contact number for his previous client (Four B’s Realty) I have to submit him an official request. I spoke with Anson Environmental representative, he promised to get back with some information.

- AD11/06/2008: Found name of the Company and its president. It is - Aviv Midtown Realty, Corp. and the president - Eyal Farage. Issued an Investigation Needed Letter. Sent it as a certified mail. DL to eDocs.

- AD12/01/2008: Received an email from Jason Green of Aviv Realty saying: “Dear Ainura Doronova: Please be advised that Aviv-Midtown Realty Corporation no longer owns 524 West 36th Street, New York, New York. On or about August 1, 2007, the City of New York acquired the property pursuant to eminent domain law. Best regards, Aviv-Midtown Realty Corporation” The NYC Department which owns the property now is - DCAS.

General phone: 212-669-7000 (ext - 5). Stuart Barth, Environmental Issues - 212-669-8722. Called and left him a message. He returned my call later. Explained him the situation. Mr. Barth said that he need to look in the files and that he will get back with some information.

- AD12/29/2008: Did not receive any response yet. Called and left a new message to Mr. Barth of DCAS.

- AD01/06/2009: Called and left a message to Mr. Barth.

- AD02/11/2009: Called and spoke with Mr. Barth of DCAS. He asked to send him an email with information request.

- AD02/11/2009: Sent an email letter to Mr. Barth. Response deadline is due March 27, 2009.

- AD03/27/2009: No response was submitted yet.

- AD04/01/2009: Called and left a message to Mr. Barth of DCAS.

- AD04/07/2010: Contacted DDC office regarding the spill case.

- AD05/19/2009: Received an email from M. Asbagh of DDC saying: “Dear Ainura: On or about April 7, 2009 you notified our office of an existing spill at the above site left unattended since Aug 2007 when NYCDCAS acquired ownership of the property. According to the time line records provided to the URS, Jane Staten, your last contact on 4/01/09 to Mr. Barth of DECAS reg. Environmental issues went unanswered. I assume you have not heard from him yet. After a careful review of this case, we
have decided to assign URS to begin the site history research, analysis and spill investigative process spending your official request directly to the DDC Transportation Unit, Deputy Program Director, Mrs. Samani’s attention at your earliest convenience. Thank you. Marcy Asbagh, Project Manager DDC/Transportation Unit Tel: (718) 391-1292. 05/28/2009: Discussed the site with J. Kolleeny of DER. Will send a Investigation Needed Letter to Ms. Samani of DDC. AD05/29/2009: Sent the letter to A. Samani. (cc: J. Kolleeny-DEC; URS and eDocs). Response is due July 29, 2009. AD06/08/2009: Received a phone call from J. Staten of URS. She asked if we have any investigation reports from Anson Environmental, Inc. (Anson) in our files. Told Ms. Staten that according to DEC remarks, Anson did not perform the site investigation, thus such reports were not submitted to DEC. Spoke with J. Vought of DER (one of the first PM for the site), he confirmed that no report was received. No PBS registration was found for this address. AD06/09/2009: Called and spoke with J. Staten of URS. Confirmed the absence of reports from Anson Env. and absence of PBS registration. Suggested to look in Sanborn map for USTs. There is some info in DEC remarks, about previous contractor - Tradewinds. Looked through old files and found hard copies of Tradewinds’ investigation reports. Scanned the copies and DL them to eDocs. Sent an e-mail to J. Staten. AD11/13/2009: Received the Soil and Groundwater Sampling Plan, submitted by URS Corporation (URS). Will review. AD11/20/2009: Reviewed the work plan. The work plan proposes a soil and groundwater investigation in the vicinity of two former gasoline USTs and in a previously excavated area. URS will advance three soil borings followed by collection of soil samples, and install three groundwater monitoring wells, with soil and groundwater sampling. A summary report with conclusions and recommendations will be provided to DEC. AD12/01/2009: Issued an approval letter to DEC with the following comment: ”Two soil samples should be collected for analysis per boring/well: one sample from directly above the water table and a second from the sampling interval with the highest PID reading. In the absence of any field indications of contamination, a single soil sample should be collected from just above the water table.” DL the letter to eDocs. AD02/16/2011: Received an e-mail from URS saying: “Hello Anura, Recently URS mobilized to this site to conduct the site investigation plan that was approved by DEC but found that there was significant demolition occurring at the site. We have prepared a revised investigation plan based on these changed site conditions (see attached pdf). We would like a quick review and approval of this revised approach if possible as we now have an opportunity to aggressively address any impact present through excavation. I will call you later today to discuss. Figure 1 is the previous plan and Figure 2 is the new plan. The photos illustrate current site conditions. Thanks. Kevin J. Shanahan Project Manager URS Corporation 77 Goodell Street Buffalo, New York 14203716-923-1215 AD02/17/2011: Discussed the site with J. Kolleeny of DEC. AD02/18/2011: Approved the work plan with the following comments:”If the previously installed wells MW-02 and MW-03 have been destroyed or are not functional, then of the six proposed
soil borings, the one with the greatest field indications of contamination should be converted into an additional permanent groundwater monitoring well; Two soil samples should be collected for analysis per boring/well: one from the sampling interval with the highest PID reading and a second from directly above the water table. In the absence of any field indications of contamination, a single soil sample should be collected from just above the water table. 

Sent the letter to A. Samani. DL pdf copy to eDocs. AD06/28/2011: Received an e-mail from K. Shanahan of URS saying: "Ainura, Today URS issued the findings of our recent soil and groundwater investigation plan for the above referenced site. We posted a pdf version to the web site and you will receive a hard copy in the mail. The report contained the following information: 1. Background/site history 2. Description of field work 3. Results of investigation work 4. Recommendations for additional groundwater investigations 5. Recommendations for remediation. This e-mail is intended to notify you that URS needs approval from you to proceed with installation of additional groundwater monitoring wells and for excavation in the area of the two former 550-gallon gasoline USTs. URS would like to proceed with the excavation work soon as the property is being redeveloped as part of the Hudson Yards project. It is our belief that it is appropriate to aggressively remediate the petroleum-impacted soils prior to property redeveloped since it may be difficult to access. Please expedite your approval given the fact the site is currently being redeveloped by HPD. Thanks, Kevin J. Shanahan Project Manager URS Corporation 77 Goodell Street Buffalo, New York 14203-716-923-1215" Reviewed the report. It states that six soil borings (B-3 through B-8) were installed and soil samples were collected on February 22, 2011. Two samples were collected from boring B-8. Only one sample was collected from each of the other borings since the driller encountered refusal at shallow depths, prior to reaching the water table. Although three monitoring wells were specified in the approved investigation plan, five monitoring wells were installed on March 15 and March 16, 2011. Groundwater and product levels were measured in the monitoring wells using an oil/water interface probe. The depth to groundwater ranged from 3.14 feet to 7.65 feet below the top of casing. Free product was detected in well MW-06 (0.1 foot). MW-06 was not sampled because product was present. A total of 0.25 gallons of product was removed from well MW-06 on March 31, 2011. There were no exceedances of the Title 6 NYCRR Part 375 Unrestricted Use standards for VOCs. However, the standards for one or more PAHs were exceeded in all samples. The type of contaminant (PAHs) is not typically associated with gasoline contamination as reported at this site. The presence of PAHs is commonly encountered in urban fill. Typical gasoline constituents (e.g. BTEX, MTBE, etc.) were detected in soil samples, but at very low concentrations. Groundwater analytical results show that there were numerous exceedances of VOCs in groundwater and a few exceedances of SVOCs. These contaminants are more typical of gasoline constituents. Summary tables with analytical results are missing in the report. The groundwater results show that product is present at the site and that groundwater contamination is significant in the general area of former USTs. VOC concentrations in samples collected from the wells closest to the former tanks, piping and fill (MW-07S and MW-07D) had the lowest VOC concentrations. This is contradictory to expectations and could support the case for other sources of contamination either on-site or off-site. The extent of groundwater...
FOUR B REALTY (Continued)

contamination has not been completely delineated, suggesting that further groundwater investigation is necessary. URS’ recommendations for additional groundwater investigations are below: 1. Interim Remediation Measure (IRM): All monitoring wells including well MW-06 with a free product will be gauged on a monthly basis with an oil/water interface probe and product will be removed from impacted wells using a vacuum truck. URS will implement these measures immediately. 2. Soil Remediation: URS will excavate soils to the top of bedrock in an area measuring 30-feet by 30-feet in the vicinity of the USTs vault. Soil will be excavated to the top of bedrock which was encountered at a depth ranging from 4 to 8 feet bgs at the site. If it is conservatively assumed that the depth to bedrock in the excavation area will average 7 feet bgs, then approximately 230 cubic yards of soil will be excavated from the 900 square foot area. 3. Groundwater Remediation: The extent of the groundwater plume on site will be further defined by installing five new monitoring wells (MW-08 through MW-12). The final groundwater remediation approach will be based on the data collected from the additional groundwater investigation. Two general approaches will be considered for remediation as follows: 1.) groundwater extraction and treatment or; 2.) in-situ groundwater remediation by injection of oxidants, bioremediation stimulants, or surfactants into the bedrock aquifer. A detailed design for groundwater remediation will be submitted to the NYSDEC after the results of the groundwater investigation have been evaluated. Implementation of the groundwater remediation will depend on the redevelopment plan for the site and surrounding area and the schedule for redevelopment. To request submission of the missing tables. Will discuss it with J. Kolleeny of DEC. Changed site priority to P1. AD06/29/2011: Called and spoke with K. Shanahan of URS. Asked to submit the tables. Later received the report with summary tables. Discussed the recommendations with J. Kolleeny of DEC. Issued and sent a letter to A. Samani approving the proposed recommendations with a comment regarding a soil sampling during new wells installation. DL pdf copy of the letter to eDocs. AD05/16/2012: Called and spoke with K. Shanahan of URS regarding site status update. He said that EDC retained LiRo to do the excavation of the contaminated soil, and that the work will probably start in summer of 2012. URS is responsible for IRM, which consist of free product monitoring. He will send me an e-mail with summary info. AD08/02/2012: met with DDC and URS on quarterly meeting. Discussed the site current situation and the next course of actions. Site status update report will be submitted to DEC. AD09/14/2012: received the following e-mail from K. Shanahan: “Ainura, LiRo completed the tank removal and soil adjacent to the tank to bedrock this week (see attached photos). They want to replace well MW-7D and not well MW-7S since MW-7S only monitors the perched water in the tank excavation; the natural water table on-site is in the bedrock. Please let me know if DEC will require replacement of well MW-7S. I have attached the previous report we issued for this site. Thanks, Kevin J. ShanahanSenior Project ManagerURS Corporation” Will review. AD09/17/2013: re-installation of well MW-7S is not necessary. AD09/17/2013: Received the following e-mail from K. Shanahan: “Ainura, Recently URS provided a report from LiRo Engineers documenting the remediation work they have completed at 524 West 38th Street under their contract with NYCEDC. LiRo is the Construction Managers involved with the Hudson Yards construction project in the area and they have control
of the site. LiRo performed an excavation, removed an abandoned hydraulic oil tank, installed some wells and completed groundwater monitoring. URS now if back performing quarterly groundwater sampling. Today, we posted a new report to the website documenting the work completed at this site by URS and LiRo and we will be sending you a hard copy in the mail. If you have the time, it would be beneficial to review the report before our meeting on Thursday. If not, I will review during the meeting. Please note the area with groundwater contamination in the bedrock appears to be where a new road will be constructed. The report is attached for your convenience.

Kevin J. Shanahan
Senior Project Manager
URS Corporation

the report to eDocs. Will review. AD09/19/2013: Attended quarterly meeting with DDC and URS. Discussed the site on this meeting. I was informed that due to some construction issues some of the proposed wells could not be installed. A meeting should be scheduled with all involved parties to discuss the different remediation scenarios after report will be reviewed. AD09/24/2013: Received a hard copy of the URS’s report. AD09/16/2013: Reviewed the report. It states that 2011 Site Investigation - July Drilling for the additional site investigation was completed by Associated Environmental Services, Inc. (AES) between July 25 and July 27, 2011. Only three of the five proposed monitoring wells (MW-08A, MW-09A, and MW-10A) were installed. The remaining two wells could not be installed because there was insufficient clearance for the well proposed in the sidewalk and a second proposed well was located too close to the existing building foundation. The boring logs from these wells are generally consistent with the logs from previous borings at the sites showing a 4-inch concrete layer and 6-inch stone layer underlain by fill and schist bedrock. Bedrock was encountered at depths between 3 and 9 feet bgs in these borings. On August 4, 2011, URS collected analytical samples from wells MW-04, MW-05, MW-07D, MW-07S, and newly installed wells MW-08A and MW-09A. Newly installed well MW-10A was found to be buried due to on-going construction at the site. Analytical results the August 2011 groundwater samples showed that no VOCs exceeded the NYSDEC Groundwater Quality Criteria in monitoring wells MW-07S, MW-08A, and MW-09A. However, total VOC concentrations in the remaining wells were elevated with 24,820 ppb in MW-04, 12,438 ppb in MW-05, and 5,705 ppb in well MW-07D. On October 11, 2011, URS met with representatives from HPD, EDC, the Hudson Yards Development Corporation (HYDC), and LiRo to discuss the on-going construction activities at the site and their impact on URS and the spill remediation efforts. During the meeting URS indicated the nature of the impacts and the need to complete the soil excavation (and possibly groundwater remediation) prior to new development. HYDC acknowledged the environmental conditions on-site and indicated a willingness to work toward environmental cleanup goals. Following this meeting it was determined that the best course of action would be for LiRo to oversee excavation of the contaminated soil and installation of the remaining monitoring wells from the original URS work plan (in addition to replacement of wells damaged during the soil excavation). Remedial Actions 2012-2013: In September 2012, LiRo completed excavation of the contaminated soil and the concrete vault as recommended by URS in the June 26, 2011 work plan. The remnants of what appeared to be a hydraulic system were also removed at this time. According to the report, all overburden soil from an area of approximately 30 feet by 30 feet was excavated to the top of bedrock and then backfilled with clean fill. A total of 57.71 tons of soil...
FOUR B REALTY (Continued)

were removed for offsite disposal. LiRo reported that the bedrock in this area (outside of the tank vault) was encountered at depths of 2 to 3 feet bgs instead of 4 to 8 feet as reported in previous documents. Because of the shallow nature of the excavation, LiRo determined that sidewall samples from the excavation would not be possible. According to their report, no confirmation soil samples were collected. Monitoring wells MW-07S and MW-07D were destroyed during the excavation and were replaced by monitoring well MW-07R located approximately 9 feet to the east. LiRo also installed new monitoring wells MW-08 through MW-12 as presented in URS’ June 26, 2011 work plan. The depth to groundwater at the site has varied significantly in the past two years ranging from as little as 2 feet to as much as 18 feet bgs. It is possible that the fluctuating groundwater elevations are due to the contaminated soil excavation and other construction activities at the site. Free product has been detected primarily at location MW-06. When this well was first installed in 2011, a product thickness of 0.10 feet was observed. URS collected an estimated total of 1.75 gallons of product from this well through 2012. Product thickness declined until only a sheen was observed during the last measurement on February 14, 2013. During the subsequent monitoring event on February 28, 2013, well MW-06 was reported as being destroyed. Occasional product sheens have been reported at other monitoring wells since 2011; however, these appear to be random occurrences and are not believed to indicate any significant quantity of free product at the site. The most recent product detections occurred in wells MW-08 and MW-09, which along with MW-06, are located west of the previous UST area. Groundwater samples were collected by LiRo in November 2012 and March 2013. A total of seven events have been conducted, the most recent by URS on June 28, 2013 where samples were collected from wells MW-04, MW-05, MW-08, MW-09, and MW-12. Results from this event show that no VOCs were detected above the NYSDEC Groundwater Quality Criteria in wells MW-05, MW-09, and MW-12. Well MW-04 was the most contaminated with 12,037 ppb total VOCs; well MW-08 contained only 75 ppb total VOCs. Well MW-07R was not sampled in June, but was sampled during the previous sampling event in March 2013 and found to have 12,233 ppb total VOCs. Based on the analytical data, URS concludes that the soil excavation had a positive impact in regard to the dissolved phase impacts at well MW-05. Total VOC concentrations at this well were on the order of 12,000 ppb prior to excavation of the contaminated soil, but have not been detected in three sampling events conducted following the excavation. Well MW-04 also showed similar improvement until the most recent sampling event in June. It appears that a small area of dissolved phase contamination exists in the vicinity of monitoring wells MW-04 and MW-07R, east of the original UST location. Results from well MW-08 show that the dissolved phase plume may extend somewhat to the north from the site. URS states that all known USTs, piping, fill ports, and other structures have been removed from the site. In regard to soil contamination, they expect that the 2012 excavation removed most or all of the contaminated soil at the site. Due to the apparent shallow depth to bedrock in the affected area, any remaining soil contamination at the site would be limited. Free product at the site was primarily limited to monitoring well MW-06. URS collected product from this well on eight separate occasions and the product levels appeared to be declining. However, the last measurement from this well before it was destroyed indicated that a product sheen still remained in the groundwater. Recent product
detections occurred in wells MW-08 and MW-09, which along with MW-06, are located west of the previous UST area. It is expected that free product is no longer present in any significant quantity; however, this should be verified with future monitoring data. The most recent groundwater analytical data indicates that a small area of dissolved phase contamination exists in the vicinity of monitoring wells MW-04 and MW-07R, east of the original UST location. Only a few rounds of groundwater data have been collected following the excavation and removal of the contaminated soil. The extent of the contamination generally appears to be defined to the south, east, and west, assuming that the contaminant concentrations from the June sampling event remain relatively consistent. It is expected that the groundwater contaminant concentrations will decline further with continued monitoring. Based on the depth to groundwater and bedrock, it appears that the groundwater contamination is located within the bedrock zone. Based on the most recent groundwater monitoring data and other remedial actions at this site as summarized above, URS recommends the following: Actions:- Continue monitoring of the site product and water levels on a quarterly basis. - Continue quarterly groundwater sampling of all available monitoring wells. URS recommends that monitoring well MW-06 be replaced since there are no other monitoring wells in the immediate area and a product sheen was observed in the last measurement at this well. Monitoring well MW-06R will be used to determine whether free product is still present in this area and to delineate dissolved phase contamination to the west of the former USTs. - Install a monitoring well to the north and to the south of the most contaminated wells (MW-04 and MW-07R) to delineate dissolved phase contamination.- Reinstall a well at location MW-07D based on its historic indications of groundwater contamination, and to potentially serve as a groundwater treatment well. - URS will also assess the condition of the remaining monitoring wells and replace damaged or destroyed wells as site conditions will allow. - All four wells (and any additional replacement wells) will be constructed as four inch diameter wells to allow the wells to function as potential groundwater treatment wells in addition to monitoring wells. Because the wells are primarily replacements for previous wells, and since soil contamination was remediated, soil samples will not be collected for analysis. URS will document the presence of petroleum impacts by the field screening of soil recovered during drilling, including PID readings. DEC and DDC discussed this site on quarterly meeting and I was informed that due to some construction issues some of the proposed wells could not be installed. A meeting should be scheduled with all involved parties to discuss the site remediation.

AD10/15/2013: Left a message to A. Samani regarding a possible meeting. AD10/29/2013: Called and spoke with A. Samani regarding the meeting with all involved parties.
AD11/01/2013: Scheduled the meeting for November 21, 2013.
AD11/21/2013: I and J. Kolleeny met with A. Samani, M. Asbad of DDC, K. Shanahan and Harvey Roberts of URS, Steve Frank and Dan Brodcen of LiRo. Discussed the site conditions and remediation options. DEC will approve the work plan proposed by URS with some modifications regarding well MW-6. LiRo will submit the GW analytical data from the excavation pit in the vicinity of the former MW-6. URS proposed to use EFR on most contaminated wells MW-04 and MW-07R and installation of ORC socks. AD11/26/2013: Issued and sent an approval letter for the wells installation work plan. DL pdf copy of the letter to eDocs.
AD01/28/2014: Received the following e-mail from K. Shanahan of
FOUR B REALTY (Continued)

URS: “Ainura, The purpose of this e-mail is to provide you with an update on our progress at this site and to request approval from you to adjust the locations of the proposed monitoring wells. We have attached our report dated September 19, 2013 for reference. During the meeting on November 21, 2013, it was decided that the following course of action should be implemented:

1. URS will redevelop the two most contaminated wells since the water table is within the bedrock and if the redevelopment may reduce the contaminant levels.
2. URS will sample all existing wells on-site.
3. Liro will provide as-built and existing utility drawings to allow URS to adjust proposed well locations, as necessary.
4. URS will install ORC socks into MW-04 and MW-07R, the two most contaminated well to stimulate bioremediation processes.
5. URS will install, develop and sample new wells MW-13, MW-14 and MW-15.

Since the meeting, items 1 through 4 have been completed. Well MW-07R has been destroyed so the only remaining wells on-site are MW-04, MW-09 and MW-12. The groundwater sampling results from the December 30th event showed negligible VOCs in wells MW-09 and MW-12 but approximately 12,000 ppb in well MW-04 which is consistent with previous sampling events. The ORC socks were installed in well MW-04 on January 16, 2014.

We requested from EDC (and their consultants) the base mapping for the new site developments including the new road, Hudson Boulevard East. The attached Figure 1 illustrates the current site conditions including the new road, the new power and storm sewer utilities, the two remedial excavation areas, the existing and previous wells, the three proposed well locations as specified in the last URS report and three alternate locations (shown in magenta color). We moved proposed well MW-13 from the middle of the road to one foot from the curb. This would allow future sampling when the road is open. We moved proposed well MW-14 from next to the underground cable TV line to inside the construction fence in between the new power utilities. Sampling this well after the new road opens may be impossible, but it will provide valuable delineation data in the near term. We moved proposed well MW-15 from directly over the new power conduit to one foot from the curb. This would allow future sampling when the road is open. Please let us know if you approve of these locations so we can schedule the drilling work.

Thanks, Kevin J. Shanahan
Senior Project Manager
URS Corporation

kevin.shanahan@urs.com
Office: 716-923-1215
Cell: 716-480-7352
Will review.
AD01/30/2014: Reviewed the submitted data. Discussed the proposed changes with J. Kolleeeny of DEC. Issued and sent an approval letter to A. Samani of DDC. DL copy of the letter to edocs.
AD03/07/2014: Received a groundwater monitoring report for 3rd and 4th quarters of 2013. DL the report to eDocs. Will review.
AD04/10/2014: Reviewed the report. It states that during both the third and fourth quarter sampling events, groundwater samples were collected only from wells MW-04, MW-09, and MW-12. Results from the most recent event in December show that no VOCs were detected in wells MW-09 and MW-12. Well MW-04 contained 8,740 ppb total VOCs. Only minor concentrations of only a few semi-volatile organic compounds (SVOCs) were detected in the groundwater sample collected from well MW-09. Naphthalene was the only SVOC detected above criteria in well MW-04. According to URS, it appears that the soil excavation had a positive impact in regard to the dissolved phase impacts at the surrounding wells. It appears that a small area of dissolved phase contamination remains in the vicinity of monitoring wells MW-04 and MW-07R (which was destroyed), east of the original UST location.
FOUR B REALTY (Continued)

Results from well MW-08 through June 2013 (the well was destroyed prior to the subsequent sampling event) show that lower concentrations of the dissolved phase plume may extend somewhat to the north from the site. Installation of the three additional monitoring wells as discussed above will help to delineate the remaining dissolved phase groundwater contamination at the site and facilitate future remediation. Conclusions: URS states that the most recent groundwater analytical data indicates that a small area of dissolved phase contamination exists in the vicinity of monitoring wells MW-04 and MW-07R, east of the original UST location. The extent of the contamination generally appears to be defined to the south, east, and west. It is expected that the groundwater contaminant concentrations will continue to decline during future monitoring events. Based on the depth to groundwater and bedrock, it appears that the groundwater contamination is located within the bedrock zone. Proposals: Based on the most recent groundwater monitoring data and other remedial actions at this site as summarized above, URS recommends the following: Actions: - Complete installation of monitoring wells MW-13, MW-14, and MW-15 in accordance with the January 2014 NYSDEC correspondence. - Continue monitoring of the site product and water levels on a quarterly basis. - Continue quarterly sampling of all available monitoring wells. The newly-installed wells will be included in future groundwater sampling events once they become available. Additionally, future groundwater samples will be analyzed for VOCs and naphthalene only. - Continue to install ORC socks in well MW-04 and other wells as appropriate. There is no proposals requiring DEC approval. AD12/16/2014: Received Report for 2nd and 3rd Quarter of 2014. Will review. AD01/22/2015: Reviewed the report. It states that the New York City Department of Housing, Preservation and Development (HPD) is redeveloping the site as part of the Hudson Yards project. LiRo Engineers (LiRo) is the construction manager for the redevelopment project, through a contract with the New York City Economic Development Corporation (EDC). This report presents the groundwater monitoring data for the second and third quarters of 2014 (through September). Monitoring wells MW-13, MW-14 and MW-15 were installed April 2 and 3, 2014 by AES, under URS supervision. Each soil boring was hand cleared manually to bedrock which was encountered from 1 to 4' bgs. One soil sample from above the bedrock was collected from each soil boring. No visual or olfactory evidence of petroleum contamination was noted. Some minor PID readings were recorded in the borings for wells MW-13 and MW-14. The highest PID reading at well MW-13 was 36.1 ppm at 4' bgs, and at well MW-14 the only PID reading was 8.1 ppm at 2' bgs. The analytical results for the soil samples were compared to 6NYCRR Part 375 Unrestricted Use SCOs. There were no VOCs detected above SCOs in any of the three soil samples collected. The highest concentration of total VOCs detected was only 1.3 ppb in the sample collected from MW-14. SVOCs were detected above SCOs in the samples from MW-13 and MW-15; total SVOCs in these soil samples were 15,757 ppb in MW-13 and 27,682 ppb in MW-14. Total SVOCs in MW-15 were only 2,587 ppb. Consistent with previous sampling events, all of the SVOCs that were detected above NYSDEC SCOs are PAHs and are attributed to urban fill, not petroleum contamination. In addition, naphthalene, commonly attributed to diesel fuel or heating oil petroleum contamination, was not detected above SCOs. In summary, based on soil sampling data collected, significant petroleum contamination was not present in the soil samples collected from borings MW-13, MW-14, and MW-15. Monitoring wells MW-13 and MW-14 were
Four B REALTY (Continued)

Installed outside the area of soil excavation completed by LiRo in 2012. The sample collected from MW?15 located inside the excavation area likely represented fill material placed following the excavation. During the most recent sampling event in September 2014, GW samples were collected only from wells MW-04, MW-09, and MW-14. Wells MW-13 and MW-15 were not sampled because they contained product. No VOCs were detected in well MW-09. MW-04 had a total VOCs of 1,202 ppb and well MW-14 had a total VOCs of 3,219 ppb. Minor concentrations of SVOCs were also detected in these wells with 3 ppb TSVOCs in MW-09, 54 ppb in MW-04, and 130 ppb in MW-14.

Naphthalene accounted for nearly all of the SVOCs detected. Conclusions: According to URS, the most recent GW data indicates that a small area of dissolved phase contamination remains in the vicinity of monitoring wells MW-04, MW-13 and MW-14 (and possibly MW-15 which has not yet been sampled due to the presence of free product). It is expected that the groundwater contaminant concentrations will continue to decline during future monitoring events, especially once the ORC sock installation can be implemented consistently. Based on the depth to groundwater and bedrock, it appears that the groundwater contamination is located within the bedrock zone.

Based on the most recent groundwater monitoring data and other remedial actions at this site summarized above, URS recommends the following actions:

- Continue monitoring of the site product and water levels on a quarterly basis.
- Continue product recovery from affected monitoring wells.
- Continue quarterly sampling of all remaining monitoring wells. Groundwater samples will be analyzed for VOCs and naphthalene only.
- Continue to install ORC socks in wells MW-04, MW-13, MW-14, and other wells as appropriate. There are no proposals which require DEC approval at this time.

Remarks:

Underground storage tanks each 550 gal have caused soil contamination over a period of 10 yrs - tanks were tested for tightness and do not appear to be leaking - contamination likely to have been caused by overfill at different periods based upon delineation by engineer contamination localized around fill pipe based on geo-probe boring and results of lab sample.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

DEC Memo: 10/08/08- Zhune spoke to Pete Mirabile from ABC tank (718) 272-2800.
They cleaned the tank and put everything in drums. Nothing leaking. He said called Donna tomorrow. 10/09/08 - Zhune called Donna. She said I am going to be in a meeting I will call you back. 10/10/08 - Donna called. They picked up all contaminated debris put them in 70 drums. They are going through the Insurance Company. They need to get the approval. The tank is going to be removed. A new tank will be install. 10/20/08 - Hiralkumar Patel received another complaint. spill #: 0808124. visited site. met Carlos Platero, building super. inspected basement. found 13 55-gal drums with contaminated soil in it. contaminated soil removed from old 7500 gal UST in basement behind wall. site currently has another 7500 gal UST and that is empty as found leaking. tanks are located along building foundation wall. and there is another wall in front of tanks towards boiler. found free product on floor from where previously closed tank removed. as per super, second tank is empty currently. during site inspection, found fill port un-plugged. asked super to plug fill port with cement. PBS #: 2-189502. as per PBS record, only one tank at the site which has been closed in-place in Jan. 2008. 10/21/08 - Hiralkumar Patel spoke with Donna (718-272-2800) at ABC tank. she mentioned that site originally had two 7500 gal #4 oil USTs at the site, in basement. in Jan. 2008 they abandoned one tank with foam as no longer needed. ABC tank found #4 oil in this first tank before abandonment (means was in service before Jan. 2008). then building manager noticed some water seeping through wall into basement. so management decided to remove abandoned tank to repair any water leak into the building. after removing first tank, they noticed oil on floor nearby second in-service tank. so ABC tank pumped out oil from second tank and noticed heavily corroded bottom after cleaning from inside. as per Donna, wall between tanks and boiler is non-supporting wall and owner has decided to demolish that wall and to remove second tank also. Donna mentioned that they will install temporary tanks this week and will remove second tank probably next week. asked Donna to remove oil/water from tank excavation area immediately. also asked to plug fill port immediately. Carlos Platero **building super** (Ph. (917) 364-5084) Winoker Realty Company **management company** 462 7th Avenue, Floor 12 New York, NY 10018. Ken Bonal or Barbara Ext. 0 **building manager** (Ph. (212) 519-2015) Fax (212) 519-2098. Email: kbonal@winokerrealty.com DEC requires: 1) immediate removal of free product from tank location, 2) PBS registration for both tanks and updates (as removing), 3) removal of contaminated debris, 4) soil/groundwater delineation 04/08 - Zhune spoke to John DiFrancesco 212-519-2015 building manager. He said he will find what they have and will call back. Owner Saeed Amidiam 212-967-1110 516-413-7573 saeed50@Aol.com Fax 212-5609751 Ext. 1402/23/11 - ABC Tank sent the report dated 02/23/11 ABC tank broke vault to expose and remove (1) 7500-gallon fuel oil storage tank (tank A) that was filled with foam and abandoned in place on January 1, 2008. All debris was removed from the premises. Tank A was removed in order to gain access to tank B which was leaking. ABC tank broke the vault to expose clean and remove tank B from premises. All contaminated debris was placed in drums & removed. A total of 56 drums were removed from the premises. ABC tank obtained: (4) soil samples from along tank B area approximately 3’ deep. A soil sample was taken from each end of the tank head and 1 mid-point sample was obtained. A soil sample was taken from middle of the floor where tank A was located. The soil analytical results show no VOCs and SVOCs above the Recommended soil cleanup objectives for fuel oil. Spill closed.

The NYSDEC case manager requested the excavation and disposal of contaminated soils associated with the piping leak. On the week of 3/8/1992 approximately 5 cubic yards of soil from the excavation were recorded between 200 and 300 ppm. The area of excavation was measured approximately 4 ft x 10 ft, with the greatest evidence of contamination west of the piping. In response to the analytical results, the NYSDEC requested that the monitoring wells be sampled and analyzed twice in the next year to

"SUN"Transferred from Miller to Sun on 10/24/2003.11/7/2003-Sun-File Review by Sun:-Closure Report for Underground Storage Tank, by Woodward-Clyde Consultants, Inc.-Three (3) ground water wells (MW1, MW2 and MW3) were installed in order to identify possible impacts to soil and groundwater that may have resulted from the three (3) USTs. MW1 and MW2 were installed west of the tanks. These wells were installed in the area assumed to be downgradient of the tanks in relation to groundwater flow. MW3 was installed east of the tanks in an area assumed to be upgradient of the tanks in relation to groundwater flow. One soil sample was obtained at the approximate groundwater interface in each of the three well locations. The samples were identified as MW-1A, MW-2A and MW-3A. The results of soil sample tests are summarized as follows: 1) Soil Sample MW1A identified a TPH concentration of 169 ppm. No BTEX compounds were detected in the sample within method limit, and 34.12 ppm of BNA compound. 2) Soil Sample MW2A identified no detectable TPH, 0.002 ppm of Benzene, 0.002 ppm of Toluene, 0.008 ppm of Ethylbenzene and 0.016 ppm of total Xylenes. BNA compounds were not analyzed. 3) Soil Sample MW3A identified TPH concentration of 306 ppm, 0.086 ppm of Benzene, 0.057 ppm of Toluene, 0.4 ppm Ethylbenzene, and 0.84 ppm of total Xylene, and BNA compound total 32.43 ppm. The results of the groundwater samples (MW1, MW2 and MW3) are summarized below: 1) Water Sample MW1 identified no detectable levels of TPH, no detectable levels of BTEX, 0.006 ppm of BNA compounds, and lead content of 2.43 ppm. 2) Water Sample MW2 identified 1 ppm of TPH, 0.190 ppm of Benzene, 0.031 ppm of Toluene, 0.002 ppm of total Xylene, no detectable of Ethylbenzene, Lead content of 28.2 ppm, 0.106 ppm of SVOC. 3) Water Sample MW3 identified TPH concentrations of 2.6 ppm, 0.200 ppm of Benzene, 0.130 ppm of Toluene, 0.450 ppm of Ethylbenzene, and total Xylene of 0.570 ppm. During the original exploratory excavations, PID readings from soil around a piping joint near the sub-level dispenser pump were found to be between 50 and 600 ppm. In addition to the PID readings, the smell of gasoline was strong. As a result of these findings, four soil samples (P1 thru P4) were obtained from within the excavation, which measured approximately 3 ft by 4 ft. Sample P1 was obtained from directly under the piping; Sample P2 was west of the piping; Sample P3, east of the piping; and Sample P4 at the point at which the pipes are closest to the dispenser pump. The results of four samples are summarized below: 1) Sample P1 identified TPH concentrations of 1530 ppm, 7.3 ppm Benzene, 0.850 ppm Toluene, 6.6 ppm Ethylbenzene, 55 ppm total Xylene, 29.28 ppm SVOC, and total Lead 418 ppm. 2) Sample P2 identified TPH concentrations of 904 ppm, 1.4 ppm Benzene, 6.4 ppm Toluene, 24.0 ppm Ethylbenzene, 22.0 ppm total Xylene, and total Lead 288 ppm. 3) Sample P3 identified TPH concentrations of 1580 ppm, 0.002 ppm Benzene, 0.003 ppm Toluene, 0.045 ppm Ethylbenzene, 0.150 ppm total Xylene, and total Lead 273 ppm. 4) Sample P4 identified TPH concentrations of 1729 ppm, 2.9 ppm Benzene, 11.0 ppm Toluene, 5.8 ppm Ethylbenzene, 32.0 ppm total Xylene, and 11.0 ppm of SVOCs. In order to remove the material spilled from the piping leak, NYSDEC case manager requested the excavation and disposal of contaminated soils associated the piping leak. On the week of 3/8/1992 approximately 5 cubic yards of soil from the excavation. The PID readings were recorded between 200 and 300 ppm. The area of excavation was measured approximately 4 ft x 10 ft, with the greatest evidence of contamination west of the piping. In response to the analytical results, the NYSDEC requested that the monitoring wells be sampled and analyzed twice in the next year...
confirm that the source of contaminants in the monitoring wells has been removed by closure of the USTs. During the week of 3/9/1992, Verizon’s contractor, GMC purged and closed in-place the three 550-gallon USTs. The tanks were closed by filling each tank with concrete slurry. GMC reported that all fills, vents and any other openings were removed and/or filled with concrete. -Attachment to Closure Report for Underground Storage Tanks, by Woodward-Clyde Consultants, Inc, dated 6/25/1993: This attachment reported the summary of water sample analysis conducted on 4/15/1993. The results are summarized below: 1) Water Sample MW1 identified less than 1.0 ppm of TPH, no detectable levels of BTEX. 2) Water Sample MW2 identified 3.8 ppm of TPH, 0.28 ppm of Benzene, 0.005 ppm of Toluene, 0.014 ppm of total Xylene, 0.01 ppm of Ethylbenzene. 3) Water Sample MW3 identified TPH concentrations of 7.7 ppm, 0.27 ppm of Benzene, 0.5 ppm Toluene, 0.065 ppm Ethylbenzene, and total Xylene of 0.55 ppm. -Attachment to Closure Report for Underground Storage Tanks by Woodward-Clyde Consultants, Inc, dated 6/5/1997: This letter reported the summary of water sample analysis conducted on 4/23/1997. The results are summarized below: 1) Water Sample MW1 identified no detectable levels of BTEX. Lead Content is 0.0129 ppm. 2) Water Sample MW2 identified 420 ppb of Benzene, 19 ppb of Toluene, 18 ppb of total Xylene, 19 ppb of Ethylbenzene. Lead Content is 0.0034 ppm. 3) Water Sample MW3 identified 160 ppb of Benzene, 16 ppb of Toluene, 21 ppb of Ethylbenzene, and total Xylene of 30 ppb. Lead content is 0.0505 ppm. As shown on 4/23/1997 groundwater sampling data, BTEX concentrations were not detected in Monitoring well MW-1. However, elevated BTEX concentrations were observed in Monitoring wells MW-2 and MW-3. In addition, a slightly elevated lead concentration was detected in MW-3. The BTEX concentrations in MW-2 and MW-3, and the lead concentration in MW-3, exceeded the NYSDEC groundwater quality standards for the respective compounds. -Letter from M. Godick of Lexicon to S. Miller of NYSDEC, dated 6/5/1997: This letter reported the summary of water sample analysis conducted on 4/23/1997. The results are summarized below: 1) Water Sample MW1 identified no detectable levels of BTEX. Lead Content is 0.0129 ppm. 2) Water Sample MW2 identified 420 ppb of Benzene, 19 ppb of Toluene, 18 ppb of total Xylene, 19 ppb of Ethylbenzene. Lead Content is 0.0034 ppm. 3) Water Sample MW3 identified 160 ppb of Benzene, 16 ppb of Toluene, 21 ppb of Ethylbenzene, and total Xylene of 30 ppb. Lead content is 0.0505 ppm. As shown on 4/23/1997 groundwater sampling data, BTEX concentrations were not detected in Monitoring well MW-1. However, elevated BTEX concentrations were observed in Monitoring wells MW-2 and MW-3. In addition, a slightly elevated lead concentration was detected in MW-3. The BTEX concentrations in MW-2 and MW-3, and the lead concentration in MW-3, exceeded the NYSDEC groundwater quality standards for the respective compounds. -On 10/24/2003, Joe Sun of NYSDEC sent a letter to Jerome Kung of Verizon, requesting to install a minimum of three (3) boring/wells to further delineate the extent of petroleum contamination both on-site and off-site, and provide a surrounding property sketch. 05/28/04-File Update by Sun-Limited Subsurface Investigation, prepared by EnviroTrac dated April 7, 2004: Based on laboratory analysis, VOCs and SVOCs were detected in soil samples collected at soil boring MW-4 (0 to 2 feet below grade) and at MW-5 (2 to 4 feet below grade) at concentrations exceeding the NYSDEC TAGM 4046 Recommended Soil Cleanup Objectives. The soil sample collected from soil boring MW-6 was below the NYSDEC Recommended Soil Cleanup Objectives. VOCs and SVOCs were detected in groundwater samples collected from monitoring well MW-4, MW-5, and MW-6 at concentrations above the NYSDEC Groundwater Standards. The hot spot is in WM-5, which has BTEX concentration of 9,780 ug/l, including 3,000 ug/l for Benzene concentration, 1,000 ug/l for Toluene concentration, 980 ug/l for Ethylbenzene concentration and 4,800 ug/l for total Xylene. MTBE concentration for MW-5 is 66 ug/l. 05/28/04-File Update by Sun: On
05/28/04 Sun sent a letter to Jerome Kung of Verizon requiring complete delineation of soil and groundwater contaminations, submittal of an Investigation Summary Report followed by a Remedial Action Plan. The Department set a deadline of June 15, 2004 for signing the Stipulation Agreement. 01/06/05 File Update by Sun: Additional Subsurface Investigation Report, prepared by EnviroTrac, dated December 1, 2004: On September 23 and 24, seven additional monitoring wells (MW-7 through MW-13) were installed at the site. Based on laboratory analysis, VOCs were detected above NYSDEC TAGM 4046 Recommended Soil Cleanup Objectives in soil samples collected from the locations of MW-7, MW-8 and MW-13. SVOCs were detected above Soil Cleanup Objectives in soil collected from locations of MW-9, MW-10 and MW-13. Based on laboratory analysis, VOCs were detected above NYSDEC Groundwater Quality Standards in ground-water samples collected from MW-5, MW-6, MW-7, MW-8, MW-10, MW-11, MW-12 and MW-13. SVOCs were detected above NYSDEC Groundwater Quality Standards in ground-water samples collected from MW-4 and MW-6. Based on the report, elevated concentrations of VOCs in soil and groundwater samples were within the vicinity of the closed in place USTs and former gasoline dispenser.  4/21/06: Reviewed the December 05 - March - May 2006 update report for June-August 2005. Samples taken on August 25, 2005. Max BTEX 151 ppb (MW-8), max MTBE 26 ppb (MW-12). Quarterly monitoring is taking place until mid-2006 when the building will be razed and the ground excavated.  4/27/06: Reviewed the December 05 -  4/21/06: Reviewed the December 05 - February 06 quarterly report. Wells samples on February 24, 2006. Product found in MW5 at a thickness of 0.75 ft. Max BTEX 55ppb in MW6, max MTBE 35ppb in MW12. Depth to water 2-10 feet. Source removal will occur following the buildings demolition in 2006. 4/27/06: Meeting with Verizon, NYSDEC, and EnviroTrac. The site is just being monitored until the new owner demolishes it in early 2007. The new owner applied for BCP funding. Additional delineation downgradient failed due to refusal. The adjacent site downgradient is under construction and may have done a phase 2 assessment.  6/29/06: Received March - May 2006 update report. Samples collected May 12, 2006. Product at a depth of 0.84 feet found in MW-5. Product was hand bailed. Minimal contamination in other wells. Depth to water 6.65 ft. Building demolition has not been scheduled. Sent an email to Jerome Kung requiring monthly bailing of product from MW-5 until building demolition begins.  10/30/06: Sent email to Jerome Kung to followup on overdue quarterly report.  11/17/06: Received update report November 13, 2006. Wells sampled on August 16, 2006. Product in MW5 at a thickness of 0.16ft. Product was hand bailed. Max BTEX 140 ppb in MW8, max MTBE 29 in MW12. "Source removal as outlined in the RAP will occur following the building's demolition. Until that time, groundwater will continue to be sampled quarterly with the next round of sampling scheduled for November 2006".  2/7/07: Reviewed update report. Wells sampled on 11/20/06. Max BTEX 140 ppb (MW8) and max...
VERIZON (Continued)

MTBE 48 ppb (MW12). 0.61 ft of product on MW5. Excavation will occur following building demolition. Case reassigned to DEC Bollers, who is managing the BCP cleanup at this site. See BCP site no. C231051.12/17/2010: Certificate of completion for BCP issued 12/17/2010 - Track 1 unrestricted use achieved through excavation to bedrock at 20’ bgs, and removal of USTs

Remarks: FOUND HIGH TPX, LOW BTX, IN TWO SOIL BORING SITE ASSESSMENT. EMPTY TANKS ON SITE. CLOSURE.

**DEC Memo:**
e2mis no. 154559: 5 gal. of a unknown substance, flooding on 50 gal. of water in V2002. 3 samples taken oil id, pcb and flash point. Lab Sequence Number: 04-05912-001 - Flash Point, PMCC >140 deg F. Lab Sequence Number: 04-05911-001 - PCBs < 1 ppm. Lab Sequence Number: 04-05913-001 - Insufficient amount of sample extracted to perform oil identification. 09-27-04 10:35 Update: @ 10:00 A final clean-up has been completed. 110 gal. of water was removed. No soilds. Vactor and tanker was used. Vault was double washed w/slix. Environmental tag was removed #41374. Source of spill is unknown. No repairs were needed.

**Remarks:**
Approximately 5 gallons of unknown oil on 50 gallons of water in a vault. Contained in the vault. Samples taken - cleanup pending sample results. Ref # 154559.

DEC Memo: Prior to Sept, 2004 data translation this spill Lead_DEC Field was
"RODRIGUEZ"E2MIS NOTES 145538Flush Dept reports that in M39883, Mr.
Valenzuela foundApprox 3 OZ. Of cable oil on concrete floor, mixed 15
lba of oil absorbent. No sewer connection. Clean up will be done as
50/499.10/12/02 04:30 Al Munro # 13615 Underground (cleanup) forman
called to report that the cleanup has been completed 100% at 03:30.
They treated this 50-499 ppm. there was 2 barrels of waste consisting
of dirt, debris, & ppe generated from this structure. There was 150
gallons of liquid removed. The structure was triple washed with slix
& rinsed down. did he see Any leaking cable & he said he did not see
any leaks.

Remarks: 3 OZ DIELECTRIC FLUID - FROM A CABLE IN MANHOLE - THERE IS A RODENT
PROBLEM IN THE MANHOLE - SO ONCE THEY EXTERMINATE THE RODENTS THEY
WILL WORK ON CLEAN UP & REPAIR CON ED #145538

WILLING RESPONSIBLE PARTY. CORRECTIVE ACTION TAKEN.
**10TH AVE & W 45TH ST (Continued)**

double washed the asphalt and the affected area in the catchbasin with safe wash. Most of the 2.5 gallons of antifreeze that had went into the catch basin had gone through to the piping within the basin. There was 1 bag of waste that will be disposed of by Clean Ventures. This case is assigned to Feroze for routine closure. 9/22/10 - Austin - Spill contained and cleaned up by Con Ed - see EDocs for more detailed information - spill closed - end

Remarks: veh # 60873 leaked unknown liquid into catch basin. National Response Ctr #952124.

#### Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

DEC Memo: Prior to Sept, 2004 data translation this spill Lead_DEC Field was "KRIMGOLD"5/12/04. J.Krimgold spoke to Grag Peterson (Langan Engineering)@ 201-794-6900 a consultant for a potential buyer. He will submit a proposal for remediation of this site 3/15/05. J.Krimgold reviewed the Tank Closure Report submitted by LANGAN Eng. on December 8, 2004. Based on information provided 4000 gal #4 oil tank has been removed. Slightly contaminated soil found during tank’s removal was excavated. Post-excavation samples show no residual soil contamination. NFA letter.
Remarks: TANK DOSEN'T SEEM TO BE LEAKING - BUT LINED TO TANK ARE VERY OLD-TANK WILL BE CLEANED AND LINES ISLOATED - THAN RETESTED

**Environmental Interest/Information System**

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

**NY MANIFEST:**

| EPA ID: | NYR000023341 |
| Country: | USA |
| Location Address 1: | 333 WEST 38TH STREET 8TH FLOOR |
| Location Address 2: | Not reported |
| Location City: | NEW YORK |
| Location State: | NY |
| Location Zip Code: | 10016 |
| Location Zip Code 4: | Not reported |

**Mailing Info:**

| Name: | NEWBRIDGE COMMUNICATIONS |
| Contact: | SCOTT TILTON |
| Address: | 333 EAST 38TH STREET 8TH FLOOR |
| City/State/Zip: | NEW YORK, NY 10016 |
| Country: | USA |

Ruthie also noted that she “constant” and were “stronger at times” but could not specify a building on 10/9/13. She noted that the gasoline vapors were dispensing operations. Ruthie noted that she moved into the new property. I noted no significant spills or tank work at Hess and UST’s are approximately 25’ feet south of her window on the Hess unit underneath) that faces 45th Street. The vent pipes for the Hess roof. Another large window is in her living room (with the heating/AC also the first window from bottom up in line of windows to building about 30 feet above and five feet out from her window. Her window is living room windows faces 10th Avenue and the gas station tank pad is Hess Gas Station located at 502 West 45th Street. One of Ruthie’s building that is newly constructed and immediately adjacent to the 6:30pm. Ruthie lives on the third floor of approximately ten-story party*Cell: 917-565-1420 email:rguppy@nyc.rr.com) at approximately (Ph:(212)683-9561) and left message to return call to Vought. Vought 12/2/13-Vought-Duty desk officer. Called Ruthie GuppyDEC Memo: (212) 683-9561Contact Phone: RUTHIE GUPPYContact Name: 999Spiller Company: NEW YORK, NYSpiller City,St,Zip: 510 WEST 45TH STSpiller Address: HESS GAS STATIONSpiller Company: RUTHIE GUPPYSpiller Name: 1/23/2014Spill Record Last Update: 12/2/2013Date Entered In Computer: FalseRemediation Phase: OtherCleanup Ceased: Not reportedLast Inspection: FalseRecommended Penalty: Spill Source: Gasoline Station or other PBS Facility SWIS: 3101Investigator: JBVOUGHTReferred To: Not reportedReported to Dept: 12/2/2013CID: Not reportedWater Affected: Not reportedSpill Class: Not reportedCleanup Meets Std: FalseSpill Notifier: Gasoline Station or other PBS Facility Spill Cause: 1308785  /   Not ReportedSpill Number/Closed Date: 12/2/2013Spill Date: 2DEC Region: 489542Site ID: 444642DER Facility ID: 1308785 Facility ID: ER Facility Type: South 510 WEST 45TH STREET-IMPACTED SITE AW698 GASOLINE ODORS AT HESS GAS STATION NY Spills S116155236 Site 1 of 24 in cluster AW Relative: Lower Actual: 21 ft. 1151 ft. 0.218 mi. saw at least two deliveries a day by tank truck to the USTs under her window. The vapors were: "giving her headaches", "making her nauseous", "vomiting", "couldn’t eat", had "no taste", "eyes were burning", she was "itching", "weakness" and "drowsiness". I asked her during site visit if she could smell gasoline odors currently and she noted "she can smell it as we speak". I, however, noted no olfactory detections of gasoline vapors in apartment during site visit. Ruthie noted that she had previously notified building management: Gotham West *Property Manager* James Caropreso email: jcaropreso@gothamwestnyc.com who performed a site visit to her apartment and noted no olfactory odors as well. I also recommended that Ruthie seal the window facing gas station as an interim remedial measure and also in consideration of her possible high sensitivity as I could feel some cold air penetrating through window seals facing gas station with hand. I also explained that possible intrusion events through window could be very sporadic (as possibly related to routine gas station operations eg tanking auto gas cap off or lifting manways during delivery to attach fill and vapor recovery lines).

Ruthie also noted that she had a previously scheduled a routine appointment with her personal physician next week regarding her overall health and recent possible vapor impacts and symptoms. I noted also that DEC would possibly liaise NYCDOH/NYSDOH with her doctor as well to provide information IF a vapor issue was confirmed.

The Hess station is an extremely active station (with over ten dispenser islands and always had lines of taxis waiting to fill their tanks suggesting a large volume sold and needed for site). I inquired if Ruthie was staying at her apartment and she noted that she was "not able to stay" there and was trying to stay with friends. I asked Ruthie that next time she smelled vapors to look out window to attempt to determine source or related activities (eg deliveries, spills etc) and let me know if she knew of a correlation. Ruthie also noted that she was currently using and air filter for the living room. Ruthie showed met email correspondence she had with NYSDOH Hughes dated 12/2 noting the vapor issues (she indicated she found his name on a public website) and NYSDOH Hughes recommended that she call the Spills Hotline. Ruthie also noted that she has contacted a representative of the NYC Mayors Office of Veteran Affairs on the issue as well. Ruthie also noted that she rents the apartment and makes her checks payable to Rose Associates 44th Street Development LLC 200 Madison Avenue 5th Floor New York, NY 10016. I performed a database review and site has ten closed spills and no currently open active spills other than this spill number. As per PBS #2-338613 site has three (10,000-gallon) gasoline USTs, one (10,000-gallon) diesel UST and ten closed (4,000-gallon) gasoline and diesel USTs combined.

Note however that an above ground source (eg through window and not vapor intrusion) is possible suspect as no complaints received from building and building recently built. Vought sent email to NYSDOH, NYCDOH, DEC PBS, Feng, Austin, Hughes, D'Andrea, Caropreso, Guppy, Hess, with site notes and request for DOH site visit and PBS Inspection. 12/5/13-Vought-On vacation from 12/6 thru 12/16 and as such Vought sent email to RSE, DOH and Zelinski that DEC Feng will be overseeing site while Vought away. Vought also called and spoke to Ruthie who noted that she did receive a copy of Voughts 12/3/13 email to all parties and that she was satisfied with email. Vought provided her with desk number of DEC Feng and Spill Hotline in case an issue should arise and also noted that work including PBS inspection and hopefully DOH inspection would occur next week so that
Vought could have results upon return to office. Ruthie also noted that gasoline vapors were very heavy this morning and it correlated with the "morning rush" of taxis filling up for day. Vought called and spoke with NYSDOH Hughes and reviewed email and he will call NYCDOH D’Andrea to follow up on DOH site visit. NYSDOH Hughes later sent email to NYCDOH D’Andrea with the 12/3 email by Vought and request for further discussion on appropriate monitoring (PID versus possible SUMMA samples). 12/18/13-Vought-To date correspondence review:

- Email from DEC Falvey to Vought- 12/6/13. DEC Falvey inspected Hess (502 West 45th Street) and issued Notice of Violation for violations including: 1) failure to maintain spill prevention equipment (three monitoring wells not secured) 2) sensors in tops sumps not secured and improperly positioned 3) Sumps not maintained as product in one gasoline catch basin (Tank 13) and in diesel catch basin. Product present in dispenser containment (Dispenser 5). Debris in catch basin fill and vapor recovery basins of Tanks 11 and 12. Product in diesel top sump. Water debris in gasoline top sumps. Email from NYCDOH D’Andrea to NYSDOH Hughes-12/9/13. Email that “This doesn’t appear to be a spill site. It seems like a vapor problem from the volume of gas being pumped from the adjacent gas station. If this is the case, DEP would be the agency to respond to this issue.”

- Chris.” NYSDOH Hughes replied that “Thanks, then who or how would be the way to get complaint/concerns to DEP for follow-up.” NYCDOH D’Andrea noted that “For environmental concerns that travel through the air and impact other locations, DEP is the agency that would typically address it. I have copied Gerry Kelpin (Program Director of the Air and Noise Enforcement and Policy Unit) to confirm. Thanks, chris.”

12/16/13-Vought-In neighborhood for other reasons and Vought noted Ruthies window shade was up and plants were in window with no signs of recommended window sealing observed from street level. 12/19/13-Vought-Sent email to NYCDOH and NYSDOH that “Chris/Mike, The Department performed a Tank Inspection on 12/6/13 and issued a Notice of Violation for numerous small housekeeping issues. DEC did note product in fill port catch basin (close to her window) which was cleaned and witnessed by DEC during its inspection. We however did not find any issues with respect to the vapor recovery system and noted a very small amount of product under the dispenser (which is an unlikely vapor source as it is contained within dispenser box). We will be pursuing these violations with our Office of General Counsel. I last spoke with the impacted party (Ruthie) during my site visit on 12/2 and as she was noting numerous health effects, I would like to update her as soon as possible with respect to the DEC tank inspection findings as well as any possible site visits by a NYC Agency with respect to indoor air to address her health concerns. Have we received any contact from Gerry Kelpin from DEP? Thanks gentlemen as always.” Vought called Ruthie and updated her on results of PBS inspection and referral of health and indoor air issue to DEP Program Director of the Air and Noise Enforcement and Policy Unit and Vought would follow up once contact from DEP was received. Vought spoke with OGC Oliva and PBS case will be handled by OGC Urda. 12/20/13-Vought- Vought had phone call with NYSDOH Hughes and DEP Air and Noise Enforcement and Policy Unit will perform second site visit today to determine if odors present and Vought to call Ruthie and inquire if Ruthie still has odor issues. NYSDOH Hughes also noted that air survey not needed if odors are not continuing as per Ruthie (after housekeeping issues noted during PBS inspection were addressed). NYSDOH Hughes noted also that Vought
should ask Ruthie to call NYSDOH Hughes as well. Vought called Ruthie and left message to return call to Vought’s cell noting if vapors had persisted after DEC site visit on 12/2 as well as removal of gasoline from fill port catch basin noted during PBS inspection. Vought also noted during message that possible further action by NYSDOH/DEP was pending her response to Vought to confirm continued presence of odors. Vought called and left message for Hess (Mathew Butler) that product was found in Dispenser 8 and that if he could have it cleaned immediately and return call to Vought. Vought received callback from Ruthie noting that she received call from DEP and they want to set up an appoint to go to her apartment and as per her measure the air during deliveries as she has indicated a possible correlation between deliveries and odor events. She confirmed additional odor events since 12/2 and as friday afternoon before holiday, Vought told her to immediately call NYSDOH Mike Hughes to discuss issue. Vought received callback later from Hughes who noted that he spoke with Ruthie regarding coordination of delivery with PID survey by DEP and that he will also call NYSDOH D’Andrea to further discuss a NYCDOH site visit. Vought received callback from Hess Michael Matri (Ph:732-750-6432) noting that he received Voughts email to Hess (Butler) and also received NOV from DEC Falvey. Vought received message from Hess (Matri) and returned call and spoke to Matri who confirmed that all dispenser islands were cleaned at the site (including Dispenser 8) and he also concurred to coordinate delivery with indoor air survey. Due to holidays and associated scheduling difficulties, Vought called and left message to Ruthie to see if she was available for delivery concurrent with survey the week of 1/7, provide updates and inquire as to why she had not covered her window to date as per Vought’s observations on 12/16 if vapors were continuing as she noted to NYSDOH Hughes.12/23/13-Vought-Received email from Hess (Matri) that “Jeff, As discussed Hess can arrange for an observed delivery the week of January 6th The only day that would be a problem is 1/9. Please let me know a date and we can arrange a time etc. Thanks.”. Vought sent email reply to Matri with cc to NYSDOH Hughes that “Mike, Thanks for the quick response. I just left a message for the Ruthie to return a call to me to ensure that she is okay with waiting until the week of 1/6 due to the difficulties associated with scheduling during the holidays and the need for multiple parties at the event (DEC, DOH, DEP, Island Tank and property owner). I will keep you and everyone posted via an email to all parties as soon as I hear back from Ruthie, Thanks again.” Vought received email from NYSDOH Hughes that NYCDOH D’Andrea will not return office until 1/1 and as such delivery/air survey will have to be performed after that time, 12/27/13-Vought-En route to home, Vought went by site and Ruthie’s shade still up with plants in window and no signs of suggested window sealing by Vought as per 12/2/13 site visit. 12/31/13-Vought-No callback to date from Ruthie regarding message left on 12/23 regarding if she is okay with waiting until the week of 1/6 due to the difficulties associated with scheduling during the holidays and the need for multiple parties at the event. Vought also left message inquiring as to why she did not seal window as per DEC observations recently as well as recommendation to do so during 12/2/13 site visit.1/3/14-Vought-Sent email to all parties including RSE, DEC Feng, OGC Urda, DEC Falvey, NYSDOH, NYCDOH D’Andrea and Friedman, Guppy, DEP Kelpin, Hess (Matri and Howard), Gotham West (Capresco) that “(Resent with date correction) Mike, Thanks again for your help as always and as many weeks have passed since my site visit

GASOLINE ODORS AT HESS GAS STATION (Continued)  

I am hoping to schedule the delivery and multi-agency inspection next week. As such I took initiative and have copied all of the necessary parties above including Ruthie Guppy and her landlord Gotham West Inc. I am hoping we can use this email chain to coordinate the logistics of the multi-agency inspection and air survey to address Ruthie’s odor concerns associated with delivery events. Ruthie noted that she will be available for the inspection January 8th and forwards. Mike Matri from Hess noted that January 8th would work, however, he also noted that January 9th was not feasible for Hess. I unfortunately cannot make the 10th. As such I am trying to schedule the delivery and air survey for January 8th. I would much appreciate if Mike Matri could let us all know what time on the 8th that the delivery truck usually arrives (during business hours for feasibility) so as to not hinder it’s delivery schedule as much as possible for the inspection. Once Hess lets us know the approximate delivery times then I am thinking via this email chain we could choose a day as well, seek confirmation of NYCDOH and/or DEP’s attendance, confirm with Ruthie and then perform the inspection. If DOH and/or DEP is not available for the January 8th inspection, I would also much appreciate a reply to all above as well. Hoping you approve and thanks again for your help and also to all of those copied for their continued cooperation and assistance in coordination of this logistically difficult task.” Vought also called Ruthie and left message that she should check her email and leave the 8th open for possible inspection. Vought received message from DOH Friedman that he was available for 1/8/14 site visit and Vought emailed reply to all that “Allan, It is great to hear that you can make the January 8th. I am hoping that Mike Matri or Hess will respond to us with the time the delivery truck usually arrives at the site on January 8th (within normal business hours hopefully). I was thinking of all interested parties meeting at the site about 30 minutes before the delivery time so we can walk the site, inspect Ruthie’s apartment, talk with her beforehand and perform a baseline survey (if you think it necessary). You can always call me on my cell at 917-577-1728 if you wish to discuss as well but I will be sure to keep everyone posted on Hess’s response with respect to delivery times and send out an email finalizing everything. Thanks again for your quick response.” Vought called Matri and left message to check email and requested a response. Vought received email from Matri that delivery will occur at 10:30 am. Vought received email from Ruthie that 1/8 “sounds good” and requested confirmation. Vought sent email to all parties that “To all, It is with much pleasure that I am finalizing the Hess delivery and multi-agency air inspection for this Wednesday, January 8th at 10:00am. The Hess delivery will begin at 10:30am so if we meet at 10am we will have time to walk the site, inspect Ruthie’s apartment (address is below), talk with her beforehand and perform a baseline survey if necessary as per NYCDOH. I have also just also confirmed again with Ruthie that she will be present. Her info is: Ruthie Guppy 510 West 45th Street Apt 3K Cell: 917-565-1420 Mike M., please ensure that Hess does not begin any aspect of the delivery (eg. manways should even stay in place) until we have NYCDOH present in Ruthie’s apartment so that we can assess all aspects of the delivery and possible impact. Confirmed attendees to date include: myself, DEC June Feng, NYCDOH Allan Friedman, Ruthie Guppy and your parties from Hess. I have not yet heard from DEP or Gotham West on whether representatives will be there but will keep you all posted if I do hear from them. If anyone needs me they can also reach me by cell
phone at 917-577-1728. I look forward to seeing everyone there and thanks again for all of your help." Vought also left message for Ruthie confirming 1/8 at 10:30am. 1/3/14-Vought-Received email from Hess (Jim Howard Ph: 732-750-6220) that "Good Afternoon All, Attached please find a copy of our most recent compliance test results from May 19, 2013. As you will see we have passing results for all Stage I and Stage II components, including the P/V Valves (page 10). I will have someone from Crompco on-site with us in case you’d like to see us test any of the components that can be tested without disrupting the business. Feel free to contact me if you have any questions prior to Wednesday’s meeting." Vought added rest results to E-docs and sent email to Woodbridge that "Jim, I have copied our PBS Inspector Brian Falvey above so that he may review the report as well and I have added it to our files. Thanks for being proactive as the documentation helps the investigation. Looking forward to Wed 1/8 at 10am." Vought also received reply from DEP Kelpin that he will also have someone onsite site at 10am on 1/8. 1/7/14-Vought-Left another message for Ruthie confirming tomorrow's site visit at 10am. 1/8/14-Vought-Site visit by DEC Vought, DEC Feng, DEC Mahat, NYCDOH Yolanda Brooks, DEP Air Unit (two representatives), Hess (Michael Matri and Jim Howard), Crompco (Ed Kubinsky), Gotham West (Capresso) and Ruthie was also present. DEC arrived onsite at approximately 10:10am and noted no olfactory gasoline odors at UST area or station. Weather at time of site visit was cold (high of 14 degrees F), with some wind and mostly sunny. Vought, Feng, Mahat went to Ruthie's apartment and DOH Brooks was already present. No olfactory detections of petroleum in her apartment as per DEC and DOH but Ruthie noted that she was "congested" due to allergies and unable to smell anything. DOH had meters measuring Total VOCs (aka ppb RAE) and CO meters as well. Background survey prior to delivery of Ruthie's apartment showed under 1000ppb (1ppm) as per DOH and as such were considered "background". Vought requested that the entire scope of delivery be performed with the PID meters running so as to encompass the maximum number of possible operational sources of vapors. Island Transportation truck arrived onsite around 10:50am and began delivery including connection of fill and vapor recovery lines at 11:05am. Note that NYCDOH meters were running prior to removal of the tank manways and continuously all the way through the delivery event until the manways were closed upon it's completion. At many points through the delivery the living room window was opened and PID readings were also taken with the wind blowing into the apartment with the delivery in progress. At one point when the driver was disconnecting the fill port with Ruthie's living room window open, the PID showed a maximum (for the survey) reading of 618ppb (still within background levels as per DOH Brooks). At the point where this reading was taken Vought, Brooks, Ruthie and Feng all noted olfactory detections of gasoline as well with the window open. Ruthie she noted that she could smell it as well and it was causing her skin to itch and NYCDOH Brooks replied that not all odors caused health to be affected. DEP Air Unit did their survey via olfactory methods and noted no significant odors of concern in the apartment or at the gas station around the UST pad. Delivery and simultaneous air survey were performed from 11:05 to 11:41pm (about thirty minutes). Truck was not idling during delivery and survey. During entire survey there was no PID detections as per Brooks as all readings below background 1 ppm. NYCDOH Brooks to send Ruthie and DEC a DOH report with her findings. 1/9/13-Vought-Sent email of above notes to NYSDOH Hughes and sent
thank you to all parties via email and note that DOH to follow up with report. Vought sent email to all parties that “Ladies and Gentlemen, I would like to thank everyone for their attendance and participation in the delivery and simultaneous indoor air survey yesterday at the above site. The survey was successful only as a sum of everyone’s roles. The Department looks forward to receiving the NYCDOH report as discussed on site. Once received we will then seek guidance from NYSDOH on further action if necessary. Thanks again everyone for their help and I will continue to keep you all posted.”

Vought spoke to DEC Falvey and he noted that he spoke with Hess Matri who will be attending PBS inspection settlement conference. Since Matri participated in air survey yesterday, Vought no longer will attend PBS conference to explain receptor issues and need for strict system maintenance and cleanliness. 1/22/14-Vought-Sent email to NYCDOH D’Andrea that “Chris/Allan, It was a pleasure meeting Yolanda Brooks for the air survey at the above Site as well as learning from her expertise on the subject. I would like to get back to Ruthie Guppy and move forward with our spills case (and possible closure) but intrinsic to the process is discussing the NYCDOH findings with NYSDOH. Unfortunately, I did not obtain Ms. Brook’s contact info during the survey and I would be much obliged if you could please forward this email to her in an effort to inquire about the status of the report. Thanks again for your help as well as your patience as I am sure Ms. Brooks is very busy.-Jeff.”

Vought received email later from DOH Friedman that “Jeffrey, please find attached report as requested. Regards, Allan.” Vought sent email to DOH Friedman with cc to NYSDOH Hughes that “Allan, Thanks for the quick turnaround and I have again attached the report below in hopes that Mike Hughes (copied above) from NYSDOH may review it for possible further action and follow up with Ruthie Guppy. I will give Mike a call in a few days to discuss. Thanks again for your help and feel free to contact me if you ever need DEC assistance as well. -Jeff.”

DEC Requires: 1) Receipt of NYCDOH survey and followup with NYSDOH Hughes and email to all with status. 2) cc to Feng, OGC Urda, DEC Falvey, Austin, Hughes, D’Andrea and Friedman, Caropreso, Guppy, Matri, Falvey, Kelpin.

Remarks: caller just moved in, heavy gas odor, possible spill at gas station

Tank Info:

Tank Number: 001
Tank Id: 61401
Material Code: 0001
Common Name of Substance: #2 Fuel Oil (On-Site Consumption)

Equipment Records:

A00 - Tank Internal Protection - None
D02 - Pipe Type - Galvanized Steel
G00 - Tank Secondary Containment - None
I05 - Overfill - Vent Whistle
J02 - Dispenser - Suction Dispenser
L09 - Piping Leak Detection - Exempt Suction Piping
F00 - Pipe External Protection - None
B00 - Tank External Protection - None
C01 - Pipe Location - Aboveground
E00 - Piping Secondary Containment - None
H00 - Tank Leak Detection - None
K00 - Spill Prevention - None

Tank Location: 1
Tank Type: Steel/Carbon Steel/Iron
Tank Status: In Service
Pipe Model: Not reported
Install Date: 01/10/1950
Capacity Gallons: 1500
Tightness Test Method: NN
Date Test: Not reported
Next Test Date: Not reported
Date Tank Closed: Not reported

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

DEC Memo: Prior to Sept, 2004 data translation this spill Lead_DEC Field was "TIPPLE"DEC (Sigona) hired Milro Associates to conduct state funded
cleanup. Contamination tracked back to Commercial Garage which services Taxi’s located directly above the spill. USCG provided statement on their investigation. Milro took samples and conducted subsurface investigation. Cleanup prevented further seepage into Jacob Javits Convention Center. ISR prepared on 8/4/98.6/04 transferred from sigona to tipple8/23/05 - Raphael Ketani. Case transferred to Jeff Vought.9/20/05-Vought-Contract Payment Package (National)-Four biweekly well monitoring and gauging events.1/06/05-Vought-Received call and spoke to Jerry Hickson (212-465-5512) who is doing possible phase II onsite by MTA due to possible 7 line extension.03/07/06-Thomas- Contract Payment PackageNational Env. Mgmt- fluid level monitoring and data recording, report preparation,preparation of hydrographs and tables for report.06/01/05-09/30/05)03/15/06-Thomas- Contract Payment Package-(National)- fluid level monitoring and data recording, review and copy files, fluid recovery (10/01/05-11/30/05),3/17/06-Vought-Receive call from Erica Hogan (Singer Environmental 718-437-9600) and owners are interested in closing the spill. Singer is consultant of buyer looking to close next week.3/20/06-Vought-Approval given to National (Menegio) to review file as buyer may not buy property and file review is needed.03/24/06-Vought-Received message from Ed Klein (212-661-9400). Vought received call and left message to return call to DEC. Vought received message from Klein and returned call and spoke to Klein. Klein is attorney for owner.04/1/06-Vought-Received call and spoke to Ed Klein as per Klein contamination onsite was waste oil and site was monitored until 2004. Tenant left site in 2003. Site is currently an taxi repair facility with two shops. No current leakage as per Klein. Ed representing current owner:Fazday Realty Corp., Jeffrey Connorc/o Klein and Solomon275 Madison Avenue11th floorNew York NY 1001fax: 212-661-6606/27/06-Vought-Due to lack of information in file Vought called National Enviro (Menegio) to see if any reports on file and for current monitoring data. Greg will look at file and return call or email to Vought. See also spill #’s: 0010648(closed spill adjacent to site) and 0007141(open spill across street). Vought called Jeremy Feedore (NYSOAG) for status of site and no answer. Vought changed spill address from 448-450 11th Avenue to 450-454 11th Avenue to reflect the actual address of the site as per NYC Tax Assessor’s Office.04/27/06-Vought-File review by Vought. Lease for 550 West 37th Street-1/11/84. Lease between owner (Ralph and Frank Chiaia) and tenant (Delory Limousines Ltd.) for entire building.Deed of adjacent railroad property-6/20/86. Deed between CRC Properties and National Railroad Passenger Corporation Letter from Kalco Pump and Tank to Perfect Auto SS (456 11th Ave)-2/27/87. “Tested five-550 gallon gasoline tanks and found vent risers leaking from tanks. Replaced old vent risers...” “Owner did not want to use the 550 gallon tanks anymore so I left the water in the tanks that I put in for the test, thus discontinuing the use of the 5 550-gallon tanks. I sealed and cemented all openings except vent lines. This work was done in Nov ov 1996”. Lease for 550 West 37th Street-6/8/92. Lease between owner (Ralph and Frank Chiaia) and tenant(National Coffee Break Supply Inc.) for entire building. Letter from Fasday Realty to NY Auto Service re:556 West 37th Street-2/1/94. “…we are in the process of obtaining a surrender of the Premises from A&M Javits Center Auto Repair Inc (A&M). We have been given to understand that a surrender agreement has been executed by A&M and that the keys are in the process of being delivered to you.” Letter from Kalco Pump and Tank

| "That on Jan 26, 1995 I purged one two thousand gallon gasoline tank. Capping and sealing all lines except the vent line".Letter from Amtrak Northeast Corridor to Rich Mohlenhoff-4/25/97. "Amtrak (according to my records) does not own any property in this bolick in fee, our interest is a permanent easement for Railroad purposes and extends to variable height above the top of rail".Insurance Statement-4/12/97. Insurance of New York Auto Service Inc and Best Cars Inc by NPA Associates Ltd.Letter from MJM Plumbing Incorporated to Abels Coffee Service-5/15/97. Application for Self Certification of Removed or Existing Boiler was file with NYCDOB. Bill sent to Phil Rizzuto. Notes from DEC Sigona-11/6/97. "...oil was puddled on southeast foundation wall of Jacob Javits below 11th Avenue which crosses above between 38th & 37th Street. The puddle is approximately 70 feet x 50 feet x 2 feet. Also, there is water mixed in with the oil". Oil was thick and black. Notes from DEC Sigona-11/7/97. Sigona onsite with Milro. "There is a corner on the northeast corner of underpass which is composed of bedrock, brick and concrete where oil is trickly, running down. Immediately above this corner is NY Auto Service....". NY Auto Service was a taxi center. Sump in basement of Javits was impacted with "skim of oil". Inspection of NY Auto Service was performed and oil tank vault "had oil spill around chamber". No records of waste oil disposal were able to be produced. Milro performed cleanup of Javits via spill pads and drums, power wash and vacuum truck. GC Extractables (Analab Inc)-11/11/97. 99% match of spill oil with that of source. Notes from DEC Sigona-11/13/97. Removal of waste oil tank. "...vault is subsurface with gaps. There was oil filled into vault 1/3 full from bottom of vault". Notes from DEC Sigona-11/14/97. Milro onsite with two vacuum trucks. Impact to adjacent train tracks. Letter from Richard Mohlenhoff to DEC Sigona-11/18/97. "Enclosed is a copy of a deed and map showing Amtrak's property ownership around the above area. The documents show Amtrack has an easement for the existing tracks only. Amtrak acquired the easement from CRC Properties, Inc."Fax from USCG to DEC Sigona-11/20/97. Pollution Incident Statement. "...upon entering the garage I noted a funnel in one of the holes in the concrete floor with oil and speedy dry around it." "Leon stated that he was instructed by "the boss" to use this dump spot when the waste oil tank was full". Report from Analab Inc to Milro Associates-11/20/97. Analytical results of three samples (metals, fingerprint and PCB). Two samples from waste oil tank and one from oil spill. Analysis Report (Environmental Testing Laboratories)-11/21/97. Foundation Wall and Floating product both show presence of Lubricating Oils. Notes from DEC Sigona-11/26/97. Site meeting with Milro. Milro pumped free product below train platforms. "The corner of NY Auto Service is exposed and there is a large weephole where oil is leaking into/out. Seems like there is a void under the building where oil is pocketed". Letter from Conrail to DEC Sigona-12/2/97. "Per our telephone conversation on November 26th, this is to advise that Block 708, Lots 62 and 65 were not conveyed to Conrail". Notes from DEC Sigona-12/3/97. Field Inspection of cleanup by Milro. "The oil is now concentrated into large rectangular pools on W37 Street under 11th Avenue immediately below and to the west under NY Auto Service". Oil also pooled under two railway platforms. Letter from Milro (Glen Katz) to DEC Tomasello-1/17/98. "...grab oil samples were collected from the spill site (CR No.1) and from the waste oil tank of New York Auto Service Center (AS No. 1 and AS No. 2) a commercial property adjacent to the spill location". "The
fingerprint comparative analysis revealed that the oil samples collected from the spill site and the waste oil tank located at NY Auto Service Center were a match (99.7% and 98.8%). Fingerprinting also performed identified the oil was lubricating oils. Cleanup via oil skimmers and vacuum trucks. Milro estimated that 60,000 gallons of used oil was recovered from the impacted area. 210 cubic yards of oil contaminated debris was also removed from the site and 32 yards of soil was removed. Oil spill impacted sump pit in Javits Center.

Two holes found in foundation walls of Javits. Holes were patched and sump was pressure washed and interior and exterior walls of Javits were sealed. Milro received approval from DEC to use bentonite to "encapsulate southern platform, the south and west walls of New York Auto Service and the western wall of the convention center." Letter from Milro (Katz) to DEC Tomasello-3/9/98. Summary of design and installation of a recovery system. "Milro deviated from the original remediation plan (dated January 17, 1998) and designed a separate phase product recovery pond and associated drainage system". Drainage system included trenching and installation of a 4 inch diameter perforated plastic pipe that discharges to a recovery pond located of the southwest corner of NY Auto Service. Construction was completed 2/20/98. Milro also proposes to and install an additional recovery pipe along the southern wall of NY Auto Service.

Contractors Authorization to Do Work-5/1/98. Authorization for Milro for installation of groundwater observation wells and sampling and development. Letter from Harwood Lloyd LLP to DEC Tomasello-6/29/98. Harwood represents owners of former conrail property. FOIL request.05/1/06-Vought-Continued File Review by Vought: Disposal Manifest-7/2/98. Manifest for disposal of 715 gallons of "waste lubricating oil". Investigative Summary Report-8/10/98. Spillers listed as NY Auto Service (448-450 11th Avenue) and 556 West 37th Street leased to NY Auto Service. Analytical Results (ANALab)-8/13/98. "This technical report contains the analytical results of one (1) sample submitted to ANALab on July 13, 1998." Requested analysis was for GC Fingerprint. Analytical Results (ANALab)-8/14/98. Analytical of sample taken from foundation wall shows: 1600ppb toluene, 3000ppb xylene, 5800ppb n-propylbenzene. Disposal Manifest-12/1/98. Manifest for disposal of 55 gallons of "waste lubricating oil". Analytical Results (ANALab)-8/14/98. "This technical report contains the analytical results of one (3) samples submitted to ANALab on July 13, 1998." Requested analysis was for GC Fingerprint. Samples collected from well 3, well 4 and trench. Disposal Manifest-03/10/98. Manifest for disposal of 55 gallons of "waste oil". Letter from Milro (Katz) to DEC Tomasello-04/14/98. Milro "will return to the above referenced location to investigate the source of increased residual petroleum seeping from the outcrop behind New York Auto Service. As an interim measure, Milro personnel will maintain the existing recovery trench on a weekly basis to recover and prevent the oil seepage from recontaminating the site."

Letter from NYSOAG Feedore to Fasday Realty Corp c/o Jeff Konner-6/2/99. "The State has determined that you are liable ..." "...demand in hereby made for full payment of costs and penalties..." Letter from NYSOAG Feedore to NY Auto Service-6/2/99. "The State has determined that you are liable ..." "...demand in hereby made for full payment of costs and penalties..." Letter from KLein & Solomon, LLP to DEC Robert Lieblein)-6/7/99. FOIL request stemming from "cost assessment you filed against my client, Fasday Realty Corp". Letter from Marvin Kramer to FOIL Officer-9/1/99. "Recently in connection with an investigation project, my client had
NY AUTO SVC JAVITS CTR (Continued)

occasion to remove the plate which covers the top of the vault which formerly contained UST for Waste Oil. He was shocked to observe that the vault again contained waste oil of obviously significant quantities. The waste oil tank which had been formerly underground was moved at the time of initial clean-up many months ago and was not leaking. Since that day only aboveground disposal has been employed. In view of the fact that the vault has not been used for any purpose by my client, this apparently validates that the waste oil is coming from a source other than New York Auto. "THC Analyticals (Environmental Testing Laboratories)-11/29/99. THC Content of roll-off is 89200ppm. THC Analyticals (Environmental Testing Laboratories)-12/22/99. THC Content of roll-off is 2470ppm. Analyticals (Environmental Testing Laboratories)-1/28/00. Oil collected from trench shows 100% lubricating oils, sample from wall below bodyshop was also analyzed for petroleum product ID and showed 16900ppm lubricating oils. Well Monitoring Logs (7/1/98-2/19/00). Four monitoring wells. Logs from 7/1/98 show .02' free product in Well #4. Logs from 2/19/00 show .05' free product. Depth to groundwater is from 9-13' below grade. Letter from DEC Sigona to Pedneault Associates (John Pedneault)-2/22/00. "The DEC requests that Pedneault Associates prepare a formal report to evaluate all of the laboratory test reports for this project which I have provided to you. Primarily, we are interested in the results of the samples collected on November 7, 1997 and whether the product collected from the waste oil tank at the New York Auto Service compares to the product spilled underneath the facility behind the Javits Center". Affidavit in Support of Search Warrant (DEC Sigona)-3/9/00. Notes from DEC Sigona-3/23/00. Borings performed through waste oil tank vault and "by drilling into the spaces, DEC Sigona observed significant free product in the soils behind the vault". NYCDEP Order (Zingaropoli)-03/30/00. Order to "submit engineering plans for a properly sized oil/water separator for the auto parts washing unit. No material what-so-ever is allowed to be dumped, discharged into floor, sidewalk, street catch basin or any manhole". Pedneault Associates report to DEC Sigona-4/20/00. Pedneault "conducted a review of analytical services previously performed...". "Comparisons of the chromatographs produced by Pedneault Associates indicated the hydrocarbon layer of the samples to be motor oil with gasoline constituents present. Review of previous information virtually identical matches with chromatographs produced by Environmental Testing Laboratories and Analab." Letter from Environmental Assessment & Remediations (EAR) to DEC Tomasello-5/10/00. Site visit performed to "document bedrock structures and to make an initial site evaluation". EAR recommends: 1) power wash stained outcrop 2) dye trace test by applying dye to tank 3) install 3-4 monitoring wells 4) surge block all existing wells 5) determine groundwater flow direction 6) install drains into foundation of NY Auto Service Center. Letter from Environmental Assessment & Remediations (EAR) to DEC Tomasello-6/8/00. Site visit performed to "document bedrock structures and to make an initial site evaluation". EAR recommends: 1) power wash stained outcrop 2) dye trace test by applying dye to tank 3) install 3-4 monitoring wells 4) surge block all existing wells 5) determine groundwater flow direction 6) install drains into foundation of NY Auto Service Center 7) collect round of groundwater samples 8) weekly bailing and monitoring 9) create site specific health and safety plan. Letter from DEC Sigona to NYCDEP Nickelson-6/29/00. "The DEC will be conducting a dye test of an
underground vault at the New York Auto Service garage. Water was supplied from DEP fire hydrant. "Please provide Environmental Assessment & Remediation with the necessary permits to operate a fire hydrant and supply the necessary water to conduct the dye test". NYSDEN Petroleum Spill Investigation Report-7/10/00. Dye test conducted on 7/10/00. "The used motor oil spill has been cleaned up except for some seepage which continues from the west side and south side of foundation of 450 11th Avenue building. "The dyed water readily drained from vault which is perforated by gaps present between the concrete block constructed vault. The dyed water flowed directly from the vault to the ground below 450 11th Avenue from the bottom of the foundation". Red dye was observed flowing from below foundation during test. Cross Referencing of Analytical Samples (Pendenteau Associates)-7/26/00. "... we have at your request made a comparison between the most recent sample and analytical work performed for the same site received at our laboratory 3/22/00..." "...we conclude that while and exact chromatographic match is not possible motor oil are constituents are present..." "...a comparison was conducted between samples of dye tablets and a liquid matrix sample in an attempt to render evidence of the dye existing within the liquid sample. The results of the analysis do not support a definitive conclusion that dye exists in the liquid matrix sample". Letter from DEC Sigona to EAR Rocetta-8/7/00. DEC requesting EAR to surge block wells MW1 thru MW4. Letter from Marvin Kramer to Klein and Solomon-8/16/00. "...I and my client have reached a conclusion that it is appropriate that the apparent 3000 gallon underground tank in the 37th Street portion of the Premises be excavated". Kramer’s client is "willing to surrender the use of a portion of his leased premises for several days to enable this work to be completed". Letter from Marvin Kramer to NYSOAG Feedore, DEC Sigona and Klein and Solomon-8/16/00. Request to have DEC witness tank excavation of 3000-gallon UST.05/03/06-Vought-Letter from DEC Sigona and Klein and Solomon-9/7/00. "This letter serves as a confirmation of our meeting with representatives from NYS Attorney General’s Office along with DEC and it’s contractors on Wednesday, September 13, 2000. Letter from Klein & Solomon to DEC Sigona-9/11/00. "...attached please find copies of our last two letters to Marvin Kramer sent on behalf of our client, the landlord..." "To sum up our clients position he had had no knowledge of the existence of an underground tank below his property, and should such existence be determined, no permission to use same was ever expressly or impliedly granted to NY Auto Service or to any other tenants...". Report from EAR Trego-9/14/00. "Please find enclosed the original photographs and color copies (on 8 1/2" x11" paper) of the scanned images". Letter from Klein & Solomon to NYSOAG Feedore and Marvin Kramer-9/20/00. "This letter confirms that Fasday Realty (the Landlord) will be kept apprised of any appointments and/or testing to be completed..." "The tenant will complete said inspection and/or testing with its Contractor at its sole cost and expense, with no contribution by the Landlord". Notes from DEC Sigona-9/20/00. Site meeting with Interboro Sign and Maintenance (licensed sign erectors) to put up sign on 456 11th Avenue. USTs discovered at 456 11th Avenue (site was former Mobil service station). Letter from DEC Sigona to Phil Rizzuto-9/25/00. Certified letter sent requiring PBS registration, testing of soil and groundwater, notification to the Department so duplicate samples can be collected. Letter from Phil Rizzuto (property agent of 550 West 37th) to DEC Sigona-10/2/00. "I am in
NY AUTO SVC JAVITS CTR (Continued)

receipt of your letter to me dated September 28, 2000 with reference to installation of a groundwater monitoring well at 550 West 37th Street, New York, NY*. "I have contacted two companies that you have recommended to either remove the existing tanks or test the ground for any contamination. After my meeting with them we will decide upon the installation of a the groundwater monitoring". Notes from DEC Sigona-9/26/00. Site visit to witness removal and endpoint sampling of six (550-gallon) gasoline USTs from 456 11th Avenue (property across street from NY Auto Service Center). Letter from DEC Sigona to Phil Rizzuto-9/28/00. "This letter is a follow-up to our meeting yesterday to discuss the registration, inspection and removal if former diesel and fuel oil tanks at the Public Parking Facility". "The DEC has hired Environmental Assessment & Remediation .. " to perform subsurface investigation. "The DEC would like to install a monitoring well in your parking garage on the west side of your property". Consent form included with letter. Letter from DEC Sigona to Summit Drilling Co.-9/29/00. Request to install four monitoring wells. Tank Removal Documentation Report (EAR)-October 2000. DEC hired EAR to document tank removal activities at corner lot located at 456 11th Avenue. Site was under control of Interboro Sign Company who was excavating for footing for a commercial advertisement sign. Removal being performed by Yellowstone Construction. EAR only performed observations. Impacted soil was encountered during excavation resulting in reporting of spill #007141. Groundwater at depth of 8-12' below grade. Removal of six (550-gallon) gasoline USTs and one one (2000-gallon) gasoline UST. "As the excavator removed soil from the west side of Tank #7 concrete vault, black liquid drained from the vault base into the open hole. As the excavator removed the liquid and impacted soil from the excavation, strong gasoline odors permeated the ambient air". "Visual observations did not indicate gross contamination or free product in the sample location area". "The fingerprint ID analysis indicated gasoline to be the petroleum product that caused the impact". "By observations made during the five days EAR was on-site, it appears that the seven tanks formerly located at 456 11th Avenue did not contribute to the 60, 000 gallons of waste oil discovered south of West 37th Street". Fax from NYSOAG Feedore to DEC Sigona-10/3/00. Order to Show Cause, Affirmation in Support and Affidavit. State of New York (plaintiff) and Fasday Realty Corp (defendant). Fax from NYSOAG Feedore to DEC Sigona-10/11/00. Attorney Affirmation. Letter from DEC Sigona to Verizon Wireless-10/30/00. Investigation of soil at 555 West 37th Street due to the former location of seven (550-gallon) gasoline UST. Site immediately east of NY Auto Service Center. "The DEC will be installing a monitoring well in front of your facility and would also like to collect samples from soils and/or groundwater beneath your site with the assistance and cooperation of IT Corporation". "The DEC would appreciate your written permission for access onto your property by signing a formal access agreement". Laboratory Analyticals (Pedneault Associates)-9/27/00. Fingerprinting ID for samples collected from 456 11th Avenue. Laboratory Analyticals (Pedneault Associates)-10/6/00. Fingerprinting ID for wells MW1 thru MW4 show "lubricating oil". Letter from DEC Sigona to Phil Rizzuto-11/2/00. Removal of USTs from 550 West 37th Street. Fenly & Nicol will be performing tank removal. DEC required: 1) notification 5 days prior to removal 2) submission of PBS registration. Letter from DEC Sigona to Miller (Cannella)-11/2/00. DEC requesting installation of four monitoring wells. Letter from Verizon (Strobel) to DEC
Sigona-11/3/00. "It is premature to discuss actions associated with the registration, inspection or removal of USTs when, as of this date, and despite diligent efforts, we have found no such USTs anywhere on our property". Despite seven vent pipes on roof of Verizon building no tanks have been able to be located to date. IT Corporation was also hired to do subsurface investigation to see if USTs were present. Verizon allowed access to property. Letter from DEC Sigona to Milro (Basso)-11/28/00. "The DEC must have complete documentation on the status of Milro’s investigation and remediation of used oil which was discharged from NY Auto Service Center...". "We would like a proposal from Milro to complete a repair of the foundation wall and cleanup of the inside of the building". Letter from Milro (Basso) to DEC Sigona-12/14/00. "Milro Associates, Inc is pleased to present this proposal to clean used oil spilled in the New York Auto Service building". Scope of work includes power washing inside wall of south side of building and encapsulation the oil contaminated area with epoxy. Report of Findings Exploratory Soil Boring Program 555 West 37th Street (IT Group)-12/15/00. Magnetometer and GPR could not locate USTs and records search yielded no information. Eighteen soil borings were performed and seven samples were collected for analysis. "Soil sample results clearly indicate that there has been no apparent release of waste oil or other contaminants from the subject property". Report concludes that "based on the work completed to date, the general quality of soils in the area of the suspected USTs has been determined and there is no indication that a relationship exists between the constituents detected at the subject facility and the nearby waste oil release...". "IT recommends a subsurface excavation in the area of soil boring SB-8 which is a potential location of a UST". Soil and groundwater analyticals show no TAGM 4046 Soil Cleanup Objective exceedences and no TOGs 1.1.1. Groundwater Standard exceedences. Letter from Milro (Basso) to DEC Sigona-12/18/00. Milro "continues to maintain the existing recovery trench behind New York Auto Service on a weekly basis...". "Milro has observed oil seeping from the outcrop below New York Service and collecting in the recovery trench". Milro also performed groundwater monitoring in wells until 6/1/00. Heaviest impact to well MW4. Contains summary of depths to water, product thickness and recovery amounts from 4/99 to date. Spill report for 0010648 (550 West 37th Street) for the discovery of contaminated soil during tank removal. Spill reported by Fenley & Nicol. "Contamination is on top of tanks". Tank Removal/Closure Documentation Report 550 West 37th Street (EAR)-December 2000. EAR onsite to witness tank removal. "Contamination is on top of tanks". Tank Removal/Closure Documentation Report 550 West 37th Street (EAR)-December 2000. EAR onsite to witness tank removal by Fenley & Nicol. Removal of four (550-gallon) gasoline USTs and one 275-gallon waste oil UST. Groundwater at depths of 8-12’ below grade. Nine soil samples and four product samples were collected. Soil analyticals show: 2600ppb xylene (West Wall tank 1,2,3), 16000ppb 1,2,4-trimethylbenzene(west wall tank 1,2,3), 3800ppb xylene(Bottom of tank 1,2,3), 18000ppb 1,2,4-trimethylbenzene(Bottom of tank 1,2,3). Report concludes that analyticals are "consistent with an older spill". Report concludes that "by observations made during the seven days EAR was onsite, it appears that the four (550-gallon) USTs, one 275-AST and the oil/water separator located at 550 West 37th Street are not a contributor to the 60,000 gallons of waste-oil discovered south of West 37th Street". EcoTest Laboratory Analyticals-1/11/01. Analyticals for above report. Letter from DEC Sigona to Long Island Analytical Services-1/17/01. "The DEC has allowed New York Auto..."
Service to conduct some limited subsurface remedial investigation work, to locate and remove any possible Underground Storage Tanks (USTs) at the site. “It is my understanding that Long Analytical Laboratories will be applying for permits from New York City Department of Business Services to obtain a permit to excavate and remove USTs and operate heavy equipment on the sidewalk…” “Please call me to confirm that this work will begin on January 22, 2001.” Letter from Marvin Kramer to DEC Sigona-1/29/01. “I am sorry I missed you when they started work on West 37th Street, New York, last Monday. I understand that it was completed before the end of the week.” Request for reports of UST removals at adjacent sites. Notes from DEC Sigona-2/1/01. “Conducted dye test on discharge line for oil water separator and line for former connection for parts washer and sink for cleaning transmissions…” “The test confirmed that oil from parts washer was being discharged to sanitary sewer” “…no evidence of upgradient oil contamination or source of oil other than NY Auto’.05/04/06-Vought-Continued file review by Vought:Tank Removal/Closure Documentation Report (EAR)-January 2001. “The tenant of NYAS (New York Auto Service) contacted Long Island Analytical Laboratories (LIAL) to search for and remove suspected underground storage tanks (USTs) beneath the service garage floor.” Groundwater at depth of 8-12’ below grade and flow to the southwest. Removal of two (550-gallon) USTs from one excavation. One tank was a 550-gallon motor oil located in a concrete vault beneath the garage floor. “An initial inspection revealed that the UST had more than five holes throughout the tank and oxidation with pitting on the bottom”. Second (550-gallon) tank was a motor oil UST also located in a concrete vault beneath the garage floor. “Tank #2 had more than five holes throughout the tank, heavy oxidation and pitting on the bottom”. Final excavation area was 10’ wide, 19’ long and 7’ deep. “The manager of NYAS insisted that a third tank existed beneath the concrete floor of the first bay (furthest bay east). Excavation was performed without success in locating the tank. Seven endpoint soil samples were collected. “Based on visual/olfactory observation of the tanks, and laboratory sample results from Pedneault laboratory, the two USTs located on the subject property contained waste/motor-oil. Construction of tanks indicated that they may have been at one time used for gasoline.” “…gross contamination from free product was not observed in the native soil…” “By observations made during the three days EAE was on-site, and findings listed above, it is apparent that Tanks #1 and #2 and the vent/fill lines are not a contributor to the 60,000 gallons of waste oil discovered south of West 37th Street”. Soil analyticals show; 1900ppb xylene(Bottom #2). High SVOC PAH’s also detected in soils. Tank Search Documentation Report 555 West 37th Street(EAR)-February 2001. Tank search at Verizon property located across 37th Street north of site due to presence of seven vent pipes on roof. Verizon property was formerly operated by Adirondack Trailways. Verizon contracted IT Corp to look for tanks. See 12/15/00 entry above for IT Corp report. Miller installed bedrock well located in front of 555 West 37th Street. The purpose of well installation was to delineate possible waste oil contamination from NYAS. EAR concludes that despite GPR, magentometer survey, records search and soil borings that “it is undeterminable if USTs exist at 555 West 37th Street”. EAR also concluded that “Gross waste oil contamination was not encountered during the installation of eighteen soil borings and one bedrock monitoring well indicating that is unlikely that the Verizon Wireless suspected USTs contributed to the
60,000 gallons of waste oil discovered south of West 37th Street. EcoTest Laboratory Analyticals (Continued). Copy of laboratory analyses for tank removal at 450 11th Avenue (NYAS). See January 2001 report. Letter from Marvin Kramer to Amtrak-03/09/01. "...we are trying to determine what knowledge was had by the company or employees of the entity responsible for the railway and track". Letter from Milro (Basso) to DEC Sigona-04/18/01. Weekly maintenance of recovery trench. "During these visits, Milro had observed soil seeping from the foundation below New York Auto Service and collecting in the recovery trench". "The area below 11th Avenue is presently flooded with surface water and the trench area is failing. Milro recommends restoring the area to increase product recovery. Milro recommends dewatering the flooded area below 11th Avenue". "Due to runoff, the trench has been filled with soil over time". Milro will excavate contaminated soil from the trench and containment area and wash foundation of building and outcrop. Examination before trial of the plaintiff (State of New York) by: Anthony Sigona. Notes from DEC Sigona-5/2/01. "There was some oil seepage under NY Auto on the west foundation and south walls". Area under NY Auto is flooded. "No further removal of soils appears necessary. Project Summary (EAR)-July 2001. "Milro continues to use pads and booms to recover oil in trenches, EAR bails monitoring wells". Weekly monitoring and maintenance by EAR. Addavit of DEC Sigona-10/31/01. Photographs-6/20/02. Photos of "oil stain on wall below New York Auto" and "oil contaminated pads in trench". Retainer Agreement from Klein and Solomon to EAR Rochetta-8/11/03. Klein and Solomon on behalf of Fasday "seeks to engage you to provide expert assistance, consultative services and possibly expert opinion evidence at trial...". Fax from Klein and Solomon to DEC Tipple-8/12/03. "Jeremy Feedore from the Attorney General’s Office indicated that my client could enter into a Stipulation of Take Over of Clean Up with your office, for the Premises". Please be so kind as to prepare such a Stipulation for the Premises at your earliest convenience”. Judicial Subpoena Duces Tecum to DEC Sigona-8/25/03. Subpoena for site files. Letter from NYSOAG Feedore to DEC Sigona-2/4/04. "The court has ruled that NY Auto/Rony Abramov is liable for all the costs and cleanup of the discharge, and is required to indemnify Fasday Realty...". Attached is decision and judgement of State of New York Supreme Court. Project Summary EAR-March 2004. "Milro continues to use pads and booms to recover oil in trenches, EAR bails monitoring wells". Weekly monitoring and maintenance by EAR. Site plan shows 30,000-gallon UST onsite and seven monitoring wells. Email from EAR Rochetta-4/8/04. "As approved in the March 19, 2004 meeting, EAR will be using Biosolve to clean onsite wells". EcoTest Groundwater Analyticals-6/2/04. Groundwater analyticals show: 30ppb benzene(MW1), 7ppb xylene(MW1), 6ppb isopropylbenzene(MW1), 8ppb n-propylbenzene(MW1), 21ppb 1,2,4-trimethylbenzene(MW1), 34ppb xylene(MW2), 38ppb 1,2,4-trimethylbenzene(MW2), 6ppb benzene(MW4), 8ppb benzene(MW6), 17ppb toluene(MW6), 110ppb ethylbenzene(MW6), 420ppb xylene(MW6), 320ppb 1,2,4 trimethylbenzene(MW6), 33ppb naphthalene(MW6), 480ppb benzene(MW7), 3600ppb toluene(MW7), 3800ppb ethylbenzene(MW7), 13000ppb xylene(MW7), 5500ppb 1,2,4-trimethylbenzene(MW7), 930ppb naphthalene(MW7). Groundwater analyticals (STL)-02/23/06. Groundwater analyticals show: 6.5ppb benzene(MW2), 18ppb benzene(MW4). FOIL Review-KTR NewMark-Anthony Galasso (212-906-9422). Fax from Envirosience (Mead)-5/1/06. Groundwater monitoring results show no free product in well MW1 since

10/05, no free product ever in MW2, MW3, MW5, MW6, .08' free product in MW4 on 12/27/05 and .02' free product in MW7. Groundwater analyticals show: 05/03/06-Vought-DEC requires: 1) contact with NYSOAG for status of enforcement and whether STIPULATION should be sent 2) monthly monitoring of wells 3) monthly monitoring, cleaning and recovery of foundation wall, recovery trench 4) verify presence of 3000-gallon UST 5) possible offsite contribution to groundwater contamination of MW7 6) permission to discuss site with Billy Masonette (646-725-2190) who has been calling for states requirements 7) site visit to inspect Javits sump system, train tracks, verify presence of 3000-gallon UST and verify presence of all monitoring wells 8) possible investigation under garage floor as per DEC Austin 05/04/06-Vought-DEC requires: 1) monthly monitoring and quarterly sampling of wells 2) monthly monitoring, cleaning and recovery of foundation wall and recovery trench 3) verify presence of 3000-gallon UST 4) permission to discuss site with Billy Masonette (646-725-2190) who has been calling for DEC requirements 7) site visit to inspect Javits sump system, train tracks, verify presence of 3000-gallon UST and verify presence of all monitoring wells 8) possible investigation under garage floor as per DEC Austin 05/09/06-Vought-Site visit by Vought with Ken Mikkelsen/Mark Younger (developers Singer Group 718-403-0900), Scott Dunley (financer 212-944-6620), Joseph Abutel (212-643-6770), Billy Masonette (working for developer), Andrew Gasparro, Ed Klein. Possible development plans for property include construction of hotel on site and adjacent sites (450-454 11th Avenue and 550 West 37th Street). Billy Masonette (aka Brothers Environmental) performed three geoproses in NY Auto Service for soil characterization. No groundwater was reached and refusal at 5' on bedrock. Report will be submitted to DEC. 3000-gallon UST was searched for and no indications of tank were found such as concrete patches, former vents/fills/dispenser islands, no dissolved BTEX in adjacent wells and such no further investigation of tank is required. Oil/water separator was opened (historical source of spill) and minor amount of product and water in bottom of separator. Two waste oil tanks in secondary containment in garage with no spill to secondary containment. As per Klein, Stipulation should be addressed to him with cc to KTR. Vought inspected Javits Center with Gasparro and Masonette. Vought met with Javits Center Operations (Carola Henderson 212-216-2806 and Dan Matuck 212-216-2233) to inspect Javits Center sumps and basement walls. No impact to sumps and minor impact (1" stain and fresh black oil (possibly waste oil) on basement plenum wall. No signs of staining on wall so no historical infiltration to Javits. Vought instructed Henderson and Matuck to contact DEC if oil began seeping through or impact to sump. Vought inspected foundation of NY Auto Service Center, trench area and adjacent tracks with Masonette and Gasparro. Foundation showed some waste oil staining and one minor area of groundwater seepage however trench was dry and no recoverable product. Dry impacted pads noted in trench. Possible closure date of sale is 7/1/06 and States contractor will not perform monitoring until after 7/1/06 (if RP does not sign STIP and take over site). Vought sent email to National (Menegio) requesting no further work till 7/1/06. As per Dunley site may not be developed for up to two years. Vought explained that until development occurs, monitoring/sampling of site will suffice. Vought sent residential construction STIPULATION with requirements of: 1) vapor barrier and possible sub-slab depressurization system 2) monthly monitoring and quarterly sampling of wells 3) monthly monitoring, removal of impacted...
adsorbent pads and recovery of impacted groundwater (if applicable) from recovery trench. 4) possible investigation under garage floor as per DEC Austin or excavation to bedrock for new construction. STIP due back to DEC by 7/1/06 (closing date of property). Vought sent Stipulation with cc to NYSOAG Feedore to: Edward E Klein, Esq.

Solomon LLP 275 Madison Avenue 11th Floor New York, NY 10016 (fax) 212-661-6666 email: edklein@kleinsolomon.com 05/15/06 - Vought - Received call from AG Feedore that he spoke with Klein and some language of letter is too strong. Vought called Feedore and removed section referring to outstanding violations of Navigation Law as case was already settled by AG. 06/02/06 - Vought - Spoke with National (Menegio) and requested that well monitoring be suspended until the month of July (after STIP from Klein is due back). 06/27/06 - Vought - Received call from Michael Wahba (212-221-3001) who is looking to purchase property and is in contract for closing. Site will be Marriott Hotel. Vought referred Wahba to Ed Klein for copy of Stipulation and DEC requirements.

Vought received call from Zeb Youngman (PW Grosser 631-589-6353). Vought called Zeb Youngman and left message to return call. Vought spoke to Zeb and his client (Witkoff Group) may be purchasing property. Zeb got site info from Ed Klein. 07/14/06 - Vought - Received call from Anthony Galasso (212-906-9422) regarding status of site who is working for current owners. Property was sold. Galasso doing research for due diligence. Vought will review report and get back to Galasso with update on adjacent property. 08/21/06 - Vought - Received call from Mohammed Ahmed (AKRF 212-675-3225). Site will be redeveloped as hotel. Ahmed working for Gertel Associates who is new owner of site. Site is E designated. Contamination will be removed to bedrock and bedrock will be removed for foundation. Vapor barrier will be installed. Excavation tentatively scheduled for 7-8 months. RAP will be submitted to DEP and DEC by 4/1/08. 01/03/08 - Vought - Received call from Klein is due back to DEC by 7/1/06 (closing date of property). Vought sent Stipulation with cc to NYSOAG Feedore to: Edward E Klein, Esq.

Klein & Solomon LLP 275 Madison Avenue 11th Floor New York, NY 10016 (fax) 212-661-6666 email: edklein@kleinsolomon.com 05/15/06 - Vought - Received call from AG Feedore that he spoke with Klein and some language of letter is too strong. was found in MW7. Report recommends continuation of monthly well monitoring. Groundwater analyticals show: 28 ppb 1,2,4-trimethylbenzene (W-5), 100 ppb benzene (W-7), 100 ppb toluene (W-7), 100 ppb ethylbenzene (W-7), 4100 ppb xylene (W-7), 7000 ppb 1,2,4-trimethylbenzene (W-7), 7300 ppb 1,3,5-trimethylbenzene (W-7), 1000 ppb naphthalene (W-7). Remedial Investigation Report (Fleming Lee Shue (FLS)-Mohammed Ahmed)-4/9/08. FLS working for Gertel Associates. Alternative addresses include 556 West 37th St, 446-450 11th Ave, 558 West 37th St, 452 11th Ave and 450-454 11th Ave. Proposed construction of 29-story hotel which will require excavation to a depth of at least 30’ below grade. Groundwater depth is 8-11’ bg.

Eleven soil borings installed via Geoprobe in Jan/March 2008. Bedrock from 3-12’ bg. Petroleum staining and odor observed in SB-1(10-11’ bg), and SB-8(8-12’ bg). Soil analyticals show no TAGM 4046 VOC exceedences with minor PAH exceedences attributable to fill material. Groundwater sample analytical from MW2 (called in this report MWA) shows non-detect for VOCs. Reviewed RAWP from AKRF (Mohammed Ahmed Fax:212-675-3224) dated May 2008 and received on 5/30/08. AKRF working for 37-11 Development LLC. “The site consists of three 1-story buildings... were formerly occupied by two auto repair shops and one check cashing facility”. Site is E designated. Site proposed to be developed with 29-story hotel with two sub-floors which will require excavation to 32 feet below grade. Groundwater estimated to flow to the southwest. Depth to groundwater is 8-11’ bg. “However, approximately 20 vertical feet of bedrock will be remmoved during pre-construction activities to a depth of approximately 32 ft bg...”. Groundwater likely to infiltrate site during bedrock removal activities. “It is expected that all onsite soil will be removed during excavation activities due to the shallow depth of bedrock."

...a waterproofing membrane will be installed...” which will be a Grace Preprufe 300R, a 46-mil thick high density polyethylene membrane and the selected waterproofing membrane for the sidewalls is Grace Preprufe 160R, a 32 mil thick HDPE membrane”.06/16/08-Vought-DEC approves RAWP pending inclusion of following requirements: 1) call to AG to determine if new STIP warranted to 37-11 Development LLC 2) cc to AG, Ahmed, DEP as site is E designated 3) sampling of dewatering water for new construction 4) round of groundwater sampling from all wells. Vought called FLS Ahmed and discussed above requirements and Ahmed will send email with current owners contact info and contact info for NYCDEP. Vought called NYSOAG Feedore and he requested that a new STIP be sent and he review STIP prior to sending.06/17/08-Vought-Received email from FLS Ahmed and new mailing address for STIP is: 37-11 Development, LLC 158-13 72nd Avenue Flushing, NY 11365. Vought sent draft copy of STIP to AG Feedore for review.06/18/08-Vought-Received email from Ahmed that NYCDEP contact is Innocent Taziva (718-595-3585 fax:718-595-4479). 07/23/08-Vought-Received fax copy of signed STIP that was signed by David Marx “an official, authorized corporate representative for the Respondent”.07/25/08-Received original copy of signed STIP on 7/24 and STIP implemented by DEC Mattei on 7/25/08. As per CAP, Addendum to RAP due to DEC by 8/25. Copy of signed STIP faxed to FLS Mathew Carroll. 10/07/08-Vought-Reviewed Remedial Action Work Plan Addendum dated 8/19/08 and received on 8/22/08 from FLS Nathe. “Although groundwater does not exist onsite according to RIWP activities and monitoring wells do not exist onsite, groundwater samples will be collected from all three off-site monitoring wells (MW-A, MW-B and MW-C) to characterize groundwater that may require
dewatering during construction activities". "Dewatering discharge will be sampled on a regular basis including initial, intermediate and final sampling via 8260/8270". Vought sent letter approving RAP addendum with cc to FLS Nathe.12/22/08-Vought-Vought spoke with FLS Ahmed and wells will be monitored and put property development put on hold due to economic conditions.01/20/09-Vought-Received and reviewed letter from FLS Ahmed dated 12/22/08 and received on 12/26. "Due to fiscal constraints, the construction of the new hotel building has not commenced at the above referenced site. Accordingly, FLS recommends that quarterly groundwater sampling be performed in accordance with the CAP until site redevelopment begins and quarterly groundwater monitoring reports be submitted as deliverables to the NYSDEC". Vought sent letter approving of proposal. Vought sent letter approving of proposal with cc to FLS.11/23/09-Vought-To date file review by Vought:Letter from FLS Ahmed to DEC Vought-2/24/09. FLS working on behalf of Gertel Associates and submitting quarterly groundwater results. "Laboratory analysis indicated absence of any VOCs or SVOCs in all samples collected." No site plan or analyticals in report to describe which samples were collected.Letter from Associated Environmental (John Schretzmayer) to DEC Vought dated 5/9/09. "Please be advised that Associated Environmental Services, Ltd. has been retained by 37-11 Development LLC located at 158-13 172nd Avenue, Flushing, NY 11365 to perform quarterly groundwater monitoring and submit required reports for the above referenced site." Owner of site is: Mr. Yossi Fischler/37-11 Development LLC158-13 172nd Avenue Flushing, NY 11365Quarterly Groundwater Monitoring Report (Associated)-5/20/09. Sampling of three monitoring wells installed in sidewalk in front of the subject property. Groundwater is 8-11'bg. VOC's were non-detect for all three wells. Vought discussed adjacent property spill (456 11th Ave) with DEC Patel and he will follow up to ensure that that owner is assuming monitoring and decommissioning responsibility for those wells. Vought called Associated (Christine Mazarella (631)234-4280) and spoke to John Schretzmayer and informed him of prior DEC acceptance of RAWP based on removal of contaminated soil down to bedrock. Vought required confirmation of development plans and submission of updated letter ensuring installation of vapor mitigation efforts on future development and sensitive receptor survey. Schretzmayer will return call to Vought.2/11/10-Vought-Received email from Associated (Mazarella) requesting update. Vought called and left message to return call.3/1/10-Vought-Received call from and spoke to Mazarella and discussed requirements of confirmation of development plans and submission of updated letter ensuring installation of vapor mitigation efforts on future development and sensitive receptor survey. Vought sent email of same.5/20/10- Vought-Called and spoke to Mazarella and as per Mazarella, Schretzmayer conveyed DEC requirements to client and Schretzmayer will send email to Vought with updates regarding sensitive receptor survey and installation of SSD/vapor barrier if site is to be redeveloped.6/10/10-Vought-Spill transferred from DEC Vought to DEC Ketani as per DEC Austin due to Vought transfer to Section A.8/9/10 - Raphael Ketani. Kevin Murphy of Associated Environmental Services (631) 234-4280 sent a letter to DEC that was written by Yossi Fischler of ATRIA Builders, LLC. The letter was a short paragraph in which was stated that ATRIA will institute vapor mitigation efforts during the construction of the hotel that will be on the site. The vapor mitigation will consist of a vapor barrier, a sub-slab depressurization system (if applicable), and a
sensitive receptor survey (if applicable). This letter was shown to staff at DEC and was found unacceptable as it was not a legally binding instrument for the owners. 8/10/10 - Raphael Ketani. Today, I sent Mr. Murphy an e-mail requesting that the owners put together a draft deed restriction and submit it to the DEC for review and approval. The deed restriction should state that there had been an oil spill at the site and that a vapor barrier and a sub-slab depressurization system must be installed as part of the building construction. 5/18/11 - Raphael Ketani. I still hadn’t received the draft deed restriction. I sent Mr. Murphy another e-mail with the same content as the one that I had sent on 8/10/10, 5/20/11 - Raphael Ketani. Earlier today, I received a call from Kumar Patel of the Region 2 Spills Unit. He said that he was investigating a spill that was called in yesterday (5/19/11) at 3:30 PM. The spill number is #1101875. The spill was called in by Joe Enang (917) 335-2438. It consisted of an unknown oil that was found in the MTA Seven Line tunnel extension at 11th Avenue and 36th Street about 25 feet below ground. Workers put down pads to collect the oil. Mr. Kumar believes the oil is from the site and is waiting for a representative from the MTA to meet him at the site in order to see what the problem is and whether the oil is still coming in. I contacted Mr. Murphy by phone (631) 234-4280. I reminded him that the DEC was still owed a sensitive receptor survey and a draft deed restriction. Mr. Murphy said that he was aware of this and that he had passed the message along to Yossi Fischler (917) 929-2440 of ATRIA Builders, LLC (the owner of the property). However, Mr. Murphy told me that his company is not presently under contract to ATRIA. Mr. Patel returned to the office and briefed me regarding what was found. He said that Rosemarie of the MTA and him investigated the spill and determined that it was definitely coming from the auto service shop above. The shop is still active and doing repairs. According to Mr. Patel, MTA personnel discovered water in the tunnel with a little oil on top. This was cleaned up. Then they discovered oil in the dirt that they were digging out to extend the tunnel. Mr. Patel told me that, right now, the MTA is willing to continue to remediate the spill by digging out more soil, which they have to do anyway. Mr. Patel will let me know the progress of the digging and what is found. If the contamination turns out to be from an active spill from the service shop, rather than residual material, then Mr. Fischler will be notified and asked to clean up the spill. Later, Gregory Ernst of Associated Environmental Services (631) 234-4280 sent me the sensitive receptor survey by e-mail. He added that the draft deed restriction will be sent sometime in June 2011 when the primary property owner returns. I reviewed the sensitive receptor survey. I had no comments. 6/3/11 - Raphael Ketani. Ed Shea (shay) of LAMCO (212) 237-1140 called. He said that he had represented Lehman Brothers during 2007 and 2008. He was counsel for LAMCO (Leeman Brothers Asset Management). He is taking care of the part where Lehman Brothers was a lender. He is trying to decide what should be done with the property. Right now, he needs an update. At one time, Ernie Fleming of Fleming Lee Shue had received approval to develop and clean up the site. Mr. Shea said that he has documents showing that owner of the taxi company had recovered 60,000 gals. of oil that was under the Javits Center and had reimbursed DEC. Mr. Fleming had the idea that were no fractures in the bedrock and so there would be no migration of oil to the deep subsurface. Mr. Shea was very surprised to learn from me that there were fractures and that the oil
had moved 30 feet down below grade to where the MTA was digging the
subway tunnel extension. He said that he will contact Kumar Patel of
the Spills Unit to find out what is happening with the tunnel digging
and the residual oil removal. 6/6/11 - Raphael Ketani. I spoke to Mr.
Patel regarding the #7 line tunnel extension digging. He said that he
hadn’t heard anything more since his last visit. He will call the
construction company. 6/8/11 - Raphael Ketani. Mr. Shea called. He
didn’t realize we had spoken earlier in the month. I told him that
there wasn’t much new regarding the site. The MTA contractor was
still digging and the DEC was still owed the deed restriction. Mr.
Shea thanked me and the conversation ended. I spoke to Mr. Patel
about progress with the MTA digging. He said that the results came
back for the soil sample that they had thought had contained oil. The
results indicated that the substance wasn’t oil. Mr. Patel added that
there isn’t much soil to dig out anyway. The end of the #7 line
extension will be next to, NOT UNDER, the site. After the soil is dug
out that covers the bedrock, then a retaining wall will be
constructed under the adjacent side of the site and that will be
the end of the construction. The extension WILL NOT go to the Javits
Center. I spoke to Mr. Vought regarding what it will take to close the
spill case. He said that if the development will be a high rise
hotel, then the soil will be dug out and then some of the bedrock. So
the RAWP will not be necessary. However, if the site will not be
developed whereby a tall structure needing a deep foundation will be
built, then the contaminated soil must come out and the RAWP will
apply. Without deep development and soil removal, the spill case CAN
NOT BE CLOSED. 6/9/11 - Raphael Ketani. I made an unannounced site
visit. The former car service station is at 450 11th Avenue. It is
between West 37th Street and West 36th Street. The site faces the
Javits Center. It is bordered on the north by a defunct check cashing
store. A gigantic pile of covered soil and rock sits next to the
south side of the site. This material is from the #7 Line subway
digging project to the south. I found three well covers adjacent to
the former check cashing store along West 37th Street. There was
nothing else of note regarding the site. 7/6/11 - Raphael Ketani. Mr.
Fischler (917) 929-2440 of ATRIA Builders, LLC (the owner of the
property) called. We discussed the easement/deed restriction. I told
him that this was the only document that was needed to close the
case. I told him that the statement must include the statements that
"there has been an oil spill on the site, and that a vapor barrier
and a sub-slab depressurization system must be installed as part of
the building construction." I told Mr. Fischler to submit the draft
deed restriction/easement to the DEC and we will review it. He said
that he agreed to submit the draft document. 7/7/11 - Raphael Ketani.
Greg Ernst of Associated Environmental Services (631) 234-4280
called. He wanted to know what the soil results showed from the
sample that had been taken. I told him that the results indicated
that the material WAS NOT oil. 8/25/11 - Raphael Ketani. I spoke to
Mr. Fischler (917) 929-2440. He said that a meeting was held last
week between Michael Bogan (environmental lawyer hired by ATRIA),
representatives of Lehman Brothers (the lender), and representatives
of Associated Environmental Services. The meeting was held to discuss
the site and the environmental situation. Mr. Fischler said that they
decided that the DEC should submit a letter to ATRIA describing what
should be done in order to close the spill case. I told him that the
DEC needed a draft deed restriction and easement. I added that the
draft document should indicate what will be done to mitigate any
vapors. Mr. Fischler said that this should be included in the letter and anything else the DEC would require. I told him that I will send this letter. Later, after reviewing the case notes again, I determined that there still was an issue regarding the second STIP which had not been complied with. The RAWP Addendum had been approved by the DEC and a letter was sent to the owner on 10/7/08, but no action was taken by the owner. This STIP was signed by David Marx, a managing member, for Marx Development - Atria Builders. He signed the STIP on 7/21/08 and it became effective on 7/25/08. According to ACRIS, the owner of the site (block 708 and lot 65) is still 37-11 Development, LLC at 158-13 72 Avenue, Ste 2F, Flushing, NY, 11365. The deed document is dated 5/18/07 and was filed on 6/22/07. Gertel Associates and ATRIA Development, LLC are also at this address. 9/8/11 - Raphael Ketani. A certified return receipt letter was sent to Mr. Fischler today. The letter stated that 37-11 Development, LLC has to comply with the requirements in the CAP for the STIP. One of these requirements was the excavation of the contaminated soil below the site. Additionally, 37-11 Development, LLC was being required to do monthly off site groundwater sampling, gauging and product collection and to submit a monthly report. A deadline of October 6, 2011 was set for the excavation and groundwater monitoring to begin. The letter also stated that legal action would be taken if the work didn’t start by the deadline 9/9/11 - Raphael Ketani. Mr. Fischler called me. He said that he had just received the DEC 9/8/11 letter. He said that he was very taken aback by the change in direction and that he was very angry about it. Mr. Fischler went on to say that he didn’t know how he could approach his bosses about what 37-11 Development, LLC has to do now. He said that they can’t get the funding to do the excavation in such a short period of time, let alone get the contractor on board to start working. He added that construction was still going on for the subway extension to the Javits Center. I told Mr. Fischler that the change in direction for the DEC was due to the fact that putting the environmental excavation wording into a deed restriction or an easement was not how the DEC manages contaminated sites. I added that this determination was made during a discussion amongst staff here and in our Albany office. Also, there was still an outstanding STIP that had never been acted on. He asked why the previous case manager and I were originally telling him that all they needed to do to close the case was a sensitive receptor survey and a deed restriction. I told him that I didn’t know why the previous case manager had decided that the receptor survey and the deed restriction were the right approach. I explained that the sensitive receptor survey was needed by the DEC anyway, but the real issue was the STIP which was signed by Mr. Marx of his company and never acted upon. I reminded him that the STIP is a legal document and contract and must be adhered to. There are timelines to follow. I told him that, if he wants, his company lawyer can talk to John Urda of our Office of General Counsel. Mr. Fischler stated that his lawyer will contact Mr. Urda. Later, I talked Greg Ernst of Associated Environmental Services (631) 234-4280 about the case. He said that John Schretzmeyer of Associated was much more familiar with everything that took place. I then spoke to Mr. Schretzmeyer. He said that Jeff Vought had told him that the groundwater sampling could stop since the samples were all non-detect and that Mr. Vought had put this in a letter. He will look for Mr. Vought’s letter. So the 2009 groundwater report was the only one that was required. Mr. Schretzmeyer added that Mr. Vought had told him that all Associated needed to do was to submit the sensitive
Failure to comply will result in legal action.

9/26/11 - Raphael Ketani. Matt Carroll of Tenen Environmental (646) 827-1061 called. He said that his company will do the quarterly groundwater monitoring for the site. They will begin the quarterly sampling this week. Mr. Carroll said that a few employees from Fleming Lee Shue had left and had formed this new company, Penen Environmental.

9/28/11 - Raphael Ketani. I received the green return card for the 9/9/11 Fischler clarification letter went out to Mr. Fischler regarding the environmental monitoring and remediation requirements under the STIP. Reference was made to the approved Fleming Lee Shue letters dated 8/19/08 and 12/22/08. 37-11 Development was in violation of the STIP due to their failure to conduct the quarterly groundwater monitoring. It was also stated that quarterly groundwater monitoring and reporting were required to begin this September, and that this should continue until they are ready to excavate the contaminated soil.

8/19/08 and 12/22/08. 37-11 Development was in violation of the STIP due to their failure to conduct the quarterly groundwater monitoring. Failure to comply will result in legal action.

9/26/11 - Raphael Ketani. Matt Carroll of Tenen Environmental (646) 827-1061 called. He said that his company will do the quarterly groundwater monitoring for the site. They will begin the quarterly sampling this week. Mr. Carroll said that a few employees from Fleming Lee Shue had left and had formed this new company, Penen Environmental.
