DEC Memo: Prior to Sept. 2004 data translation this spill Lead_DEC Field was
"TIPPLE"09/12/95: W.O. TNK IN BASEMENT OVERFILLED, INTO DRAIN, SEWER, RIVER, KINT Dd NOT TAKE RESPONSIBILITY, OWNER MYRNA 47 REALTY, SENT LOR, and offered 30 day grace period for payment prior to starting a
PIN. Spoke with Slavik Gossman (212) 768 - 7540 who said he represented the owner and would provide payment, sixty days later, never paid. Opened PIN (# 94352) to pay MILRO. 12-07-95 Got call from
Sam at the Sunoco (adjoining property). Sam says that he is getting sued by owner, and has already paid owner over $ 3,000 dollars for the cleanup, but owner never paid Milro.5/12/04 - AUSTIN - TRANSFERRED FROM MULQUEEN TO TIPPLE - END8/23/05 - Raphael Ketani. Case transferred to Jeff Vought.07/25/05 - Vought-Spill reassigned from
DEC Vought to DEC Ketani as per DEC Austin.10/8/08 - S. Paige conducted Technical Review of spill file. Source of release was an automotive repair shop in operation at 602 West 47 Street, Manhattan. Waste oil was being discharged into a defective aboveground storage tank (AST) system in the basement of the repair shop. Oil overflowed from the AST and discharged into drain in the basement which then discharged into the storm sewer leading to the Hudson River.
M. Mulqueen (DEC) called out Milro Associates to contain the spill. Contractor vacuumed out storm drains and waste oil tank, placed booms in drains, and placed pads and speedy dry down in basement around tank area. Milro then transported and properly disposed of emulsified product at a disposal facility. A review of the spills database showed that no other spills are open in close proximity to this site as of 10/8/08. Given the age of the spill, readily available documentation and completed cleanup activities, no further action is required at this time.

Remarks: STORM WATER REGULATOR ON WEST SIDE HWY & 47 ST HAS FLOATING WASTE OIL. SLIGHT SHEEN ON RIVER, TRACED BACK TO ARIO'S AAA TAXI GARAGE. USCG & IWCS ON SCENE. DEC CALLED CONTACTOR - NO RESPONSIBLE PARTY

Prior to Sept, 2004 data translation this spill Lead_DEC Field was "O'CONNELL"/6/19/02, 1230 hrs: Met at site with Joe Browne (UT supervisor) and David Duke (ERT). Material visually appears to be cable oil - samples taken for PCB and oil ID. Manhole is in center lane of 12th Ave./West Side Hwy. Lane is closed by Con Ed truck with flashing arrow and cones. Con Ed tanker arrived soon after I did - 4,000 gallon capacity. Using graduated stick and water-finding paste, estimate approximately 800 gallons oil and 4,000 gallons of water. Tanker began pumping at about 1:15 PM. Will take several hours and another tanker to remove liquids. Clean Harbors will then clean the manhole so that crew can assess equipment to see if there is a leak. According to Joe Browne, there is no pressure drop on either feeder. This is probably a long-term, low-volume leak from a fitting. DEP IWCS (Andrew Kelly) and Haz Mat (Chris Haas) also stopped at location to get update. (JHO)6/20/02, 1540 hrs: spoke with Joe Browne. They pumped out and cleaned manhole, but found no evidence of a leak. They have obtained an emergency DOT permit to begin excavating end walls to check for leaks. (JHO)6/21/02: Met with John Tranchina and Joe Browne. North end of manhole has been dug out. Leak was found in manhole sleeve. Small leak, low volume (slow leak) over time. No visual contamination in excavated area, but Tranchina reported some odor in soils. Will collect soil samples from floor, walls for TCLP benzene and TPH modified 8100. (JHO)7/9/02: lab results for soil samples submitted by John Tranchina. Two of 10 locations still had high TPH after 6/21/02 sampling event. Tranchina excavated more soil and re-sampled the two locations on 6/28/02 - still very high TPH. (JHO)7/17/02: Spoke with Tranchina - Locations 5 and 6 will be excavated additional 6" to 1'. Will collect samples and backfill. 2nd set of samples had higher TPH results than first set.(JHO)10/13/06: Con Ed submitted report (see eDocs) documenting additional cleanup and sampling. Close. (JHO)~~~~~~~~~e2MIS no. 143-435: On June 19, 2002, J. Browne, CCI, 78774 of Transmission Operations reported that while preparing for installation of a cathodic testing station at manhole 61724, feeder M54/M55 he discovered approx. 1000 gallons of unknown oil and approx. 2000 water. All substance contained in manhole. Chem Lab is at the site and will be taking samples. Source of spill and cause of spill is unknown at present. No sewer, waterway or private property affected. No smoke, fire, injuries or outside impact. Clean Harbors has been notified to report to the site. Tag no. 4259 will be hung in manhole. Treating as 50-499ppm. UPDATE Per B. Byrne, Supervisor, 54151, 06/19/02 a crew was on site to check manhole. 06/20/02 - NYSSEC & NYSDOT was to meet with Construction Management to discuss permits and how to proceed with the remediation. 15:00 - 06/20/02 excavation began 06/21/02 - at present no leaks has been found on the North end, going to break out the wall to check the pipe in the wall. Update: 06/21/02 15:40 hrs. Project Mgr. Mr. J. Farina # 75798, of transmission Operations Reports that in M-61724, tanker pumped approx 2,000 gallons of water and approx 1,000 Of oil. Clean Venture has removed approx. 30 yards of soil from the excavation. PCB Concentration 6PPM NO LEAK FOUND IN MANHOLE, LEAK FOUND ON THE SLEEVE OUTSIDE OF MANHOLE. -Chem lab reported 02-05803-001 for PCB at 10 sample locations Chem lab reported 02-05804-001 for TCLP Benzene and TPH at 10 locations.

Remarks:
1,000 GALLONS ON 2,000 GALLONS OF WATER. VENDOR HAS BEEN NOTIFIED FOR CLEANUP. SAMPLES TAKEN FOR PCB AND FOR FURTHER INVESTIGATION.
MANHOLE #61724 (Continued)

TO BE DONE 50 TO 499 PPM PCB. MANHOLE CONTAINS DIELECTRIC FLUID FILLED FEEDER CABLES M54 AND M55. FEEDERS ARE NOT LEAKING. CON ED #143435.

DEC Memo: spill from boiler on floor. approx 500-1000 gallons down drain. Surface cleanup is relatively small. Drain is believed to go to Amtrak tracks below. I spoke with AMtrak rep who walked the tracks. they found no oil. DEP was informed and surface spill was taken care of. Followup for closure. Release to city sanitary system. Surface cleanup complete and repairs have been made. Spill closed.
Remarks: Tommy reported to Castle Oil over 1000 gallons in basement down the drain - No cleanup noted as of yet - possibly from a boiler malfunction

**DEC Memo:**

Prior to Sept. 2004 data translation this spill Lead_DEC Field was *FOLEY*Con Ed e2mis #137262:75gal dielectric fluid in vault 0264 at 331 W 33 St. Cause is damaged equipment. Transformer leaning, guage reads low. @14:40 hrs call transportation for a tanker over for clean up.Jerry Gnall, I&A Supervisor, reported at 18:30 hrs. on 5/24/01 that NYCDEP rep. Ellie St. Jean arrived on location at 16:30 hrs. and left at 17:05 hrs. Mike Kessler, ERT arrived at 17:20 hrs. and left at 17:25 hrs.. Feeder was taken out at 18:30 hrs. The over 50 Tanker arrived on location at 18:15. Partial cleanup in progress. Final cleanup is pending transformer removal. Mr. Gnall also reported that he discovered approx. 1 gallon of oil in the sump pit of the adjacent vault V5995. There was an "Oil Minder" in this sump and it worked. The Oil Minder shut down the pump when it sensed oil in the pit. They are presently checking the trap. Spill tag #18387 was installed in...
VAULT 0264 (Continued)

this vault V5995. According to Mr. Gnall previous PCB historical data for vault V0264 is 15 ppm. The cross street for this address (331 W 33 St.) is between 8th & 9th Ave. Update: At 22:15 Operating supv. reports that clean up is partially done at this time. He reports that tanker has taken on 60 gal. from the floor & 227 gal from the unit. total of 287 gal. completion of clean up is pending removal of transformer. And this he adds will be on 11-7 shift. Update: 22:39 hrs 05/24/01 Lab seq#01-05994-001, 17ppm PCB UPDATE: 8/29/01 Ed Higgins #18537, Supervisor Cable Dept., reported at 08:35 hrs. that the cleanup of vault V0264 has been completed. The transformer was removed and a "flush truck cleanup" was performed. The walls and floor were double washed with Slix and Bio-degreaser. Approx. two yards of solid debris were generated and picked up by the Flush truck. Spill tag #18386 was removed. Cleanup crew consisted of G. Rosario #11464 and J. Rotondi #11602. The cleanup was completed at 07:00 hrs. Update 12-05-02 @ 20:19 Lab Sequence Number: 02-11333-001, Analysis indicates the presence of a substance similar to a dielectric fluid. Update 12-05-02 @ 22:10 Lab Sequence Number: 02-11332-001, 39ppm PCB

Remarks:
spill in to vault due to transformer failure...sample taken clean up pending...ref # 137262.

DEC Memo: Prior to Sept, 2004 data translation this spill Lead_DEC Field was *RODRIGUEZ"e2mis 138318Vito Vavallo #57666, I&A Planner, reported at 11:25 hrs. that he found approx. 10 gallons of transformer oil on the vault floor and the sump pit was filled with oil in vault V2633. This
vault was previously turned in on 7/17/01 at 18:14 hrs. for a small spill of 1 pint of transformer oil. See e2MIS Incident #138298. This previous incident was closed since the cleanup was completed within two hours. They checked this vault again and found all of the oil absorbent pads that were left on the floor soaked with oil and oil in the sump pit. The sump pump had been disconnected on 7/17/01. The source of the leak is the transformer and the cause is a bottom leak. No samples taken since they were taken on 7/17/01. PCB results of the transformer oil is less than 1.0 ppm per lab sequence #01-07434-001. Additional absorbent pads placed. Cleanup in progress and pending arrival of tanker. UPDATE: 10/15/01 Jerry Gnall #19045 reported at 09:10 hrs. on 7/18/01 that 312 gallons of liquid (transformer oil & water) was removed from vault V2633. One drum of debris including PPE was generated and removed. The transformer was drained and the partial cleanup was completed on 7/18/01 at 23:00 hrs.. Final cleanup is pending transformer removal. Ed Higgins #18537 reported at 05:20 hrs. on 8/14/01 that the final cleanup of vault V2633 was completed. The vault was double washed with Slix and rinsed or flushed with the Vactor truck.

DEC Memo: Prior to Sept. 2004 data translation this spill Lead_DEC Field was "FOLEY". J. VOUGHT RESPONDED OFF-HOURS, WITH GUIDANCE FROM O'CONNELL. M.E. KRIS NOTIFIED BY VOUGHT e2MIS no. 143-225: Was called to the location of 225 W.43 (7 Ave). Upon arriving he reports that V973 21M21, was on fire and N.Y.F.D. was on location to extinguish fire, and at this time he reports that it appeared that the transformer was ruptured, and at this time he was unable to inspect due to the smoke. No samples taken at this time due to fire. Tag #33315 will be placed after fire & smoke clears. Also the same for samples. UPDATE: 6/7/02 Ken Ferraro #06749, Emergency Supervisor, reported at 08:40 hrs. that the NYCDEP is on location. They arrived at 08:25 hrs. They want to know where the drains go? He reported that there are approx. 5 gallons of oil on the floor. There is no water - just oil and debris on the floor. The transformer is below minimumand ruptured. The capacity of the transformer is 285 gallons per the nameplate. The NY Fire Dept reported the fire. #9 responded and when they arrived they found the NYFD on location and the transformer smoking heavily. The Fire Dept used foam to put out the fire. He reported that once the backfeed cleared the smoking stopped. The transformer vaults are in front of the NY Times Building Loading Dock. He reported that there was oil splattered on a garage door in front of the easterly bay of the NY Times loading dock. There is approx. one-half pint of oil splattered on the door. Mr. Ferraro did not see a drain in the floor due to limited access and debris on the floor. There is no pump in any of the four vaults at this location. He reported that there is no oil in the three adjacent vaults. UPDATE: @ 09:05 hrs. Environmental Desk ordered an Over 50 tanker and requested that samples be taken from the spill. EPA # NYP 004 099 016 issued by ERT Mike Daughtrey. Ken Ferraro reported at 09:08 that George Greenwood and the ERT, Mike Daughtrey are on location. UPDATE: 6/7/02 Jerry Gnall, #19045 reported that an I & A crew is on location and Mike Reiter #27277 took two
VAULT 8973 (Continued)
samples for PCB and Oil Id from the spill. Chain of Custody #BB02926 issued.UPDATE: 6/7/02Mike Reiter reported at 12:40 hrs. that the
courier picked up the samples at 12:20 hrs.UPDATE: 6/7/02Account #
F3452 is the account number to be used for this job.UPDATE 6/6/2002 @
17:35 HRSThe correct date of this entry is June 7, 2002. Also 315
gallons of transformer oil was removed not "#15 gallons”.Reiter #
27277 informed me at 17:20 HRS, that the cleanup for V-8973 has been
partially completed as of 6/7/02 @ 17:15 HRS. One drum of solid
waste was disposed of. #15 gallons of liquid was removed. Oil
absorbtion was used on the floor and the Garage door had six(6) panels
cleaned. The Environmental tag was left in the structure and the
final cleanup will be pending removal of the Unit. Cleanup Supervisor
- Reiter # 27277. Cleanup person - J Knipper # 51005.UPDATE:
6/10/02Mike Reiter #27277 reported to Rich Pagano at approx. 17:20
hrs. on 6/7/02 that 315 gallons was drained from the
transformer.Clarification of the cleanup information:Mike Reiter
#27277 reported to R. Pagano at 17:20 hrs. that 315 gallons of oil
was drained from the transformer only. Oil absorbent pads and
granules were used on the floor. The garage door panels on the NY
Times Bldg. were cleaned. A partial cleanup of the vault was
completed. The final cleanup is pending transformer removal. The
spill tag was left in the structure. Cleanup crew was J. Knipper
#51005 and M. Reiter #27277. Cleanup Supervisor was Jerry Gnall.Lab

Oxygenate: False

Tank Test:
samples will be taken to verify completeness of cleanup. Called ERT about 6 inches wide. Soil was removed. Upon completion of repairs, underneath feeder pipe. Affected area about 12 inches along wall, Operations, found damp soil found manhole, adjacent to manhole wall Operations, Joe O'Connell, Construction Inspector, Transmission According to Gerry Materazzo, Field Operations Planner, Transmission repairs south side of manhole wall around fdr pipes broken out. about 6 inches from end wall, on southeast side of manhole. To make coming from crack in one inch line from fdr 54. Location of leak was 04-03859-001 Fingerprint of oil indicated dielectric fluid. Leak Sequence Number: 04-03858-001 PCB 3 ppm. Lab Sequence Number: the waste from the manhole was treated as 50-499 PPM PCBs. Lab Venture Power washed the manhole. Pending receipt of sampling results pending. May 20, 2004 Clean Harbors pumped out the manhole and Clean taken, one for PCB and one for ID by the Chem Lab. The cleanup is source and cause of the spill are unknown. There will be two samples approx. 50 gal. of oil on approx. 3700 gal. of water in M62163. The report of a missing manhole cover on mh62163 when he discovered approx. 50 gal. of oil on approx. 3700 gal. of water in M62163. The source and cause of the spill are unknown. There will be two samples taken, one for PCB and one for ID by the Chem Lab. The cleanup is pending. May 20, 2004 Clean Harbors pumped out the manhole and Clean Venture Power washed the manhole. Pending receipt of sampling results the waste from the manhole was treated as 50-499 PPM PCBs. Lab Sequence Number: 04-03858-001 PCB 3 ppm. Lab Sequence Number: 04-03859-001 Fingerprint of oil indicated dielectric fluid. Leak coming from crack in one inch line from fdr 54. Location of leak was about 6 inches from end wall, on southeast side of manhole. To make repairs south side of manhole wall around fdr pipes broken out. According to Gerry Materazzo, Field Operations Planner, Transmission Operations, found damp soil found manhole, adjacent to manhole wall underneath feeder pipe. Affected area about 12 inches along wall, about 6 inches wide. Soil was removed. Upon completion of repairs, samples will be taken to verify completeness of cleanup. Called ERT -
MANHOLE # 62163  (Continued)

Steve Martis at 0955 hrs to inform him of damp soil found outside MH. Estimated amount would be less than a pint. South wall of manhole broken out. Confirmed with SSO that leak was actually on M55 not M54. Clean Ventures removed 1800 gallons of liquid under bill of lading CVCC051901 on 5/20/04. Permanent repairs started at approx 12:00 5/20/04 with barrel through wall. Permanent repairs completed at 19:22 5/20/04. The tanker that pumped out the manhole was checked and it was estimated that there were 60 gallons of dielectric fluid in the tanker. Update: June 4, 2004 Manhole was pumped out by Clean Harbors on May 20 and shipped via Clean Harbors Manifest MAQ248913.

On June 4, 2004 Tom Columbia of Clean Harbors informed Ron Silva, Senior Specialist, Transmission Operations, that approximately 10% of the tanker 3150 gals of oil/water mixture that was removed from the manhole was dielectric fluid, or about 315 gal. Total amount dielectric fluid removed is 315 (Clean harbors) and 60 gal (Clean Venture) = 375 gal. Update: June 16-04 After the contaminated soil was removed, samples were taken on May 25 by Jacques Whitford outside the south wall of the manhole. Samples were taken under both feeder pipes, adjacent to the manhole wall and under both feeder pipes about 1.5 feet away from the wall. The samples were analyzed for dielectric fluid via method 8100, and Benzene (both total & TCLP). The analysis was conducted by Environmental Testing Lab. The Chain of Custody number was DD18026; the LSN number was 04-04062. The lab was unable to associate the hydrocarbons in the soil with any known reference standard. The results ranged from 66.4 ppm to 734 ppm. Based upon the above results, any potential contamination was removed. The repairs made involved installed a repair barrel on the feeder pipe, through the manhole wall. The repair barrel encompassed the leaking one inch line.

Remarks:
2 SAMPLES WERE TAKEN:

DEC Memo: DEC PIPER responded to site 1/17/10 at 1pm. Con ed had already made permanent repair to leaking feeder approx 550- 600 gal spilled to soil. Excavation was 10x 7 and approx 8’ deep. Crews were using a guzzler to continue removing soil. Sidewalls have been shored. Endpoint samples will be collected. Once shoring is removed, soil excavation will continue horizontally. Con Ed # 219935 The floor of the excavation consisted of bedrock so no floor samples were taken. The side and end walls were each sampled. The side wall samples were taken immediately adjacent to the leak location. All samples meet the DEC closeout criteria of less than 10,000ppm TPH. This spill is closed. See e-docs if warranted. 3/18/10 - Austin - Spill contained and cleaned up by Con Edison - See eDocs for the report - spill report closed - end

Remarks: **POSSIBLE FEEDER LEAK 475 GALLON DISCREPANCY IN THE TANK. UPDATE:
01/17/10 0246 The amount hasn’t changed but have found unk amount of oil in soil at 155 St and Harlem River Dr. They will work to put a temp. clamp on feeder.

DEC Memo: Prior to Sept, 2004 data translation this spill Lead_DEC Field was "ENGELHARDT" See spill # 0200426. See eDocs for 2007 Substation Inspection Findings and for response from Con Edison relative to this spill. 6/21/10 - changed Lead DEC to JMOCONNE (JOC) 5/3/13 - e2mis report submitted as part of review of open substation spill cases.
Report indicates that there are two open maximo numbers to track needed repairs to fix leaks on the equipment. No other open spill identified for the equipment. This spill was identified as the master for cooling plant #2, which had oil leaking down through the ceiling in the fire pump room. Will be returned to Con Edison as part of multi-spill site review. Note that this spill is located in a facility that is part of Appendix B site 19. (JOC)

**Prior to Sept, 2004 data translation this spill Lead_DEC Field was O’CONNELL’s e2mis no. 130551:03/24/00 14:45 R.Palladino (10563) while doing a routine inspection found unknown fluid in V-1606(16m71) at 368-80 10th Ave and it appears to have migrated via a weep hole to the adjacent structure-V-8173(16m69) at the same location. It appears to be diesel fuel but not sure. Taking 2 samples in each vault for ID, PCB analysis, and for flashpoint. Have 50 gallons of water total in both structures. No cracks in either structure. Unplugged sump pump. Entry into sewer or waterways is unknown at this time. Will disassemble sump and the piping to determine same. Unknown fluid amount is 25 gallons. Cleanup pending results.04:45 am As of this time analysis indicates the presence of a substance similar to light fuel oil (lab seq# 00-02807). Lab results are as follows for two vaults: Location: 368-380 10 Ave. v-1606 16m71ppm
<1.00 Aroclor-None
Location: 368-380 10 Ave. v-8173 16m69ppm
<1.00 Aroclor-None

| DEC Memo: | 11/24/08 - See eDocs for Con Ed report detailing cleanup and closure. Sangesland spoke to Dave Duke at Con Ed and Nick Chronopolous at PetroSpill was from a vent line during a delivery. Less than 5 gal sprayed on side of building and onto sidewalk. Oil pads were laid down. Con Ed says some of the oil came "near" their sidewalk box (Con Ed men were working there when spill happened). Spill was cleaned. Very Heavy Rain in the 2-3 hours after the spill. Whatever was not cleaned up immediately by Petro was washed away in the downpour. |
| Remarks: | Caller is 3rd party reporting above spill. Unknown clean up at this time. Nick Chronopolous from Petro oil (718-628-3305) called hotline at 10:51 a.m. to state approx 1 quart of oil spilled to sidewalk out of a vent from an overfill, due to a faulty gauge. Stated a pad was put down and does not believe any oil went into the catch basin. Oil was being delivered to 450 West 33rd st.. |

OIL SEEPAGE INTO A/C/E LINE (Continued)  

DEC Memo:  

Oil is coming through the subway wall onto the tracks. Transit does not know exactly where this oil is coming from. It is in the area of 780 8th Ave. 03/20/12- Zhune spoke to Sherry Bulkley. She said right now all information I have I gave it to Steve. Zhune asked to take sample for fingerprint analysis. There are two buildings on 8th ave between 48th and 47th street. Building at 770-780 8th ave.-------- PBS 2-2608717--- Manager 267-273 west 47th street. & Building at 782-786 8th ave.-------- PBS 2-357553— 248-248 west 48th street. Zhune spoke to the superintendent of the building located on 780 8th Ave. This building have a20000-gallon AST # 6 fuel oil. As per the superintendent Stanli Pazmino 212-245-5252 the building is new 9 years old as well the tank. The building is not using oil since December because the high cost of #6. The building is running on gas. He checked the tank, the boiler and the lines minutes ago and everything is ok. he did not see any oil spill. He mention the fire house is next to this building they are digging soil in front the building on the sidewalk. The building located on 782-786 8th ave. is a fire house. There is one spill closed (Spill # 9812690). The site has a 1000-gallon AST diesel.03/20/12- Jeff Vought and V. Zhune had a conference call with Sherry Bulkey to set up an inspection. She said the spill was discovered saturday 03/17/12 for someone walking on the truck. the spill is not much product but the source have to be find. Since saturday the spill have not been cleaned. They need special work order to shut down the train and do the cleanup. She is going to send an email saying when they are going to address this issue.3/21/12-Vought-Received email from MTA Bulkley (NYCT Enviromental Protection Cell:646-252-5774) with email string to numerous parties. Location of oil seepage is East side of 8th Avenue between 47th and 48th Street in front of 780 8th Avenue. Bulkley included request to NYCT Edwin Reyes to collect product sample for fingerprinting. Bulkley sent email request to NYCT Hooshang Nejat Haim asking to coordinate DEC site visit with NYCT Reyes or NYCT Robert Cioffi. NYCT Reyes (Ph:212-424-4604) noted that they are working 10pm to 6am Monday to Friday night and request to let him know. Bulkley noted that Francis Von Mueller works days and is in the process of arranging for flagging but she does not know when that will be and that is is best to collect sample and have DEC do site inspection at same time. Bulkley noted that Edwin Reyes will likely be escorting DEC to seepage location. NYCT Bulkey not sure if flaggins is needed and asked that Vought contact Reyes tonight after 10pm to discuss necessity of flagging and DEC site visit arrangements. 3/22/12-Vought-Sent email to Bulkley that "Sherry, I did indeed talk to Edwin Reyes last night and he noted that a flagman was indeed needed if DEC was to perform a site visit. I have conferred with my supervisor (copied above) and a site visit by DEC to the tracks will not be needed if we receive a scaled site plan with abovegrade references and the seepage location. Edwin noted that he may be able to attain such a map so that we dont have to arrange for a flagman. If that map is not available I can perform the site visit on the following dates:Friday 3/23 10pm until 6am Saturday 3/24, Sunday 3/25 10pm until 6am Monday 3/26, Monday 3/26 10pm until 6am Tuesday 3/27 My cell is 917-577-1728 as well for my direct line and I look forward to your response". NYCT Bulkley replied noting she would ask NYCT Reyes for map. Vought request to be contacted via cell as was on vacation next day. NYCT Reyes replied that he will set up site visit for Friday or Monday night and then also replied that he
can get a track plan but not an above grade reference plan. 3/23/12-Vought-Received email from NYCT Bulkley asking NYCT Reyes if he could arrange for flagging and that MOW is planning to have Francis Von Mueller present for the site visit and that a sample should be collected and that she would inform DEC that Vought would need to bring safety gear and Track Training Certificate. NYCT Reyes replied that he would arrange for the flagging. 3/26/12-Vought-NYCT Bulkley sent email to NYCT Reyes noting DEC would not perform site visit if map was available and that DEC will not be present for sample collection. Vought received map in separate email and added to e-docs. Received second email from Bulkley that “Hooshang Nejat Haim is the Environmental Compliance Manager for Maintenance of Way, Francis Von Mueller works in his division.” Received email from NYCT Von Mueller that field trip is on for 3/26 and that fingerprinting sample will be collected. 3/27/12-Vought-Sent email to NYCT Bulkley that “I have been able to review the site plan and I think that is enough for the Department to use for a site visit to inspect for possible sources of the seepage. Unfortunately I was out of the office on vacation over the weekend and now am out sick and will hopefully be back in tomorrow but will be checking email from home. I am looking forward to the fingerprinting results of the oil sample and that along with the site plan will be expeditious in locating possible sources. I will follow up with you upon my return to the office and schedule a Department site visit to the neighborhood as well to inspect for possible sources hopefully later this week. I will keep you posted on the results of our visit as well.” Vought received second email from NYCT Bulkley that “Francis pulled a sample in the early hours of the morning. It will be sent to the lab this afternoon with a request to expedite the results. Please see all of the information in the associated e-mails below. Francis pin pointed the source to the address referenced below.” “Location is on “C” line north bound between W48th and W47th streets and about 90 feet north of the Emergency Exit # 246. The building above it has the address of 780 8th Ave. I have just sent an email to our infrastructure people to arrange for cleaning up.” “Oil spill emanating from subway structure was surveyed at 12:30 AM on March 27, 2012. The location is approximately 90 feet North of emergency exit no. 246. The stationing is 1180+90 on A-2 Track, IND, local, in the Borough of Manhattan. The spill location corresponds to 780-8th Avenue, New York, New York. This location is North of the intersection of 8th Avenue and 47th Street on the East side of the street. Oil was observed seeping through the subway tunnel wall at approximately 5 locations. The leak appears to be inactive at present. One sample of the oil has been collected. Please notify the NYSDEC Inspector Jeffrey Vought. Mr. Vought can be reached at 917-577-1728. Inspected By: Francis Von Muller Ph:718-694-1393 Cell: 516-903-1600) 3/28/12-Vought-Vought noted closed spill #9812690 for 782 8th avenue (FDNY station) and Vought also noted no PBS registration for 780 8th avenue. Vought also received email request from NYCT Von Mueller for “exact instructions for reporting of lab test results to conform to standard protocol expectations.” 3/30/12-Vought-Replied to NYCT Von Mueller that lab protocol for “Spills or Category 1 deliverables” however since samples were collecting for fingerprinting via comparision to known standards that DEC was a bit unsure of inquiry. Vought also asked for when fingerprinting results can expected to be received as they would be useful for DEC site visit to inspect for possible sources. Received email from Bulkley that “Francis is not in the loop.
regarding the actual arrangement for sampling analysis. That is arranged for in the office I work in. The sample was sent to the NYCT contracted environmental lab on 3/27/12 for GC fingerprint. We’ll check on its status, request it be expedited, and let you know when the report is expected. As soon as it comes in, I will forward you a copy.4/4/12-Vought-Received fingerprint analysis via email from NYCT Bulkley. Bulkley noted in email that “Please see the attached analysis for Spill #11-14087. The limits of detection are high for the individual parameters, but it is a reasonable assumption that the source of the leak is from a #2 fuel tank. The sample volume was adequate - 1 liter.” Vought added analysis to E-docs and scheduled site visit with DEC Zhune to inspect for possible sources and sent email to NYCT Bulkley noting same. Site visit scheduled with DEC Zhune for 4/16.4/23-12-Vought-Called PBS Contact for 780 8th Avenue (aka 271 West 47th Street) Kimberly Cafaro Ph:212-245-8300 (Biltmore Towers, LLC) to explain site history and arrange site visit. Vought spoke with Biltmore Towers (Bryan Weiss bweiss@thebiltmoreny.com) and he will return call to Vought with possible confirmation of proposed 5/1 site visit. Vought emailed Weiss copy of Spill report and also forwarded email to NYCT Bulkley with request if she would like to attend site visit as well (as long as property owner permits as well).5/1/12-Vought-Called and left voicemail message for Weiss to schedule site visit. Vought updated NYCT of same (Claire Sammon PH:646-252-5763) of same via another voice message.5/2/12-Vought-Received message from Weiss (Ph:212-245-8300x222) that he agreed to site visit and was available today and could have super available as well. Vought returned call and set up site visit for 5/3 at 10am and that DEC would also be looking for monthly inspection records for AST as well (after Vought conferred with DEC Ajoku). Vought spoke to NYCT Bulkley and informed her of same and she noted that no NYCT representative will be available for site visit. DEC requires: 1) site visit to 780 8th Avenue (aka 271 West 47th Street) and adjacent sites for possible seepage source possibly with NYCT Maintenance of Right of Way representative. 2) Updating PBS registration of 271 West 47th Street3)email to Weiss with Photos and site plan once DEC database back online.

Remarks: unknown petroleum seeping thru wall at above location/investigation underway, photos available. Please call

CONTAMINATION - SOIL WILL BE STOCKPILED UNDERGROUND STORAGE TANK FAILED OVER TIME AND CAUSED SOIL TO BE REMOVED SPILL CLOSED. FROM A TECHNICAL/ENVIRONMENTAL POINT OF VIEW THE SITE IS CLEAN.

Prior to Sept. 2004 data translation this spill Lead_DEC Field was "SANGESLAND". On August 15, 2001, DEC Sigona received spill closure report from AKRF dated August 14, 2001. See file for details and copy of report. 12/01 Spill re-assigned to Sangesland. AKRF submitted a letter dated Dec 27, 2001 which included a second copy of the Aug 14, 2001 report and a series of photographs showing the complete excavation of the city block down to bedrock. There was a problem with the PBS registration on the site. Sangesland asked AKRF to re-submit the PBS forms with the correct address (old PBS had the wrong city block) along with info on ALL of the tanks found and removed from the site. From a technical/environmental point of view the site is clean and will be closed out as soon as all of the administrative paperwork has been submitted and reviewed. 2/4/2002 AKRF has submitted copies of all updated PBS registration forms (PBS # 2-604810). All tanks have been removed from the site. The whole site has been excavated down to bedrock. All petroleum related contamination on this site has been removed. Spill Closed.

Contact Phone: (212) 580-8383

Substation Operations found at 12:22 hrs. approx. 4 gallons of
dielectric fluid (transmission feeder fluid) spilled into the sump
and onto the bluestone at the West 132nd Street PURS site. He was at
this location to meet with Clean Ventures, who was going to replace
bluestone from a previous spill. Mr. Rukaj stated that the rupture
disc blew in PURS Unit 52 North & South spilling oil into the sump
and then onto the bluestone. Environmental spill tag #000383 was
installed. No samples taken since there is generator knowledge of
transmission feeder dielectric fluid. No initial cleanup action was
taken. A maintenance crew will be dispatched to start the
cleanup. 4/23/05 I spoke with supervisor Dave Mocera. He informed me
that the previous spill stated in the report is historical staining.
This spill was cleaned up by Clean Venture. All bluestone was removed
and the rupture disc repaired.

Prior to Sept, 2004 data translation this spill Lead_DEC Field was
"ENGELHARDT" E2MIS 12082010/26/98 13:09 O.S R.BROWNE(21646) REPORTS
M.PRYSTUPA(02394) FOUND DIELECTRIC CABLE OIL LEAKING THROUGH SHRINK
CAPS. V3040 F/0435 W.50TH ST. , HAVE 2 QTS OF CABLE OIL ON FLOOR.
CONTAINED NO RELEASE NO ENTRY INTO SEWERS OR WATERWAYS. NO CRACKS IN
SUMP... SUMP NOT RUNNING. HAVE A SEWER CONNECTION. FOUND WHILE
DOING ROUTINE TRANSFORMER INSPECTION... NO OTHER OIL FILLED EQUIPMENT
IN STRUCTURE. CLEANUP IN PROGRESS..ESTIMATED COMPLETION1400HRS.
If this is a Con Edison manhole it contains electrical cable and
splices. Many manholes have a sealed sump in the floor which is used
to allow runoff when pumping the structure. A hose is place in this
sump and water on the floor will flow into the sump allowing the
floor to be cleaned. If cleaned prior to analysis of the fluid, the
structure will be cleaned as >50 PPM and all liquid and waste will be
manifested accordingly. The structure will be double washed with a
degreaser, i.e. Slix. All cleaning material and PPE will also be
treated as >50. If any sludge is found within a manhole it is treated
as lead contaminated and manifested accordingly. The spill
identification tag will remain secured to the structure until the
VAULT 3040 (Continued)  S104505998

analysis is completed and if <500 PPM the signage will be removed. If
the analysis is >499 PPM, a grid will be prepared for wipe testing
the area. Until the analysis of the wipes are proven to be
<10ug/100cm<sup>2</sup> all additional waste produced from the structure will
be treated as the original analysis. If this spill occurred in a
transformer vault containing a sump pump and there was a possible
release, the drainpipe trap will be dismantled to determine if oil
was released. Sludge found in a vault, through historical analysis,
has been determined not to contain lead.10/26/98 13:49 NO ANSWER AT
CIG--------------------- PM5810110/26/98 14:05 NO ANSWER AT
CIG--------------------- MICHAEL CROWE # 7145310/26/98 1414 HRS CIG MR
ROACH NOTIFIED-------MICHAEL CROWE #7145310/26/98 14:00R. Browne (I&A
OS) reports I&A Crew Prystupa and Christiansen cleaned up spill by
double washing affected area (2'X2') on vault floor with slx.
Cleaned up as over 50PPM waste stream. Generated one barrell of solid
waste and transported to West 28 St WOL PCB temporary storage area
for disposal. Labeled as over 50PPM PCB waste stream.10/26/98
17:50 Donohue (#9) reports that leaking cable ends are grounded and
resealed to contain oil. This was reported to the control center as
reported on B-ticket ME98008976. Job complete. Also on location with
Donohue was #9 trouble shooter Murphy. Logger: A. Johnson
#81226Transformer #4392889 in V3040 is an Air Cooled Non PCB unit.
The oil is from the Feeder (21M22) cable and is assumed to contain 50
- 500 ppm p'cb's and is cleaned accordingly.

Remarks:
A LEAKING SHRINK JOINT ON A CABLE LED TO THE 2 QT SPILL. CLEAN UP IS
IN PROGRESS.

DEC Memo:
Prior to Sept, 2004 data translation this spill Lead_DEC Field was
"O'CONNELL"SEE ALSO SPILL # 9811143.STEPHEN CRIBBIN OF CONED CALLED
IN TO UPDATE THE SPILL; LOCATION FEEDER M52, MANHOLE 61733 IN
BROADWAY AND 119TH STREET, MANHATTAN ABOUT 100 GAL OF DIELECTRIC
FLUID IN THE MAHOLE OF 1000 GL OF WATER. SAMPLE WAS TAKEN DEC 2 1998
AND THE LAB RESULT INDICATED THE SAMPLE CONTAINS 5 PPM OF PCB. TO
FIND OUT WHERE LEAKS COMES FROM. THEY WILL EVALUATE THE MANHOLE. NO
SEWER IS AFFECTED.2/12/99: Update from ERT Wallace: There was no
impact to the environment, was contained to manhole. Cleanup/repair
was completed on 4 DEC 98, Final spill amount 100 gallons.12-02-98
2:25pmDave Perez, ERT- Have S&D on water as a precaution (feeder runs
under river) I told him , if location is found overnight to update
hotline and also leave me a voice mail.Notify Steve Sangesland if
possible of his response.Notify Region 312-02 3:38pm Dave Perez,S&D
has been up and down Harlem River between 225th & Fordham Rd, no oil
seen. Update 12-04-98Stephen Cribbon of ConED called in to update the
spill. Location: Feeder M52. MH 61733. About 100gal of dielectric
fluid in the MH on 1000 gal. of water. Sample was taken Dec 2,1998
and the labs results indicated the sample contains 5ppm of PCB. To find
out where leaks come from, they will evacuate the MH and cleanup the
manhole, no sewer affected.CON ED E2MIS NOTESMeter reading
descrepancy of 232 gals. on FDR M52, River Patrol boat requested.5gph
leak declared on M5217.05 Partol Boat reported no oil found in Harlem
river Crossing.17:20 Pumphouse & PURS inspected, no leaks.19:50 all
Bx MH checked, no leak found01:10 Pipes exposed, no leak
found07:00 Only indications found at 120th St,( old Leak) and 117th
St,10:10 MH 61733 at B'way s/o 119th St. was opened to check and
dielectric fluid was found entering the manhole through the wall
sleeve.VNR to begin excavating outside the MH11:20 leak was discovered
to be on feeder M51 not M5211:15 - 11:30 Notified that USI flow meter
on leak detection system was found jammed at Sprainbrook Station, when
the flow meter was repaired at Sprainbrook S/S flowmeter showed flow
into tanks at Sprainbrook S/S. Tank levels have not changed at
Sprainbrook S/S but gauges may not be functioning correctly. Because
of these information the may not be a leak on feeder M52 and the
232 gallons originally reported as lost was not.

Remarks:
SUSPECTED LEAK FROM FEEDER M52. FEEDER TERMINATES AT SPRINGBROOK
SUB-STATION IN YONKERS. PUMP HOUSE LEVELS INDICATE A LOSS OF 232
GALLONS. UNKNOWN WHERE OR WHY. CON EDISON CREWS ARE CHECKING RIVER
AND MANHOLES. CON EDISON REFERENCE 121637.

VAULT 2480 (Continued)

| Contact Phone: | Not reported |
| DEC Memo: | Prior to Sept, 2004 data translation this spill Lead_DEC Field was "O'CONNELL"e2mis no. 131624: Found spill approx 5gal transformer oil and 1 gal water in vault 2480. spill possibly caused by transformer bottom leak. No cleanup action taken at this time. Cleanup pending scheduling, there is a sewer connection but no entry. update on amount spilled in v-2480 is 25 gallons also hung two oil signs. v-2480 also in v-2827. oil seeped in from v-2480. clean up in progress by I&A. Removed oil and water from floor in V2480 with Astoria Tanker Truck. Drained and disconnected transformer for replacement. Clogged drain and completed a partial cleanup in V2480. Cleanup for V2827 pending Lab results. LAB SEQ #00-05262 PCB <1 PPM lab sequence # 00-05286-001 in V-2827 indicates the presence of an oil similar to dielectric fluid. 7/5/00 final cleanup complete. Cleaned Vault 2480 and vault 2827 with flush truck. |
| Remarks: | transformer leaked. sample taken - supervisor enroute to assess situation. con ed 131624. still investigating sewer entry. |

**DEC Memo:**

Prior to Sept. 2004 data translation this spill Lead_DEC Field was "SAWYER" 12/15/2003 Sangesland spoke with Matthew Stanley (212-273-5097) of NY State Dormatory Authority. His group is looking at buying this building to use as a college dorm. As part of a phase 1/2 the consultant saw a sealed fill port and an active fill port. Both had evidence of oil staining around them. 2 borings were done adjacent to these fill ports and heavy contamination was found down to approx 4-5 ft deep. At 6-8' deep there did not appear to be any problems. Sent Contaminated Soil Letter to:406 Realty LLC/c/o The Expansion Group Inc.250 West 57th StreetNY, NY 10107Attn: Johnny Melohn12/21/05 Sharir// I spoke with Matthew Stanley of NYS Dormatory Authority. He said the property is currently owned by Fashion Institute of Technology(FIT)and they are building a residential unit for students. NYS Dorm. Authority is providing the financial
assistance to FIT for building the Dorm. Mr. Paul Goncalves, (212) 273-5043 is the Construction Project Manager on behalf of NYS Dorm. Authority. I left a message for Paul to follow up about the current status of the clean-up. 02/23/06 Sharif Rahman - Another CSL was sent to Fashion Institute of Technology. Seventh Avenue at 27th Street, New York, NY 10001. Attn: Harbey W. Spector, Vice President. 03/31/06 Sharif Rahman - As per Paul’s request, CSL was sent via fax # 212-273-5121. Address of NYS Dormitory Authority in NYC One Penn Plaza, 52nd Floor New York, New York 10119. 04-0785 / 212-273-5000 Fax: 212-273-512105/06 Sharif Rahman - Repeated failure to get any response from the RP required to send CSL again, via certified mail (7099 3220 0010 3990 0800) to NYS Dormitory Authority. One Penn Plaza, 52nd Floor New York, NY 10119. Attn: Paul Goncalves. 03/15/07 Rahman - Contact @ Persons & Brimmerhoff is Mike Johnston, (212) 631-3705, if not call John Faeth, (212) 465-541103/21/07 Rahman - RAP and final closure report on edocs. Side walk was removed to facilitate the excavation of contaminated soil. A total of 65.34 tons of contaminated soil was removed for disposal from the area of concern. Four post excavation samples did not identify any VOCs/SVOCs above TAGM. Area was backfilled. Waste manifest was provided to DEC. NFA required.

Remarks:
outside on sidewalk from overfilling the tank. Soil borings showed some kind of petroleum in ground. Unknown how long or how much will be doing more soil borings, to see how deep.

There is a service box adjacent to the excavation which is located on West 48
SPILL NUMBER 0102293  (Continued)

Street 150 feet east of 12th Ave on the north side of 12th Ave. The service box is collapsed approx. 8 inches from grade. The Contractor suspected that the oil & water was coming from the grating box. Frank Popolizio traced the oil and water that was running down the street towards our structure & the excavation to a building located at 605 West 48 street, which is possibly a garage. He suspects that there was a diesel fuel delivery at this location and it spilled onto the sidewalk & street. Someone washed the oil down the street with water and it migrated to our service box and the excavation. This a 3rd Party Spill. The source of the spill is from a possible diesel fuel delivery and the cause is unknown. Frank Popolizio was at this location for a field meeting with the Contractor to discuss problems with the building. He reported that there is approx. 5 gallons of oil and approx. 10 gallons water on the surface of the service box area. He has no access to the service box.UPDATE @ 14:08 hrs.Red Wagon crew arrived at location to investigate and to take samples. Environmental Desk (E.D.) called Shawn Barrett of Clean Harbors at 13:30 hrs. and requested their services to clean this location. He will send a 4 person crew and Vactor truck to location. E.D. also called for a photographer to take pictures of this incident. E.D. also called the Corporate Courier at 14:02 hrs. to pick up the samples.UPDATE @ 18:30 hrs.Clean Harbors arrived on location at approx. 17:15 hrs.

Underground North crew to meet Clean Harbors to assist in cleanup if required. EPA # NYP 004 083 929 issued by ERT, Bill Capune.UPDATE 6/1/2001 @ 02:40 HRSLab Sequence # 01-06126-001, Hydrocarbon scan (NYSDOH 310-13) identified as light fuel oil. Lab Sequence # 01-06125-001, 1ppm PCB Spoke to Setero # 01481 and he informed me that Clean Harbors has completed this Cleanup as of 20:30. UPDATE: 7/23/01 The following information is from the Clean Harbors work sheets and invoice received on 7/23/01 from Clean Harbors: ...."Arrived on site ... met contact ... called H/S ....review section#43 with crew ...... setup work zones...lay down speedi-dry on roadway..... put into drums.....clean-out service box......vactor - up solids and pressure wash.....remove drums from job site.....breakdown job site and back to Bklyn shop."Waste Generated: 2 yards solid - manifest CTF08340495 drums solid - 1400 lbs. - CTF0810315

Remarks: cont found in excavation...no clean up action at this time...3rd party spill.ref # 137345. contact to con ed peter depalma he is w/ rock rose construction.

DEC Memo: Prior to Sept, 2004 data translation this spill Lead_DEC Field was "O'CONNELL"Con Ed e2mis no. 141-758 notes:On 3/11/02 at 11:55 H. Anderson # 141758 of the cable dept. reported that at a manhole #-47123 that is located at the NEC W. 48 St. & 12 Ave. he found an oil like substance mixed with water in the structure. He also states that there is a tag already in the structure & was calling as per the status. He gave me the tag number 28473 & structure number. I tried
MANHOLE (Continued)

to look up the incident & found no record. I informed Bob Pellegrino # 38620 Environmental sr. specialist of the situation. He tried to look up an incident on this structure as well & found nothing, so he advised me to have the employee make another report of the substance & remove the old tag. He reports that he found 25 gallons of an unknown oil mixed with 25 gallons of water. He states that there was no sewers or water ways affected & no sewer connection in the structure. The oil is from an unknown source & the cause is also unknown. He also reports that he will call back with a new tag number & chain of custody # because he has neither in the truck at this time. He was also informed that 2 samples will need to be taken.

Update 3/11-02 @ 21:09 hrs. Lab Sequence Number: 02-02020-001 Insufficient amount of sample extracted to perform oil identification. Update 3/11-02 @ 21:37 hrs. DEC Memo: 03/26/10-HRAHMED-Spoke to ConEd ERT. Leak was discovered in feeder line M52 at 07:15 AM on 03/26/10. An off line analysis indicates a loss of approx. 205 gal at a leak rate of 2.8 gal per minute. PFT vans are searching for the leak from W49th St. Substation to Sprainbrook Substation. Kaynes Marine is hired for searching any release in Harlem River between Hamilton bridge and Broadway bridge. The location of the leak is still unknown. As per ConEd, a leak in the return line of feeder was discovered in Manhole #62565 at the intersection of 101st and Western Ave in Manhattan. 300 gallons of Dielectric Fluid is contained in the Manhole. The leak has been clamped. ConEd took samples to characterize the fluid and will eventually pumped out the manhole. 04/16/10-HRAHMED-case transfer under Feroze, Mohammad for routine closure 4/22/10 - Austin - Actual amount lost to manhole was 230 gals. - spill contained and cleaned up by Con Ed - see eDocs for more details - Spill closed - end

Remarks: Leak in feeder that runs between manhattan and westchester county, showing a loss of 205 gallons in tank at 637 w 49th st in manhattan exact location of leak is unkown at this time. 1210 pm - Neal called - UPDATE - 300 gallons of Dielectric Fluid in a Manhole #62565 - Intersection of 101st and Western Ave in Manhattan

DEC Memo: 209427. see eDocs

There are currently two separate spills involving W49 Street S/S; 0710712 and 0710715. Two separate feeders are involved: M54 and 38M72/44. Based on modeling, ConEd has just started digging on 11 Avenue between W49 and W50 Streets. Leak rate estimated to be 13 gallons per hour for a release of 460 gallons from M54. This is spill report 0710712. It was called in at 2:49 AM. ConEd reported a visible release inside the W49 Street Substation and mentioned a possible feeder leak. The second spill report, 0710715, was called in at 7:23 AM. ConEd considers this a pump house inventory discrepancy involving feeders 38M72 and 38M44. 1/11/08. Report from Mike Pillig by telephone. The breach in M54 has been found and clamped. A barrel will be fabricated and welded in place over the next few days for a permanent repair. The breach was located in the penetration of the basement wall on the east side of the substation. The wall is three feet thick. There had been weeping from this location for years. The wall was stained. A skimmer had been installed years ago to collect the weeping oil. Yesterday the weeping increased and its appearance changed to fresh oil. Release is initially estimated to be at least 700 gallons, with a portion inside the station and collected by the
WEST 49 ST S/S - FEEDER M54 (Continued)

skimmer. The rest of the release is to soil outside the station’s east wall. The immediate task is to clean the area sufficiently for the safe installation of the barrel. Mike Pillig will direct the remediation effort as a feeder project. 1/13/08: e-mail from Con Ed (Pillig): “At last count we estimate the loss of DF to be about 939 gallons. Most but not all was released to the environment. As the leak was inside the concrete wall we did have some enter into the tunnel of the substation and was recovered by the skimmers that were installed to address the historic contamination that has long since been coming into the station through the penetrations. I am going to try to calculate the amount but I figure it to be about 100 gallons. We will also be confirming shortly the amount recovered into our tanker trucks. We have sampled the side walls and are awaiting the results but at the end of the day, I think we will be left with an excavation that continues to make oil from a historic leak/leaks. The picture above shows discolored/aged oil at the bottom of the excavation. Additionally, there is what appears to be a recovery well presumably installed because of this condition. I will speak with the folks in EHS Remediation to see if this is one they are currently managing and I will inform you accordingly. “I would like to set up a sight visit early this week to develop a game plan going forward. I will have more accurate information with regards to the amount we recovered and we can speak about how to move forward given we are encountering historic contamination.” See eDocs for photos. (JHO)

1/16/08. Meeting at site for this morning had to be canceled so Mike Pillig could respond to site of leak on Feeder M51 at Bway and LaSalle St., Spill 0710894. Mike reports that he has obtained a permit for sidewalk opening on the east side of the W49 St station. He plans to excavate more next week and take samples. We will meet at the site at that time. Chad Pfeiffer: 646-235-0196. Mike Pillig: 347-386-5506 Chris Cotronei: 347-203-42251/31/08: Met at site with Con Ed (Pillig) - oil at bottom of excavation appears to be old, black df from previous leaks. Can be tracked under DEC spill no. 9301730 (appendix B site 19). Will contact Con Ed (Matt Madsen) regarding installation of recovery wells to assist with product recovery. (JHO)6/16/08: lose - track under sp. 9301730. (JHO)

Remarks: caller reports majority of spill onto concrete floor and rest made it to a water separator. leaking at rate of 90 drops/min. involves a feeder line. no to questions 1,2 and 5; yes to 3 and 4. ref #209427. cleanup is pending.

DEC Memo: emis# 23831710/8/2014 - Feng - Duty Desk Officer. Talked to Mike Beto of ERT (212-580-8383). Feeder leak at 3 gallons/hour. The LeakWatch indicates there is a leak somewhere in the system, in between west 49th street substation in Manhattan to Sprain Brook substation in Yonkers County. They are now checking the substructures and opening the manholes. No oil has been found yet. They have another another feeder pull at 2pm and to call us at 3pm for updates. Called at 3:00pm. No updates yet. No oil has been found and they are still searching for it.10/10/14 - 14:39 hrs - Obligado (DEsk Duty) - I received a call from Con ED. They located the spill location. It was clamped last night at 20:25 hours. Total gallons lost 485 gallons. Location in Bronx, Sedgewick Ave and West 195 street. Remedial operations are underway. They are at the site excavating now. After discussion with Tim Demeo, he directed Tosh to go to the site to see the inspection. I accompanied Tosh on the site visit. We arrived at the site and found the excavation open and the pipeline clamped. The excavation went down to bedrock which was exposed at approximately 4 ft below grade. The excavation was supported with wood planks. The bedrock surface was already cleaned prior to our visit. Coned workers were scaling excess material from the line in preparation for the barrel repair. Dave Trombetta arrived at the site shortly after us. We requested they collect endpoint soil samples from the sidewalls. Wood sheeting planks were raised to allow for sidewalk soil sample collection at the bedrock interface at each sidewalk. Tosh and Obligado departed after endpoint sample collection.10/22/14: Mahat Spill case is assigned to DEC Mahat as per DEC Vought.11/7/14: Mahat DEC is waiting for a spill closure report.1/6/15: Mahat DEC Mahat received an email from Mr. Bauer."Good afternoon Andre, This is a summary of the cleanup efforts for DEC Spill #1407135. On 10/09/2014 at 1320 hours, a leak was declared on 345kV Feeder M52. The leak was discovered in an excavation on Sedgwick Avenue approximately 80 feet south of the intersection with West 195th Street. A temporary clamp was applied at 2025 hours on 10/09/2014, stopping the leak. A repair barrel was welded over the clamp as a permanent repair. The cause of the leak was determined to be from disbonded coating, likely resulting from poor backfill material by a third party. The total release for this event was 503 gallons of dielectric fluid. Four (4) post-extraction soil samples of the excavation (EX-1) were collected from the sidewalls and endwalls and analyzed for TPH using EPA Method.
Modified 8100. All of the samples collected were below the 13,000ppm remediation standard for synthetic dielectric fluid. Bedrock was encountered in the base of the excavation at approximately six (6) feet below ground surface; therefore, the floor of the excavation was power washed. As the base of the excavation encountered bedrock, no soil sample could be collected from the floor. Attached are documents supporting the cleanup efforts and include the EMIS report, laboratory sample results, excavation diagram, and manifests. Please feel free to contact me if you have any questions or concerns, or require any additional information. Michael E. Bauer

- DEC Memo: 6/22/15: Mahat DEC Mahat contacted ERT inquiring about the Feeder leak reported as 260 gallon dielectric fluid. The leak was detected due to tank discrepancy between Sprain-Brook Sub Station and 49th Street Sub-Station. PFT Vans has been deployed to detect the leak location. Marine Team has been dispatched to detect any sheen on Harlem River. Con Edition is performing a rundown at 1:30 and will update the Department with updated information. Spill case has been assigned to DEC Piper as After Hour Runner, EMIS:241286 (Crossed
FEEDER (Continued)

Reference: DEC Piper responded to site morning of 6/23/15. Temp clamp on. They are removing concrete of adjacent structure to put barrel on it. Remediation will follow. On 6/22/15, DEC Spill staff received a leak watch notification from Con Edison. Con Edison dispatched leak locator vans along the run of the feeder to determine the location of the leak and make repairs. On the morning of June 23, 2015, DEC spills staff was notified that the leak had been located and responded to this location. Approximately 260 gallons of dielectric fluid was lost to the subsurface on West end Ave and West 63rd St., in Manhattan. A Guzzler Truck was used to remove the soils surrounding the feeder at which point a temporary clamp was placed on the line. As the leak was outside of a subsurface concrete structure, the wall needed to be removed to place a permanent barrel around the clamp. DEC staff observed crews performing this task. DEC staff directed to RP to continue remediation of the spill area and finalize the permanent repairs.

Remarks: Leak rate is 14 gal/hr. The leak occurred along a feeder line between the above address and a substation in Yonkers. Clean up is pending investigation of structures along the line.

- DEC Memo: 161449 and 146541 as well. 10/9 @ 16:22. McDonald # 52509 of SSO reported to me at 15:59 that in the W 49 St Substation at Cooling plant # 5 he discovered a spill of 1/2 gallon of Cable oil. He says that the spill was found coming from the Moat. No sewer/waterway affected, no private proprty affected, no fire/smoke involved, no injuries and weather did not contribute. The source of the spill is Cooling plant # 5 and the cause is a leak. The spill cleanup was started at 13:46 and was contained by 14:06 on 10/9/2005. Absorbant pads were used to contain the spill. There is no knowledge at this time of the source. Logger R Pagano # 10/9 @ 16:35. Spoke to Pontecorvo of ERT and he related a conversation he had with the Finder and this is not an Active Laek and can be made a 24- Hr deminimus (impervious). He said he would EMail P Keelan. Logger R Pagano # 4870310/11/05. At 0955 I determined that the spill will not be cleaned up in 24 hours and called CIG to report the spill. Bobby Mann (Mech A) was cleaning the spill using oil pads. P.Keelan10/11/05. The mote and cooling plant #5 has been cleaned, but remains active and contained. This spill has been moved to e2mis #146541 to be in conjunction with the DEC/SSO remediation plan for cooling plants. C.BrowneClosed. 11-30-05. see eDocs. GB

DEC Memo: There are currently two separate spills involving W49 Street S/S; 0710712 and 0710715. Two separate feeders are involved: M54 and 38M72/44. Based on modeling, ConEd has just started digging on 11 Avenue between W49 and W50 Streets. Leak rate estimated to be 13 gallons per hour for a release of 460 gallons from M54. This is spill report 0710712. It was called in at 2:49 AM. ConEd reported a visible release inside the W49 Street Substation and mentioned a possible feeder leak. The second spill report, 0710715, was called in at 7:23
WEST 49 ST S/S. FILL LINE LEAK. (Continued)

AM. ConEd considers this a pump house inventory discrepancy involving feeders 38M72 and 38M44. 1/11/08. Report from Mike Pillig by telephone. The breach was located in a three-inch fill line that serves the substation’s five pump houses. The breach is below the substation floor, which is eight to ten inches thick. The initial estimate is that 2000 gallons has been released beneath the substation. Chad Pfeiffer and Chris Cotronei will direct the remediation effort as a substation project 1/16/08. Chad reports by telephone that the fill line has been repaired. All three fill lines passed pressure testing. Chad excavated down to five feet and took samples. Chris has photographs. Chad Pfeiffer: 646-235-0196. Mike Pillig: 347-386-5506 Chris Cotronie: 347-203-4225209430. see eDocs 1/16/08: e-mail from Con Ed (Cotronei): “Here is a little update on the pump house 4, 5, 6 fill line spill. The engineers are still finalizing the numbers, but it looks like we lost 2,850 gallons of dielectric fluid. Once a discrepancy was observed, all the valves that fed the suspect pipe were closed to no longer contribute fluid to the leak. “We declared a leak on the fill line at approximately 1710 on 1/10/08 (Th). This was after many test to ensure that our equipment was measuring properly. Once a leak was declared we devised a plan to break the concrete above the 4 way joint in tr 4 vault near the fill port to split the fill line into 4 pieces for drop testing each segment to determine direction. Once the leaking section was determined, the next elbow / tee would be exposed on the leaking line to break the line to drop check. “By chance the first place we broke the concrete we discovered oil at approximately 0330 on 1/11/08 (F). Despite their being no flow out of the pipe, it was exposed and clamped by approximately 0720 on 1/11/08 (F). Throughout Friday Safeway and ASPV worked to expose enough pipe for S&TO to make permanent repairs. Permanent repairs and a drop checked were completed at 2030 on 1/11/08 (F). “Safeway and ASPV worked from 2030 on 1/11/08 (F) to 2100 on 1/12/08 (Sa) to enlarge the opening in the concrete to 9’ by 15’. Approximately 4’ of sand and soil were removed from the excavation. “At approximately 2100 on 1/12/08 (Sa) I sampled 12 locations for TPH 8100 (modified) to determine the remaining level of contamination. We are supposed to have these results tonight. I will forward them when I have them. See the attached sampling grid for locations. “All samples were from the top approximately 6” of material “All samples were primarily soil “Samples 1, 2, 3 and 11 collected approximately 4’ below the top of the concrete “Samples 4, 5, 6, 7, 8, 9 and 12 collected approximately 5’ below the top of the concrete “Sample 10 collected approximately 2’ below the top of the concrete "As of 1/12/08 (s) at 2200 we removed approximately: “5 yards of reinforced concrete (9’ * 15’ * 1’)* 20 yards of soil and sand (9’ * 15’ * 4’)* 6.5 yards of clean bluestone removed for access (18’ * 20’ * 0.5’)* 4 vac boxes were utilized “Pictures: Initial contamination and leak location in early AM on 1/11/08 (F) <<found leak - looking south under concrete.JPG>> <<initial contamination at joint 2.JPG>> <<initial contamination at joint - looking under fill port.JPG>> Excavation at 1900 hours on 1/12/08 <<looking east.JPG>> <<looking east top.JPG>> <<looking north.JPG>> <<looking north close.JPG>> <<looking south.JPG>> <<looking south at drain pipe and 2 fill pipes.JPG>> <<top looking north west.JPG>> <<west wall north side close.JPG>> See eDocs for attached pictures. (Breen) 1/24/08: e-mail from Con Ed (Cotronei): “On Tuesday we had ASPV remobilize on the site to continue remediation of the impacted area based upon
WEST 49 ST S/S. FILL LINE LEAK. (Continued)

engineering’s constraints. After three days of work this week we completed the following:*All remaining areas of the open concrete were excavated to approximately 5’ below the top of the concrete.*An area of approximately 6 1/2’ wide and 4’ under the concrete was excavated to 5’ below the top of the concrete. This concrete that was undermined was braced with 4” by 4” timbers.*Within the open concrete area we excavated another 18” of material out of the center area coming approximately 2’ away from all walls and support structures. *Covered the excavation with plastic to prevent water from saturating it.*“Going forward we will be talking to engineering about installing sheeting and shoring to excavate deeper in the center area as it is still contaminated. By sloping the material we are not removing nearly as much impacted material as is possible. We will let you know when we receive information back from engineering.”<<excavation looking north 012408.JPG>> <<area under concrete 012408.JPG>> See eDocs for attached photos. (Breen)1/31/08: Site visit with Con Ed (Cotronei, Pfeiffer and Pillig) - excavation is at approx. 5 feet below grade. Con Ed engineering is designing a shoring plan to allow additional excavation. (JHO)3/4/08: e-mail from Con Ed (Cotronei) transmitting results of post-excavation sampling. Requested site sketch, which was later e-mailed by Con Ed (Chad Pfeiffer). Results indicate there are still areas that exceed the cleanup criteria, however Con Ed Engineering states that no additional soil can be removed in those areas. See eDocs for results and sketch. (JHO)3/4/08: E-mail from Cotronei:*We completed additional work at W49th St. We had sheeting and shoring installed and were able to excavate deeper. In all we excavated approximately 4’ of material below the 1’ of concrete. This final depth was given to us by engineering with the primary concerns being the building on the west side and the concrete buttress of the east side of the excavation. The buttress is part of the structural support for the weight of the transformer and switchgear. “Once we hit the final depth we had Jacques Whitford sample the area. All except one of the floor results are below 10000 ppm. 7 of the 12 samples taken from the wall area were below 10000 ppm. The remaining five were all under 22000 ppm."Later the same day, received clarification e-mail from Pfeiffer based on inquiry from DEC:*“Sample locations PE-1 through PE-6 were collected on the sidewalks of the excavation and then cored into the sidewalk, usually around 1.5 feet laterally into the wall. They were all taken around 6-10” above the excavation floor."The east and west sidewalls of the excavation that were sampled are soil supporting concrete beams (for the vault wall on the west side and the transformer foundation/pothead stand on the east side). See the attached sketch of a sideview of the east wall with the vault floor on top, the concrete supporting beam beneath that and the soil supporting the beam below that. There is a similar setup on the west wall.*Engineering has told us that we cannot remove soil beneath the beams without risk of undermining. We also cannot dig any deeper without providing structural support to the sidewalls, current timber sheeting/shoring will not be adequate to support the sidewalls any deeper.*We have not encountered groundwater in the excavation and we get to final restoration of the area, the solid concrete floor will be poured and tied into the existing vault floor. All precipitation landing in the vault goes into the station drainage system which leads to the oil/water separator. The area will essentially be capped with no water draining into the soil." See eDocs for sampling map and lab results. Based on engineering
WEST 49 ST S/S. FILL LINE LEAK. (Continued)

restrictions, no further excavation can be done. Area will be capped
with concrete. Close. (JHO)

DEC Memo: 9-18-0@ 12:05P Keelan #19995 reports that while refueling the diesel vault @ w 49 st sub station (637 w 49 st), W Zwirz #20206 discovered that 10 gallons of diesel fuel had spilled onto the concrete floor of the structure. There was or is no smoke or fire involved. No sewer or waterway affected. No injuries and weather had no affect. Spill was caused by overfilling the tank and it spilled from the diesel tank vent line. No measuring device used to determine the amount of the spill. No private property affected. Oil absorbent pads and socks were applied to contain the spill. Cleanup pending .....J Moran CIG P Didonato #01669 notified @ 12:33 J Moran #09/18/03While filling up the main diesel tank the day tank overflowed spilling approx ten gallons of oil out of the vent line on the corrugated roof of the desiel generator. The oil ran down the sides of the shed onto concrete. Speedy dry and pads were used to clean the roof walls and concrete. The day tank oil level was lowered and there is no further leaking equipment. Spill cleanup was supervised by Mike Butchar using SSM personnel. P.Keelan

WEST 49 ST S/S. SKINNER TANK, 30 GAL (Continued)

Substation called to report that at 11:00 he discovered 1-1/2 gallons of transmission feeder fluid (dielectric fluid) on the metal floor of the cooling plant located at 637 W. 49 St. He states that the oil is from feeder M-51. He does not know where the oil came from exactly. He has reported it to his supervisor. There was no sewers or waterways affected. No fire or smoke involved. No private property affected. No injuries related to the spill. He also reports that there is an unknown amount of oil in the concrete moat. He does not know where this oil came from either. The capacity of the moat is 55 gallons as reported by ERT M. Daughtrey # 88151. 3/13/06 12:41 P. Didonato # 01669 was notified. R. Bruns # 21106 See eDocs for 2007 Substation Inspection Findings and for response from Con Edison relative to this spill.

DEC Memo: 01/10/08 - See eDocs for Con Ed report detailing cleanup and closure. 11/19/2005. After the spill is eliminated a Drip pan will be placed under the leak area and the appropriate crews will find and permanently repair the leak at the source. Logger R Pagano # 487031119 @ 12:40. Spoke to P Keelan and he reported that the cleanup would not be able to be completed on time, so I downgraded this incident to a reportable spill and I notified CIG, spoke to Haynes # 87736 @ 12:36 HRS. Logger R Pagano # 48703See eDocs for 2007 Substation Inspection Findings and for response from Con Edison relative to this spill.

<td>DEC Memo</td>
<td>1/15/09 - Raphael Ketani. A 75 gal. spill of #2 oil took place at 2:32PM today. It was an overfill. I called up Lt. Johnson of the NYFD (347) 203-0115 and asked him what the situation was. He said that BLT Transport had overfilled the fuel tank in the building and it overflowed onto the sidewalk. He said that no one had arrived to clean up the oil. He said that he didn’t have the phone number for BLT, but, he said, his battalion chief does. Lt. Johnson said that his battalion chief is still on the scene. I spoke to Battalion Chief Joyce. He said that the cleanup crew is on their way. He said that a little got onto the sidewalk, but the majority is on the street. He said that it ran 50 feet, but didn’t enter any sewers. He said that it’s 30 gals. of oil and it’s against the curb. They diked the oil. He said that Castle Oil (718) 579-3450 is the supplier and that HESS Oil (908) 803-9863 is the wholesaler. He said that they are not letting the truck go until the cleanup crew arrives. The address is 760 8th Avenue and the corner with West 47th Street. Sangesland spoke to Hess - Petroleum Tank Cleaners hired for cleanup response. 1/16/2009 - Joe O from PTC says they cleaned #4 oil from an overfill. Pressure washed the area and then salted due to the extreme cold (10°F). Cleanup completed.</td>
</tr>
<tr>
<td>Remarks</td>
<td>Caller states an overfill caused oil to spill onto the sidewalk. Cleanup crew is enroute from the buildings company.</td>

DEC Memo: Prior to Sept, 2004 data translation this spill Lead_DEC Field was
"SANGESLAND"5/2/2002 - Sangesland spoke to Mr. Aaron Adams (718-328-3300) who is one of the owners of this building. Apparently
the Fire Dept. was doing an inspection of all "Sign - Etching"
companies in Manhattan looking for explosive conditions. They found
approx. 15 gal of #6 fuel oil on the floor of the tank room. Owner
hired A.L. Eastmond to clean up. 1:15PM Sangesland spoke with Joe
Ostrowski at Eastmond. He said two trucks were on their way to the
site for the clean up. Sangesland specifically asked Eastmond to look
for the condition of the vault room floor. If this was a long term
spill, was there any chance that the oil went under the slab floor.
Eastmond will investigate.

DEC Memo: 12/04/09 Spoke with Diana Duque. Spill occurred due to the gauge malfunction. No spill in the tank room, only on sidewalk. Few gallons #6 oil. Clean up has been done. (sr) 12/10/09 Spoke to building super Freddy @(212)564-4310. Spill was minor from vent, all cleaned up at the same time. Case closed. (sr)
Remarks: Spill onto sidewalk possible over fill due to gauge that measures amount in tank not working properly, clean up is in progress.

DEC Memo: 203206. see eDocs2/20/07: spill submitted for closure by Con Edison.
Review of information indicates that this is contamination related to former Martin Motors facility (now Con Ed Astor Substation). Con Ed conducted remediation on-site under BCA # C231047. The off-site contamination under sidewalk and street are responsibility of former owner. See also spill # 0103148. (JHO)Austin - 9/20/09 - Closed this spill and ref. it to #0103148. - end

<td>DEC Memo:</td>
<td>Prior to Sept. 2004 data translation this spill Lead DEC Field was &quot;DEMEO&quot;9/27/04 - AUSTIN - SPOKE WITH JOEL LANDES, LANGAN ENGINEERING (212-479-5404) WHO HAD CALLED THE RD'S OFFICE ON THIS MATTER TODAY. HE SAID THEY WERE DOING SOME PHASE 2 WORK WHEN THEY MADE THEIR DISCOVERY. WANTED TO KNOW WHO THE PROJECT MGR. WOULD BE FROM DEC. GAVE HIM TIM'S NUMBER - REPORTED BACK TO RD'S OFFICE ON RESULTS OF CALLBACK - END9/28/04 TJDR received a call from Joel Landes from Langan Engineering regarding contamination identified during a Phase 2 investigation which is being performed at the site prior to the construction of a new sports arena over the existing rail yards. Contaminated soils and separate phase petroleum were found in a boring adjacent to track 14. Langan/LIRR have requested a night meeting on site with DEC to perform a walk-thru. Tentatively scheduled for 9/30/04. Lew Wunderlich from LIRR was contacted in an effort to obtain additional information, he will be reviewing site plans in an effort to identify any possible sources of contamination.3/23/05 - Austin - Transferred from DeMoe to Tibbe - end04/06/06: Contamination discovered in a large void in a boring under tracks in the LIRR yard. Because of the fact that trains were using these tracks, the void could not be left unfilled. The void and boring were filled with grout. Soil and groundwater analysis from surrounding borings show minimal to nonexistent contamination. NFA signed by K. S. Tang.</td>

DEC Memo:
11-7-14 - Obligado - AS per Tim Demeo, this tank test failure is assigned to Santosh Mahat. (see also consolidated spill #1408183). Will send TTF letter. 11-10-14 - Obligado - TTF letter sent to Jeff Walsh of Tip Top.11/12/14: Mahat t/c: DEC Mahat talked to Mr. Jeff Walse ( Management @ 646.820.7759 ) inquiring about the TT. He does not have access to the TTR but he is certain that the leak was from the pipeline. He also mentioned that the building is undergoing demolition in near future and REFUSE to bring the Tank system in compliance. DEC Mahat consulted with DEC Demeo and DEC Patel for a guidance. Regardless of demolition, if the tank is operating then the system has to be comply with the enforced regulation.11/14/14: Mahat t/c: DEC Mahat left a voice message to Mr. Walse advising him to comply with the regulation. In case if he does not then the case will be refer to the legal for enforcement. DEC is waiting for a call back from Mr. Walse confirming that he is willing to follow the TTF letter sent out by DEC Obligado on 11/10/14.12/3/14: Mahat A 30 days extension for the deadline has been approved by the Department followed by the request via email. *Santosh,Good afternoon, I hope your holiday weekend was relaxing and enjoyable. We are writing to inform you we have retained Crompco to complete the work on the Oil Tank in 738. However due to Crompco other obligations they will be unable to service this request before December 10th. In our previous conversation you had mentioned that if we needed an extension that would be possible. I will be in the office today if you could please call me back at your earliest convenience I would greatly appreciate it.Thank you,Jeffrey Walsh Tip Top Tenth Ave Management Inc.tiptopmanagementinc@gmail.comWork - 646-820-7759Fax - 866-472-7520*DEC is waiting for a report.3/27/15: Mahat DEC Mahat uploaded the spill closure reprot. The rport verify that repair has been performed on the tank and tank passed the pressure test. No further action is warrant by the Department since no other resources were impacted. **** Spill C1053d***

- **DEC Memo:**

10/01/06-Vought-Off hours responder. Vought called Officer Zannis and spill amount was approximately 5-10 gallons and is being currently boomed and contained by USCG. Cause of spill was sunken crane and barge in relation to moving Intrepid. USCG contact is LT Mack (718-354-4119). As per NYPD Zannis DEC response not requested. Vought spoke to USCG Mack who confirmed size and containment of spill. As per Mack barge and crane contained 200 gallons of diesel, 100 gallons of hydraulic oil and 30 gallons of engine oil (which were still contained in crain underwater). Miller Launch was deployed and is currently onsite along with USCG investigator (PO Carothers 917-439-5919). Vought called Carothers and left message with DEC contact info. No response requested by USCG due to small size and containment of spill. Vought informed DEC Austin who confirmed that no response was needed however requested that salvage operations be monitored. 10/02/06-Vought called USCG for update on salvage
PIER (Continued) S108294601

operations. Vought spoke to USCG and team is onsite and is awaiting
salvage plan. Vought will perform site visit. Site visit by Vought.
Vought spoke with Tony Rivara (917-715-9429 Pile Foundation) and
owner of sunken crane. Divers checked crane and tanks are holding.
Crane area contained with boom and sweep and Miller Launch constantly
onsite. Rivara providing hourly updates to USCG. Salvage plan was
submitted to USCG but has not been approved of as of yet and hence no
schedule has been set for raising the crane. Some sheen however no
free product in water. Vought spoke with DEC Austin who requested
that Vought contact USCG for spill response provisions in salvage
plans. Vought called USCG contact PO Winslow (718-354-4120) for
response provisions and left message to return call to DEC. Vought
spoke with Winslow and company to do work will be Glatsky Marine
services and USCG is assisting in draft the salvage plan and ensured
that spill response provisions will be included. Spill closed by
Vought due to minor spill amount and supervision by USCG.

Remarks:
private construction company with crane on top of barge. Barge sunk
causing leak into Hudson River. Coast Guard is on scene attempting to
contain spill.

- **DEC Memo:** Prior to Sept. 2004 data translation this spill Lead DEC Field was "O'CONNELL"SEE SPILL # 00-04627.9/29/00: update from Ray Lo, ERT - spill amount calculated at 875 gallons.Con Ed no. 132-158:03/07/2000 at 10:47 hrs vega,c.81172 soo suprt reported to lee.w.33243 mccc oil leak on feeder m52 from sprinbrook to w.49 st station. leaking 8.8 gal.per hour. leak from an unknown point being investigation sub-station operation.DEC 00-04011. Both PFT vans sent out 1 from 125th St to go south and 1 to go north from 125th St. Manholes checked by CGO and TO crews - no leak found. All substation equipment checked - no leak found. 3" line checked at Sprainbrook - no leak. On 7/4/00 PFT vans continued to check run - no PFT found except in area of leaks on 6/26 and 6/29. PFT vans made complete run of feeder - no leak found. On 7/5 slight PFT increase found just north of leak of 6/26/00. Safeway to start excavating from existing trench and go North. Safeway also installing barholes along B'Way north of 118th St and Chem lab taking samples. Slight PFT signals found in barholes by sandbag area by MH 61733 (B'Way s/o 119th St). 2nd PFT van making run north to Sprainbrook from 125th St. Safeway excavated from last leak to end of repair area - no leak found. Sandbags taken out of trench -

TC4381152.2s Page 2778
FEEDER TUB FROM YONKERS (Continued)

no leak found. Barholes taken off of feeder centerline show PFT in area of 119th St. 2nd Van made run through most of Bronx but did not find anything - this van was pulled off and sent to leak search on Fdr 34052 (E2MIS 132191). On 11-7 shift 7/6 PFT van made run from 140th St to 49th St. PFT only found in air around 119th St. Bag samples taken from trench where sandbags were removed s/o MH61733. PFT readings found, but none conclusive. Additional barholes requested on the street side of the FTB from 119th to 120th St. At 13:45 off scale readings found in sandbag areas north of 119th St. Safeway excavating four locations. On 7/6/00 entire feeder was run again and the only PFT was found in air around 118th to 120th St. The readings are increasing in this area. Safeway began excavating the sandbag areas north of 119th St. Chem lab taking samples from existing barholes north of the repaired area on the feeders. 2nd PFT van was sent to the Harlem River and began checking the feeder going north. At approx 14:00 PFT van found indications in air near MH29007 (Cedar Ave n/o Tremont Ave). Manhole was checked - no leak found. Barholes crew requested to install barholes on both sides of the manhole. Bag samples from barholes show no PFT in ground - no leak - PFT probably coming from Sedgewick Ave PURS. Subway recheck by NYCTA - no sign of dielectric fluid. Contractor continues to remove sandbags from pipes on Broadway. Everytime the sandbags are removed the PFT drops off to background in the soil under the FTB. No signs of fluid. On 7/8/00 at 20:00 during conference call Leak detection system showed no leak since Thursday 7/6/00 night. Also the flowmeters at W49th St show there is no leak. The chem lab (PFT) technicians believe that PFT from old leaks is accumulating in the sandbag areas in the FTB. Once the sandbags are removed the PFT readings drop to background and never increase. Since there is no signs of "new" PFT in ground and both the leak detection system and the flowmeters do not show a leak, the leak search was called off by the leak committee at21:00 7/8/00 Update: On 7/17/00 CSD reported 800 gallons of dielectric fluid in oil/water separator at Sedgewick Ave due to a blown rupture disc. (See E2mis 132425) This fluid is probably the missing fluid claimed by the USi leak detection system during the above leak. UPDATE : 9/29/00 the oil loss on this leak from 7/03/00 to 7/08/00 was 875 gallons. the cause of the leak was a blown rupture disc at the Sedgewick Avenue cooling plant (1823 Sedgwick Ave.,Bronx ,N.Y. 10467)The oil drained from an oil/water separator into the sewer system.

Remarks:
leak in feed tub some where from yonkers to 49th street...unsure where at this time...leak rate of 8.8 gal/hour...nrc ref #534206.

**DETERMINATION:**

Prior to Sept. 2004 data translation this spill Lead_DEC Field was "O'CONNELL"Leak located at Broadway and 120th St., Manhattan on 3/17/99.3/18/99: met at site with Joe Floryshak (Con Ed Remediation), Ray Turkin and Jerry Materazzo (Con Ed TO). Total release calculated at 1231 gallons. Final repair complete. Materazzo indicated that more excavation was needed to accommodate additional weld repairs. Once complete, soil samples will be collected for benzene and TPH df.

(JHO)1/27/04: Based on analytical results of soil samples collected following completion of excavation activities, this spill can be closed. (JHO)--------------e2mis no. 123-628:15-MAR-1999 @ 09:15 HRS. LEAK DETECTION SYSTEM ON HP FEEDER M52ACTIVATED AN ALARM OF 8 GALLON PER HOUR LEAK RATE. AT 09:30 HOURS THE LEAK COMMITTEE WAS CONVENED AND A SUSPECTED LEAK WAS DECLARED. PFT VAN WAS DISPATCHED, TRANS.OPS. AND GAS CORROSION CREWS DISPATCHED TO CHECK MANHOLES AND
### FEEDER M52 (Continued)

S.S.O. CHECKING TUNNEL AT WEST 49TH ST S/S, PURS AND POTHEDS AT 
W49TH ST AND SPRAINBROOK. 04:40 HRS ERT.STAN P. WAS ADVISED OF 
SITUATION AND REQUESTED TO DEPLOY A BOAT TO INSPECT THE HARLEM RIVER 
CROSSING.1st PFT van sent to 125th St and will work South. 2nd van to 
be sent out and go north from 125th St. TO crews to check Manhattan 
and Westchester manholes. CGO crews to check Bronx manholes. As of 
19:00 all manholes on feeder run have been checked - no leak found. 
1st PFT van concentrating on area south of 120th St. Suspect area 
south of 117th St. VNR called in. Readings could not be confirmed. No 
barholes done on 11-7 shift. No other readings found along feeder 
route in Manhattan. Barholes to be done on B'Way between 116th and 
117th St. Barholes sampled - no significant PFT readings found. 
Transit Authority called and stated they had oil leaking into the 
tunnel in the area. On the 11-7 shift Con Ed personnel entered the 
tunnel with the TA and found the oil - it is NOT dielectric fluid. 
High PFT readings found on B'Way s/o 120th St. Excavation started. 
Dielectric fluid found in trench at:55. Excavation continues. Leak 
found and clamped on 10" feeder pipe at 18:50. Excavation continues 
for repairs. Welding of 220 style repair barrel started at 00:01 
3/18/99. Welding completed and pressure tested at 05:30. As per CSD 
total fluid loss is 1231 gallons. Sample results from Chem Lab 
99-02790 <1.00 ppm PCB's. Clean Harbors removed 30 cubic yards of 
material from leak site. On 3/18/99 Jane O'Connell (NYSDEC) visited 
leak site. On 3/19/99 Joe Florshak spoke to Jane and concluded that 
since there is rock underneath the pipes there is no further 
excavation necessary. Additional samples of the soil were taken by 
the chem lab and the site was backfilled on 3/19/99. Chem Lab reports 
99-02798 <1.0 ppb TCLP benzene in soil. Starting in mid-February 2000, 
a program to inspect feeders M51/52 in the vicinity of 120th Street 
was initiated. A trench about six feet wide was excavated the length 
of the feeders, centered about the feeders. The trench generally went 
to a depth of about one foot below the feeders, unless encumbered by 
bedrock below the feeders. On March 8, 2000 an employee of Jacques 
Whitford, an environmental consulting firm, took eight soil samples 
in the vicinity of the repair barrel that had been installed on 
Feeder M52 on March 18, 1999. The samples were analyzed by Ecotest 
Laboratories for TCLP benzene (Astoria Chem Lab Seq nos. 00-02201-001 
to 008) and TPH dielectric fluid by modified EPA method 8015 (Ecotest 
Lab no. 200970.01 - .08) The benzene results were all less than 1 
ug/l (ppb). The TPH results were as follows:Location Concentration 
(mg/Kg [ppm])|trench bottom, near repair barrel, between feeders.

| east side of excavation, near repair barrel |...| 940 east side of excavation, about 15 ft north of repair barrel |...| 700 east side of excavation, about 15 ft north of repair barrel |...|

| north of repair barrel |...| <40 trench bottom, about 23 ft northhof repair barrel, between feeders |...| 520 west side of excavation, about 23 ft north of repair barrel |...|

| 190 west side of excavation, about 16 ft north of repair barrel |...| 170 west side of excavation, near repair barrel |...|

27000On April 20, 2000 Ms. Jane O'Connell of NYSDEC inspected this 
site along with John Mitchell and Glen Katz. The sampling results 
discussed with here. Ms.O'Connell said it was OK to backfill the 
excavation.

Remarks:

alarm on feeder #m52 which runs at the above listed address this is 
only a suspected release - crews are on the way to check feeder and 
run of feeder

Contact Phone: (212) 580-6763
DEC Memo: Prior to Sept, 2004 data translation this spill Lead_DEC Field was "O’CONNELL"1/21/99: ERT Piczatowski - Based on flow meter trending, not on reservoir level drop. Pulling manholes and 2 PFT truck are out. Capacity of feeder is 308,153 gallons. (JHO)1/23/99: Leak located at West End Avenue at West 86th St., Manhattan.1/25/99: spoke to John Heggerty, S&TO Central Ops. Final leak volume calculation is 282 gallons. (CAE)1/25/99: CIG Romero reports temp clamp as of 0200 on 1/23/99. West End Ave. 10 feet north of W. 86th Street. (CAE)Field notes: 1/25/99 On location at 12:53. Met with Gerry Materazzo, Joe Floryshak (Con Ed) and George Vasilev (MEG). Repairs made. Materazzo reports that bedrock was only a couple of inches below feeder. Had to jack hammer out to put barrel on. Vasilev put in "well" this morning to bedrock - recovered 90 gallons mostly oil. During excavation removed 5 yards contaminated soil. Oil is entering sewer on corner of W. End Ave. & W. 86th St. MEG maintaining boom. MEG to return on Friday to check well and sewer (change sorbent), Chem Lab arrived and collected 2 soil samples from west wall of excavation a couple of feet north of the spot on the feeder where the leak was (leak at 4 o’clock on feeder facing south). Samples looked dark and wet - collected from behind the shoring. After samples collected I told Materazzo he could backfill. (CAE)10/18/02: submitted for closure by Con Ed (see e2mis report which follows). Sent back to Con Ed requesting soil sample results and additional information on well. This spill added to Appendix B site no. 41, and transferred from Engelhardt to O’Connell. (JHO)3/10/03: letter from Con Edison EH&S Remediation group requesting to combine this spill with Appendix B site 29 (sp. 9012291). (JHO)3/25/04: Draft site investigation work plan submitted by Con Edison. (JHO)10/7/04: Comment letter on SIWP sent out. (JHO)5/17/05: revised SIWP (incorporating DEC comments) approved. (SKA)3/30/06: Con Ed submits site investigation report. Report assigned to Shaun Bollers for review. (JHO)8/7/06: Report indicates that no residual soil or groundwater contamination was detected during the site investigation activities. Based on these results, spill is closed. (JHO)-------------------------e2mis no. 122-598:21-JAN-1999 @ 13:40 HRS. FLOW METER TRENDING ON FDR M52 AT WEST 49TH ST S/S PUMPHOUSES INDICATES A DISCREPANCY OF APPROXIMATELY 200 GALLONS.LEAK RATE OF 1.5 GALLONS PER HOUR.LEAK COMMITTEE CONVENED.UT AND GAS CORROSION INSPECTING MANHOLES ON RUN OF FEEDER . PFT VAN DISPATCHED TO PATROL RUN OF FEEDER SUBSTATION OPERATIONS INSPECTING PUMPHOUSES, PURS AND POTHEADS. FEEDER RUN FROM WEST 49TH ST S/S TO SPRAINBROOK SUBSTATION.DEC# 98-12964 Conference call 13:30. TO crews to check Manhattan and Westchester manholes. CGO crews to check Bronx manholes. CSD to check Pumphouses and Pumps and valves at Sprainbrook Sta. PFT van #1 to go South from 125th St and B’Way. PFT van #2 to go North from 125th St and B’Way. MEG notified to standby and arrived on location at 125th St and B’Way at 16:00. VNR notified and crews standing by in yard in Harlem. ATC notified for possible air monitoring if necessary. As per CIG S&D was not called out to check the Harlem River at Tremont Ave since the fluid loss (1.5 GPH) would not be able to be seen on the surface. 20:15 all manholes in Westchester have been checked - no leak found. At 20:20 Chem Lab found indications of PFT at 84th St and West End Ave. Barhole crew to barhole area. 20:30 conference call: Large signal found in subsurface @ 85th St.; Manhattan Area completely checked for PFT; PFT van to check Bronx run; All Bronx manholes checked - except MH27009- no leak found; At 21:30 Manhattan manholes have been checked - no leak. At
FEEDER M52 (Continued)

21:40 all Pumphouses and Purs checked - no leak. Barholes finished on 11-7 shift 1/22/99. PFT samples taken. Highest PFT indications found at intersection of West End Ave & 86th St. Excavation crew on location and excavation started at 09:30 at intersection of 86th St and West End Ave. MH27009 checked - no leak. Area excavated - no leak found. 19:00 conference call: Higher concentration found north of 1st excavation. 2nd excavation started approx 30’ north of 1st. Dielectric fluid found in trench. Excavation continues south - Leak found and clamped by 02:00 1/23/99. Chem lab took samples and reported 99-00700 <1.0 ppm PCB’s; 99-00755 466 ppm total benzene in soil and 99-00701 23.5 and 23.4 total benzene in oil. No TCLP results were given. Temp EPA ID# NYP004035317 received from ERT for CTW disposal. Excavation continues for permanent repairs. Welding started at 15:00 1/23/99. 220 style repair barrel welded over temp clamp @ 04:15 1/24/99. ETI made inspection of weld. CSD notified. MEG removed 43 cubic yards of soil and 100 gallons of fluid from trench at leak site at 23:00 1/23/99. MEG installed recovery well at leak location. During well installation MEG removed an additional 90 gallons of dielectric fluid from trench. DEC notified of leak and well installation. Chris Engelhardt (NYSDEC) requested soil samples to be taken by Chem Lab. MEG could not take samples from soil at bottom of trench since bottom of trench is rock. On 4/1/99 and 4/9/99 MEG removed booms from sewers - approx 1 cubic yard of material each time. CSD reports 288 gallons lost due to leak. Report from MEG geologist received on 4/7/99. On 8/3/99, 8/12/99, 8/20/99, 8/27/99, 9/1/99, 9/10/99, 9/16/99, 9/24/99, 9/30/99, 10/20/99 MEG replaced sorbents in sewers at 86th St and West End Ave and disposed of 1 cubic yard of material. Sample ID No. 99-00700 For what parameters? X PCB X BENZENE Recovered oil 190 GALLONS Excavated contaminated soil, bluestone. Excavated soil/bluestone 43 CUBIC YARDS Wells installed. Cleanup completed on 01/23/99 at 23:00

Remarks: LEAK IN FEEDER LINE THAT RUNS BETWEEN THE TWO SUBSTATIONS - LEAK IS APPROX 1.5 GALS PER HOUR - APPROX 200 GALS MISSING FROM RESEVOIR CON ED 122598 - LINE IS 80 MILES LONG AND LEAK COULD BE SOMEWHERE BETWEEN THE 2 - UNK PCB COUNT

Initial EMIS #230769 added to Cross Reference Field, deleted from Proxy and downloaded into E-docs. As per EMIS, Sherwyn Samuel (Manager) reports that a Leak was declared on 38M72. The Leak detection system shows that a Deviation of 925gal. of dielectric fluid, missing and leaking at a rate of 40 gal. per hr from Pump House #6 at W 49 St SS.*8/20/12-HRAHMED-Spoke to ERT Desk. As per him, they found a probable leak location at W 65th St and Amsterdam Ave, they started excavating in that area and will confirm if that is the actual leak location. So far they lost around 1250 gal fluid.9/5/12 - Austin - Spill transferred from Ahmed to DeMeo - end7/25/13 - Austin - Today I received an e-mail from Rob Duffy, Con Ed Transmission Operations, regarding documentation for closing this spill. Narrative provided: *"This leak was declared on 138Kv feeder 38M72 on 8/19/12 at 1834 hours. The leak was discovered in an excavation on W65th street between Amsterdam avenue and Columbus Ave. The leak was clamped on 8/25/12 at1232 hours. Permanent repairs were made and visually contaminated soil was removed from the excavation. Post-ex samples from the leakexcavation(EX-1) were below the 13,000...
CON EDISON 38M72 FEEDER LEAK (Continued)

PPM remediation standard for dielectric fluid except for the south wall where a sample result of 21,000 PPM required further remediation. An additional excavation was made to the south (EX-2) to remediate the high sample result. There was a high level of interference in EX-2 including a manhole wall and conduit for electric distribution. The excavation was dug down to 8 feet and then sampled. All remaining samples are below the 13,000 PPM remediation standard for dielectric fluid. Attached are supporting documents for the cleanup of the leak including the sample results, an excavation diagram, the EMIS report, and the manifests. This spill will be submitted for closure with the quarterly batch submittals. “The final tally provided by Con Ed on the amount of cable oil spilled was 6,462 gals. Duffy provided a sampling diagram showing the stages of excavation and post-ex results, the lab results, the final EMIS, and the three disposal manifests. Con Ed contained and cleaned up the spill - No further work needed - See eDocs for above mentioned documents - Spill closed - end

Remarks: Large transformer feeder line - unknown where on line leaking - rate is 40 gal. per hr. clean up pending

"O'CONNELL"7/15/00 1431 CON ED UPDATE - REVIEW COMMITTEE DETERMINED IT
WAS NOT A LEAK.Con Ed e2mis no. 132-396 notes.07-15-00 12:50 Henry
Nguyen #81199 Substation Operator reports to James McCutchen feeder
leak on M-52 from Sprainbrook to W.49st Station. Leaking 8 gallons
per hour, leak from unknown point, being investigated by substation
operations and T.A. crews are inspecting subway tunnels in
Manhattan.07/15/00 14:35 H.Nguyen (SSO) reported that the LEAK
COMMITTEE reviewed the LEAK DETECTION SYSTEM EQUIPMENT and DATA. The
LEAK COMMITTEE review showed that no leak condition existed on feeder
M51 DEC #00-04534. CGO crews called in to check Bronx and Westchester
manholes. TO crews called in to check Manhattan manholes. 2 PFT vans
sent out to check from 125th St and B'Way. 1 van to go North and 1
van to go South. At 14:00 conference call - USI reports that there is
no discrepancy on the leak detection system, no leak. Alarm is from
PURS outage on Thursday causing bad data in model. At this time the
leak detection system will be reset to clear the alarm and the bad
data. Leak search called off. All crews re-called. Update: On 7/17/00
CSD reported 800 gallons of dielectric fluid in oil/water separator
at Sedgewick Ave due to a blown rupture disc. (See E2mis 132425) This
fluid is probably the missing fluid claimed by the USI leak detection
system during the above leak. VS 78367

Remarks:
leak on feeder - leak rate 8 gals per hr - some place between 2
substations - non pcb oil - springbrook subsation is in
yonkerswestchester co.

DEC Memo: Employee reports he discovered a Filco Carting garbage truck leaking
fluid from the back of the truck in our parking lot. The driver stated
it was paint he picked up at a non-Coned location. Approximately 3
ounces spilled into the storm sewer located in the middle of the
parking lot. Approximately 2 quarts leaked onto the asphalt of the
parking lot. The bottom of the sewer is filled with water that shows
no movement. Pads were placed on the bottom of the sewer and the
asphalt is being cleaned. Filco is sending personnel to assist in the
clean up. We do not know if the paint was oil or latex based. Clean
up is ongoing. 18-Nov 0945
Update: The NYC DEP came to inspect site. They
issued an order to Filco to clean the area. The pads were removed
from the sewer and no paint was left on the water. The owner of the
location where the paint was picked up by Filco stated that the paint
was latex based. The asphalt area is being cleaned. Update - As of
12:30 hrs Vic Faster reported that a Filco crew came onsite at
100hrs and cleaned up the asphalt. The truck drain was plugged to
prevent further leaking and the vehicle was removed from the location
to their garage. Clean up complete. Vehicle removed from site.

Remarks: 3 OUNCES OF OIL BASED PAINT; FROM A CARTING VEHICLE, WHILE PICKING UP
PAINT, SPILLED INTO DRAIN: NO TO 5 QUESTIONS. e2MIS 156283.

DEC Memo: Prior to Sept, 2004 data translation this spill Lead_DEC Field was "O'CONNELL"APPENDIX B SITE NO. 191/31/08: Met at site with Con Ed (Pillig) regarding feeder leak (DEC no. 0710712). While excavating for feeder leak they encountered oil at bottom of excavation that appears to be old, black df from previous leaks. There is a "recovery sytem" installed on the inside basement wall of the substation to collect oil from this old leak. A collection rail directs the oil to a sump, where it is skimmed off into drums. Water then goes through station's oil/water separator before discharge. According to Con Ed
W. 49ST SUB. STA. (Continued)

(Chris Cotronei) they recover approximately 100 +/- gallons annually using this system. Note - according to spill file, this recovery system was never reviewed or approved by NYSDEC. (JHO)2/1/08: During Appendix B quarterly meeting with Con Ed (Matt Madsen and Barry Cohen), requested evaluation of installation of recovery wells to assist with product recovery. Also, existing system should be evaluated and a report submitted to the Department outlining the recovery efforts to date and the proposal going forward. (JHO)See eDocs for 2007 Substation Inspection Findings and for response from Con Edison relative to this spill. Breen.See also spill no. 0710712 and 0801886. (JHO)07/30/12 This spill is part of Appendix B Site 19 - the work plan was reviewed and a comment letter was sent dated 07/27/12 (JOC)

Prior to Sept. 2004 data translation this spill Lead_DEC Field was “O’CONNELL*REFERED TO CON EDISON MONITOR FROM TIBBE.5/10/99: ERT Masood Akbar - boat in water patrolling Harlem River (no oil seen). Feeder from W49 St SS to Sprain Brook. (CAE)5/10/99: John Hegerty (Transmission Ops) - Checking manholes, PFT vans deployed 7 to 8 AM

starting at 125th St/Broadway and going north and south (2 vans). (CAE) 5/11/99: Spoke to John Ryan (TO) - Con Ed believes they have found leak at 59th St/11th Ave. They found wood wedged against the feeder. (CAE)5/12/99, 0354 AM: message from CIG Joe Devoti - leak clamped at 0300 hrs. (CAE)5/12/99, 5:05 PM: message from CIG Rich Roach - total amount of dielectric fluid lost as of 1600 hrs today is 2365 gallons. (JHO)5/18/99: met at site with Ray Turkin, Joe Floryshak. Excavation is approx 200 feet long between 58th and 59th St on 11th Ave. There is still contaminated soil at the leak location and south of it. Leak is about 75’ south of the corner of 59th St IFO middle of garage bay of building at 550 W59th St (southern bay).

There is a cement bottom in the excavation about 3’ deep from about 10’ south of leak to 59th St. All contaminated soil removed down to bottom. Told Ray & Joe (1) remove more contaminated soil, (2) review subsurface drawings to try to understand if a well is feasible, and (3) call me to visit site when this is done. (CAE)5/20/99: Con Ed has used guzzler to remove soil beyond concrete wall but started hitting obstructions at 3’ down. Agreed to take sample and backfill. A well is infeasible because groundwater is at least 25’ down (according to George Vassilev - MEG). They are going to take 6 samples: 1 each from the bottom, east and west walls for BTEX (grab) and df (composite),7/11/00: Con Ed submits spill closure request, including report from MEG of soil sampling results. 3 soil samples collected - two results have high TPH. (JHO)APPENDIX B SITE NO.

TC4381152.2s Page 2796
excavation continues - trench is 25 feet long and no leak found (although there is still wet soil). Leak detection system oos - leak rate undeterminable. Pipe is resting on wood blocks on top of Amtrak tunnel. At 15:00 Amtrak reports that tunnel was checked and no fluid was found. Temp clamp installed at 02:00 on weep leak. Feeder returned to service at 03:19 5/12/99. Clean up of trench continues. No other leak found. Engineering inspection of pipes performed and areas of pipe and coating marked out for repair. On 5/14 temp clamp was removed from Fdr 52 and banding applied. Banding could not stop leak. Plidco clamp reinstalled and leak stopped. 220 style repair barrel installed over temp clamp. Permanent repairs completed 22:10 5/14. CSD reports that 2384 gallons of fluid were lost. Chem lab reports 99-04864 24.1 ppm benzene in fluid. Chem Lab reports 99-04863 0.87 ppm benzene is soil. On 5/18/99 Chris Englehart (NYSDEC) and representatives from remediation met at leak location and discussed remediation. Additional soil to be removed from area south of tunnel and well installed. Coating repairs in progress. On 5/20 Chris Englehart (NYSDEC), MEG geologist, Ray Turkin and Jerry Materazzo met at leak site. Allstate Power vac removed additional soil from trench and exposed concrete tunnel roof. Additional soil was also taken out south of tunnel. No well could be installed because of concrete tunnel and steel beams outside of tunnel wall. Additional samples taken by MEG geologist as per DEC recommendation. MEG geologist will write report. Permission was given by DEC to backfill excavation. Allstate Power Vac removed total of 140 cubic yards of soil from leak site. Chem lab reports 99-04863 0.016 ppm TCLP benzene in soil. 7/20/12 sent 7/12/12 letter SIWP review (JOC) 3/4/14 - Revised SIWP was reviewed and conditional approval letter issued on February 14th 8/5/14 - met with Con Edison PM Mariani and section manager Cohen on 8/4 discussing various spill cases; for this Appendix B site Mariani indicated he was working on the revised figures per the approval. I indicated that per the approval a schedule was needed and must be submitted, that any other work that has to be completed, such as revising the figures, should be built into the schedule. They agreed a schedule will be provided shortly. (JOC) 10/1/14 - response to conditional approval and schedule received in 8/27 letter which included revised figures. Sent letter 9/5 including that the figures have not been revised per the prior Department letter and that the schedule which included starting seven months out was not supported, that a meeting was needed. Met on 9/17 to discuss issues. Apparently Con Edison’s Remediation records are incomplete as compared to the Department’s; there is additional information they need to incorporate; they have not gotten a response from Amtrak regarding the tunnel, so that is at this point an unknown as far as timing and scope around W. 59th Street, agreed they should phase the locations included in the plan. Expecting revised schedule. Need to provide copies of pertinent records to Con Edison/CDM Smith. (JOC) 11/5/14 - copied and sent 10/23 via FTS spill file (JOC)

DEC Memo:
Prior to Sept, 2004 data translation this spill Lead_DEC Field was
"O'CONNELL"O'CONNELL NOTES 4/25/01, 1:00 PMSpoke to ECO Doreen Lum -
told her that leak location had not been found yet. Will update ECO
duty officer when found.O'CONNELL NOTES 4/25/01, 3:45 PMSpoke to Leon
Paretsky - leak committee met. Telephone lines to leak detection
system were accidentally cut yesterdat (unrelated to this incident).
Therefore, spill estimate is made using very conservative plug-in
values. The phone/leak detection system has been repaired and
Underground Transmissions is currently re-calculating the leak rate.
Crews are still inspecting the subsurface structures associated with
this feeder. P.U.R.S. units have been checked and no leaks were found
thus far.HOTLINE UPDATE FROM CON ED, 4/26/01, 1701 hrsNo spill -
computer showed it as spill - but due to extreme cooling the tank
FEEDER M52 (Continued)

levels dropped. CON ED E2MIS REPORT 4-30-01

The Leak Detection System alarmed indicating a 30 GPH leak on M51. The leak was triggered by rapid cooling of M51 as opposed to M52 since the precoolers were placed to anula on Tuesday, April 24th. The significant drop in temperature later that day caused M51 to cool down faster than M52. In addition, the communication lines were o/s for the Leak Detection System. This caused the computer to plug in numbers that may not have been as accurate as real time data. There was no leak.

Remarks:
700 gal discrepancy btwn 49th st substation and sprainbrook substation in yonkers...line does cross harlem river...btwn 155st bridge and 225st bridge.nrc contacted #564042. no con ed ref # as of yet.

CALLER REPORTING A SPILL OF MATERIAL FROM AN EQUIP FAILURE CLEAN WAS PREFORMED BUT STILL OF 1 DROP PER HOUR SPILL OS ONE OZ. NO CALLBACK NECESSARY CONED#132285

Prior to Sept. 2004 data translation this spill Lead_DEC Field was "O'CONNELL"Con Ed e2mis #132285:7/10/2000 10:50 HRS.SSO Supervisor found at 09:35 hrs approximately one (1) ounce of dielectric fluid had leaked from B phase pothead on 345 kV Feeder M51. The leak is from above the CT's (current transformers) on the pothead structure and is leaking at approx. 1 drop every 2 hours. The dielectric fluid spilled on the concrete floor and was contained. Spill tag #S1993 was installed. Cleanup was started at 09:40 hrs. by J. Suarez #48822 and completed at 09:50 hrs. He used absorbent pads and "Simple Green" solvent. Note: I called the substation operator to inquiry if a drip pan (containment pan) was placed at the location of the leak. The S/S operator indicated that the drip pan was in place. See tag #S01922 which was also found in place dated 08/03/2000. Spilled associated with the tag #S01922 was closed tag was removed. Removed/recovered liquid/solids. Removed visible traces of oil. Washed stained areas. Other REMOVED SLIGHT OIL BUILDUP FROM POTHEAD FLANGES Cleanup completed on 8-22-00 at 13:00hrs. On January 7, 2003 a inspection was performed of W49 St substation. Joe Susco, Robert Sanchez, Patrick Keelan, Mike Butchar represented SSO. Kerry Foley represented the DEC. This incident was inspected and all agreed that the clean up and repairs were completed sufficiently to close out this spill.

DEC Memo:

Prior to Sept, 2004 data translation this spill Lead_DEC Field was

12/15/00 Okwuoha Notes: Spoke with John Monahan. Spill location covered with steel plates, however Con Ed dug up soil 30m south of spill spot in order to remove the asbestos coating and put on a new hand wrapped coating. Instructed John that sample results must be faxed over before backfilling can be authorized.2/6/01 Met with J. Tranchina and Chem Lab at 123rd St and Broadway. Will take samples for TPH, (KMF)7/2/04 Spill submitted for closure. TPH concentrations OK for closure. (JHO)---------------------------

Con Ed e2mis #134737:12/13/00 0855hrs USI Leak detection indicates a leak of 70gal/hr on fdr M52. Gas Corrosion dispatched to patrol run of feeder and inspect manholes. Two PFT vans dispatched to patrol feeder.
Substation Operations to inspect all associated equipment. Feeder M52 runs between the W 49th St and Sprainbrook Substations. S&D to patrol river crossing. TO sent 2 crews to check Manhattan and 2 crews to check Bronx and Westchester. Both PFT vans out running feeder. Feeder removed from service at 09:48. At 1300 barhole crew requested to sample from 125th to LaSalle Pl. At 1600 Clean Harbors notified to respond and stand by. Excavation started 120’ s/o LaSalle Pl. At 23:30 12/13/00 temp clamp installed. Custom barrel fabricated and installed 23:00 12/14/00. ETI performed 3rd party weld inspection. Feeder returned to service at 05:13 12/15/00. Other damaged sections of pipe found and repairs to be done to them also. Chem Lab reported 00-11684 <1ppm PCB in fluid, 00-11685 44ppb TCLP benzene in soil and 00-11687 <1ppm PCB in soil. On 12/15/00 Clean Harbors removed 6cu yds of material. CSD reports total loss for leak is 979.5 gal. On 12/28/00 Clean Harbors removed 15cu yds of spill material from trench. Samples were taken in the area of the leak location on February 6, 2001, by a representative from Jacques Whitford. Sample locations were selected by Kerry Foley from the NYSDEC, who was on site. Samples were analyzed by Ecotest Laboratories, for TPH dielectric fluid (by method 8100) and TCLP benzene (LSN 01-01279). The results are presented in the following table:

<table>
<thead>
<tr>
<th>Sample Location</th>

DEC Memo: Sangesland spoke to Ms. Tarcangeioi. She said an old blood pressure machine in a box broke and mercury leaked out in a business location. She left the room and sealed the area. Sangesland directed her to the EPA website for cleaning mercury spills and provided her with the names of 3 companies which can cleanup mercury (Radiac, Miller & Triumverinte). She was also directed to NYC Dept of Health. While she was on the line, Sangesland spoke to NYCDP Haz Mat, they told her to contact Dept of Health for further directions.
Remarks: MATERIAL CAME FROM WITHIN BOX; IT LEAKED OUT WHEN THE BOX WAS MOVED AND THE CONTAINER FOR THE MERCURY WAS BROKEN ; REQUESTING AN IMMEDIATE CALL BACK;

DEC Memo: e2mis no. 158022:04/09/05 12:40S.Santiago#86275, of maintenance services found approx. 1 gallon of unknown oil and 15 gallons of water in M44637. There was no sewers or waterways were affected. The source and cause of the spill is unknown at this time. There is oil filled equipment, the feeder cables, in M44637. The water is standing, with no visible movement. There were two samples taken from M44637, one for PCB’s and one for oil ID. There was no initial cleanup action taken. The cleanup is pending crews and lab results. 4/10 @ 0035
Lab Sequence Number: 05-03253-002 @ 18:50 hrs. Lab Sequence Number: 05-03257-001 @ 09:56 hrs. Lab Sequence Number: 05-03253-003 @ 03:30
Analysis indicates the presence of a substance similar to a lubricating oil. Update 5-5-05 @ 03:30 B Degeorge # 15949 reports that the cleanup is complete as of 03:30. 1 bag of ppe. 1050 gallons of oil and water removed by tanker. Double washed with slix and flushed. Tag # 42788 removed. Cleanup persons are listed in the event involved person screen. No visible sign of a source of the spill was observed during the cleanup.
Remarks: 1 gallon of unkn. oil found in 15 gallons of water in manhole. No to 5 questions.

| DEC Memo: | 158709. 05/21/05 13:45 P.Arroyo #15642, I&A Planner, notified the control center on 05/21/05 at 13:20hrs. to report he found approx. 2 pints of an unknown oil on 25 gallons of water in SB44634, which is located at the South West corner of W.40 ST & 7 Ave. P.Arroyo #15642 was on location wth Triumph Construction, a contractor, to do a regrading of the service box cover and casting when he discovered the spill. The account number is #F3437. There was no fire or smoke |
involved and no sewers or waterways were affected. There were no injuries related to this spill and the weather conditions did not contribute to the hazards of this spill. There was no private property affected. The source and cause of this spill is unknown at this time. There is no oil filled equipment in SB44634. The water is standing. There are no substantial cracks in SB44634. A yellow environmental tag numbered #44786 was hung in SB44634. There were two samples taken from SB44634, one for PCB'S and one for oil ID. The samples are marked priority E. P. Arroyo #15642, did not have a chain of custody form with him, one is being delivered to him. There was no initial cleanup action taken. P. Arroyo #15642 states that a steel plate will be placed over the open cover and casting, and will need to be removed when there is a cleanup, due to this fact this will not be a 24 hr. Deminimus. The cleanup is pending test results and a meet with construction. Logger: M. Casalta #126845/21 @ 20:29. Lab Sequence Number: 05-04784-001

----------Aroclor 1242 < 1.0 ppm EPA 608/12/05/22/05 16:45. Lab Sequence Number: 05-04785-001. The sample does not match any current Con Ed standard, however, the sample resembles a synthetic lubricating oil. May 31, 2005. @ 19:45 UG, Supervisor V. Mazza 17336 reported to me, clean-up was completed at 19:20. Sb-44634 was double-washed w/simple green. A small amount of water was removed. Environmental tag #44786 was removed. See clean-up crew on people involved screen. Source of spill was cooking oil. No repairs needed. Logger: T. Haynes #82326. Closed. 7-26-05. George Breen

Remarks:
2 pints of unknown oil in service box. contained to box. cleanup pending sample test. 158709.

Remarks: We received the following emails (they are listed from most recent to original complaint, including my replies:) I really do not know where they take this debris. Cemusa has subcontractors. They demolish these old newsstands, dump them in trucks and take old debris away. DOT may have the answers. But they are not responding to my requests. Let me know if I can help further. Ozlem, --- On Tue, 2/16/10, Dispatch R5 <r5dsptch@gw.dec.state.ny.us> wrote: From: Dispatch R5 <r5dsptch@gw.dec.state.ny.us> Subject: Re: Cemusa / Illegal Dumping To: "Ozlem Dato" <ozlemdato88@yahoo.com> Date: Tuesday, February 16, 2010, 4:34 PM Sir, Thank you for the pictures. I think you misunderstood my question. Where are they taking the debris? In order to verify whether or not freon and other material are being removed at the landfill or "off site" it would be helpful to have that location. The locations that the demolition occurred in are helpful, however, an officer would not be able to go to the site and find anything after a newsstand closure. Also, we received your same email through Web DPAE, please be advised we are the same program and agency, so you will not be getting a separate complaint once one is drawn based on the new information that is provided. Look forward to your response. Dispatcher Quade NYS DEC Office of Public Protection Dispatch Center PO Box 296115 SR 86 Ray Brook, NY 12977 (518) 897-1300/1326877-457-5680 www.dec.ny.gov >>> Ozlem Dato <ozlemdato88@yahoo.com> 2/16/2010 11:23 AM >>> SEE BELOW. Mr. Data, In order to effectively handle your recent email, we request that you provide us with additional information. We can then provide you with an answer or forward your concerns to the appropriate DEC staff for a response. The following information that is needed is: Street address, town, and county where the dumping is occurring...7th Ave and 42nd Street. Total of 330 locations in NYC What materials are the newsstands constructed from?...The company has been removing old newsstands (over 300 of them) and disposing of the old newsstand structures along with the old refrigerators containing toxic and combustible freon gases and thousands of old fluorescent lights containing poisonous mercury. What leads you to believe that the freon and other materials are not being removed before disposal?...SEE PICTURES ATTACHED. Thank you for your help and please
### NEWSPAPER STANDS (Continued)

let me know what the next step is. Thank you, Dispatcher Quade NYS DEC Office of Public Protection Dispatch CenterPO Box 2961115 SR 86 Ray Brook, NY 12977(518) 897-1300/1326877-457-5680www.dec.ny.gov

Ozlem Dato <ozlemdato88@yahoo.com> 2/16/2010 9:56 AM

May Concern: Dear Sir or Madam: Cemusa, a Spanish company, which signed a franchise agreement with NY City, has been unlawfully disposing mass quantities of harmful material. The company has been removing old newsstands (over 300 of them) and disposing the old newstand structures along with the old refrigerators containing toxic and combustible freon gases and thousands of old fluorescent lights containing poisonous mercury. I am formally requesting to have this practice ceased immediately. Please get back to me as soon as an action has been taken. Thank you and regards Ozlem Dato

| Hotline generated two spill #’s for this location//See Also Spill # 04-09264PTC cleaning spill9/30/05 - Raphael Ketani. I received a call on 9/27/05 from Melissa Borg of Laurel Environmental, 52 Elm Street, Huntington, NY 11743, (631) 673-0612 regarding the spill. She said that she wanted to know the status of the case and that she was calling for a bank. She said she was the case manager, but that she didn’t know anything about the case. I called up the current owners of the property and spoke to Rick Schussel at (212) 719-2733. He is the artistic director for the non-profit company New Dance Art Center. He told me that the spill took place months ago and involved one of the 2 275 gal. fuel oil tanks. He said it was a very small spill from the bottom of the tank and that PTC came and cleaned up the spill and cleaned out the affected tank. Mr. Schussel added that the spill was on a concrete floor that did not have any holes or cracks. They are not going to use this tank, he said, as the one that is still good is sufficient. He told me that he would FAX the report from PTC. I received the cleanup report and will send a No Further Action letter to New Dance Art Center, 10036.

Tank Test: False
Hartage discovered a leaky Feeder and 1 ounce of dielectric fluid had dripped on the floor. He immediately put a pad underneath the area. The source of the spill is the above Feeder and the cause is a leaky joint. No samples were taken. M-44635 is the correct structure number. 7/20 @ 16:45 #9 was out to location.

Chintalin reports he found no leaking Feeder Cable & that oil is migrating from a previously cut 3c Cable that was improperly sealed. Chintalin resealed the ends and incident is pending UG to do the cleanup. 08/04/04 04:00V.Mazza@17336 underground supervisor notified the control center on 08/04/04 at 02:40 hrs. that the cleanup in M44635 was completed. This was a final cleanup. There were two barrels of solids removed from M44635. The was approx. 100 gallons of water and oil mixed removed from M44635. The method used to clean was double washed with slix. The environmental tag #32854 was removed from M44635.

Equipment failure - feeder leak - leaking approx. 1 oz. dielectric fluid onto floor of manhole #44635.

Cleanup not completed - unknown why. Ref. # 154205

DEC Memo: 10/08/14-Hiralkumar Patel. alternate addresses: 528-536 7th Ave, 200-212 West 39th Street PBS #: 2-056839. as per PBS record, the site has two following tanks, in-service, installed in Jan. 1924: - one (1) 12,000 gal #6 oil AST on saddles- one (1) 3,000 gal #2 oil AST on saddles other spill # 0700678 was reported on 04/18/2007 by ConEd due to spill of 10 gal dielectric oil in vault # 4122. case closed. visited site. met Joe and Salvatore Robustelli. site has two aboveground tanks in building basement. during delivery earlier today, driver overfilled the 12,000 gal tank causing spill of about 5-10 gal on sidewalk and street from the vent pipe and about 10 gal in tank room from the manhole. spill on street was cleaned up using absorbent sand. PTC will come to conduct cleanup inside the tank room and repair the manhole. asked Mr. Robustelli to stop anymore oil deliveries to the 12,000 gal tank until repairs are made and system is retested tight. minor odors were noted near the tank room in basement. asked Mr. Robustelli to ventilate the basement. 550 Adler Realty LG Holding Company, LLC. **property owner** c/o Savitt Partners LLC. 530 7th Avenue New York, NY 10018 Attn.: Salvatore Robustelli Director of Operations Ph. (212) 452-6051 (O) (917) 656-4131 (C) Fax (646) 214-4809 email: srobustelli@savittpartners.com Joe **building super** Ph. (646) 522-0681 10/14-Hiralkumar Patel 11:06 AM: sent email to Mr. Robustelli. asked him to submit documents regarding cleanup of spilled material, repair of tank system and result of tightness test of the tank system after repairs are made. 10/28/14-Hiralkumar Patel 2:49 PM: left message for Mr. Robustelli. 10/31/14-Hiralkumar Patel 10:24 AM: spoke with Mr. Robustelli. He mentioned that due to insufficient insurance coverage with one company, he had to contact another company for required tank system test. he will get work proposal today and will call back by 11/03/14 with work schedule. he confirmed no more oil has delivered to the 12,000 gal tank since 10/08/14. 11:44 AM: - received email from Mr. Robustelli stating that tank integrity test will be conducted on 11/04/14. 11/05/14-Hiralkumar Patel received email from Mr. Robustelli (at 5:32 PM on 11/04/14). he mentioned that the tank passed the test. he will submit test result, once available. 11/07/14-Hiralkumar Patel. received email from Dot (at 4:49 PM on 11/06/14) from Milro including spill cleanup report. she mentioned that approx. 50 gal of fuel oil was released into the boiler room, exterior sidewalk and street. during the site visit, oil spill was observed in tank room and outside the building. 8:42 AM: sent email to Dot and asked her to clarify on spill locations, also asked her to submit tank system test result. email copied to Mr. Robustelli and rdowling@energi.com. 9:04 AM: received email from Dot including revised cleanup report. 11/10/14-Hiralkumar Patel. 8:56 AM: received email from Frank from Ace Atlas including tank system test result. the tank system was found tight during tightness test on 11/04/14. based on available information, case closed.

Remarks: loss to street, contained, and c/u pending

Hamptons phone # 212 714 2902Donald Lee is contactowner is not aware that there was a spill on the property, spill was reported before they bought the building, spill report faxed to them on 10/19/0508/13/12 - LZ As
  - Randy Austin requested, the spill has been reassigned to Tim DeMeo10/10/14-Hiralkumar Patel. reviewed available information for DEC DeMeo.alternate address: 224-232 West 30th Street satisfactory spill report faxed to them on 10/19/0508/13/12 - LZ As
  - one (1) 5,000 gal #6 oil UST, closed-in-place in Oct. 1998-
  - one (1) 5,000 gal #2 oil AST on saddles, in-service, installed in Oct. 1998 and 08/13/12
  - MB Hamptons, LLC. **property owner**11/28/14 TJDFile review.
  - Based upon a review of available documentation the 5K UST associated with reported tank test failure was closed in place in October 1998 - a new 5K Ast was installed at the same time. New owners took possession of the property after reported tank replacement. Business records are required to be maintained for only 7 years - no subsequent spill reports were received at this address. Previous attempts by Department staff to obtain historical information associated with reported tank test failure have been unsuccessful. Spill report is more than 15 years old. Spill is administratively closed.

DEC Memo: Prior to Sept, 2004 data translation this spill Lead_DEC Field was
"VOUGHT"7/1/02 TJDRceived work plan from Emteque (John Raguso).
Expedited review at consultant’s request. Unable to approve plan as
report missing key information and site not complete delineated.
Consultant directed to provide a modified plan which includes
installation of wells and contains missing report data. Missing data
includes: boring logs, MTBE analysis, plume boundaries, scaled map
which includes all tanks and relevant site features, groundwater flow
direction etc..7/1/03 TJDSu Bassel (LMS 845 735 8300) contacted
DeMee to inform DEC that LMS had taken over project. A work plan
will be submitted to remove tanks, excavate accessible soils, use
bio-remediation to treat groundwater contamination and soil vapor
extraction to remediate the soil contamination. LMS was also directed
to provide any recent sampling data & all relevant information
regarding the proposed bio-remediation application. In addition LMS
was informed hydraulic control would be required if bio remediation
is approved for the site.8/29/03 TJDRassign to Vought9/18/03:
Martin Motors submits Supplemental Conceptual Remedial Plan prepared
by LMS. In cover letter, Martin Motors reports that approximately 5
feet of product was found in well MW-2 on or around July 28. Manual
bailing program initiated - approx. 20 gallons product recovered
through 8/21/03. Product thickness in well dropped to approx 2 feet
as of 8/21. (JHO, 1/13/05) 5/6/05: Vought-Vought spoke to David Rubin (Con Ed 718-204-4219) who is looking to install a substation at this site. Con Ed looking to resolve open spill issue and have BCP pre-application meeting. Con Ed will notify current owner of meeting.1/10/05: Spill reassigned to O’Connell. Con Ed will be attending pre-app meeting with DEC on 1/21/05. Con Ed apparently conducted preliminary off-site investigation, but no report was submitted to the Department. Will request copy at pre-app meeting. (JHO) 5/10/07: On-site cleanup was completed by Con Edison under a Brownfield Cleanup Agreement (site no. C231047, Astor Substation). There is still off-site gasoline contamination that remains beneath the sidewalk and street on 11th Avenue. This spill number is being transferred to the Petroleum Remediation group for follow up with the responsible party. (JHO)
and the scope of the proposed corrective action plan, as well as other potential sources of area contamination. I look forward to working with you on this matter.

DEC Memo: 8/9/12-Vought-Primary off hours responder. This spill assigned to DEC Feroze as part of routine Con Edison minor spill portfolio review and possible closure. Initial EMIS #230918 added to Cross Reference Field, deleted from Proxy and downloaded into E-docs. As per EMIS, "W. Varela of Substation Operations reported that he found 4 gallons

TC4381152.2s Page 2870
MARTIN MOTOR VOLVO  (Continued)

of transformer oil on the concrete pad that has leaked from the transformer. He does not know where the leak is at this time or if it is still leaking. He will start the cleanup. "3/26/13 - Austin - 4 gal. discovery lead to finding of 700 gals. in vault, from bad bushing gasket on transformer body - Con Ed contained and cleaned up the spill, and repaired the gasket - See eDocs for further information - Sandy storm related - Spill closed - end

Remarks: Spill was to a concrete pad, no resources affected. Clean-up is in progress.

DEC Memo: 8/9/07, 2:38 PM: received e-mail from Dave Rubin, Con Edison Remediation group."FYI, attached is a Con Edison EMIS report for a spill that occurred this morning in the 11th Avenue Sidewalk Area adjacent to the Astor Site. Con Edison was excavating in the area that had previously been backfilled following completion of remedial activities (between the secant piles at the Con Edison property line and the 11th Ave. curb line). After the heavy rain yesterday, the excavation filled up with water and needed to be pumped out in order for work to continue. When the crew went to pump out the excavation they noticed a sheen on the water. The water was pumped into a drum and the attached report was called in (Con Edison is in the process of identifying the corresponding NYSDEC spill number). Excavation activities have since been completed; backfilling remains." Assigned to Bryan Wong (PM for Astor Substation site) for follow up. Sent e-mail to Con Ed (Rubin): "Any idea what the source of the sheen was? Is it related to street runoff from the rain or did the sheen come out of the soil? Has a sample been collected for product ID?" Response from Con Ed (Rubin):" Please see below for responses to your questions [in bracketedCAPS], and advise as to whether any further action is required on Con Edison’s part (we are storing the drummed water onsite pending your response)."Any idea what the source of the sheen was? [CON EDISON CANNOT CONFIRM THE SOURCE]. Is it related to street runoff from the rain or did the sheen come out of the soil? [BOTH ARE POSSIBLE CONTRIBUTORS TO THE OBSERVED SHEEN. THERE WAS NO OBSERVABLE SHEEN WHEN THE EXCAVATION WAS OPEN DURING YESTERDAY’S RAINFALL EVENT. WHEN THE CREWS RETURNED THISMORNING THE SHEEN WAS PRESENT. THERE IS NO WATER-TIGHT CONTAINMENT ON THE 11TH AVENUE SIDE OF THE EXCAVATION (ONLY STEEL SHEETING) TO "ISOLATE" THE SIDEWALK AREA. SURFACE RUNOFF LIKELY ENTERED THE EXCAVATION DUE TO THE INTENSE NATURE OF THE STORM EVENT.] Has a sample been collected for product ID? [NO - CON EDISON WAS PLANNING TO DISPOSE OF THE DRUMMED LIQUID AS NON-HAZARDOUS OILY WATER BASED ON GENERATOR KNOWLEDGE FROM PRIOR SITE INVESTIGATION/REMEDIATION INFORMATION]" (JHO) 8/9/07, 2:38 PM: received e-mail from Dave Rubin, Con Edison Remediation group."FYI, attached is a Con Edison EMIS report for a spill that occurred this morning in the 11th Avenue Sidewalk Area adjacent to the Astor Site. ASTOR SUBSTATION PROJECT SITE
700 11TH AVE, 549-551 & 553-557 W 49TH ST
NEW YORK, NY 10019

NY BROWNFIELDS S106906504 N/A

Update By: BCP
Program: MOBARRIE
Site Code: 337122
Acres: .600
HW Code: C231047
SWIS: 3101
Town: New York City

The Astor substation site was formerly called the Riverside Substation site. Con Edison, the project applicant, changed the project name to Astor Substation site in response to discussion with various community members in October 2005. The Astor substation site (~0.6 acres in size) is located along the eastern side of 11th Avenue between west 49th and West 50th Street in the Clinton section of the borough of Manhattan, city of New York, at latitude 40 degree 45' 57.2" and longitude 73 degree 59' 40.9" and designated as tax parcels Block 1078, Lots 1 and 5 on the Tax Map of the City of New York, New York County. The street address for the parcel is 700 11th Avenue (which also known as 549-551 and 553-557 West 49th Street), New York, NY 10019. During 1930 to 1940, the site had been used for gasoline filling station and automobile service garage. Prior to its acquisition by Con Edison on April 12, 2005, the site was owned and operated by Martin Motors Sales, Inc. (MMS) as a retail automobile sales and service facility. The area around the site is fully developed as commercial, residential and institutional uses to the east, north and south; with another Con Edison electrical
substation located west of the site across 11th Avenue. The building on the site had been demolished in connection with Con Edisons redevelopment of the Site into an electrical substation that is needed to meet the increasing demand for power in midtown Manhattan. The site is currently being redeveloped and the electrical substation construction is anticipated to be completed sometime in 2008.

Investigations completed at the site include a Limited Phase II Environmental Site Assessment (January, 2005) and Remedial Investigation Report (November 2005). The volunteer has submitted and the Department has approved a Remedial Action Work Plan (RAWP) which involves excavation of soil at the entire site and the northern portion of 11th avenue sidewalk area along the western site property line down to top of bedrock surface. Contaminated media will be removal and properly disposed off-site. Implementation of the approved RAWP started on 4/25/06. Remedial construction was completed on February 2007. Remedial Action Report (RAR) date March 2007 and RAR addendums dated April 2007 and November 2007 respectively, collectively equivalent to a Final Engineering Report. FER was approved on 12/21/2007 and a Certificate of Completion was issued on 12/21/2007.

Env Problem:

Site investigations conducted prior and after implementation of the BCP agreement revealed that the presence of underground storage Tanks (USTs) that were associated with the former gas station or automobile repair facility; petroleum contamination in the northwest corner of the site (both on-site and off-site) in soil and groundwater, including petroleum product on the groundwater surface (up to 5 feet of separate-phase product has been detected in an off-site well in the vicinity of the former gasoline filling station located in the north west portion of the site); soil and groundwater near the location of a former oil/water separator in the garage area which is located south east of the site had been impacted by the former site uses (automobile service garage); Soil Gas sampling indicates the presence of VOCs, including both gasoline related compounds and chlorinated solvents (PCE, and TCE) that are consistent with findings in soil, groundwater, and pass site use. The remedial investigation report also identify a NYSDEC spill site (spill # 8904939 petroleum origin) is located at the southeast corner of west 51st street and 11th avenue about one block north of Astor substation site, these off-site properties may be contributing to the soil vapor detections; Low level of PAHs and Metals were detected from on site soil; Sediment samples from the floor drain in the service garage indicated the presence of PCE, TCE and gasoline related compounds with concentration above the TAGM4046 recommended soil clean up objective. The applicant had implemented the approved Interim Remedial Measures (IRM) to recover petroleum product identify in the on and off site wells since September of 2005. The thickness of the petroleum product in groundwater monitoring wells show significant drop as the result of the IRM activities. The quality exposure assessment indicated the lack of exposure pathways at the site because of the current ground surface is covered with impervious surface. DEC has determined, in consultation with NYSDOH, that the conditions at this site do not pose a significant threat to human health or the environment. The RAWP dated December 2005 was approved March 31, 2006 has been implemented. The FER has been approved and the COC issued in December 2007.

Health Problem:

Public water is provided to the area, thereby preventing exposures to groundwater. The site is currently covered with buildings and...
ASTOR SUBSTATION PROJECT SITE  (Continued)

pavement, preventing direct contact exposures.

### MAN HOLE 62572 (Continued)

**Contact Name:** ERT  
**Contact Phone:** (212) 580-8383  
**DEC Memo:** Leak has not been found yet. 04/20/11 inspected the leak location at 50th Street & 11th Avenue. Fluid contained in a manhole. Leak has been stopped by putting a clamp. Minor soil contamination encountered out side of the manhole. (sr)/6/1/11 - Received both EMIS reports from Con Ed that apply to this event (#225484 and #225485). They confirm the findings of Rahman's inspection on 4/20/11, as well as the cleanup. - See eDocs files for more information - Case closed - end

**Remarks:** Leak rate, 3gals per hour/leak location is unknown at this times of 1620 - leaks fixed 4/20/11 UPDATED BY DIDONATO, ONE GALLON OF DIELECTRIC FLUID IMPACTED SOIL. THE CLEAN UP IS IN PROGRESS. SPILL AMOUNT WAS ACTUALLY 275 GALLONS.

Prior to Sept., 2004 data translation this spill Lead_DEC Field was "ENGELHARDT"E2MIS 12006409/26/98 1145 HRS TURIANO #14461 UG SPlicer FOUND AND REPORTED TO T.TIMMONS #05198 OS WHOM REPORTED TO CONTROL ROOM OPERATOR MICHAEL CROWE #71453 5 GALLONS OF OIL (UNKNOWN TYPE) MIXED WITH 100 GALLONS OF WATER IN M8367 N/S W43RD ST 77' EEC7TH AVE - CONTAINED- DID NOT ENTER SEWER OR WATERWAYS- NO AGENCY ON SITE - SAMPLE TAKEN- HUNG SIGN #17297--CLEANUP PENDING TEST RESULTS---------MC----------09/26/98 1333 HRS MR DEVOTI CIG NOTIFIED BY MCII this is a Con Edison manhole it contains electrical cable and splices. Many manholes have a sealed sump in the floor which is used to allow runoff when pumping the structure. A hose is placed in this sump and water on the floor will flow into the sump allowing the floor to be cleaned. If cleaned prior to analysis of the fluid, the structure will be cleaned as >50 PPM and all liquid and waste will be manifested accordingly. The structure will be double washed with a degreaser, i.e. Slix. All cleaning material and PPE will also be treated as >50. If any sludge is found within a manhole it is treated as lead contaminated and manifested accordingly. The spill identification tag will remain secured to the structure until the analysis is completed and if <500 PPM the signage will be removed. If the analysis is >499 PPM, a grid will be prepared for wipe testing the area. Until the analysis of the wipes are proven to be <10ugs/100cme2 all additional waste produced from the structure will be treated as the original analysis. If this spill occurred in a transformer vault containing a sump pump and there was a possible release, the drainpipe trap will be dismantled to determine if oil was released. Sludge found in a vault, through historical analysis, has been determined not to contain lead. 10/09/98 O.S (UG) J. sorrenti # 09296 reports clean up complete inMH# 8367 N/S W. 43 St. 77' E/O 7 Ave on 9/27/98 @ 13:30 hrs.Treated Wastestream as >50 ppm PCB Removed 100 gals. **Remarks:** CREW OPENED MANHOLE COVER AND DISCOVER SHEEN ON WATER - NO CLEAN UP-PRODUCT WILL BE TESTED
Prior to Sept, 2004 data translation this spill Lead_DEC Field was "ZHAI/DO"12/19/02 - AUSTIN, DDO - TTF LETTER SENT1/11/06- DEC Piper spoke w/ Eugene Degan, (Prev. Owner Rep 845.294.7509) regarding tank test. He could not be sure though he thinks the tanks are still empty. He will look into this. Piper then contacted new owner Dov Hertz, Extell Group. 212.712.0633. He knows nothing and will have previous owner get info. Galden Frankel performed Phase I and II on property. Left message at GF requesting call back.1/18/06- DEC Piper spoke w/ property manager, Rob Scharf 212.712.6111. Stewart Dean Co. -212.695.3180. He will fax info. DEC Piper to review and inform Rob of additional work if warranted.2/6/06- DEC Piper spoke w/ Rob S. I explained to him that he was still in violation of PBS code. I have received analytical suggesting that there was no release at the site. The tank test results indicated a dry ullage leak. The tank is empty and still needs to be removed or closed in place. As per Rob, he will be sending in the new application this week. I instructed him to include a line item that that due to the razing of the building, that they will remove the tank when the activities have been completed. Afterwards, he will need to update the PBS records to inscind that the tank has been removed. Upon review of a limited phase II investigation of the site performed by Galden Frankel, of the six soil samples taken from various locations throughout the site, no elevated constituents were detected. However, three GW samples were collected. The results indicate 1,040 ppb of MtBE and slightly elevated levels of PERC and its byproducts. 5/15/06- DEC Piper. Referred to Remediation.5/31/06 - reviewed file: MTBE was detected without other VOCs usually present in a petroleum release. The MTBE is likely the leading edge of an off-site impact. Low level of CVOCs are also detected. These CVOCs are only detected in GW with no soil contamination or other sources on site. Spill is closed, no NFA issued since no remediation was ever conducted at site. - KST

Soil contamination was found at E-53, 61, 62, 71 and 72. The soil contamination consists of VOCs and SVOCs. Well TRC-MW-3 has contamination, but there is little to no contamination in the northwest corner of the yard. The immediate spill site is in the northwest corner of the site. The spill site is underlain by 20 to 30 feet of historical fill. Groundwater is at 5 to 7 feet bgs. The LIRR rail line, the High Line, runs along the west side of the site and is also present in the northwest corner of the yard. The immediate spill site is in the northwest corner of the yard. The site is underlain by 20 to 30 feet of historical fill. Groundwater is at 5 to 7 feet bgs. Soil contamination was found at E-53, 61, 62, 71 and 72. The soil contamination consists of VOCs and SVOCs.

DEC Memo: 04/06/06: Investigation identified significant contamination on and off site. Significant soil staining and free product identified in boring logs at varying depths. Possible source across the street to the north, behind Javitts building. No direct link between possible source and contamination onsite because of different depth of contamination. Product id across the street identified #5 oil, no product id of contamination onsite. Investigation letter sent 04/06/06. 11/2/10 - spill re-assigned from Tibbe to Joe O’Connell 07/18/2011 - The spill was reassigned from Joe O’Connell to Linda Ross 12/14/11 - DEC Hussein and Ross met with LIRR at spill site on 12/2/11, and observed construction above the impacted area (photos in edocs). DEC met with LIRR (Ms. Russo and Mr. Albano) on 12/8/11 at the DEC office and met again at the spill site on 12/9/11. LIRR will task its consultant with preparing a preliminary screening of remedial alternatives for the contaminated media for submission to DEC. (JOC)3/12/12 - Raphael Ketani. The case was reassigned to me during February 2012. From, the previous documentation, the general West Side Yard site is bounded by West 33rd Street to the north, by various commercial and industrial properties to the south, by 12th Avenue to the west and by 10th Avenue to the east. An elevated former railroad line, the High Line, runs along the west side of the site and is present in the northwest corner of the site. The immediate spill site is in the northwest corner of the yard. The site is underlain by 20 to 30 feet of historical fill. Groundwater is at 5 to 7 feet bgs. Soil contamination was found at E-53, 61, 62, 71 and 72. The soil contamination consists of VOCs and SVOCs. Well TRC-MW-3 has contamination, but there is little to no contamination in the
The area to be remediated is E-53, 61, 62 and MW-2 to MW-4. I looked at the analytical summary tables in the June 2009 TRC Remedial Investigation Report. It appears that the most contaminated horizon is at about 20 to 25 feet below grade at TRC-MW-3. However, there were only a small number of SVOC hits in the soil analyticals. The VOCs were the major components of the contamination and there were very high exceedences in the parts per millions. The analytes were typical of gasoline contamination, not fuel oil or MGP waste. The groundwater analytical summary tables showed the highest hits as several hundred parts per billions at 20 feet or greater for gasoline analytes - again not fuel oil or MGP waste. The metals results were typical of seawater and rusting metal, with other low exceedences for items such as mercury. However, the site is underlain by anthropogenic fill. So mercury and other similar metals may have their origin in coal ash waste. 3/13/12 - Raphael Ketani. I began my review of the 2/1/12 Progress Report. According to the report, a soil boring was performed on 10/4/04 on the east side of 12th Avenue and a sample was recovered with elevated PID readings and an odor of petroleum. This was the location of boring E-61. An additional investigation was performed. On 4/6/06, the DEC reviewed the closure report and commented that more investigation was necessary. The LIRR’s additional investigation work plan was approved on 1/19/09. The remedial investigation took place during May 2009. MGP waste was identified. However, the DEC unit in charge of MGP sites declined to be the project manager for the site as there was no history of an MGP site being located here. The DEC requested that the LIRR develop remediation strategies for the contamination. The LIRR staff found 9 wells on the site and 7 off site. The 9 on site wells were abandoned during September and October of 2007. Quarterly groundwater sampling and monthly monitoring have taken place since 2007. During October 2007, the MTA informed the LIRR that there were 14 wells on their property. On 10/24/07, these wells were abandoned by the LIRR. The final version of the work plan was sent to the DEC on 1/19/09. A remedial investigation took place during May 2009. A report was sent to the DEC on 7/23/09. A letter with potential remediation alternatives was sent to the DEC on 1/13/12. Groundwater data has been provided up to February 2012. The 2/1/12 Progress Report also included an analytical report from Analytical Chemists dated 11/21/11. Groundwater samples were analyzes from MW-1, 2, 4, 5, 11, 13, 47, 53, 61, 69, 72 and 73. With the exception of a 65.9 ppb hit of benzene from MW-2, the great majority of the results were non-detect. There were also a small number of other hits, but they were very low and below the CP-51 standards. 3/14/12 - Raphael Ketani. I tried to contact Gloria Russo, Manager Environmental Planning and Compliance, System Safety Department. LIRR (347) 494-6034 regarding the 3/12/08 Technical Scope of Work - Remedial Investigation (TSOW), but I could only leave a voice message. 3/16/12 - Raphael Ketani. Ms. Russo and Al Albano (347) 494-6020 of the LIRR called me today in a conference call. Ms. Russo called regarding a previous phone call concerning the TSOW. She said that Mark Tibbe of DEC (the former case manager) had reviewed and approved the document some years ago. It was made into a work plan by the LIRR’s consultant at the time, TRC, which was also approved. The work was done in 2009 and a report was generated the same year. Divirka & Bartilucci are the new LIRR consultants. A letter was sent to the DEC dated 1/13/12, but the LIRR never heard anything back regarding its review. I told Ms. Russo that I will take a look at the letter. Mr. Albano then took over the
conversation. He stated that the MGP waste is there. However, it is under the interface between the capillary fringe in the soil and the water table. The top of the soil contamination is at about 10 to 12 feet below grade and extends down to 24 feet. The contaminated soil was found when the site was being investigated for possibly building the JETS football team stadium. The groundwater (at 6 feet bgs) does not have much in the way of dissolved analytes. So it is only the soil that needs to be addressed and only in the northwest corner. However, the Highline Park is right there and the clearance is about 15 feet. Mr. Albano added that for years the LIRR, its consultants and DEC have tried to figure out a solution to the soil contamination issue, but nothing has been resolved. Excavation does not appear to be possible due to the footings for the Highline and the many utilities that run through the northwest corner. Lastly, Ms. Russo added that the LIRR does not have any plans to develope the site. With that, the conversation ended.

4/23/12 - Raphael Ketani.

Gloria Russo (347) 494-6034 of the LIRR sent my supervisor, Hasssan Hussein, an e-mail on 4/17/12. The e-mail concerned an alleged very high exceedence of the state soil concentration standards for chromium. Back some years ago, sample SB-H-06-LIRR-24-26 was analyzed. A table (Table 3-C) was submitted, along with other analytical data summary tables, indicating the results from the soil analyses. The Langan Engineering letter dated 10/27/04 had attached Table 3-C which showed the chromium concentration to be 29,100 ppm. Mr. Hussein was concerned about this high concentration. However, the raw data analyses were found for this sample and showed that the concentration actually was 26.1 ppm. The high analytical result was actually for iron, not chromium. So, Ms. Russo requested that the issue be put to rest. It appears that some of the numbers were transposed when they were copied to the data summary tables.

5/1/12 - Raphael Ketani. I reviewed the 5/1/12 Quarterly Progress Report. Groundwater was sampled from MW-1, 2, 4, 5, 11, 13, 47, 53, 61, 69, 72, and 73. All of the VOC and SVOC results were non-detect except for one hit of 32 ppb benzene from MW-2. 5/4/12 - Raphael Ketani. A site visit was set up with Ms. Russo and Mr. Albano for 5/8/12.5/4/12 - Raphael Ketani. I reviewed the Dvirka and Bartilucci 1/13/12 letter describing various methods of addressing the contamination below the site. There is 20 to 30 feet of fill under the site. Native silty clay underlies the fill. Bedrock is about 96 feet below the northwest corner of the site. The fill is anthropogenic material: brick, wood, etc. Groundwater is 5 to 7 feet below grade and flows northwest. However, they state that the groundwater contamination is not flowing to the Hudson River. Langan Engineering found soil contamination in October 2004 at borings E-61, E-53, E-62, B-71, and B-72. The contamination consisted of VOCs, SVOCs, and PAHs. The contamination was at 6 feet down and at 26 feet down. A 2009 Remedial Investigation report defined the extent of the most significant soil contamination as being at borings E61, E62, E53, TRC-MW-2, TRC-MW-3 and at TRC-MW-4. The most significant contamination is at 15 to 25 feet down. This is the zone being considered for treatment. The available treatments include excavation, solidification, chemical oxidation, oxygen enhanced bioremediation, air sparging with SVE and monitored natural attenuation. Monitored natural attenuation was recommended as it disturbs the subsurface the least (it is also the cheapest method). The consultants suggested that this may be enhanced with focused oxygen enhanced bioremediation. They would use ORC around TRC-MW-3. The consultants don’t believe it is feasible to achieve pre-spill
conditions, but can reach unrestricted or restricted use SCOs. They included TABLE 1 - Identification of Potential Remedial Technologies. All of the methods were described as not feasible, except monitored natural attenuation.5/7/12 - Raphael Ketani. I reviewed the TRC June 2009 Remedial Investigation Report. In the report, they mention that PID readings at TRC-MW-3 were 475 ppm at 18 to 35 feet, and 78.3 ppm at TRC-MW-4 at 15 to 20 feet. Coal tar was observed at TRC-MW-3 at 18 to 35 feet below grade, and at 15 to 20 feet down at TRC-MW-4. The fingerprint from the TRC-MW-3 sample at 18 to 20 feet suggested coal tar or an unknown fuel oil. TRC-MW-4 was sampled on 5/6/09 for soil at 23-25 feet and had benzo series analyte hits of from 2.6 ppm to 3.3 ppm, chrysene 3.1 ppm and dibenzo(a,h)anthracene at 0.51 ppm. TRC-MW-3 was sampled 5/1/09 for soil at 18-20 feet and had 56 ppm 1,2,4-trimethylbenzene, 34 ppm 1,3,5-trimethylbenzene, 1.3 ppm benzene, 58 ppm ethylbenzene, 12 ppm isopropylbenzene, 13 ppm n-butylbenzene, 26.5 ppm total xylenes, 66 ppm 2-methylnaphthalene, 77 ppm acenaphthenes, 31 to 19 ppm benzo series analytes, 11 ppm chrysene, 300 ppm naphthalene, 140 ppm phenanthrene, 65 ppm pyrene. TRC-MW-3 groundwater at 25 feet contained 170 ppb 1,2,4-trimethylbenzene, 250 ppb benzene, 560 ppb ethylbenzene, 49 ppb isopropylbenzene, 280 ppb total xylenes, 97 ppb acenaphthenes and 1400 ppb naphthalene. TRC-MW-2 groundwater at depth had: 97 ppb benzene at 15 feet; 110 ppb benzene at 25 feet; 100 ppb at 35 feet; 85 ppb at 45 feet. TRC-MW-2 to TRC-MW-5 groundwater samples had dissolved metals hits for various analytes (Fe, Na, Mg, Ca, K) in the tens of thousands of ppm that were typical of seawater. Mercury was 3.1 ppm at TRC-MW-5 at 15 to 16 feet down. Groundwater from MW-12 and MW-13 had typical seawater analyte hits up to 687 ppm. Given the information in the RIR, the bulk of the elevated soil contamination is at 15 to 35 feet. There are 2 classes of contaminants: gasoline range VOCs and coal tar. The soil and groundwater contamination is concentrated in the vicinity of TRC-MW-3. 5/8/12 - Raphael Ketani. The site visit took place as scheduled. Ms. Russo lead the group to the northwest corner of the site. The Highline was about 20 feet above our heads with lights hanging from the underside. The southern limit of the site was about 50 feet from the northern limit. We discussed the subsurface conditions and a little bit about what could be done to remediate the site. I told Ms. Russo that the Department did not agree with using monitored natural attenuation as the remediation method as, from our experience, it was not an effective means of removing the contamination. I added that there were gasoline constituent analytes in the soil and that these were much more amenable to treatment. So a chemical or biological method should work. I added that the consultants should also consider hot water or steam injection in order to mobile the MGP waste and recover it.

Lastly, I told Ms. Russo that I had seen a drawing that indicated there used to be a gas station across the street from the northwest corner of the site. Ms. Russo wasn’t aware of the former gas station location, but she told me that the hot spot was TRC-MW-3. However, the LIRR was building a new large shed over the well. I wondered whether injection wells could be installed near TRC-MW-3 and how the remediation could be monitored. After this, we left the site. 5/10/12 - Raphael Ketani. I drafted a letter for the review of Mr. Hussein. In brief, the letter described that the Department had reviewed the Dvirka and Bartilucci 1/13/12 letter and the TRC June 2009 Remedial Investigation Report. From the review of the two documents and the site visit, it was stated that remediation should take place and that
the LIRR must submit a pilot study work plan and a full scale design work plan. A pilot study report would be due 30 days after the successful completion of the test. The full scale design work plan would be due 30 days after the pilot study report. 5/17/12 - Raphael Ketani. Mr. Hussein approved the letter yesterday and it went out today. 8/10/12 - Raphael Ketani.

A letter was received dated 8/3/12 from the LIRR which was in response to the DEC’s 5/17/12 letter requesting that the LIRR investigate the possibility of using other remediation methods to treat the contamination. In the 8/3/12 letter, Ms. Russo stated that various factors limit the effectiveness of the other methods and made them cost prohibitive: the urban setting; extensive above and below ground utilities; depth of the contamination at 15’ and 25’ and below the water table; the train yard is highly congested and critical to the LIRR operations and can’t be shut down. It was also stated that the LIRR is not responsible for the contamination as it is from the historical fill that was put in place before 1890 and after. So both the soil and groundwater contamination is historical. Also, continued monitoring has shown that the groundwater contamination is greatly reduced. Ms. Russo also stated that in their 1/13/12 letter, Dvirka & Bartilucci evaluated the other methods that were suggested. They found the methods more appropriate for sites with high concentrations of contaminants, not the low concentrations found under the West Side Yard. The concentrations under the West Side Yard were more like the goal concentrations for MGP sites. Also, delivery of the steam and hot water methods would be hard to control given the heterogeneous makeup of the fill and the results would not be satisfactory. It would be impossible to control the recovery and there would be unintended migration of the contamination. Surfactant based oxidation would encounter the same problems as the other methods and transporting the hazardous chemicals in a congested urban environment would be difficult. All of these methodologies are expensive and the low contaminant concentrations below the site would not provide a benefit. Ms. Russo recommended monitored natural attenuation with focused injections of ORC. According to her, Dvirka & Bartilucci identified at least 4 MGP sites in New York State where solidification was used successfully. The present contaminant concentrations are less than the cleanup objectives for many former MGP sites. The goal of reaching pre-spill conditions using CP-51 standards is not applicable given the unknown source of the contamination and that the contamination may be related to historical fill. All soil contamination data should be compared to the industrial SCO standards and GA groundwater standards should be used. Ms. Russo wrote that she would like a conference call with her, representatives of Dvirka & Bartilucci and DEC Albany staff who have experience in cleaning up MGP sites. Once an appropriate remedial method is determined, then the LIRR will submit a work plan. 8/14/12 - Raphael Ketani. The August 1, 2012 Progress Report was received and reviewed. Monthly groundwater monitoring and quarterly sampling is continuing. The sampling for this report took place on 5/21/12. Groundwater was encountered at most wells between 5 and 7 feet below grade. At MW-4, the groundwater was at 8 feet below grade. At MW-5 it was 11.8 feet below grade and at MW-73 it was 11.31 feet below grade. The VOC and SVOC analytical results for all of the samples were almost entirely non-detect with widely scattered very low VOC hits that were generally below or just above CP-51 standards. However, the sample from MW-3 had 135 ppb benzene, 130 ppb ethylbenzene and 246
MAPFINDINGS

naphthalene. I had no comments. 10/30/12 - Raphael Ketani. The November 1, 2012 Progress Report was received and reviewed. Monthly groundwater monitoring and quarterly sampling is continuing. The sampling for this report took place on 8/21/12. Groundwater was encountered on 8/21/12 at most wells between 5.27 and 11.64 feet below grade. The VOC and SVOC analytical results for all of the samples were almost entirely non-detect with widely scattered very low VOC hits that were generally below or just above CP-51 standards. However, the sample from MW-2 had 71.6 ppb of benzene, MW-3 had 271 ppb benzene, 138 ppb ethylbenzene and 29.6 ppb 1,2,4 trimethylbenzene, 56.6 ppb total xylene and 108 ppb naphthalene. I had no comments. 11/1/12 - Raphael Ketani. The conference call took place as scheduled. In attendance were Bill Ottaway - DEC Albany Tech Support, Gardiner Cross - DEC Albany MGP program, myself, Gloria Russo and Al Albano of the LIRR and their consultant from Dvirka & Bartilucci Tom Fox. The issues of the petroleum waste and, in particular, the deeper MGP waste were discussed. Mr. Ottaway stated that, due to the infrastructure, not much could be done about the deeper MGP waste. He also stated that the extent of the contamination needed to be better defined in order to transfer the site to the MGP program. Up until now, there has only been a site characterization. There needs to be a site management plan and institutional controls. Regarding the petroleum impacts, this may be treatable. He also stated that Mr. Fox should talk to Mr. Cross and put together a work plan. Mr. Ottaway said that Mike Ryan, the bureau director, had no problem with transferring the site to the MGP program. The site would be a "P" site. The spill case would be closed and an MGP case would be opened. Mr. Cross stated that there needed to be a Consent Order in place for the site. Ms. Russo said that she will send Mr. Cross and Mr. Ottaway copies of the Consent Order for the LIRR sites. The call ended with Ms. Russo stating that she will send me and Hassan Hussein copies of all correspondences and documents and that she will keep Region 2 updated. 1/25/2013 - Raphael Ketani. Mr. Fox of Dvirka & Bartilucci sent Mr. Ottaway and Mr. Cross of Albany NYS DEC and Ms. Russo of the LIRR a draft investigation scope of work. I began my review of the document. 1/29/13 - Raphael Ketani. I finished my review of the draft investigation scope of work. There are two objectives: determine whether MGP residuals are present within the area of concern and determine whether the residuals are the source of the BTEX and PAH contamination; determine whether there is a source of the contamination to the east and upgradient of the area of concern. Five soil boring will be completed. The borings will go to a total depth of 40 feet below grade. Soil sampling will take place at three locations within each boring. The boring will end shallower if bedrock is encountered before 40 feet or the boring will be extended deeper if contamination is found in order to vertically delineate the extent of the affected horizon. The soil samples would be examined for the presence of MGP or other contaminants. PID measurements will be taken. Odor, staining and color will be described. Rock and minerals components, historical fill components and clast characteristics will be noted. Stratification and the degree of saturation will also be reported. Lab analysis will be via methods 8060 (BTEX), 8270 (PAHS) and 9012 (cyanide). Dvirka and Bartilucci will submit an investigation report to the DEC and the LIRR. The analyses will be compared to restricted residential and commercial standards. Two borings will be done through the sidewalk on the north side of West 33rd Street. One boring will be done in the north end of
LIRR WEST SIDE YARD  (Continued)

the area of concern. One boring will be done next to the east side of
the E.I.C. storage building. One boring will be done next to the east
side of the Yard Operations Building. I found the draft investigation
scope of work to be deficient. First, at a minimum, there should be
one soil sample taken every five feet in order to characterize
subsurface conditions. Next, there should be an expanded analysis for
VOCs via method 8260. Lastly, As this is still an oil spill case, the
analyses should still be compared to the unrestricted residential
standards. 2/12/13 - Raphael Ketani. I reviewed the Fourth Quarter
2012 Progress Report dated 2/1/13. A draft investigation work plan
was submitted on 1/25/13 to the MGP Group at the Albany DEC office.
Water gauging took place from 10/25/12 to 1/16/13. Wells MW-1 to 5,
11, 13, 47, 53, 61, 69, 72 and 73 were sampled on 11/28/12. MW-2 had 5
VOC hit to 55.8 ppb and 1 low SVOC hit. MW-3 had up to 270 ppb of
ethybenzene with 10 VOC hits and 5 SVOC hits to 440 ppb of
naphthalene. MW-4 had 3 very low VOC hits. All of the other
groundwater samples were entirely non-detect. 2/14/13 - Raphael
Ketani. The monthly remedial progress update meeting for 8 LIRR sites
took place today. The DEC was informed by Ms. Russo that William Wu
(518) 402-8782 of Albany DER will be the case manager from the MGP
group and his supervisor is Gardner Cross. Later, I received an
e-mail from Mr. Cross informing me that Remediation Case #231083,
LIRR West Side Yard, had been opened for the site. 3/5/13 - Raphael
Ketani. Mr. Wu called me today. He said that he consulted with his
boss and found out that the MGP group will take the "big picture
approach" regarding the site. This means that they will look at all
of the contamination at all levels below grade. I asked Mr. Wu to
send me an e-mail stating this. He said that he will. Mr. Wu sent the
e-mail. Later, I forwarded Mr. Wu’s e-mail to Mr. Hussein. I also
discussed the case with Mr. Hussein. He granted permission to close
the spill case effective today. Based upon the information in the case
file, based upon the opening of the MGP remediation case for the same
site and the same area within the site (#231083), and based upon the
decision by the MGP group in Albany DER to address all of the
contamination within the site, I am closing the spill case.

Remarks:
At 18-20 feet deep, found elevated PID reading.

<td>DEC Memo</td>
<td>09/19/08 - See eDocs for Con Ed report detailing cleanup and closure. Prior to Sept, 2004 data translation this spill Lead_DEC Field was &quot;O'CONNELL&quot;. NOTE: This is the &quot;Master Spill Number&quot; for Transformer #1. It is to remain open until all repairs on this equipment and remediation are completed. (JHO, 3/24/06)--------------------------e2mis no. 142-238 (master):12-APR-2002 @ 11:20Hrs. Michael Butchar, Station Supervisor, reports during Substation inspection historic</td>
</tr>
</tbody>
</table>
contamination was found on bluestone in/ around transformer vault 1. By visual inspection the surface layer of the bluestone appears to be less than 10% stained/ discolored next to radiator. The substance is unknown, however it is likely to be identified as dielectric fluid. The quantity released is unknown, however for reporting purposes the volume has been entered as 1 gallon. A station remediation plan will be prepared to determine the priority order for addressing this and other historic incidents as per SSO's letter to NYSDEC dated February 20, 2002. Housekeeping and maintenance activities, as required, will be documented. Note: This vault is connected to an oily water separator. ~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~e2mis no. 151722 (sub);1/13/04

@ 10:23 hrs. Joe Pitre #12477, Senior Substation Operator found approx. 1 ounce of transformer oil had leaked from the main body valve of Transformer #2 located at the West 50th Street Substation. No samples taken due to generator knowledge. Prior historical sample results are less than 1.0 ppm PCB as per lab sequence number 01-11722. Absorbent pads will be used to cleanup and control the leak. Update: 1/13/04 Joe Pitre #12477 reported at 11:49 hrs. that the cleanup was completed and a containment of absorbent pigs and pads was placed under the leaking valve. The cleanup was completed at 11:30 hrs. He also reported that the correct transformer main body valve leak is from Transformer #1 not Transformer #2 as he originally reported. Environmental Desk made the necessary corrections in this report. On 2/2/04 I checked the transformer and containment is in place pending outage for permanent repairs. Pat Keelan Update: 5/23/07. This spill was originally entered as occurring at West 49 Street substation by mistake. GBSee eDocs for 2007 Substation Inspection Findings and for response from Con Edison relative to this spill.

Remarks:

historical contamination in trans vault #1 being reported as per letter to dec dated 02/20/02 - ref #142238

Referred To: INVESTIGATION 1310227
Reported to Dept: 5/20/2004
CID: 444
5/20/2004: DEC (Sangesland) spoke with Dan Canavan of Geologic Services. Regular sampling of several offsite wells associated with an Exxon Mobil station located at West 51st St & 11th Ave. (#17-J WN @ 718 11th Avenue). He says the offsite well (MW-9S) had a "hit". They will send a sample out for fingerprinting. Based on that result, they may try to have this spill number disassociated from the Exxon Mobil station. Near to this "hot" well are open spill cases at a Chrysler Plymouth dealer (0304103). Another case is associated with 601 W 50th St.1/26/2005: Mobil documentation indicates that the product is not gasoline, but rather diesel fuel or fuel oil. This spill will be referred to the adjacent property (Chrysler-Jeep @ 711 11th Avenue; spill #03-04103). (Harrington)07/26/10-Hiralkumar Patel. while investigating spill at 711 11th Ave (spill # 0751290), found this old spill associated with it. This spill was reported due to product found in well MW-9S located on west sidewalk of 11th Ave, close to 711 11th Ave. This well was installed by ExxonMobil as part of their ongoing remediation work (spill #: 8904939). 3:13 PM:- sent email to DEC Harrington inquiring about any available reports for this spill. 4:14 PM:- received call from DEC Harrington. He referred to DEC Haggerty who is working on spill case 8904939 related to Exxon Mobil property (718 11th Ave) which is across the street from well MW-9S. Spoke with DEC Haggerty. He mentioned that there was about 2 ft of product found in well MW-9S in 2004, and later it was found to be either diesel or #2 fuel oil. As Exxon Mobil site has gasoline tanks and no diesel tanks on property, they closed the spill #: 0401882 and referred to closest open spill #: 0304103 as per PBS #: 2-157899 for Exxon Mobil site, they had two #2 oil tanks in past: one 550 gal UST and one 1,000 gal UST removed in Dec. 1944 and one 1,000 gal UST removed in Dec. 1989. Reviewed map for Exxon Mobil case and found that well MW-9S is located in front of building at 709 11th Ave which is Kenneth Cole Productions, Inc., a shoe making company. Also, there was no product found in wells MW-4 and MW-5, which are located upgradient from well MW-9S. Properties owned by Kenneth Cole Productions: 601 W 50th Street and 615 W 50th Street. As per PBS record, site has one 5,000 gal #2 oil AST on legs.
Mr. Tracy mentioned that they are running business at the site since 2001. They rented property from 2001 to 2005 and then bought this property in 2005. He also mentioned that building was using #6 oil in past, but around 2003 they changed to #2 oil as old boiler broke. Found dark stain around fill port for the tank. Fill port/vent pipes are location along W 50th Street. Tank at Kenneth Cole is located almost in the southern end of the building, far away and downstream from well MW-9S. During site visit, found new sidewalk along W 50th Street towards Kenneth Cole property. As per Mr. Tracy, no contamination found during installation of new sidewalk. During site visit, found multiple PBS violations for tank at Kenneth Cole: 1) Tank installed in Sep. 1960. Spills reported at 601 and 603 W 50th Street: 9805550, 0012588, 0200426, 0311542, 0401253, 0401882. All these spills, except 0401882, were reported by ConEd on their W 50th Street substation, but according to city record, site owned by Kenneth Cole Productions, Inc. Spill # 9805550 was reported on 08/04/1998 due to about 2 gal transformer oil spill. Case closed. Spill # 0012588 was reported on 02/26/01 due to about 1 gal transformer oil spill. Case closed. Spill # 0200426 was reported on 04/12/02 due to historical contamination found in transformer vault #1 at ConEd Substation. Case closed. Spill # 0311542 was reported on 01/13/04 due to minor leak of dielectric fluid. Case closed. Spill # 0401253 was reported on 05/05/04 due to release of 3 ounces of dielectric fluid. Case closed. Spill # 0401882 was reported on 05/20/04 due to findings of free product in monitoring well associated to ExxonMobil site at 718 11th Ave. Fingerprint analysis showed product as either diesel or #2 fuel oil. DEC Harrington closed this case and referred to spill #: 0304103.

Found multiple PBS violations for tank at Kenneth Cole: 1) Tank registered as AST, but tank is completely wrapped in concrete which is considered as UST; 2) No color code at fill port; 3) No tank label on tank or near gauge; 4) Tank installed in 1960, prior to 1986, which requires tank testing every five years. No records of tank test available since tank use changed from storing #6 oil to #2 oil. Kenneth Cole Productions, Inc. 603 West 50th Street New York, NY 10019. Attn.: Charles Tracy Senior Manager Administrative Services Ph. (212) 315-8202/(212) 265-1500 (646) 510-7591 (C) Fax (866) 688-5601 Email: ctracy@kennethcole.com Jennifer Steindler ** Legal Counsel ** Kenneth Cole Ph. (212) 265-1500 Email: jsteindler@kennethcole.com. Met John Johnson at Potamkin at 706 11th Ave. As per Mr. Johnson, site has two 550 gal motor oil and one 1,000 gal waste oil ASTs. Found fill port/vent pipes along northern foundation wall of the building along W 51st Street. Found old fuel oil fill port near curb side along W 51st Street. In area nearby fill/vent lines for motor/waste oil tanks. Mr. Johnson mentioned that they are using natural gas for heating and doesn't know if there was
any heating oil tank in past. John Johnson, Building Manager, GM Potamkin, 706 11th Avenue, New York, NY 10019. PH. (212) 708-3180 (O) (917) 682-9950 (C) Fax (212) 603-2996.
jjohnson@potamkincadillac.com
3:17 PM: received email from DEC Haggerty with copy of report from ExxonMobil dated Jan. 06, 2005.

abstract: this report was made after findings of free product in well MW-9S (which is off-site from ExxonMobil)- on 05/20/04, about 0.07 ft of product found in well MW-9S- during the gauging event, no noticeable evidence of vandalism was observed on the well or road box- groundwater was found at 11 ft bg and screen in well MW-9S is from 5 to 20 ft bg- ExxonMobil refused responsibility of product in well based on following: 1. fingerprint analysis of product from well indicated that the product has a boiling range from 401 to 1331 degree F (possibly mixture of diesel and lubricating oil), while gasoline sold at ExxonMobil station typically has boiling range from 80 to 435 degree F. 2. highly weathered gasoline would not have an initial boiling point greater than approx. 300 degree F. 3. results showed that product did not contain any additive elements or wear metals usually present in used or new motor oils. 4. ExxonMobil never stored diesel on the property. 5. product was not found in upgradient wells MW-4, MW-5 or MW-103. 5:3 PM: spoke with DEC Haggerty. informed him that fuel oil tanks at buildings 709 and 711 located more than 300 ft downgradient from the well MW-9S. also, PBS record shows old #2 oil tank at ExxonMobil site. as per fingerprint analysis, product in well MW-9S was probably mixture of diesel (similar to #2 oil) and lubricating oil (ExxonMobil has repair shop). also observed an abandoned fuel oil fill port at Potamkin along W 51st Street.

ExxonMobil report indicated presence of bedrock and water main between the ExxonMobil site and well MW-9S. these underground structures and bedrock might have created channel which brought oil from ExxonMobil/Potamkin to well MW-9S. asked Haggerty to send me copy of well logs for wells installed by ExxonMobil and excavation work report (to confirm no product found in excavation and depth of excavation/bedrock). as per PBS # 2-342297 for Potamkin, site has/had following tanks: - two 275 gal lube oil ASTs, in-service installed in Nov. 2001- three 275 gal waste oil ASTs, in-service installed in Nov. 2001- two 1,000 gal USTs, installed in Dec. 1962 and removed in Nov. 2001, no information about product stored in these tanks in past:

4:14 PM: spoke with Mr. Johnson at Potamkin. he confirmed that they have 1,000 gal waste oil tank. asked him to correct information on PBS record. Mr. Johnson asked to contact Mr. Sunga, controller for Potamkin property. 4:23 PM: spoke with Mr. Sunga. he doesn't know if Phase I or Phase II investigation done before they bought property. he asked to send any letter to Mr. Spallina, Marco Sunga, Controller, Ph. (212) 708-3107/ (212) 433-1722 email: mcsunga@yahoo.com 706 Manhattan LLC. 706 11th Avenue, New York, NY 10019. Attn.: George Spallina **Vice President** Ph. (212) 708-3102 email: geo798@aol.com 4:35 PM: sent email to Mr. Johnson with copy of PBS correction form. email copied to Mr. Sunga. asked them to submit correction form by end of 08/16/10. 4:46 PM: received email from DEC Haggerty. he mentioned that DEC Harrington was on-site during excavation work and did not encounter diesel or lubricating oil contamination. Haggerty also sent copy of email describing work done during installation of wells MW-4, MW-5, RW-1D, RW-2D and RW-3D. wells MW-4, MW-5 and RW-3D were installed on east sidewalk of 11th Ave (along ExxonMobil and Potamkin) and wells RW-1D and RW-2D were installed inside gas station property line. bedrock was found at 3 ft depth in sidewalk wells, at
5 ft in RW-1D and at 6 ft 7 in in RW-2D. groundwater was found at 11 ft 2 inches bg in all wells. all wells have screen within bedrock only.4:59 PM: sent email to Mr. Tracy with copy of PBS correction form, informed him about PBS violations and asked to submit PBS correction form alongwith tank tightness test result by the end of 08/20/10. informed him that if the department doesn't receive the required documents by the end of 08/20/10, a notice of violation may be issued.07/28/10-Hiralkumar Patel.2:07 PM: received email from Mr. Tracy, he is working on scheduling the tank test with ACe Atlas.08/03/10-Hiralkumar Patel.10:00 AM: visited site with DEC Mohammed Hasan to check any product in well MW-9S. found oil in well MW-9S, but could not measure product thickness as it was only one inch well. product looks similar to lubricating/hydraulic oil.1:06 PM: spoke with Mr. Tracy at Kenneth Cole regarding any shoe manufacturing at the site. Mr. Tracy mentioned that they only do design at the site and there is no machinery at the site which needs lube/hydraulic oil. Mr. Tracy asked to send any letter to his legal counsel, Jennifer Steindler.2:08 PM: sent email to DEC Haggerty requesting copy of soil excavation report and well construction logs for all on-and off-site wells related to ExxonMobil property discussed with DEC Austin. due to findings of petroleum product in well MW-9S, during the site visit, case re-opened. this spill was originally reported at 709 11th Avenue as well MW-9S was located in front of it. but as no information about source of product in well MW-9S, changed spill location from '709 11th Ave' to 'in front of 709 11th Ave'. also Austin asked to initiate state funded work (PIN # 05289) based on following: product found in only one well MW-9S- product was never found in upgradient wells located in front of ExxonMobil and Potamkin properties- no history of underground tanks at Chrysler property- no history of machinery operation in past 10 years at Kenneth Cole siteAustin asked to pump out product from well MW-9S and lock it. based on observation after 2-3 weeks following pump-out, the department may require additional work.08/04/10-Hiralkumar Patel. reviewed old spills (9211268 and 9306238, no other spills reported) at Potamkin property (706 11th Ave). in Dec. 1992, spill #: 9211268 was reported as a 1,000 gal waste oil UST failed a tightness test. the waste oil UST was removed later on. in Aug. 1993, spill #: 9306238 was reported as found contamination near oil/water separator. as per Phase I, in 1899, the subject property and adjacent properties were used for housing. by 1930, a Mobil gas station was operating adjacent to the site. the subject site was still characterized as residential/commercial. by 1951, the subject site was identified as the Diamond T. Motor Cab Company. the year of construction was listed as 1948.as per the previous reports (stored on e-docs under spill #: 9306238), the 1,000 gal waste oil UST was located beneath the first floor of the building along the south side of the property (along W 50th street). the Department does not have copy of waste oil tank closure report. but as per report dated Feb. 2000, which summarize work done on site under both spill reports, the waste oil UST was determined to be intact with no evidence of pitting or leakage. also, five hydraulic lifts and two oil/water separators removed from the site. one oil/water separator was located on first floor in area of previous waste oil UST and another oil/water separator was located in basement along northern foundation wall. a 1,000 gal heating oil AST and a boiler room was located near oil/water separator in basement.
PRODUCTION STUDIO (Continued)

during removal of hydraulic lifts, found only SVOC contamination which was probably related to backfill material. during removal of oil/water separator in basement, found product on water. product sample was collected for fingerprint analysis. result of fingerprint analysis indicated that the sample contained petroleum hydrocarbons in the distillation range of motor oil and kerosene. it was noted in the analysis that waste oil and hydraulic fluid could not be distinguished from motor oil by the method used. subsequently, a monitoring well in former boiler room and a sump well in oil/water separator excavation were installed. no product found in any well after initial findings. both wells were monitored and sampled for eight quarters. no dissolved contamination found in groundwater sample from sump well, but dissolved BTEX contamination found in well MW-1 which was installed in former boiler room. adjacent to the former boiler room is ExxonMobil property where spill reported in 1989 (spill #: 8904939). the Department closed the spill numbers on 706 11th Ave based on eight quarterly monitoring reports and notified ExxonMobil to delineate their spill area.

-0"---------3'-6"----------5'-0"----------------NAafter reviewing the well logs, found that screen in well MW-9D starts at 29 ft and groundwater in that well found around 11-12 ft depth. as screen in well MW-9D is well below water table, that could be reason for not having any product in well MW-9D, but 2 ft of product in well MW-9S and MW-10, MW-11, MW/VP-8 and MW/VP-9 bridge the observed overburden bedrock interface. screened portion of recovery wells RW-1, RW-2, RW-3, RW-6 and RW-7, as well as the screened portion of monitoring wells MW-4, MW-5, MW-8, MW-9D and MW-9S are located below the observed bedrock overburden interface less than ----------------well log information (all distance in ft):

-0"--------6'-0"--------NARW-3(Deep)------5'-6"--------2'
-0"--------3'-6"--------5'-0"--------NAafter reviewing the well logs, found that screen in well MW-9D starts at 29 ft and groundwater in that well found around 11-12 ft depth. as screen in well MW-9D is well below water table, that could be reason for not having any product in well MW-9D, but 2 ft of product in well MW-9S which is only about 2 ft away from MW-9D: 2:30 PM: spoke with Mr. Sunga, controller at Potamkin, informed him that based on old spill reports and site specific groundwater flow direction (defined by ExxonMobil), the oil found in well MW-9S may be originated on Potamkin property. asked him if they want to do any investigation or the Department proceed with investigation. Mr. Sunga asked to talk to Mr. Spallina, vice president in this matter: 2:35 PM: left message for Mr. Spallina: 08/06/10- Hiralikumar Patel: 9:32 AM: received call

TC4381152.2s  Page 2914
from Mr. Spallina, explained him about findings of free product in well and history of old spills on Potamkin property. Mr. Spallina requested meeting with his boss John Bruno at the site. Mr. Spallina will talk to Mr. Bruno and try to schedule meeting at 9:30 AM on 08/09/10.reviewed log for well MW-8/MW-9S/MW-9D which shows well was installed by core barrel method and not air rotary. discussed with DEC Vought who mentioned that by core barrel method, contractor can see cracks in rock and any oxidation (which indicates water flow in the crack) in it.08/09/10-Hiralkumar Patel.9:45 AM:- visited site. met Mr. Spallina at Potamkin, explained him about findings of free product in well MW-9S and source possibility on his property. he will discuss in internal meeting to decide if they wants to do their investigation. inspected basement at Potamkin site. site has 1,000 gal aboveground tanks in basement. found well inside the tank room (which was previous boiler room). asked Mr. Spallina to close this monitoring well to avoid any spilled product (if happen) going into ground. Mr. Spallina mentioned that as part of their current contract to remove some out-of-service 275 gal ASTs, they have also planned to close this well.during meeting, Mr. Spallina mentioned that the Cybert Tire and Car Care, located at 726 11th Ave, is using lifts for long time. this property is located north of W 51st Street.spoke with John Everett at Cybert Tire store. John mentioned that the tire shop is in service since 1916. up until 1995, site was used for tire change and alignment work only. in 1995, they installed five aboveground electrical lifts for repair shop. they have one 275 gal motor oil and one 275 gal waste oil ASTs.Cybert Tire and Car Care726 11th AveNew York, NY 10019owner: John Oliver EverettPh. (212) 265-1177Fax (212) 765-4031email: brewsterguy1@aol.comalso inspected basement wall along 11th Ave at Kenneth Cole property. found red stains and some wet material on foundation wall in area close to well MW-9S on sidewalk. asked Mr. Tracy to seal the wall. suggest him to do sampling to find out type of product.during database search, found spills reported at 700 11th Ave (spill #: 0608770, 0607790, 0605854, 0604159, 0601353, 0103148), which is ConEd substation property. this property was honda showroom and repair shop in past. spill #: 0103148 is still open and under remediation. DEC Tibbe is the project manager. as per old reports, found about 5 ft of gasoline product in well MW-2 installed on east sidewalk of 11th ave. about 80 ft south of southeast corner of the intersection of 11th Ave and W 50th Street.discussed with DEC Austin. he asked to pump out well without further delay 4:08 PM:- sent Contractor Authorization Form to Brian at F&N. asked him to call to discuss the site.Brian Linehan **cleanup contractor**Fenley & Nicol EnvironmentalPh. (631) 586-4900 (O) (516) 768-1765(C)email: blinehan@fenleynicol.com08/13/10-Hiralkumar Patel.2:47 PM:- received email from DEC Haggerty with response from Kleinfelder. Glenn Spataro from Kleinfelder (631-218-0762 ext. 274, cell: 516-903-3550, email: gspataro@kleinfelder.com) sent email to Haggerty informing that they had gauged well MW-9S. product was found at 11.19 ft and water was found at 11.51 ft below top of casing.3:23 PM:- left message for Brian.08/16/10-Hiralkumar Patel.9:30 AM:- received call from Brian McCabe from F&N. he will handle this pin job in F&N and will be at the site at 11 AM on 08/19/10.Brian McCabeFenley & Nicol EnvironmentalPh. (631) 586-4900 (O) (516) 658-9671 (C)email: bmccabe@fenleynicol.com08/19/10-Hiralkumar Patel.11:30 AM:- visited site. met Brian McCabe from F&N. gauged wells MW-8, MW-9D and MW-9S. found groundwater around 11 ft bg. product found in well MW-9S. well was pumped for about 15 minutes.
mostly water was pumped out. well recharged immediately. no product found in well MW-9S after pump out. Brian collected product sample for fingerprint analysis.08/24/10-Hiral Kumar Patel. sent contractor work authorization form to TestAmerica for sample analysis. asked them to submit sample and standard chromatograms. Erin Arasate.TestAmerica Ph. (203) 944-1318 Fax (203) 929-8142 email: erin.arasate@testamericainc.com 08/25/10-Hiral Kumar Patel. 10:08 AM:- received email from Dave from Jade Environmental. Dave is working on PBS issue to Potamkin site. Dave Pelletier. Jade Environmental. Ph. (914) 882-6074 email: JadeEnv@alum.rpi.edu 09/08/10-Hiral Kumar Patel. 9:22 AM:- received a fingerprint analysis result from TestAmerica. lab compared sample chromatogram with standard chromatogram for #2 oil, #4 oil, #6 oil, kerosene, gasoline, motor oil and coal tar, but doesn’t match with any standard chromatogram. no comparison done with lube oil or hydraulic oil. also report missing standard chromatogram for #2 oil.09/10/10-Hiral Kumar Patel. 3:38 PM:- left message for Erin at TestAmerica. asked her to submit missing chromatogram for #2 oil. also asked her to call back to discuss further comparison of sample chromatogram with other petroleum compounds. 3:53 PM:- sent email to Erin asking to submit chromatogram for #2 oil and to call to discuss extending comparison to other petroleum compounds. 09/14/10-Hiral Kumar Patel. 2:45 PM:- visited site. found product in well MW-9S. could not measure product thickness as sensor was covered with oil. went to Potamkin and met Mr. Spallina. he spoke with property owner who refused to do any investigation on their property. Mr. Spallina discussed with DEC Austin and DEC Vought. based on available information. Austin asked to compare fingerprint results to some other petroleum compounds for possible match. as product found in well, he asked not to send contractor again for well gauging and pump out. he also asked to send letter to Potamkin suggesting to start investigation. 09/16/10-Hiral Kumar Patel. 2:24 PM:- left message fro Erin. 2:45 PM:- spoke with (and also sent email to) Brian McCabe and asked him not to respond to the site again as requested earlier in the work authorization form (item # 5). asked Brian to submit a brief report for work done till date. 09/17/10-Hiral Kumar Patel. received email from Erin (at 5:56 PM on 09/16/10). she will send standard chromatogram for #2 oil which is missing in previously submitted report. she mentioned that the only standards that were are capable of comparing samples to by 8015B- Finger print analysis at the lab are #2 fuel oil, #4 fuel oil, #6 fuel oil, kerosene, Gasoline, Motor oil and Coal Tar and they do not have the ability to compare to other petroleum based constituents at this facility. she can check with other lab in their network for further comparison. 09/21/10-Hiral Kumar Patel. 11:01 AM:- left message for Erin. 09/22/10-Hiral Kumar Patel. after reviewed and approved by DEC Austin and DEC Urda, sent letter to Mr. Spallina requesting to start delineation of groundwater contamination found in well MW-9S (based on groundwater flow direction). informed Mr. Spallina that if Potamkin doesn’t initiate investigation by end of 10/22/10, then DEC will activate state funded contractor to perform the necessary investigation. letter emailed to Mr. Spallina. 10:25 AM:- spoke with Erin. asked her to send chromatogram for #2 oil. she has already sent inquiry in their network to find out if any lab has capability to compare existing sample chromatogram with standard for hydraulic oil/lube oil. Erin will call back by end of 09/24/10. 09/23/10-Hiral Kumar Patel. 9:05 AM:- received email from Erin. she found one of their lab which has
standard chromatograms for hydraulic and lube oil. She will send those with missing #2 oil chromatogram. 10:18 AM - sent email to Erin and asked her to have those chromatograms compared to sample chromatogram by one of her chemist and to submit results with all standard chromatograms. 2:27 PM - received email from Erin with copy of standard chromatogram for #2 oil. 09/24/10. Hiralkumar Patel. 4:16 PM - received email from Charles from Kenneth Cole including copy of updated PBS (showing underground tank and #2 oil) and copy of tank tightness test result (which shows tank system tight). 09/25/10. Hiralkumar Patel. 11:39 AM - sent email to Brian with copy of tank test result for tank at Kenneth Cole. Asked him to review test result and update PBS record (as record shows tank test due date at 12/27/1987. 11:48 AM - sent email to Erin inquiring about status on product fingerprint analysis result comparison to other petroleum compounds. 09/29/10. Hiralkumar Patel. 11:51 AM - received email from Brian with report on work done on 08/19/10. 10/5/10. Hiralkumar Patel. Received email from Erin (at 6:19 PM on 10/04/10) including standard chromatograms for hydraulic oil and lube oil. She mentioned that sample chromatogram doesn't match with standard chromatograms for lube/hydraulic oil. She also mentioned that the sample was analyzed on different instrument than comparison standards for hydraulic/lube oil, so it is somewhat difficult to make a determination. After discussing with DEC Austin case transferred to DEC Vadim due to product on groundwater and an unknown source (possible PIN job). 10/19/10. Hiralkumar Patel. Approved two invoices (#103593 and 103820) from Fenley & Nicol. **See spill #: 0751290 for possible PIN job. 10/19/10. Hiralkumar Patel. Approved two invoices (#103593 and 103820) from Fenley & Nicol.**

- **08/19/10. Hiralkumar Patel.** Received email from Erin at 6:19 PM on 10/04/10. Included standard chromatograms for hydraulic oil and lube oil. Mentioned that sample chromatogram doesn't match with standard chromatograms for lube/hydraulic oil. Also mentioned that the sample was analyzed on different instrument than comparison standards for hydraulic/lube oil, so it is somewhat difficult to make a determination. After discussing with DEC Austin, case transferred to DEC Vadim due to product on groundwater and an unknown source (possible PIN job). 10/19/10. Hiralkumar Patel. Approved two invoices (#103593 and 103820) from Fenley & Nicol. **See spill #: 0751290 for possible PIN job.**

**08/29/10. Hiralkumar Patel.** Sent email to Erin inquiring about status on product fingerprint analysis result comparison to other petroleum compounds. **08/29/10. PRODUCTION STUDIO (Continued)

installed within 11th Avenue along the path of the involved feeders for 1310227 which are also likely the source for 0401882. Con Edison advised that the consultant ARCADIS for the gas station remediation project at the corner of 11th Avenue and W. 51st Street (sp. 8904939) which had installed the wells along 11th Avenue which were impacted has instructed that Con Edison may no longer access the wells. They are working out for Con Edison to take over/ownership/responsibility for the wells, which Con Edison advised should be completed within 2 weeks. Con Edison/Langan will put together proposal for the next phase of investigation. (JOC)

<td>05/03/07 - See e-docs for Con Ed report detailing cleanup and closure. e2mis no 159328. John G Morgan reports that a garbage truck was by the above location and leaked approx. one qt of hydraulic fluid to MT232. It is unknown as to who was the operator of this vehicle, it was not on location reports Mr. Morgan. He goes onto report that the only reason he found out this much was because an undisclosed person came from one of the buildings and told reported that much information. This will be a 3rd party spill. No sewer or waterway affected. Unable to see oil filled equipment in the structure. Environmental yellow tag # 10038 was applied. Water is standing, no visual water movement. No substantial cracks. Not able to see if dielectric filled feeders in the structure. Same, 1 for id and 1 for pcb took 2 soil samples from the spill. Sample priority &quot;E&quot;. Chain of custody # cc16381. Cleanup is pending results. Remarks: material was spilled in a vault ... the cause is unknown. Unknown is material is PCB or Non PCB. Clean up is pending lab results and deenergizing the feeder. ConEd# 159350 No to four question but there is a transformer involved.</td>

**DEC Memo:**

1/23/07 - Raphael Ketani. I spoke to Robin Wilson at (212) 967-2212. She said that the spill happened when one of the workers disconnected a hose from a machine. She said that it was all cleaned up. Based upon my conversation with Ms. Wilson and the successful cleanup of the small amount of oil spilled, I am closing the spill case.

**Remarks:**

SPILL WAS ON SOIL AND ASPHALT, SPILL AMOUNT ROUGHLY 1 QUART.

Material Name: waste oil/used oil
Case No.: Not reported

Remarks:
during a transfer between 2 vessels - when the hose was disconnected there was still pressure in the hose causing spill of the oil -

Prior to Sept, 2004 data translation this spill Lead_DEC Field was *KIRKMOLD*10/28/2002. 1800. J. Krimgold/Tom Sullivan(phone). Absorbent booms and pads were deployed. Spill contained between a ship and receiving barge. Most of oil went to the deck of the barge. Contractor Clean Water of NY was hired by RP to complete a cleanup. 10/28/2002. 2130. J. Krimgold/Michael Minoque (ECM Hudson)/phone. Cleanup completed. US CG left the site. No further action was required.

DEC Memo: Prior to Sept, 2004 data translation this spill Lead_DEC Field was "TIPPLE"9/20/2004 Sangesland spoke to John Leddy to find out if this case could be closed out. Leddy said he was subcontracted to do the testing. He has NOT done any repairs and has NOT been hired to retest the tanks again. Sangesland called "Angel"(building super???) and got no answer 07/14/06: This spill is transferred from Mr. Koon Tang to Q. Abidi. Contacted to John Leddy he said he will find the data and he will send it to me. -QA 07/19/06: Contacted Mr. Jerry William of Controlled Combustion Company. He said there is not any waste Manifest record and no soil sampling. They removed older tank and they have put in a new tank. He will fax me the supporting documents to close the spill. -QA 07/20/06: Reviewed letter from Mr. Jerry William (General Operational Manager), Controlled Combustion Co. Inc. They removed the old oil tank and they installed a brand new 10,000 gallon oil tank. He mentioned in his letter that there were only very small oil stains on the floor, which were cleaned up. The letter also included a copy of the tank test failure report, and documents indicating that the old tank had been removed and replaced with a new tank. Based on the information provided by Mr. Jerry William, this case could be closed out. -QA

Remarks: TEST METHOD WAS EZ THREE LOCATOR PLUS. TNAK IS ON LEGS, 95% VISABLE. THE DELAY IN REPORTING WAS DUE TO CONFUSSION DUE TO WHO WAS GOING TO REPORT IT.

BRWOLOSE

The site consists of several parcels located on West 53rd Street between 10th Avenue and the Amtrak easement, on West 52nd Street adjacent to the east side of the Amtrak easement, and along the Amtrak easement between West 51st and 53rd Streets in the City of New York, Borough of Manhattan. Railroad tracks pass through the site. A former ExxonMobil gas station was present on this portion of the Site from approximately 1950 - 1992. By February 2006, all original buildings on-site were torn down and all on-site contaminated soil was excavated and removed off-site. The property is currently owned by Dermot Clinton Green LLC. The Site now consists of two residential towers, a mixed-use low-rise building, public park, and subsurface parking garage (all currently under construction). A Certificate of Completion was issued on October 20, 2006.

Env Problem:

Past environmental investigations revealed that this BCP site had on-site and off-site petroleum impacted soil and groundwater as a result of petroleum spills from the former Exxon/Mobil Service Station at the corner of 53rd Street and 10th Avenue. Dissolved phase groundwater contamination (BTEX, lead and MTBE) has impacted the shallow groundwater table exceeding standards. An adjacent off-site building has experienced liquid petroleum in the basement. On-site and off-site remedial work occurred in early 2000. Although all on-site contamination has been removed through the BCP program in 2006, an off-site groundwater plume still exists and additional cleanup work is required to remediate the off-site contamination. The City of New York has accepted the responsibility for the off-site contamination and a final Site Investigation Work Plan was approved by NYSDEC on February 9, 2009. Field work will begin in the spring of 2009.

Health Problem:

All on-site contamination has been remediated through remedial actions completed in 2005-2006. Remedial actions included demolition of all site buildings, removal of all soil to the top of bedrock, and associated dewatering of the site. No contamination is known to exist.
CLINTON GREEN DEVELOPMENT PROJECT (Continued)

S106906459

beneath the top of bedrock. Therefore, all on-site exposures have been mitigated. A shallow off-site petroleum-contaminated groundwater plume was documented in 1993 (NYSDEC Spill No. 93-08101). Migration of the plume has been limited due to the geology of the area. NYSDEC is currently pursuing the responsible party (Clinton Green OU#2) to investigate and remediate any off-site contamination.

Program: BCP

Acres: Not reported
HW Code: C231011A
SWIS: 3101
Town: New York City
Update By: JAQUINN

Site Description:
Location: The Off-site Clinton Green Development Project Site, defined by a shallow off-site petroleum-contaminated groundwater plume, involves the intersection of West 53rd Street and 10th Avenue in Manhattan, New York City. Site Features: This location is an urban area of commercial/light industrial and residential use including multi-story buildings, sidewalks and open city streets. A paved elementary school playground is located on the southeast corner of this intersection and the Hudson River is approximately two blocks west of the Site. Zoning/Historical Use: The Site is in an Environmental Zone which is part of the Clinton Green Urban Renewal Area. This is an off-site remedial project associated with the now-completed Clinton Green Development Brownfield Cleanup Project. Site Geology and Hydrogeology: The depth to groundwater ranges between 12 to 20 feet below the surface. The soil, below the urban fill, is fine to coarse-grained sand. Bedrock is encountered between 11 feet and 15 feet below the surface.

Env Problem:
Nature and Extent of Contamination: The on-site source area (Clinton Green Development BCP Site) was cleaned up by Dermot Clinton Green in 2006, and this project includes the remediation of the off-site petroleum-contaminated plume. Contaminants: Based upon investigations conducted to date, the primary contaminants are petroleum-related volatile organic compounds (VOCs) in a shallow off-site groundwater plume. Concentrations: Concentrations of benzene in the groundwater ranged from non-detect to 330 parts per billion (ppb), exceeding the groundwater standard of 1 ppb. Ten other VOCs also exceeded the groundwater standard. Naphthalene (290 ppb) was the only semi-volatile organic compound detected and it exceeded the groundwater standard of 5 ppb. This very localized plume has migrated off-site approximately 100 feet down-gradient. Significant Threat: The BCP site presented a significant environmental threat due to the off-site release of contaminants from source areas.

Health Problem:
Direct contact with contaminated groundwater is not expected since contamination is located at depth and below pavement. Ingestion of contaminated groundwater is not expected since the area is served with public water. An evaluation of the potential for vapor intrusion to occur is part of the approved Remedial Action Workplan currently underway.
The site is located at 514 - 520 West 28th Street in New York City, New York County and has an area of approximately 0.51 acres. It is between 10th and 11th Avenues and is bounded to the north by West 28th Street and the south by West 27th Street. Commercial structures are adjacent to the east and west boundaries.

Site Features: Presently, the site is undergoing redevelopment. Prior to remediation and redevelopment, the two lots that made up the site contained a vehicle rental company and a scrap yard. Current Zoning and Land Use: The site is zoned commercial (C6-3) and is located in a commercial and residential area of the West Chelsea section of the Borough of Manhattan. Past Use of the Site: The site has been occupied by several residential structures, laundry cleaning, metal works, manufacturing, motor freight storage, automobile repair and a scrap yard. Site Geology and Hydrogeology: Prior to remediation, subsurface material present below the site included historic fill from prior developments that may have been used to stabilize soil or to elevate the existing ground. The fill included concrete, brick, cinders, and other construction debris mixed, silt, sand and gravel and was generally present from 1-10 feet below ground. Below the fill the shallow subsurface soil at the site consists of sands and silts, glacial till intermixed with lean clay. Depth to bedrock ranged from 15 to 25 feet below grade. The surface geology of Manhattan generally includes very thin layers of unconsolidated glacial deposits underlain by bedrock. Groundwater at the site is encountered at approximately 8 to 11 feet below ground surface. Regional groundwater flow direction is westerly toward the Hudson.

Env Problem: Soil: Investigations found no evidence of significant VOC contamination in soil. Trimethylbenzenes and xylenes were present in one of the 21 soil samples at concentrations above their unrestricted use SCOs, but well below residential use SCOs. PAHs were observed in about half of the samples at concentrations indicative of historic fill. Metals are also present in soil at concentrations typical of historic fill and urban background. However, mercury concentrations ranged from non-detect to 69.6 parts per million (ppm). The unrestricted use SCO for mercury is 0.18 ppm; restricted residential is 0.81 ppm. The entire site has been excavated beyond the site boundary on all side and to bedrock over about two-thirds of the site. The remaining soil meets unrestricted SCOs for all constituents. Groundwater: Cis-1,2-dichloroethene (DCE) was found in groundwater samples from two wells near the north-west corner of the site at concentrations up to 260 ppb. DCE has been documented in up-gradient groundwater and is not due to an on-site source. Soil Vapor: The presence of chlorinated VOCs in soil vapor and groundwater presents the possibility of vapor intrusion to future on-site buildings. The maximum concentrations of tetrachloroethene (PCE) and...
trichloroethene (TCE) were detected along the west boundary at the respective concentrations of 308 micrograms per cubic meter (ug/m3) and 828 ug/m3. The site has been excavated to below the water table and the new on-site building will have a water vapor barrier. USTs were exhumed in August 2013 and disposed of off-site. Two more wells were removed during the site remediation activities.

Health Problem:
The site is fenced and covered by concrete, people will not come into contact with site related soil and groundwater contamination unless they dig below the surface. Contaminated groundwater at the site is not used for drinking or other purposes and the site is served by a public water supply that obtains its water from a different source not affected by this contamination. Volatile organic compounds may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air or buildings, is referred to as soil vapor intrusion. Because the site is vacant, the inhalation of site related contaminants due to soil vapor intrusion does not represent a concern for the site in its current condition.

BROWNFIELDS:
Program: BCP
Site Code: 488150
Acres: .130
HW Code: C231086
SWIS: 3101
Town: New York City
Update By: BXANDERS
Site Description: Location: The site is located at the northwest corner of the intersection of West 24th Street and 10th Avenue. The site is approximately 0.13 acres in size. Site Features: The site currently is occupied by a non-operating gasoline service station, including a recently vacated 1-story commercial building last used as a convenience store. Current Zoning and Land Use: The subject property is zoned as M1-5, which allows for commercial and mixed-use buildings. The intended use of the site is for residential and commercial. The site is bounded directly adjacent by an 11-story residential building to the north, a car wash and mixed-use (residential and commercial) building to the south, and across 10th Avenue 4- and 6-story mixed-use buildings and a 20 story residential building. The site is approximately 100 feet away from the High Line
FORMER GETTY SERVICE STATION (Continued)

Park, which overlooks the site to the east, separated by a one-story art gallery. Past Use of the Site: The site was operated as a small portion of a gas light fixture manufacturing facility that occupied the eastern third of the block in the 1890s. The site then operated as a gasoline filling station from at least 1930 until recent decommissioning in 2013. Since 1988 the site had 8 spill numbers assigned to it, out of which one spill number still remains open. In 1998 twelve 550-gallon gasoline USTs, three 4,000-gallon gasoline USTs, one 275-gallon fuel oil UST, and two fueling pump islands were removed and 1,853 tons of impacted soil was removed. Post excavation soil sampling results identified concentrations of volatile organic compounds (VOCs) exceeding NYSDEC Recommended Soil Cleanup Objectives (RSCOs). Petroleum impacted groundwater was also detected on-site which still remains. Site Geology and Hydrogeology: The geologic conditions at the site consists mainly of fine to medium grained sands mixed with gravels, boulders, construction debris and interbedded layers of silt down to 25 feet below grade (fbg). The Sites topography is generally flat and the surface elevation is approximately 43 feet above mean sea level. Groundwater occurs within the unconsolidated soils at depths ranging from approximately 7 to 10 fbg; based on historical gauging data, there appears to be an appreciable degree of seasonal variation in the direction of groundwater flow at the site, periodically fluctuating between south, southwest and west.

Env Problem:

Nature and Extent of Contamination: Based upon investigations conducted to date, the primary contaminants of concern for the site include petroleum hydrocarbon related volatile organic compounds (VOCs) compounds. Soil: Per 1998 lab results for the end point soil samples collected from 10 feet below grade (SW-7) the highest benzene concentration was detected as 44.5 ppm which exceeded the soil cleanup objective (SCO) for commercial use (to 44 ppm). Other SCO exceedances were ethylbenzene at 198 ppm (restricted residential SCO = 41 ppm), xylene at 1,990 ppm (industrial SCO=1000 ppm), toluene at 479 ppm (restricted residential SCO=100 ppm) and MTBE at 124 ppm (restricted residential SCO= 100 ppm). Groundwater: Since 2001 twelve (12) monitoring wells have been installed on and off-site (3 on site and 9 off-site) related to the current open spill. Per August 2012 (latest available) monitoring data the highest on-site concentrations detected were: benzene (32 ppb), ethylbenzene (139 ppb), xylene (80.5 ppb) and MTBE (18.3 ppb). Groundwater standards have been exceeded for all of the above analytes. Site related soil vapor and indoor air samples never been analyzed.Special Resources Impacted/Threatened: The site is located in the urban area and Fish and Wildlife Impact Analysis is not warranted.

Health Problem:

Information submitted with the BCP application regarding the conditions at the site are currently under review and will be revised as additional information becomes available.

**ENG CONTROLS:**
- **Site Code:** 390497
- **HW Code:** C231062
- **Control Code:** 12
- **Control Type:** ENG
- **Date Record Added:** 12/03/2013
- **Date Rec Updated:** 04/08/2015
- **Updated By:** DPMECOMB
- **Site Description:** Location: The Mid Block #57 Project site is located in Manhattan at 615-649 West 57th Street, between 11th and 12th Avenues. The site consists of Tax Block 1105, Lots 14, 19, 43, and part of Lot 5, in the Borough of Manhattan. The surrounding neighborhood is mixed residential and commercial. East of the Site is The Helena, a residential tower, and Manhattan Mini Storage. West of the Site at 830 12th Avenue is a vacant lot, which is being remediated as an off-site project under site C231062A. Site Features: This site is approximately 1.36 acres in size. Former on-site buildings have been demolished and the site is currently vacant. Current Zoning and Land Use: The site is vacant and will be redeveloped following remedial action. It is a special district re-zoned for residential and commercial use. Past Use of the Site: The Site formerly contained an Airborne Express parcel warehouse and vehicular maintenance building (631-649 West 57th Street), a Potamkin Toyota auto service repair facility (623-629 West 57th Street), the Copacabana Night Club (615-621 West 57th Street), and Dynasty Auto Body Facility (616-618 West 58th Street). Numerous underground storage tanks (USTs) were left in place as part of historical site uses and contributed to site contamination with petroleum-related contaminants. Most of the USTs were removed in 2003, prior to the site entering the BCP. Additional USTs, along with remaining petroleum-impacted soil, were removed during the remedial action in 2012 and 2013. Site Geology and Hydrogeology: The topography of the site slopes gently to the west toward the Hudson River, which is situated approximately 250 feet west of the site. The site geology is characterized by fill material overlying sand and till, an organic silty clay layer, weathered rock, and bedrock. Bedrock is shallow on the eastern portion of the site and slopes steeply toward the west. During remediation, the top 20 to 25 feet of material was excavated and replaced with clean fill. The Certificate of Completion was issued for this site on 12/30/2013.

**Env Problem:** Nature and extent of contamination: Remediation at the site is complete. The following sections describe the nature and extent of contamination prior to the remediation in soil, groundwater, and soil vapor. Soil: Prior to remediation, the contaminants of concern in soil were petroleum-related volatile organic compounds (VOCs) and semi-volatile organic compounds (SVOCs). VOCs that were present in soil at concentrations exceeding the NYCRR Part 375 Unrestricted Soil Cleanup Objectives (UUSCOs) included ethylbenzene, 1,2,4-trimethylbenzene, and total xylenes. SVOCs that were present at concentrations exceeding the UUSCOs included chrysene and naphthalene. Metals were also present at concentrations exceeding the UUSCOs, including lead, zinc, chromium and mercury. During remediation, all soil above bedrock with contaminants exceeding the UUSCOs was excavated and disposed off-site. Remedial action has

**Location:** The Mid Block #57 Project site is located in Manhattan at 615-649 West 57th Street, between 11th and 12th Avenues.

**Site Features:**
- Former on-site buildings have been demolished.
- Current Zoning and Land Use: The site is vacant.
- Site Geology and Hydrogeology: The site geology is characterized by fill material overlying sand and till, an organic silty clay layer, weathered rock, and bedrock.
- Remediation: The Certificate of Completion was issued for this site on 12/30/2013.

**Nature and extent of contamination:** Remediation at the site is complete. The nature and extent of contamination prior to the remediation in soil, groundwater, and soil vapor are described in detail.
achieved soil cleanup objectives for Unrestricted Use. Groundwater: Prior to remediation, the contaminants of concern in groundwater were petroleum-related and primarily included VOCs. Contaminants in groundwater that were detected at concentrations exceeding the NYS Technical and Operational Guidance Series (TOGS) Ambient Water Quality Standards included benzene, 1,2,4-trimethylbenzene, and total xylenes. Groundwater must be monitored under site management to ensure that remedial action objectives for groundwater have been achieved by the remedy. Soil vapor: Prior to remediation, analytical data revealed the presence of VOCs in soil vapor samples, including benzene, 1,2,4-trimethylbenzene, tetrachloroethane (PCE), and total xylenes. Once the building foundation is in place, the sub-slab soil vapor must be monitored under site management to ensure that remedial action objectives for soil vapor have been achieved. Significant threat: Based on the pre-remediation site conditions, NYSDEC and NYSDOH determined that the Site represented a significant threat to human health and the environment. This decision was based on the nature of the contaminants identified at the Site; the potential for off-site migration of contaminants in the groundwater; and the potential for human exposure to site-related contaminants via soil vapors. These threats have been mitigated by completion of remediation. The Certificate of Completion was issued for this site on 12/30/2013.

Health Problem: Measures are in place to control the potential for coming in contact with any remaining contamination on the site. People are not drinking the contaminated groundwater because the area is served by a public water supply that is not affected by this contamination.

Location: The Mid Block #57 Project site is located in Manhattan at 615-649 West 57th Street, between 11th and 12th Avenues. The site consists of Tax Block 1105, Lots 14, 19, 43, and part of Lot 5, in the Borough of Manhattan. The surrounding neighborhood is mixed residential and commercial. East of the Site is The Helena, a residential tower, and Manhattan Mini Storage. West of the Site at 830 12th Avenue is a vacant lot, which is being remediated as an off-site project under site C231062A. Site Features: This site is approximately 1.36 acres in size. Former on-site buildings have been demolished and the site is currently vacant. Current Zoning and Land Use: The site is vacant and will be redeveloped following remedial action. It is a special district re-zoned for residential and commercial use. Past Use of the Site: The Site formerly contained an Airborne Express parcel warehouse and vehicular maintenance building (631-649 West 57th Street), a Potamkin Toyota auto service repair facility (623-629 West 57th Street), the Copacabana Night Club (615-621 West 57th Street), and Dynasty Auto Body Facility (616-618 West 58th Street). Numerous underground storage tanks (USTs) were left in place as part of historical site uses and contributed to site contamination with petroleum-related contaminants. Most of the USTs were removed in 2003, prior to the site entering the BCP.
Nature and extent of contamination: Remediation at the site is complete. The following sections describe the nature and extent of contamination prior to the remediation in soil, groundwater, and soil vapor. Soil: Prior to remediation, the contaminants of concern in soil were petroleum-related volatile organic compounds (VOCs) and semi-volatile organic compounds (SVOCs). VOCs that were present in soil at concentrations exceeding the NYCRR Part 375 Unrestricted Soil Cleanup Objectives (UUSCOs) included ethylbenzene, 1,2,4-trimethylbenzene, and total xylenes. SVOCs that were present at concentrations exceeding the UUSCOs included chrysene and naphthalene. Metals were also present at concentrations exceeding the UUSCOs, including lead, zinc, chromium and mercury. During remediation, all soil above bedrock with contaminants exceeding the UUSCOs was excavated and disposed off-site. Remedial action has achieved soil cleanup objectives for Unrestricted Use.

Groundwater: Prior to remediation, the contaminants of concern in groundwater were petroleum-related and primarily included VOCs. Contaminants in groundwater that were detected at concentrations exceeding the NYS Technical and Operational Guidance Series (TOGS) Ambient Water Quality Standards included benzene, 1,2,4-trimethylbenzene, and total xylenes. Groundwater must be monitored under site management to ensure that remedial action objectives for groundwater have been achieved by the remedy. Soil vapor: Prior to remediation, analytical data revealed the presence of VOCs in soil vapor samples, including benzene, 1,2,4-trimethylbenzene, tetrachloroethane (PCE), and total xylenes. Once the building foundation is in place, the sub-slab soil vapor must be monitored under site management to ensure that remedial action objectives for soil vapor have been achieved. Significant threat: Based on the pre-remediation site conditions, NYSDEC and NYSDOH determined that the Site represented a significant threat to human health and the environment. This decision was based on the nature of the contaminants identified at the Site; the potential for off-site migration of contaminants in the groundwater; and the potential for human exposure to site-related contaminants via soil vapors. These threats have been mitigated by completion of remediation. The Certificate of Completion was issued for this site on 12/30/2013.

Measures are in place to control the potential for coming in contact with any remaining contamination on the site. People are not drinking the contaminated groundwater because the area is served by a public water supply that is not affected by this contamination.
OFF-SITE MID-BLOCK #57 PROJECT (Continued)

Location: The Mid Block #57 Project site is located in Manhattan at 615-649 West 57th Street, between 11th and 12th Avenues. The site consists of Tax Block 1105, Lots 14, 19, 43, and part of Lot 5, in the Borough of Manhattan. The surrounding neighborhood is mixed residential and commercial. East of the Site is The Helena, a residential tower, and Manhattan Mini Storage. West of the Site at 830 12th Avenue is a vacant lot, which is being remediated as an off-site project under site C231062A. Site Features: This site is approximately 1.36 acres in size. Former on-site buildings have been demolished and the site is currently vacant. Current Zoning and Land Use: The site is vacant and will be redeveloped following remedial action. It is a special district re-zoned for residential and commercial use. Past Use of the Site: The Site formerly contained an Airborne Express parcel warehouse and vehicular maintenance building (631-649 West 57th Street), a Potamkin Toyota auto service repair facility (623-629 West 57th Street), the Copacabana Night Club (615-621 West 57th Street), and Dynasty Auto Body Facility (616-618 West 58th Street). Numerous underground storage tanks (USTs) were left in place as part of historical site uses and contributed to site contamination with petroleum-related contaminants. Most of the USTs were removed in 2003, prior to the site entering the BCP. Additional USTs, along with remaining petroleum-impacted soil, were removed during the remedial action in 2012 and 2013. Site Geology and Hydrogeology: The topography of the site slopes gently to the west toward the Hudson River, which is situated approximately 250 feet west of the site. The site geology is characterized by fill material overlying sand and till, an organic silty clay layer, weathered rock, and bedrock. Bedrock is shallow on the eastern portion of the site and slopes steeply toward the west. During remediation, the top 20 to 25 feet of material was excavated and replaced with clean fill. The Certificate of Completion was issued for this site on 12/30/2013.

Nature and extent of contamination: Remediation at the site is complete. The following sections describe the nature and extent of contamination prior to the remediation in soil, groundwater, and soil vapor. Soil: Prior to remediation, the contaminants of concern in soil were petroleum-related volatile organic compounds (VOCs) and semi-volatile organic compounds (SVOCs). VOCs that were present in soil at concentrations exceeding the NYCRR Part 375 Unrestricted Soil Cleanup Objectives (UUSCOs) included ethylbenzene, 1,2,4-trimethylbenzene, and total xylenes. SVOCs that were present at concentrations exceeding the UUSCOs included chrysene and naphthalene. Metals were also present at concentrations exceeding the UUSCOs, including lead, zinc, chromium and mercury. During remediation, all soil above bedrock with contaminants exceeding the UUSCOs was excavated and disposed off-site. Remedial action has achieved soil cleanup objectives for Unrestricted Use.

Groundwater: Prior to remediation, the contaminants of concern in groundwater were petroleum-related and primarily included VOCs. Contaminants in groundwater that were detected at concentrations exceeding the NYS Technical and Operational Guidance Series (TOGS) Ambient Water Quality Standards included benzene,

Town: New York City
Update By: JHOCONNE
Site Description: This project was initiated to address off-site impacts from the Mid-Bloc #57 Brownfield Cleanup Program (BCP) project C231062. There is also a stipulation agreement for the Site, under Spill 9810172. Location: This site is located at 615-649 West 57th Street and 830 12th Avenue in the Borough of Manhattan, Block 1105, Lot 1 and part of Lot 5. It is immediately west of BCP Site C231062. To the west is 12th Avenue and the Hudson River; north is 58th Street and the 59th Street Con Edison steam generating facility; and to the south is 57th Street and several businesses, including parking facilities, auto dealership service stations, and offices of NYC Sanitation Department. The surrounding neighborhood is mixed residential and commercial. Site features: The Site is a rectangular lot of 1.17 acres. Former on-site buildings have been demolished and the Site is currently undergoing redevelopment. Current zoning/uses: The site is currently being redeveloped with residential and commercial uses. Historical use: Prior to 1951, the western portion of the site formerly contained the Brockway Motor Truck Company and Stutz (or State) Service Station. By 1951 a private garage and repair shop occupied the 2-story building. By 1976 the building was used by the Artkraft Strauss Sign Company for the manufacturing of signs and billboards for Times Square. The first floor of the building was used at this time for parts storage, metalworking and woodworking equipment, painting, and storage of vehicles. After Artkraft Strauss left the building was subsequently served as studio space for artists. This building was demolished in early 2011. The eastern portion of the site formerly contained the Colt Stewart Co. Chrysler Service Station followed by United Parcel Service, Inc. who occupied the building by 1940. Underground Storage Tank (UST) leaks were reported to the Fire Department during that time. The building was subsequently used by New York Telephone, who installed 2 USTs, and later by Airborne Express as a parcel warehouse. The building was demolished in 2001 and subsequently used as a parking lot. Site geology and hydrogeology: The Site topography slopes west toward the Hudson River with an elevation ranging from 13 feet above Manhattan Bureau Datum on the eastern portion of the Site to 7 feet above Manhattan Bureau Datum on 12th Avenue. In general, regional topography slopes gently to the west. The nearest surface water body is the Hudson River located approximately 250 feet west of the Site. The Site geology is characterized by fill material of varying thickness overlying sand and till, decomposed rock, weathered rock, and bedrock.
OFF-SITE MID-BLOCK #57 PROJECT (Continued)

Env Problem: The site has been remediated and is currently undergoing development. Groundwater monitoring is ongoing to ensure that remedial action objectives have been achieved for groundwater. Nature and extent of contamination prior to remediation: Soil - Petroleum-related contaminants at levels exceeding unrestricted use soil cleanup objectives (UUSCOs) exist in discrete locations on the site. These areas were largely addressed via Interim Remedial Measures (including UST removal and excavation of surrounding impacted soil). Following the IRM work, end-point samples in the northern excavation show remaining contamination that requires further remedial action, including benzene at 0.21 ppm (UUSCO is 0.06 ppm); ethylbenzene at 8.5 ppm (UUSCO is 1 ppm); total xylenes at 8.1 ppm (UUSCO is 0.26 ppm); 1,2,4-trimethylbenzene at 33 ppm (UUSCO is 3.6 ppm); and 1,3,5-trimethylbenzene at 16 ppm (UUSCO is 8.4 ppm). In addition to this area, two other discrete areas on the site will be excavated to remove soil with elevated concentrations of benzene under the approved Remedial Action Work Plan (RAWP). Semi-volatile organic compounds (SVOCs) have also been found site-wide, at concentrations that indicate this is part of site background conditions. One area of elevated SVOCs (LB-17) requires remediation under the RAWP. SVOCs detected here include: benzo(a)anthracene at 12 ppm; benzo(a)pyrene at 10; benzo(b)fluoranthene at 12 ppm; and chrysene at 10 ppm (UUSCO for these contaminants is 1 ppm). Tetrachloroethylene (PCE) previously detected in one boring at 1.76 ppm was removed during the IRM work; chlorinated VOCs were not detected in any other borings. Groundwater - In on-site groundwater, VOCs detected in previous investigations have been largely reduced. In 2007 tetrachlorethene was detected in one groundwater sample and vinyl chloride in a separate groundwater sample; these have not been detected in any groundwater samples since. The only contaminants detected in on-site groundwater at concentrations exceeding the NYS Technical and Operational Guidance Series (TOGS) Ambient Water Quality Standards, during the recent Remedial Investigation, include: 1,2,4-trimethylbenzene at 8.1 ppb and isopropylbenzene at 42 ppb. Off-site monitoring wells have detected (in historical sampling) benzene at 20.3 ppb (compared to the TOGS standard of 1 ppb); ethylbenzene at 61 ppb (compared to the TOGS standard of 5 ppb); and total xylenes at 39.5 ppb (compared to the TOGS standard of 5 ppb). Groundwater contamination appears to be coming from the adjacent BCP site C231062 (Mid-Block 57 Site). Soil vapor - Historical soil vapor sampling (2007) and RI soil vapor sampling initially identified high concentrations of chlorinated VOCs in soil vapor in a few discrete locations including tetrachloroethylene (PCE) as high as 46,500 ug/m3 and trichloroethene (TCE) as high as 1400 ug/m3. Following the IRM work, these concentrations were greatly reduced but are still present (post-IRM soil vapor samples identified PCE at a maximum of 125 micrograms per cubic meter (ug/m3) and TCE at a maximum of 67.2). Petroleum-related contaminants are also present in soil vapor, including benzene at 130 ug/m3 and ethylbenzene as high as 82 ug/m3. The approved RAWP includes installation of a sub-slab depressurization system.

Health Problem: Not reported

Program: BCP
Site Code: 390497
Acres: 1.360
HW Code: C231062
Nature and extent of contamination: Remediation at the site is complete. The following sections describe the nature and extent of contamination prior to the remediation in soil, groundwater, and soil vapor. Soil: Prior to remediation, the contaminants of concern in soil were petroleum-related volatile organic compounds (VOCs) and semi-volatile organic compounds (SVOCs). VOCs that were present in soil at concentrations exceeding the NYCRR Part 375 Unrestricted Soil Cleanup Objectives (UUSCOs) included ethylbenzene, 1,2,4-trimethylbenzene, and total xylenes. SVOCs that were present at concentrations exceeding the UUSCOs included chrysene and naphthalene. Metals were also present at concentrations exceeding the UUSCOs, including lead, zinc, chromium and mercury. During remediation, all soil above bedrock with contaminants exceeding the UUSCOs was excavated and disposed off-site. Remedial action has achieved soil cleanup objectives for Unrestricted Use.

Groundwater: Prior to remediation, the contaminants of concern in groundwater were petroleum-related and primarily included VOCs. Contaminants in groundwater that were detected at concentrations exceeding the NYS Technical and Operational Guidance Series (TOGS) Ambient Water Quality Standards included benzene, 1,2,4-trimethylbenzene, and total xylenes. Groundwater must be monitored under site management to ensure that remedial action objectives for groundwater have been achieved by the remedy. Soil
OFF-SITE MID-BLOCK #57 PROJECT (Continued)

vapor. Prior to remediation, analytical data revealed the presence of VOCs in soil vapor samples, including benzene, 1,2,4-trimethylbenzene, tetrachloroethane (PCE), and total xylenes. Once the building foundation is in place, the sub-slab soil vapor must be monitored under site management to ensure that remedial action objectives for soil vapor have been achieved. Significant threat: Based on the pre-remediation site conditions, NYSDEC and NYSDOH determined that the Site represented a significant threat to human health and the environment. This decision was based on the nature of the contaminants identified at the Site; the potential for off-site migration of contaminants in the groundwater; and the potential for human exposure to site-related contaminants via soil vapors. These threats have been mitigated by completion of remediation. The Certificate of Completion was issued for this site on 12/30/2013.

Health Problem: Measures are in place to control the potential for coming in contact with any remaining contamination on the site. People are not drinking the contaminated groundwater because the area is served by a public water supply that is not affected by this contamination.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

DEC Memo:
Prior to Sept, 2004 data translation this spill Lead_DEC Field was
*ROMMEL*12/9/03 TJDReassigned Demeo greater than greater than greater
than Rommel.11/23/05- Obligado - Spill transferred from Tang to
Obligado11/29/05 - Obligado - From Caller Remarks: "UNDER GROUND
PRODUCT LINE WAS FOUND TO BE LEAKING. CONTACT PERSON WAS NOTIFIED OF
THIS WITH THE RECOMMENDATION TO EXCAVATE AND REPAIR". No files were
found to document repairs or tests. Review PBS records - PBS# 2-285919 listed for site. Site has one 2000 gallon #2 fuel oil AST,
two 4000 gallon gasoline USTs, one 550 gallon and two 275 gallon
other ASTs. Time Warner Facility Manager Phone # (212) 598-7357
598-735711/30/05 - Obligado - call Time Warner at number listed
above. No answer.12/15/05 - Obligado - called again, no answer.
Called Dave Greffinius (consultant for neighboring property) to see
if he was able to get any facility information for Time Warner
building.12/19/05 - Obligado - voice mail from Greffinius (12/15).
Gave contact names and a phone number for Time Warner Facility: Frank
Soto, Barry Rosenblume, and Tom Lonst (212) 379-2852 12/20/05 -
Obligado - tried calling above listed number, appears to be a wrong
number.12/28/05 - Obligado - Site visit. Contact information for
manager - Terrence Charlton (212) 598-7358. Called, spoke with
secretary, Terrence Charlton on vacation, will call back next
Tuesday.1/3/05 - Obligado - Called Terrence Charlton. He does not
know anything about spill. He will contact the Operations Manager -
Britt Wenzel. Tell him the DEC requires information regarding the
tank failure, if repairs were made, if soil/gw was impacted, if tanks
were retested.1/4/05 - Obligado - Received phone call from Abbas -
engineer from Time Warner. Gave him my contact info with
instructions to send/fax any files he had regarding this spill
number.1/19/05 - Obligado - Call Abbas Family (718-474-3400) to
inquire about documents. Left message. Abbas called back, he will
send the information the beginning of next week.3/31/06 - Obligado -
Review documents sent by Abbas, received by Department on 1/25/06.
Documents installation of new fill box in 1999 and 2002, and passing
tightness tests in 2004 adn 2005. Documents do not shed any light on
spill incident reported by Croompc on 12/15/00. Call Mr. Abbas and he
said he will research the file for more information. He requested a
spill report. I will email the spill report so he can find pertinent
information.5/5/06 - Obligado - Received additional documents.
5/11/06 - Reviewed documents. Corrosion in fill port pipe, caused
leak to soil, soil excavated to 2 ft bgs. No mention of endpoint soil
sampling. Send letter to Time Warner requiring soil boring
investigation and collection of gw sample from below line where leak
occurred.5/16/06 - Obligado - Delivery confirmation on 5/13/066/6/06
511 WEST 21ST STREET (Continued)

- Obligado - Received Limited Subsurface Investigation Report, submitted by Fenley and Nicol Environmental. Three soil borings advanced. Refusat at SB1. Soil impacts above TAGM at SP-2@10 ft, SP-3@5 ft, and SP-3@10 ft. Greatest contamination at SP3 with 93,000 ppb MTBE and 2,242 ppb benzene. Recommends lateral and vertical extent of impact be delineated including offsite sampling. After delineation a Remedial Action Workplan will be submitted. 6/20/06 - Obligado - Phone conversation with Kristin Dilner 631-586-4900. She will email a workplan for additional delineation. Obligado - received workplan approved with minor changes. Required one soil boring to be moved closer to former remote fill area and collection of 3 ground water samples. One from previous soil boring area above, one from remote fill area, and one inbetween the dispensers. 8/7/06 - Obligado - Received Limited Subsurface Investigation Report, submitted by Fenley and Nicol Environmental. Six soil borings, 3 ground water samples collected from temporary well points. Ground water impacts detected at all 3 gw sampling points. Greatest soil and ground water impacts detected west of dispensers and southwest of UST field (TW1/SB4). GW results in ppb from TW1 show 7327 benzene, 41,697 toluene, 2783 ethylbenzene, ~23500 total xylenes, 321,467 MTBE. 8/21/06 - Obligado - Phone conversation with Kristin Dilner from F&N. Told her that permanent monitoring wells needed to be installed, the plume would need to be delineated, and a RAP submitted. I told her I would send Abbas a Stipulation agreement this week. 8/28/06 - Obligado - Sent STIP to Azzaro. Due date for signature is 9/25/06. CC to Dilner and Abbas Family. 90 days for ISR and 60 days for RAP. 8/31/06 - Obligado - Received delivery confirmation of Stip Agreement. 10/10/06 - Obligado - Signed STIP received by Department on 9/26/06. CAP has been modified and signed by RP. Called Abbas to schedule a meeting to discuss. 11/1/06 - Obligado - Had a meeting with Sal Azzaro, Manfred Bohms, Abbas Family. Discussed scope of work. UST excavation will probably take place in May 2007. They can proceed with monitoring well installation in meanwhile. I will send them another CAP with modifications based on discussions. 11/22/06 - Obligado - Email from Abbas with another revised CAP. After review the CAP looked acceptable. I attached it to the STIP and emailed it as a final version back to Abbas requesting signature by 12/2/06. 11/27/06 - Obligado - Signed STIP received by Department. 12/4/06 - Obligado - Stipulation Agreement executed by Oliva 1/17/07 - Obligado - Called Manfred Bohms to discuss the status of project. He said 4 wells were installed, 2 onsite and 2 in the sidewalk. He is trying to gain access to the other sidewalk wells to sample. He will need a 2 week extension and will send an email request. 2/27/07 - Obligado - Received a letter from Abbas Family of Water Gorman engineers. The letter documents ground water results from 4 monitoring wells that were installed. Requests to collect samples from sidewalks in front of adjacent buildings. Upon the sampling and testing of the groundwater from the neighboring premises they will submit investigation report. 3/16/07 - Obligado - Abbas Family asked to get access to wells in sidewalks infront of 521 and 510 w. 21st street to do ground water sampling and guaging. Since this would help to allow a more accurate picture of ground water conditions in the area I sent a letter to Guy Roberts and to the owner of Sorage USA and asked for them to grant access to Time Warner to do the work. 4/17/07 - Obligado - Email from Greffinus from Delta stating they would grant access but asked to be copied on analytical results. 4/18/07 - Obligado - Spoke with Jessica from Gannette
Fleming. She said they will be doing a tidal study on using the
wells in the sidewalk and they would not be collecting samples. I
forwarded this information to Greffinius. Additionally, Jessica said
I should expect a report by May 31 and UST excavation in June.5/9/07
- Obligado - Received a phone call from Andy Rudko of AKRF,
646-388-9526, who is working for a party looking to purchase the site
from Time Warner and had some questions. I didn’t give him any
details, but that Time Warner signed a stipulation agreement and I am
waiting for an investigation for well installations.5/14/07 -
Obligado - Spoke with Abbas Family. He said project has been delayed
because the new facility where Time Warner Cable will be moving to in
Brooklyn is not ready yet. He will send a letter stating the same.
They surveyed all the wells to get a ground water flow map.5/18/07 -
Obligado - Received a progress report letter. Delays have been
incurred at new Time Warner facility in Brooklyn. So Time Warner will
vacate the 21st street facility by the end of August. At that time
the USTS and piping will be removed. Called Abbas, asking him when I
will receive a report of all the investigation activities. He said
3-4 weeks. I told him I needed the report sooner than that. He will
talk to Time Warner to expedite the report.7/19/07 - Obligado -
Reviewed documents entitled “Investigation Summary Report”, dated
February 27, 2007, “Update on CAP’s Milestone and Monitoring Well
Survey Report”, dated June 11, 2007, and “Monitoring Well Survey and
Tidal Study”, dated June 8, 2007. The documents summarize
investigation activities performed to delineate soil and ground water
contamination. After review of documents sent a letter to Time Warner
requiring the following by Nov 1, 2007.1) Quarterly Ground Water
Monitoring - Collection of ground water samples for laboratory
analysis from monitoring wells GF-MW1 through GF-MW4 and monitoring
wells R-MW-1, R-MW-3, and either R-MW2 or R-MW-9. 2) Additional
Delineation - Due to the extremely high concentrations of BTEX and
MTBE in ground water, the Department requires installation and
sampling of 3 additional monitoring wells to delineate the areal
extent of the contaminant plume. One monitoring well must be
installed in the north sidewalk of 21st street approximately 45 ft
west of GFMW-2 to determine the down-gradient extent of plume and the
extent to which the plume from Time Warner site is impacting other
properties. One monitoring well must be installed north of GFMW-1 to
delineate the areal extent of plume in the cross-gradient direction.
One monitoring well must be installed northeast of GF-MW-4 to
establish up-gradient background ground water conditions. 3) Summary
of UST Removal - Documentation of the UST system and contaminated
soil removal and endpoint sampling results must be submitted to the
Department. 4) Remedial Action Plan - A Remedial Action Plan (RAP)
should be submitted to the Department. The RAP must contain a plan to
remediate residual soil and ground water contamination subsequent to
source removal. The RAP must also include an Operation, Maintenance,
and Monitoring Plan. If the property is to be redeveloped for a
different use, the RAP must state the future intended use of the site
and include a Vapor Intrusion Mitigation Plan.7/19/07 - Obligado -
Received call from Abbas Family. He received the letter and he said
they would do the work. He asked if they need to do ground water
remediation. I told him yes. He said the deadline might be hard to
meet but he would let me know later. 10/19/07 - Obligado - PBS
Violation hearing with DEC Urda and Falvey, Scott Furman (Time Warner
attorney), Tradewinds Contractors, and Abbas Family. During removal
of USTs Brian Falvey visited the site for a PBS Inspection and found
511 WEST 21ST STREET (Continued)

several PBS violations. Tank removal was put on hold due to violations, however they did continue to move some contaminated soil found in area of dispenser product lines. They found 2 additional USTs, that will be properly closed. Prior to any excavation, I will visit the site to inspect. A site visit is tentatively scheduled for Thursday November 1. The 4000 gallon USTs were encased in concrete and according to the attorney the tank vault is clean, but I will inspect. They will also core through the dispenser island concrete vaults. 12/4/07 - Obligado - Met on site with Scott Furman and Paul Woodel. The gasoline USTs have been removed as well as some contaminated soil. Endpoint samples only showed one hit for MTBE on eastern sidewall. Bottom was a concrete slab, but I couldn’t see it because when they previously cored through the bottom the gw infiltrated up the whole and filled the bottom of the excavation. According to Scott Furman, at no time during work did they notice any sheen or petroleum smell from the water. And the tanks were in good condition. He said they would excavate a little more on the east to try and get clean side walls, then back fill. They showed me two additional excavations in the back of the building, one for a 550 UST of unknown contents, and the other was a suspected UST location which they didn’t find any UST. From the 550 UST they took sidewall samples and only found several PAHs, but it appeared to be levels similar to urban fill. After looking at the data I approved backfilling those 2 excavations. The major contamination is in the area around the dispenser and the vent lines, with elevated MTBE and BTEX, in the southwestern corner of the site and the sidewalk. Moving forward they will 1) excavate a little more on eastern sidewall of tank excavation then backfill, 2) install 2 additional wells to delineate the southwest gw plume area, 2) additional excavation to remove as much contaminated soil as site constraints allow around vents and dispensers 3) propose a plan for gw water treatment they may due treatment at time of excavation since soils and gw will be exposed.

Since the new tenant plans to build a hotel in 1 years time, timely remediation is required, so we agreed that chem ox might be the best strategy for ground water. They will submit a memo summarizing our discussions. 12/17/07 - Obligado - Received Memo from Woodell via email, detailing above meeting minutes. The memo proposes excavation and chemical injection with regenox. I sent an email to Paul concuring the planned course of action. 1/8/08 - Obligado - Conference call with Paul Woodel and Mark Furman. They are planning to use regenox as chemical oxidant followed by injection of advanced ORC to enhance bioremediation subsequent to chemical oxidation. They will submit a formal RAP today. 1/11/08 - Obligado - Approved RAP. Sent email with RAP approval letter. 1/15/08 - Obligado - Email from Woodel: ”We have begun the tasks described in the work plan. The holes in the north room have been backfilled. Today I was on site to scrape back the east wall of the gasoline UST excavation in the south room. We took it back an additional 2-3 feet and I collected another sidewall sample. This excavation is also being backfilled. We anticipate that the first test pit between the 2 former dispenser islands will be dug on Friday.” 1/28/08 - Obligado - Email update from Woodel - “LGB has supervised the excavation of the 2 test pits described in the work plan. Impacted soil and pockets of free-phase product were encountered in the western pit and were removed. The eastern pit contained impacted soil at the water table but there was no free product and no apparent “source zone” above the water table. Both pits have been extended to their practical limit (interior
walls, sewer lines, column footers, etc.). We plan to backfill the level at the water table with stone on Tuesday and apply the chemical-oxidation product Tuesday and Wednesday. 5/14/08 - Obligado - Review UST Closure Report. 2 3000 gallon gasoline USTs, 1 550 gallon 2ASTs, 2 product dispensers, associated piping and 1 oil water separator were removed. Endpoint samples were collected from UST excavations. East wall of gasoline UST excavation had MTBE above TAGM. The waste oil UST excavation indicated residual SVOCs and chromium typical of urban fill throughout the city. Test pits TP1 and TP2 were excavated and 78 tons of contaminated soil was removed and disposed off-site and waste manifests were included. End point sampling from test pits show that gross contamination present at and below the water table. No evidence of the specific source of the contamination was obvious. Contamination above TAGM and limited free-phase product appears to have accumulated around the buried concrete and structural components of th ebuildings. Test pits were backfilled with gravel and chemical oxidation products were applied to the subsurface to promote remediation. Three treatment sumps were installed with 4" diameter slotted screen set 3 ft into water. 1120 lbs of RegenOx and 150 lbs of ORC were mixed and applied to the gravel backfill on January 31, 2008. On Feb 29, 180 lbs of RegenOx and 75 lbs of ORC were applied. 3 borings and 2 wells were installed at the site. 1st round of sampling will be completed March 10, 2008. Review 1Q08 MONitoring Report - 5 wells were gauged and sampled. Based on most recent results Max contamination at S3 (former GFMW4) with 2570 ug/L BTEX and 33,000 ug/L MTBE. According to the report, the whole building will be torn down in the summer of 2008. When this occurs LBG will supervise additional soil removal. LBG will inform the NYSDEC of future remedial activities. 9/25/08 - Obligado - review 2Q08 report. Elevated concentration still present in wells. Effectiveness of REgenOx not yet apparent. Max MTBE at 48,000 ug/L. According to report building is still scheduled to be demolished. LBG will inform the DEC of any redevelopment or additional remediation. 7/7/09 - Obligado - Review 1Q09 Update Report - S3 and GFMW4 have been destroyed, so there is no monitoring wells in the source area. Downgradient well GFW-1 still has significant impacts. S3 and GFMW4 before destroyed had the max concentrations. Send a letter requiring the installation of additional monitoring wells. Require work plan submission within 30 days. 10/29/09 - Obligado - Review Investigation Work Plan, submitted 8/13/09. The workplan proposes 3 additional wells as requested, however, one of the upgradient is over 100 feet away and to far north. This well won't provide and meaningfull data. SEND letter requiring relocation of well to the east of the tanks and also revise soil sampling plan so soil sampling begins above the water table. Also requested that they revise the implementation schedule. 6/7/10 - Obligado - I reviewed the revised Investigation Work Plan. The soil sampling plan was modified and the location of the upgradient well was moved to a more appropriate location. I sent a letter via email for approval of the three wells. 8/12/2010 - Obligado - I reviewed the July 2010 Update Report. The report documented the installation of 3 additional monitoring wells and quarterly sampling. Only one soil sample, MW8, had soil impacts with 980 ug/kg MTBE. Maximum BTEX concentrations were found at MW8 with 4100 BTEX. Maximum MTBE also detected at MW8 with 3400 ug/L. the report recommends continued monitoring. I emailed Paul Woodell at LBG and requested a BTEX plume map on future reports. 10/11/11 - Obligado - I emailed Paul Woodell to inquire about the status of the
monitoring. I received a phone call from Sean Groszkowski of LBG ((914) 694-5711) who is now managing the project. He said they are planning to do another chemox event using REgenOx. I asked him to send me a work plan as well as any monitoring reports since July 2010.11/9/11 - Obligado - I reviewed a plan to do additional chemical injections at the site. They plan to do injections via geoprobe. They proposed 10 injection points using Regenox and ORC advanced. I gave approval to proceed with the additional injections. I also had a conference call with Sean Groszkowski (LBG), Scott Furman (Time Warner attorney), and representaties of a potential purchaser, Arnie Fleming (consultant) and Karen of Kramer LEVIn (attorney). We discussed the pending injections and the planned purchase and redevelopment. A purchaser plans to redevelop the property as an office building. They will use and reinforce the existing structure, as well as add several floors. The building will not have basement. They will install a vapor barrier and SSDS. The planned start for the work is 6 to 9 months. I recommended Time Warner to try and treat the soil and ground water as aggressively as possible prior to starting the development. They concurred. The injections are scheduled to begin tomorrow (11/10/11).11/16/11 - Obligado - I spoke with Sean. The injections went well. All the material was accepted. They plan to sample again in December. According to Sean I will receive a report documenting baseline sampling in early December.1/17/12 - Obligado - Meeting with Time Warner, LBG, FLS, DEC, and the site developer. They will continue with current strategy but DEC will require additional remedial actions if not effective.1/19/12 - Obligado - DEC, LBG, Albanese, meet on site to go over injection locations. We discussed potential remedial options for soil under footings. We also discussed installation of a well immediately down gradient of footers in TP2 to monitor effects of residual source on gw concentrations. According to LBG, multiple refusals were encountered in downgradient plume area. DEC recommended evaluating alternate injection approaches.1/27/12 - Obligado - I sent a letter to Time Warner ccing all parties in meetings describing DEC requirements: 1) additional well downgradient of footer area 2) evaluate alternate remedies for residual source 3) alternate injection strategy in plume area due to refusals.3/5/12 - Obligado - I received 4th Quarter 2011 report. The report documents baseline sampling on October 28, 2011, 1st chemical injection on November 10 and 11, 2011, fourth quarter sampling on December 27, 2011, and the 2nd chemical injection on December 28 and Jan 3 2012. The report documents a spike in BTEX concentrations following the 1st chemical injection, which may represent release of adsorbed contaminants from the soil. They will continue monitoring. 5/8/12 - Obligado - I emailed Sean Groszkowski to inquire when I would receive 1st Quarter sampling results. He indicated 1 to 2 weeks.7/16/12 - Obligado - I received the 1st Quarter Sampling report. MW10 was installed downgradient of the excavated area. Gross contamination was present in soil. 38000 ug/L BTEX and 53,000 ug/L MTBE found in MW10 groundwater. 42 ppm BTEX and 27 ppm MTBE was found in soil. I sent an email to LBG with a cc to FLS and Albanese requiring a remediation plan within 30 days to indicate whether they plan to continue with chemox or try alternate methods.7/17/12 - Obligado - received an email from LBG Sean Groszkowski including 2nd Quarter 2012 data which showed significant ground water improvement in MW10. BTEX reduced 98%. LBG requesting determination on need for new plan to be delayed until review of 3rd Quarter 2012 data. 7/24/12 - Obligado - sent an email deferring requirement for new plan until review of the 3rd
quarter data. 12/17/12 - Obligado - received and reviewed 3rd Quarter results. BTEX concentrations rebounded to over 15,000 ug/L, including 5,400 ug/L benzene. I sent a letter to Time Warner requiring a new RAP within 60 days. 12/24/12 - Obligado - DEC receives notification letter of BCP application from Sive Paget. BCP Site No. C231080. 04/29/2013 - Spill transferred from Obligado to Perez-Maldonado. Property Owner applied to the BCP (Site #C231080) to address environmental issues at the site. Spill administrative closure pending to implementation of a remedial program to address contamination in connection with this spill. 11/15/2013 - Remedial Investigation Work Plan have been approved. Remedial investigation ongoing under the BCP program (511 West 21st Street Site, Site ID C231080). (Perez) 03/31/2015 - BCP Site (511 West 21st Street Site, Site ID C231080) Remedial Action Work Plan have been approved. ** Note: The Department will keep this spill case open until BCP site post-remedy groundwater monitoring program confirm that there are no off-site groundwater impacts. (Perez)

BROWNFIELDS:
Program: BCP
Site Code: 475372
Acres: .450
HW Code: C231080
SWIS: 3101
Town: New York City
Update By: JEBROWN
Site Description:
Location: The Brownfield Cleanup Program (BCP) site is located at 511 West 21st Street in Manhattan, New York County. The property is bounded by West 21st Street to the south and West 22nd Street to the north between 10th Avenue and 11th Avenue in Manhattan. The property has frontage on the north side of West 21st Street and the south side of West 22nd Street. Site Features: The site is approximately 0.45 acres in size, and includes a vacant 5-story parking garage with a 1-story annex in the southwest corner. The property is flat with average elevation approximately 10 feet above mean sea level and the elevated High Line Park runs along the eastern property boundary. Current Zoning and Land Use: The area is zoned for
511 WEST 21ST STREET (Continued)

manufacturing and commercial use, and the City’s zoning code for the site is M1-5. Past Use of the Site: The site has been used for manufacturing by a gas meter company and also as a service station. Most recently it has been used by a television cable company for vehicle parking and maintenance, storage and offices. Site Geology and Hydrogeology: The site is underlain by 13 to 17 feet of man-made/historic fill. Native soils beneath the fill layer consist of organic silty clay of estuarine origin as well as sand and silt of glacial origin. The depth-to-bedrock varies from approximately 33 feet below grade at the northern end of the site to 65 feet below grade at the southern end of the site. The depth-to-groundwater at the site is approximately 6 to 7 feet below sidewalk grade and the local groundwater flow direction is to the southwest.

Env Problem:

Nature and Extent of Contamination: The primary contaminants of concern at the site include metals, semi-volatile organic compounds (SVOCs), and volatile organic compounds (VOCs). Previous environmental investigation in the area revealed concentrations of metals, SVOCs, and VOCs exceeding Standards, Criteria, and Guidance values in the soil and/or groundwater. The soil samples were analyzed for metals, SVOCs, VOCs, polychlorinated biphenyls (PCBs) and pesticides. Data results from soils sampling reported one metal (copper), VOCs (petroleum related compounds), and SVOCs (polyaromatic hydrocarbons or PAHs). Maximum detections vs. applicable commercial or protection of groundwater soil cleanup objectives (CSCO/PGWSCO) are as follows: copper at 592 parts per million (ppm) vs. 270 ppm, benzene at 1.86 ppm vs. 0.06 ppm, ethylbenzene at 17.7 ppm vs. 1 ppm, methyl tert butyl ether (MTBE) at 8.7 ppm vs. 0.93 ppm, total xylene at 8.44 ppm vs. 1.6 ppm, benzo(a)pyrene at 4.84 ppm vs. 1 ppm and dibenzo(a,h) anthracene at 0.805 ppm vs. 0.56 ppm. Site-related soil contamination is not expected to extend off-site based on the available data. The PAHs and metals contamination in soils are likely related to the presence of historic fill. Groundwater sampling indicates total metals and VOCs contamination above Class GA groundwater standards. The groundwater samples were analyzed for metals, SVOCs, VOCs, PCBs and pesticides. Some metals were found at relatively low levels in groundwater and are likely related to the presence of historic fill. Maximum groundwater detections vs. standards are as follows: MTBE at 6,190 parts per billion (ppb) vs. 10 ppb, benzene at 3,870 ppb vs. 1 ppb, toluene at 3,990 ppb vs. 5 ppb, ethylbenzene at 720 ppb vs. 5 ppb, and total xylenes at 2,270 ppb vs. 5 ppb. Low concentrations of petroleum contaminants above groundwater standards are migrating off-site. Elevated levels of petroleum related compounds, toluene, methyl ethyl ketone and dichlorodifluoromethane were detected in sub-slab soil vapor. While there is currently no standard or guidance addressing these particular contaminants, these elevated levels have a potential to impact indoor air in the building through soil vapor intrusion. The maximum concentrations of toluene, dichlorodifluoromethane (Freon-12) and methyl ethyl ketone in sub-slab vapor were detected in the southwestern portion of the site at the respective concentrations of 1,210 micrograms per cubic meter (ug/m³), 1,730,000 ug/m³ and 782 ug/m³. Indoor air levels of these contaminants did not exceed background levels.

Health Problem:

Direct contact with contaminants in the soil is unlikely because the site is covered with buildings and/or pavement. People are not drinking the contaminated groundwater because the area is served by a public water supply that is not contaminated by the site. Volatile
511 WEST 21ST STREET (Continued)

organic compounds in the groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. Inhalation of site-related contaminants due to soil vapor intrusion does not represent a current concern because the site is vacant. Furthermore, environmental sampling indicates soil vapor intrusion is not a concern for off-site buildings.
FORMER NY CENTRAL RAIL YARD SITE (Continued)

Env Problem: Nature and Extent of Contamination: SOIL: Except in the Amtrak easement, historic fill and suspected contaminated soils (six PAHs, lead at 570 parts per million [ppm], mercury at 9.5 ppm) were removed to a depth of 10 to 15 feet below grade across the entire site. The release of hydraulic fluid may have impacted the soil and shallow groundwater. Excavation will continue but not to bedrock which is 27 to 37 feet deep. The remaining on-site soils will be investigated as part of the RIWP. GROUNDWATER: The shallow groundwater aquifer is at 9 to 16 feet deep. One VOC, isopropyl benzene, was detected at 15 micrograms per liter (ug/L). Five metals were detected: antimony (3.3 to 4.4 ug/L), iron (570 to 886 ug/L), lead (unfiltered, 96.3 ug/L), manganese (336.5 to 2,232 ug/L), and sodium (57,600 to 220,000 ug/L). The bedrock aquifer does not appear to be contaminated. Much of the shallow groundwater has been pumped and removed during the site excavation. SOIL VAPOR: Total soil vapor VOCs ranged from 2.618.36 micrograms per cubic meter (ug/m3) to 3,271.39 ug/m3 in a previous site investigations. VOCs detected included petroleum related compounds, 2-Butanone (MEK), Tetrachloroethene (PCE), Isopropanol and 1,3-Butadiene. One photoionization detector (PID) reading was 2,580 parts per billion (ppb) in soil point SV-5. Results of the April 2012 Soil Vapor Study found PCE at 8.8 ug/m3, m&p xylenes at 14 ug/m3, Ethyl Acetate at 43.6 ug/m3 and MEK at 18-21 ug/m3. Off-site contamination is not known but will be evaluated as part of this BCP Project.

Health Problem: The site is completely fenced, which restricts public access. However, persons who enter the site could contact contaminants in the soil by walking, digging or otherwise disturbing the soil at the site. People are not expected to come into contact with contaminated groundwater unless they dig below the surface. Volatile organic compounds may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air or buildings, is referred to as soil vapor intrusion. Because there is no on-site building, inhalation of site contaminants in indoor air due to soil vapor intrusion does not represent a concern for the site in its current condition. However, the potential exists for the inhalation of site contaminants due to soil vapor intrusion for any future on-site development.

NY BROWNFIELDS S106704107

BROWNFIELDS:
Program: BCP
Site Code: 332564
Acres: 1.090
HW Code: C231043
SWIS: 3101
Town: New York City
Update By: MOBARRIE
Site Description: The Site is situated on an approximately 1.09-acre area bounded by West 61st Street to the north, West 60th Street to the south, the Track 4 area, a school, and a residential building to the east, and residential buildings, a school, and a commercial automobile parking garage to the west. The Site is located in the County of New York.
New York and is identified as Block 1152 and former Lots 5, 8, 10, 11, 12, 13, part of 43, 52, 53, and 55 (current Lot 8 and part of Lot 13) on the New York City Tax Map. The street address of this Site is 229-251 West 60th Street and 218-240 West 61st Street, New York, NY 10023. The results of the remedial investigation, conducted at the Site during 2005, indicated several areas of concern within the Site, associated with past on-site uses. Former Site uses included a gasoline station, an automobile repair shop, an iron works, and automobile parking areas. Several aboveground storage tanks (ASTs) and the likelihood of several USTs were noted during the Phase I ESA. A commercial-industrial facility located east of former Lot 13, which produced buttons and fabric, was noted in the report. Records indicated that the facility utilized two petroleum storage tanks during its operation from 1926 to 2003. Three schools and a NYC Parks Department pool and a community center are present in the surrounding neighborhood. The proposed development on the Site includes the construction of a mixed-use residential and office complex with a parking garage. The proposed project will contain a total of 384,000 gross square feet of residential space (buildings would be a 27 story tower with two lower and mid-rise components of 9 and 14 stories), totaling approximately 505 units; 31,000 gross square feet of medical office space; courtyard area with tennis court and an underground garage for 282 parking spaces. The remedial program was conducted in accordance with the March 2006 Remedial Work Plan and included excavation, removal of all soil within the Site boundary to the bedrock (8-22 feet deep) and transportation and disposal at off-site approved facilities. A total of twenty-six (26) tanks, including ASTs and USTs, were encountered during demolition, excavation, and remediation activities on the Site. All twenty-six tanks encountered on-site were removed for off-site disposal/recycling. Contaminated groundwater was removed for off-site disposal. A waterproofing layer has been installed beneath the new construction. The Remedial construction was completed in November 2007. A Final Engineering Report was approved on December 21, 2007 for a Track 1 cleanup for unrestricted Site usage. Redevelopment of the Site is on-going. A Certification of Completion was issued on December 21, 2007.

June 2003 Phase I Environmental Assessment Report identified environmental conditions for the site and indicated evidence of up to 16 storage tanks (UST/ASTs) were present. These tanks were used for storing gasoline, fuel oils, lubricants, waste oils and other materials. These operations have resulted in environmental contamination. Remedial Investigation commenced in late summer of 2005 and was completed by January 2006. The Remedial Investigation Report (RIR) indicated the presence of seven on-site areas of concern. These areas include (1) three locations where underground storage tanks were discovered, (2) one location of elevated lead in the soil (Lot 43), (3) one location where acetone-contaminated soil (Lot 5) was detected, (4) one location of a suspected vaulted tank in a former basement, and (5) one location of petroleum-contaminated soil and groundwater. Groundwater contained benzene, two pesticides and several metals above groundwater standards. The primary contaminants and impacted media at the site include an area of petroleum-contaminated soil; historical fill containing atypical concentrations of contaminants (e.g. metals and SVOCs); and limited VOCs, pesticides and metals in groundwater. An Interim Remedial Measure (IRM) work plan was prepared in February 2006 to investigate and remove some of the areas of concerns identified in RI report.
Exceedances of standards, criteria and guidance primarily include total VOCs (max: 8,900 ug/ kg), total SVOCs (max: 243,260 ug/ kg) and some metals (including lead (max: 2980 mg/kg), chromium (max: 278 mg/Kg), mercury (max: 2.5 mg/kg) and arsenic (max: 16.8 mg/ kg) for soil and VOCs in groundwater (benzene at 20 ppb; toluene at 5.8 ppb, ethylbenzene at 8.3 ppb and xylene at 33 ppb) and one SVOC (naphthalene at 13 ppb), low levels of metals and low levels of two pesticides (4,4’-DDD and heptachlor epoxide). A Remedial Action Work Plan (RAWP) was prepared in April 2005 to address all contamination from this property including underground tanks and associated contaminated soils, petroleum-contaminated soils, historic fill and C & D debris. Remediation proceeded for Track 1 Cleanup standards for unrestricted usage. A total of 36,617 tons of petroleum-contaminated soil, 77 tons of characteristic hazardous waste (lead) soil, 43,961 tons of soil containing low-level contaminants, and 1,892 tons of soil containing rock and/or concrete pieces greater than 8 inches were excavated and disposed of off-site. Twenty-six (26) tanks, including ASTs and USTs, were encountered during demolition, excavation, and remediation activities on the Site. All 26 tanks were removed for off-site disposal/ recycling. Approximately 533,490 gallons of groundwater were pumped through the filter system and approximately 888,897 gallons were transported via tanker trucks for off-site disposal. All on-site sources of groundwater contamination were removed during remedial activities. The sub-grade slabs and foundation walls are waterproofed with a barrier and seal system, which also functions as a vapor barrier. All remediation is completed and a Final Engineering Report was approved on December 21, 2007. The site does not present a significant threat to the environment.

**Health Problem:**

Volatile and semi-volatile compounds are present in soils at this site. Exposure to groundwater is not likely since the area is served by public water. The site is paved and is currently used as a parking lot, therefore current exposure to contaminated soils is unlikely. Soils will be removed and excavated to bedrock thereby removing all site-related contamination. Soil vapor intrusion into the proposed building will be unlikely since all contamination is being removed as part of the remedy. A soil vapor survey was conducted at the perimeter of the site to evaluate the potential for off-site receptors to be effected. Low levels of volatile organic compounds were detected, but the concentrations do not pose a health concern.

Federal Delisted NPL site list

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425(e), sites may be deleted from the NPL where no further response is appropriate.

Federal CERCLIS list

CERCLIS: Comprehensive Environmental Response, Compensation, and Liability Information System

CERCLIS contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). CERCLIS contains sites which are either proposed to or on the National Priorities List (NPL) and sites which are in the screening and assessment phase for possible inclusion on the NPL.

Date of Government Version: 10/25/2013  Source: EPA
Date Data Arrived at EDR: 11/11/2013  Telephone: 703-412-9810
Date Made Active in Reports: 02/13/2014  Last EDR Contact: 05/29/2015
Number of Days to Update: 94  Next Scheduled EDR Contact: 09/07/2015

Number of Days to Update: 64  Next Scheduled EDR Contact: 10/19/2015
Data Release Frequency: Varies

Federal CERCLIS NFRAP site List

CERCLIS-NFRAP: CERCLIS No Further Remedial Action Planned

Archived sites are sites that have been removed and archived from the inventory of CERCLIS sites. Archived status indicates that, to the best of EPA’s knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list this site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time.

This decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be a potential NPL site.

Federal RCRA CORRACTS facilities list

CORRACTS: Corrective Action Report

CORRACTS identifies hazardous waste handlers with RCRA corrective action activity.
Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF: RCRA - Treatment, Storage and Disposal
RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Federal RCRA generators list

RCRA-LQG: RCRA - Large Quantity Generators
RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

RCRA-SQG: RCRA - Small Quantity Generators
RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

RCRA-CESQG: RCRA - Conditionally Exempt Small Quantity Generators
RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.
Federal institutional controls / engineering controls registries

US ENG CONTROLS: Engineering Controls Sites List
A listing of sites with engineering controls in place. Engineering controls include various forms of caps, building foundations, liners, and treatment methods to create pathway elimination for regulated substances to enter environmental media or effect human health.

Date of Government Version: 03/16/2015
Date Data Arrived at EDR: 03/17/2015
Date Made Active in Reports: 06/02/2015
Number of Days to Update: 77

Source: Environmental Protection Agency

Data Release Frequency: Annually
NJ SHWS: Known Contaminated Sites in New Jersey

The Known Contaminated Sites in New Jersey includes sites under the purview of the Site Remediation Program which have contamination present at levels greater than the applicable cleanup criteria for soil and/or groundwater standards. The sites appearing in Known Contaminated Sites in New Jersey are classified as either active, where the site is assigned to a specific remedial program area, or pending, where the site is awaiting assignment to a specific remedial program area. Sites where no further action (NFA) designation has been given are not included in this report unless there are other areas of identified contamination which have not been remediated. This report includes sites being remediated under all of the various regulatory programs administered by the Site Remediation Program such as: Federal Superfund Program, Federal Resource Conservation and Recovery Act (RCRA), New Jersey’s Industrial Site Recovery Act (ISRA), New Jersey’s Underground Storage of Hazardous Substances Act, New Jersey’s Spill Compensation and Control Act, New Jersey’s Solid Waste Management Act, New Jersey’s Water Pollution Control Act.

NY RES DECL: Restrictive Declarations Listing
A restrictive declaration is a covenant running with the land which binds the present and future owners of the property. As a condition of certain special permits, the City Planning Commission may require an applicant to sign and record a restrictive declaration that places specified conditions on the future use and development of the property. Certain restrictive declarations are indicated by a D on zoning maps.

State and tribal voluntary cleanup sites

NY VCP: Voluntary Cleanup Agreements
New York established its Voluntary Cleanup Program (VCP) to address the environmental, legal and financial barriers that often hinder the redevelopment and reuse of contaminated properties. The Voluntary Cleanup Program was developed to enhance private sector cleanup of brownfields by enabling parties to remediate sites using private rather than public funds and to reduce the development pressures on "greenfield" sites.

### State and tribal Brownfields sites

NY ERP: Environmental Restoration Program Listing

In an effort to spur the cleanup and redevelopment of brownfields, New Yorkers approved a $200 million Environmental Restoration or Brownfields Fund as part of the $1.75 billion Clean Water/Clean Air Bond Act of 1996 (1996 Bond Act). Enhancements to the program were enacted on October 7, 2003. Under the Environmental Restoration Program, the State provides grants to municipalities to reimburse up to 90 percent of on-site eligible costs and 100% of off-site eligible costs for site investigation and remediation activities. Once remediated, the property may then be reused for commercial, industrial, residential or public use.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites
Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

UMTRA: Uranium Mill Tailings Sites
Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing
A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

Date of Government Version: 10/19/2006

Telephone: 202-564-4203
ICIS: Integrated Compliance Information System
The Integrated Compliance Information System (ICIS) supports the information needs of the national enforcement
and compliance program as well as the unique needs of the National Pollutant Discharge Elimination System (NPDES)
program.
Date of Government Version: 01/23/2015
Date Data Arrived at EDR: 02/06/2015
Date Made Active in Reports: 03/09/2015
Number of Days to Update: 31
Next Scheduled EDR Contact: 10/28/2015
Data Release Frequency: Quarterly

PADS: PCB Activity Database System
PCB Activity Database. PADS Identifies generators, transporters, commercial storers and/or brokers and disposers
of PCB's who are required to notify the EPA of such activities.
Date of Government Version: 07/01/2014
Date Data Arrived at EDR: 10/15/2014
Date Made Active in Reports: 11/17/2014
Number of Days to Update: 33
Next Scheduled EDR Contact: 10/28/2015
Data Release Frequency: Annually

MLTS: Material Licensing Tracking System
MLTS is maintained by the Nuclear Regulatory Commission and contains a list of approximately 8,100 sites which
possess or use radioactive materials and which are subject to NRC licensing requirements. To maintain currency,
EDR contacts the Agency on a quarterly basis.
Date of Government Version: 03/31/2015
Date Data Arrived at EDR: 04/09/2015
Date Made Active in Reports: 06/11/2015
Number of Days to Update: 63
Next Scheduled EDR Contact: 09/21/2015
Data Release Frequency: Quarterly

RADINFO: Radiation Information Database
The Radiation Information Database (RADINFO) contains information about facilities that are regulated by U.S.
Environmental Protection Agency (EPA) regulations for radiation and radioactivity.
Date of Government Version: 04/07/2015
Date Data Arrived at EDR: 04/09/2015
Date Made Active in Reports: 06/11/2015
Number of Days to Update: 63
Next Scheduled EDR Contact: 10/19/2015
Data Release Frequency: Quarterly

FINDS: Facility Index System/Facility Registry System
Facility Index System. FINDS contains both facility information and 'pointers' to other sources that contain more
detail. EDR includes the following FINDS databases in this report: PCS (Permit Compliance System), AIRS (Aerometric
Information Retrieval System), DOCKET (Enforcement Docket used to manage and track information on civil judicial
enforcement cases for all environmental statutes), FURS (Federal Underground Injection Control), C-DOCKET (Criminal
Docket System used to track criminal enforcement actions for all environmental statutes), FFIS (Federal Facilities
Information System), STATE (State Environmental Laws and Statutes), and PADS (PCB Activity Data System).
Date of Government Version: 01/18/2015
Date Data Arrived at EDR: 02/27/2015
Date Made Active in Reports: 03/25/2015
Number of Days to Update: 26
Next Scheduled EDR Contact: 09/21/2015
Data Release Frequency: Quarterly

RAATS: RCRA Administrative Action Tracking System
RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA
pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration
actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of
the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources
made it impossible to continue to update the information contained in the database.
RMP: Risk Management Plans
When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g. the fire department) should an accident occur.

BRS: Biennial Reporting System
The Biennial Reporting System is a national system administered by the EPA that collects data on the generation and management of hazardous waste. BRS captures detailed data from two groups: Large Quantity Generators (LQG) and Treatment, Storage, and Disposal Facilities.

NY HSWDS: Hazardous Substance Waste Disposal Site Inventory
The list includes any known or suspected hazardous substance waste disposal sites. Also included are sites delisted from the Registry of Inactive Hazardous Waste Disposal Sites and non-Registry sites that U.S. EPA Preliminary Assessment (PA) reports or Site Investigation (SI) reports were prepared. Hazardous Substance Waste Disposal Sites are eligible to be Superfund sites now that the New York State Superfund has been refinanced and changed. This means that the study inventory has served its purpose and will no longer be maintained as a separate entity. The last version of the study inventory is frozen in time. The sites on the study will not automatically be made Superfund sites, rather each site will be further evaluated for listing on the Registry. So overtime they will be added to the registry or not.

NY UIC: Underground Injection Control Wells
A listing of enhanced oil recovery underground injection wells.
NJ UIC: Underground Injection Wells Database
A listing of underground injection well locations. The UIC Program is responsible for regulating the construction, operation, permitting, and closure of injection wells that place fluids underground for storage or disposal.

NY SPDES: State Pollutant Discharge Elimination System
New York State has a state program which has been approved by the United States Environmental Protection Agency for the control of wastewater and stormwater discharges in accordance with the Clean Water Act. Under New York State law the program is known as the State Pollutant Discharge Elimination System (SPDES) and is broader in scope than that required by the Clean Water Act in that it controls point source discharges to groundwaters as well as surface waters.

NY E DESIGNATION: E DESIGNATION SITE LISTING
The (E (Environmental)) designation would ensure that sampling and remediation take place on the subject properties, and would avoid any significant impacts related to hazardous materials at these locations. The (E) designations would require that the fee owner of the sites conduct a testing and sampling protocol, and remediation where appropriate, to the satisfaction of the NYCDEP before the issuance of a building permit by the Department of Buildings pursuant to the provisions of Section 11-15 of the Zoning Resolution (Environmental Requirements). The (E) designations also include a mandatory construction-related health and safety plan which must be approved by NYCDEP.

EPA WATCH LIST:  EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants
The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR’s researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR US Hist Auto Stat: EDR Exclusive Historic Gas Stations
EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR’s review was limited to those categories of sources that might, in EDR’s opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as “High Risk Historical Records”, or HRHR. EDR’s HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

EDR US Hist Cleaners: EDR Exclusive Historic Dry Cleaners
EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR’s review was limited to those categories of sources that might, in EDR’s opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as “High Risk Historical Records”, or HRHR. EDR’s HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

EDR Recovered Government Archives

Exclusive Recovered Govt. Archives

NY RGA HWS: Recovered Government Archive State Hazardous Waste Facilities List
The EDR Recovered Government Archive State Hazardous Waste database provides a list of SHWS incidents derived from historical databases and includes many records that no longer appear in current government lists. Compiled from Records formerly available from the Department of Environmental Conservation in New York.
NY RGA LF: Recovered Government Archive Solid Waste Facilities List
The EDR Recovered Government Archive Landfill database provides a list of landfills derived from historical databases and includes many records that no longer appear in current government lists. Compiled from Records formerly available from the Department of Environmental Conservation in New York.

NJ RGA HWS: Recovered Government Archive State Hazardous Waste Facilities List
The EDR Recovered Government Archive State Hazardous Waste database provides a list of SHWS incidents derived from historical databases and includes many records that no longer appear in current government lists. Compiled from Records formerly available from the New Jersey Department of Environmental Protection in New Jersey.

NJ RGA LF: Recovered Government Archive Solid Waste Facilities List
The EDR Recovered Government Archive Landfill database provides a list of landfills derived from historical databases and includes many records that no longer appear in current government lists. Compiled from Records formerly available from the New Jersey Department of Environmental Protection in New Jersey.

COUNTY RECORDS

CORTLAND COUNTY:

Cortland County Storage Tank Listing
A listing of aboveground storage tank sites located in Cortland County.

Date of Government Version: 06/05/2015
Date Data Arrived at EDR: 06/09/2015
Date Made Active in Reports: 06/19/2015
Number of Days to Update: 10
Source: Cortland County Health Department
Telephone: 607-753-5035
Last EDR Contact: 08/03/2015
Next Scheduled EDR Contact: 11/16/2015
Data Release Frequency: Quarterly

Cortland County Storage Tank Listing
A listing of underground storage tank sites located in Cortland County.

Date of Government Version: 06/05/2015
Date Data Arrived at EDR: 06/09/2015
Date Made Active in Reports: 06/19/2015

OTHER DATABASE(S)
Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data
Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

Source: Department of Energy & Environmental Protection
Telephone: 860-424-3375

Data Release Frequency: No Update Planned

NJ MANIFEST: Manifest Information
Hazardous waste manifest information.

### Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

### AHA Hospitals:
Source: American Hospital Association, Inc.
Telephone: 312-280-5991
The database includes a listing of hospitals based on the American Hospital Association’s annual survey of hospitals.
Medical Centers: Provider of Services Listing  
Source: Centers for Medicare & Medicaid Services  
Telephone: 410-786-3000  
A listing of hospitals with Medicare provider number, produced by Centers of Medicare & Medicaid Services,  
a federal agency within the U.S. Department of Health and Human Services.

Nursing Homes  
Source: National Institutes of Health  
Telephone: 301-594-6248  
Information on Medicare and Medicaid certified nursing homes in the United States.

Public Schools  
Source: National Center for Education Statistics  
Telephone: 202-502-7300  
The National Center for Education Statistics' primary database on elementary  
and secondary public education in the United States. It is a comprehensive, annual, national statistical  
database of all public elementary and secondary schools and school districts, which contains data that are  
comparable across all states.

Private Schools  
Source: National Center for Education Statistics  
Telephone: 202-502-7300  
The National Center for Education Statistics' primary database on private school locations in the United States.

Daycare Centers: Day Care Providers  
Source: Department of Health  
Telephone: 212-676-2444

Flood Zone Data: This data, available in select counties across the country, was obtained by EDR in 2003 & 2011 from the Federal  
Emergency Management Agency (FEMA). Data depicts 100-year and 500-year flood zones as defined by FEMA.

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR

EDR’s GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principal investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.
GROUNDWATER FLOW DIRECTION INFORMATION
Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

TOPOGRAPHIC INFORMATION
Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY
General Topographic Gradient: General NW

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.
HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

Target Property County: NEW YORK, NY

Flood Plain Panel at Target Property: 3604970039B - FEMA Q3 Flood data

Additional Panels in search area:
- 3604970031B - FEMA Q3 Flood data
- 3604970030B - FEMA Q3 Flood data
- 3604970038B - FEMA Q3 Flood data
- 34017C - FEMA DFIRM Flood data

NATIONAL WETLAND INVENTORY

NWI Quad at Target Property: YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

Search Radius: 1.25 miles
Location Relative to TP: 1/2 - 1 Mile SSW
Site Name: MANHATTAN GENERAL MAIL FACILITY
Site EPA ID Number: NY6180000352
Groundwater Flow Direction: NOT AVAILABLE.
Inferred Depth to Water: not available. Saturated layers impacted by salt water intrusion are present in the overburden. It is generally inferred that the depth to the uppermost ‘aquifer’ is greater than 70 feet at the surface of the bedrock/sediment interface.
Hydraulic Connection: Detailed hydraulic connection information is not available. Glacial till and outwash deposit sediments overlie the Manhattan Schist, the uppermost bedrock unit at the site. The surface elevation of bedrock decreases to the southwest of the site.
Sole Source Aquifer: No information about a sole source aquifer is available
Data Quality: Information is inferred in the CERCLIS investigation report(s)

* ©1996 Site-specific hydrogeological data gathered by CERCLIS Alerts, Inc., Bainbridge Island, WA. All rights reserved. All of the information and opinions presented are those of the cited EPA report(s), which were completed under a Comprehensive Environmental Response Compensation and Liability Information System (CERCLIS) investigation.
EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION
Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY
Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY
The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps. The following information is based on Soil Conservation Service STATSGO data.

Soil Component Name: URBAN LAND
Soil Surface Texture: variable
Hydrologic Group: Not reported
Soil Drainage Class: Not reported
Hydric Status: Soil does not meet the requirements for a hydric soil.
Corrosion Potential - Uncoated Steel: Not Reported
Depth to Bedrock Min: > 10 inches
Depth to Bedrock Max: > 10 inches
OTHER SOIL TYPES IN AREA

Based on Soil Conservation Service STATSGO data, the following additional subordinant soil types may appear within the general area of target property.

Soil Surface Textures: silt loam  
loamy sand  
sandy loam  
fine sandy loam

Surficial Soil Types: silt loam  
loamy sand  
sandy loam  
fine sandy loam

Shallow Soil Types: sandy loam

Deeper Soil Types: unweathered bedrock  
very gravelly - loamy sand  
stratified  
sandy loam

LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)
Source: United States Geologic Survey
EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Scanned Digital USGS 7.5' Topographic Map (DRG)
Source: United States Geologic Survey
A digital raster graphic (DRG) is a scanned image of a U.S. Geological Survey topographic map. The map images are made by scanning published paper maps on high-resolution scanners. The raster image is georeferenced and fit to the Universal Transverse Mercator (UTM) projection.

HYDROLOGIC INFORMATION

Flood Zone Data: This data, available in select counties across the country, was obtained by EDR in 2003 & 2011 from the Federal Emergency Management Agency (FEMA). Data depicts 100-year and 500-year flood zones as defined by FEMA.

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005 and 2010 from the U.S. Fish and Wildlife Service.

State Wetlands Data: Freshwater Wetlands
Source: Department of Environmental Conservation
Telephone: 518-402-8961

HYDROGEOLOGIC INFORMATION

AQUIFLOW Information System
Source: EDR proprietary database of groundwater flow information
EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit

STATSGO: State Soil Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Services
The U.S. Department of Agriculture’s (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Services (NRCS)
Telephone: 800-672-5559
SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Services, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.
LOCAL / REGIONAL WATER AGENCY RECORDS

FEDERAL WATER WELLS

PWS: Public Water Systems
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

PWS ENF: Public Water Systems Violation and Enforcement Data
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750

USGS Water Wells: USGS National Water Inventory System (NWIS)
This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

STATE RECORDS

New York Public Water Wells
Source: New York Department of Health
Telephone: 518-458-6731

OTHER STATE DATABASE INFORMATION

Oil and Gas Well Database
Department of Environmental Conservation
Telephone: 518-402-8072
These files contain records, in the database, of wells that have been drilled.

RADON

State Database: NY Radon
Source: Department of Health
Telephone: 518-402-7556
Radon Test Results

Area Radon Information
Source: USGS
Telephone: 703-356-4020
The National Radon Database has been developed by the U.S. Environmental Protection Agency (USEPA) and is a compilation of the EPA/State Residential Radon Survey and the National Residential Radon Survey. The study covers the years 1986 - 1992. Where necessary data has been supplemented by information collected at private sources such as universities and research institutions.

EPA Radon Zones
Source: EPA
Telephone: 703-356-4020
Sections 307 & 309 of IRAA directed EPA to list and identify areas of U.S. with the potential for elevated indoor radon levels.

OTHER

Airport Landing Facilities: Private and public use landing facilities
Source: Federal Aviation Administration, 800-457-6656

Epicenters: World earthquake epicenters, Richter 5 or greater
Source: Department of Commerce, National Oceanic and Atmospheric Administration

Earthquake Fault Lines: The fault lines displayed on EDR’s Topographic map are digitized quaternary faultlines, prepared in 1975 by the United State Geological Survey

APPENDIX B:
USER QUESTIONNAIRE(S)
ASTM E1527-13
X3. USER QUESTIONNAIRE

In order to qualify for one of the Landowner Liability Protections (LLPs) offered by the Small Business Liability Relief and Brownfields Revitalization Act of 2001 (the “Brownfields Amendments”), the user must provide the following inquiries required by 40 CFR 312.25, 312.28, 312.29, 312.30, and 312.31. These inquiries must also be conducted by EPA Brownfields Assessment and Characterization grantees. The user should provide the following information to the environmental professional. Failure to conduct these inquiries could result in a determination that “all appropriate inquiries” is not complete.

Site Name and Location: COVENANT HOUSE, WAIST . NYC

(1) Environmental liens that are filed or recorded against the property (40 CFR 312.25).
Did a search of recorded land title records (or judicial records where appropriate, see Note 1 below) identify any environmental liens filer or recorded against the property under federal, tribal, state or local law?

Note 1 – In certain jurisdictions, federal, tribal, state, or local statutes, or regulations specify that environmental liens and AULs be filed in judicial records rather than in land title records. In such cases judicial records must be searched for environmental liens and AULs.

Answer: NO

(2) Activity and use limitations that are in place on the property or that have been filed or recorded against the property (40 CFR 312.26(a)(1)(v) and (vi)).
Did a search of recorded land title records (or judicial records where appropriate, see Note 1 above) identify any AULs, such as engineering controls, land use restrictions or institutional controls that are in place at the property and/or have been filed or recorded against the property under federal, tribal, state or local law?

Answer: NO

(3) Specialized knowledge or experience of the person seeking to qualify for the LLP (40 CFR 312.28).
Do you have any specialized knowledge or experience related to the property or nearby properties? For example, are you involved in the same line of business as the current or former occupants of the property or an adjoining property so that you would have specialized knowledge of the chemicals and processes used by this type of business?

Answer: NO

(4) Relationship of the purchase price to the fair market value of the property if it were not contaminated (40 CFR 312.29).
Does the purchase price being paid for this property reasonably reflect the fair market value of the property? If you conclude that there is a difference, have you considered whether the lower purchase price is because contamination is known or believed to be present at the property?

Answer: NO

(5) Commonly known or reasonably ascertainable information about the property (40 CFR 312.30).
Are you aware of commonly known or reasonably ascertainable information about the property that would help the environmental professional to identify conditions indicative of releases or threatened releases? For example,

(a) Do you know the past uses of the property?
(b) Do you know the specific chemicals that are present or once were present at the property?
(c) Do you know of spills or other chemical releases that have taken place at the property?
(d) Do you know of any environmental cleanups that have taken place at the property?

Answer: NO

(6) The degree of obviousness of the presence of likely presence of contamination at the property, and the ability to detect the contamination by appropriate investigation (40 CFR 312.31).
Based on your knowledge and experience related to the property are there any obvious indicators that point to the presence or likely presence of releases at the property?

Answer: NO

User Answers Provided By: Thomas Johnson, CORP SEC. 9-2-15

\(^{17}\)Landowner Liability Protections, or LLPs, is the term used to describe the three types of potential defenses to Superfund liability in EPA's Interim Guidance Regarding Criteria Landowners Must Meet in Order to Qualify for Bona Fide Prospective Purchaser, Contiguous Property Owner, or Innocent Landowner Limitations on CERCLA Liability ("Common Elements" Guide) issued on March 6, 2003.

\(^{18}\)P.L. 107-118.
EDR Aerial Photo Decade Package

Environmental Data Resources, Inc. (EDR) Aerial Photo Decade Package is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR’s professional researchers provide digitally reproduced historical aerial photographs, and when available, provide one photo per decade.

When delivered electronically by EDR, the aerial photo images included with this report are for ONE TIME USE ONLY. Further reproduction of these aerial photo images is prohibited without permission from EDR. For more information contact your EDR Account Executive.

Thank you for your business.
Please contact EDR at 1-800-352-0050 with any questions or comments.

The Sanborn Library includes more than 1.2 million fire insurance maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow and others which track historical property usage in approximately 12,000 American cities and towns. Collections searched:

- Library of Congress
- University Publications of America
- EDR Private Collection

Limited Permission To Make Copies

TRC Environmental Consultants (the client) is permitted to make up to FIVE photocopies of this Sanborn Map transmittal and each fire insurance map accompanying this report solely for the limited use of its customer. No one other than the client is authorized to make copies. Upon request made directly to an EDR Account Executive, the client may be permitted to make a limited number of additional photocopies. This permission is conditioned upon compliance by the client, its customer and their agents with EDR's copyright policy; a copy of which is available upon request.
This Certified Sanborn Map Report is based upon the following Sanborn Fire Insurance map sheets.

EDR Historical Topographic Map Report

Environmental Data Resources, Inc.s (EDR) Historical Topographic Map Report is designed to assist professionals in evaluating potential liability on a target property resulting from past activities. EDRs Historical Topographic Map Report includes a search of a collection of public and private color historical topographic maps, dating back to the early 1900s.

Thank you for your business.
Please contact EDR at 1-800-352-0050 with any questions or comments.

Disclaimer - Copyright and Trademark Notice

This Report contains certain information obtained from a variety of public and other sources reasonably available to Environmental Data Resources, Inc. It cannot be concluded from this Report that coverage information for the target and surrounding properties does not exist from other sources. Instructions for Application for Records under FOIL

Completion of this form is voluntary. However, it will expedite access to the records you seek, if available.

- Please identify the types of records being requested.
  Descriptions of the bureaus and/or records they retain are as follows:
  Agency Chief Contracting Office (ACCO): Contracts, Bids and Procurement records
  Bureau of Customer Services (BCS): Water bills, water metering
  Bureau of Environmental Compliance (BEC):
    Asbestos Control Program, Hazardous Materials response
    Air and Noise Permits and inspection records
  Bureau of Environmental Design and Construction (BEDC): Design and construction of wastewater treatment plants, water-supply related projects and infrastructure projects
  Bureau of Environmental Planning and Assessment (BEPA): SEQRA/CEQR and other environmental review-related records
  Bureau of Wastewater Treatment (BWT): Industrial pretreatment program, sewer discharge violations, operation of wastewater treatment plants
  Bureau of Water and Sewer Operations (BWSO): Water and sewer main repair
  Bureau of Water Supply (BWS): Watershed/aqueduct/reservoir operations, water quality
  DEP Police: Reports for watershed-area law enforcement incidents

- Please indicate whether you want to receive copies or want to inspect the records prior to copies being made.
- Please describe, with the greatest amount of detail possible, the type of records you are requesting. Include, if available and when applicable, complaint numbers, contract numbers, addresses, block and lot information, Notice of Violation number, specific time frames or date of incident/occurrence, name of document/form, and account numbers. **Please DO NOT request information about more than one account, NOV, property, etc.** Please use a separate form for each request.
- Please provide your name, firm/company name, address, phone number or e-mail address where you want the response forwarded.
- Please, either mail or fax the form to the DEP Records Access Officer at the address and number listed on the form. **DO NOT FAX AND MAIL THE FORM.**
- You will receive an acknowledgment of receipt of the request.
- After the search has been performed, you will be contacted by bureau personnel informing you of the results of the search.
- Please do not send payment for records until such time it has been requested. Copying fees are $.25 per page.
NEW YORK CITY DEPARTMENT OF ENVIRONMENTAL PROTECTION

Application for Records, Article 6 – New York State Public Officers Law, Freedom of Information Law

Complete Part I of this form. Please refer to instruction sheet for assistance in completing this form. If responsive records are located, you will be notified and informed of the required payment. Advance payment is required in check or money order payable to the City of New York before documents will be released. Either send the completed application to the Records Access Officer at NYC DEP, 59-17 Junction Blvd., 19th Fl., Flushing, NY 11373, or fax to (718) 595-6143. DO NOT FAX AND MAIL.

PART I. APPLICATION – Check type of record(s) requested:

☐ Bid/ Procurement (ACCO)
☐ Noise complaints/ inspections (BEC)
☐ Sewer main/line repair/construction (BWSO)
☐ Water bill accounts/ metering (BCS)
☐ Asbestos (BEC)
☐ Environmental Review/SEQRA (BEPA)
☐ Water Quality (BWS/WQ)
☐ Personnel records (HRM)
☐ Hazardous materials emergency response (BEC)
☐ Industrial Pretreatment/ sewer discharge violations (BWT)
☐ Watershed/ reservoir operations (BWS)
☐ Wastewater Treatment Plant operations (BWT)
☐ Right To Know (BEC)
☐ Water main/line repair/construction (BWSO)
☐ Watershed area incident reports (DEP PD)
☐ ______________

I hereby apply to inspect or receive copies of the following records (use additional sheets as needed and attach):

Environmental records pertaining to investigations, remediations, hazardous chemical storage and/or generation, petroleum/chemical storage tanks, spills and/or releases and environmental violations.

Location: 538-554 10th Ave., New York, NY 10018

_Time frame/date of records: ASAP

Dear Record Access Officer:

I, Gray Bender, request copies of any inspection reports and/or records located in the Bureau of Environmental Health Services, of the New York City Department of Health and Mental Hygiene.

The records pertain to:

- Lead Poisoning
- Animal bite
- Employment/Human Resources
- Contracts/RFPs
- Pest Control
- Correctional Health
- Early Intervention
- Food Safety
- Mental Health
- Communicable Diseases
- School Health
- Day Care

Please specify/describe the records you are requesting from the above program(s):

Please provide the following records for 538-554 10th Avenue, New York, NY 10018:

- The status and description of any reported petroleum spills or tanks;
- Copies of any record of decision regarding investigation or clean-up of the site;
- Notification of the lead agency that is primarily responsible for investigating and cleaning up the site; and
- Notification of any legal action involving the site, Detailed reports, monitoring data, regulatory non-compliance notices documents or studies regarding any known pollution problems at this site, and how I may obtain copies of them or review them in person.

There is a charge of 25¢ per page or actual costs of reproduction, payable in advance.

Requester’s Name: Gray Bender

RECORDS DENIED
I hereby advise that access to the records, or part of the records, has been denied for the reason(s) checked below:
___ Specifically exempt by another statute
___ Unwarranted invasion of privacy
___ Would impair present or imminent contract awards or Trade secrets
___ Collective bargaining negotiations
___ Compiled for law enforcement purposes __ Could endanger life or safety of any other person
___ Inter-agency or intra-agency materials that are not:
   • statistical or factual tabulations or data
   • instructions to staff that affect the public
   • final agency policy or determinations; or
   • external audits, including but not limited to audits performed by the comptroller and the Federal government
___ Other exemptions (as applicable)

Re: Freedom of Information Request  
538-554 10th Avenue  
New York, New York 10018

Sir/Madam:
Under the provision of the New York Freedom of Information Law (Article 6, Public Officers Law) I would like to request access to certain information available from your agency. I would like to receive information regarding the known or potential environmental and public health hazards posed at the site located at the following address:

<table>
<thead>
<tr>
<th>Block, Lots</th>
<th>Address</th>
<th>Alternate Address(s)</th>
</tr>
</thead>
</table>
| Block 1050, Lot 1 | 538-554 10th Avenue, New York, NY 10018 | • 538 10th Avenue  
                      • 554 10th Avenue |

Specifically, I would like to obtain:

- Status and description of any reported petroleum spills or tanks;
- Copies of any record of decision regarding investigation or clean up of the site;
- Notification of the lead agency that is primarily responsible for investigating and cleaning up the site;
- Notification of any legal action involving the site;
- Detailed reports, monitoring data, regulatory non-compliance notices, documents or studies regarding any pollution problems at this site, and how I may obtain copies of them or review them in person.

If there are any fees imposed for searching or copying the materials I have requested, please inform me of that fact before filling this request. I would appreciate your handling this request as quickly as possible. Thank you for your attention. I await your reply.

Sincerely,

TRC Engineers, Inc.

Gray Bender

EDR BUILDING PERMIT REPORT

About This Report

The EDR Building Permit Report provides a practical and efficient method to search building department records for indications of environmental conditions. Generated via a search of municipal building permit records gathered from more than 1,600 cities nationwide, this report will assist you in meeting the search requirements of EPA’s Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-13), or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

Building permit data can be used to identify current and/or former operations and structures/features of environmental concern. The data can provide information on a target property and adjoining properties such as the presence of underground storage tanks, pump islands, sumps, drywells, etc., as well as information regarding water, sewer, natural gas, electrical connection dates, and current/former septic tanks.

ASTM and EPA Requirements

ASTM E 1527-13 lists building department records as a "standard historical source," as detailed in § 8.3.4.7: “Building Department Records - The term building department records means those records of the local government in which the property is located indicating permission of the local government to construct, alter, or demolish improvements on the property." ASTM also states that "Uses in the area surrounding the property shall be identified in the report, but this task is required only to the extent that this information is revealed in the course of researching the property itself.”

EPA’s Standards and Practices for All Appropriate Inquires (AAI) states: "§312.24: Reviews of historical sources of information. (a) Historical documents and records must be reviewed for the purposes of achieving the objectives and performance factors of §312.20(e) and (f). Historical documents and records may include, but are not limited to, aerial photographs, fire insurance maps, building department records, chain of title documents, and land use records.”

Methodology

EDR has developed the EDR Building Permit Report through our partnership with BuildFax, the nation’s largest repository of building department records. BuildFax collects, updates, and manages building department records from local municipal governments. The database now includes 30 million permits, on more than 10 million properties across 1,600 cities in the United States.

The EDR Building Permit Report comprises local municipal building permit records, gathered directly from local jurisdictions, including both target property and adjoining properties. Years of coverage vary by municipality. Data reported includes (where available): date of permit, permit type, permit number, status, valuation, contractor company, contractor name, and description.

Incoming permit data is checked at seven stages in a regimented quality control process, from initial data source interview, to data preparation, through final auditing. To ensure the building department is accurate, each of the seven quality control stages contains, on average, 15 additional quality checks, resulting in a process of approximately 105 quality control "touch points."

For more information about the EDR Building Permit Report, please contact your EDR Account Executive at (800) 352-0050.
EXECUTIVE SUMMARY: SEARCH DOCUMENTATION

A search of building department records was conducted by Environmental Data Resources, Inc (EDR) on behalf of TRC Environmental Consultants on Aug 12, 2015.

TARGET PROPERTY

538 10th Avenue
New York, NY 10018

SEARCH METHODS

EDR searches available lists for both the Target Property and Surrounding Properties.

RESEARCH SUMMARY

Building permits identified: YES

The following research sources were consulted in the preparation of this report. An "X" indicates where information was identified in the source and provided in this report.

General Building Department concepts

- **ICC**: The International Code Council. The governing body for the building/development codes used by all jurisdictions who’ve adopted the ICC guidelines. MOST of the US has done this. Canada, Mexico, and other countries use ICC codes books and guides as well. There are a few states who have added guidelines to the ICC codes to better fit their needs. For example, California has added seismic retrofit requirements for most commercial structures.

- **Building Department (Permitting Authority, Building Codes, Inspections Department, Building and Inspections)**: This is the department in a jurisdiction where an owner or contractor goes to obtain permits and inspections for building, tearing down, remodeling, adding to, re-roofing, moving or otherwise making changes to any structure, Residential or Commercial.

- **Jurisdiction**: This is the geographic area representing the properties over which a Permitting Authority has responsibility.

- **GC**: General Contractor. Usually the primary contractor hired for any Residential or Commercial construction work.

- **Sub**: Subordinate contracting companies or subcontractors. Usually a “trades” contractor working for the GC. These contractors generally have an area of expertise in which they are licensed like Plumbing, Electrical, Heating and Air systems, Gas Systems, Pools etc. (called “trades”).

- **Journeymen**: Sub contractors who have their own personal licenses in one or more trades and work for different contracting companies, wherever they are needed or there is work.

- **HVAC (Mechanical, Heating & Air companies)**: HVAC = Heating, Ventilation, and Air Conditioning.

- **ELEC (Electrical, TempPole, TPole, TPower, Temporary Power, Panel, AMP Change, Power Release)**: Electrical permits can be pulled for many reasons. The most common reason is to increase the AMPs of power in an electrical power panel. This requires a permit in almost every jurisdiction. Other common reasons for Electrical permits is to insert a temporary power pole at a new construction site. Construction requires electricity, and in a new development, power has yet to be run to the lot. The temporary power pole is usually the very first permit pulled for new development. The power is released to the home owner when construction is complete and this sometimes takes the form of a Power Release permit or inspection.

- **“Pull” a permit**: To obtain and pay for a building permit.

- **CBO**: Chief Building Official

- **Planning Department**: The department in the development process where the building /structural plans are reviewed for their completeness and compliance with building codes

- **Zoning Department**: The department in the development process where the site plans are reviewed for their compliance with the regulations associated with the zoning district in which they are situated.

- **Zoning District**: A pre-determined geographic boundary within a jurisdiction where certain types of structures are permitted / prohibited. Examples are Residential structure, Commercial/Retail structures, Industrial/Manufacturing structures etc. Each zoning district has regulations associated with it like the sizes of the lots, the density of the structures on the lots, the number of parking spaces required for certain types of structures on the lots etc.

- **PIN (TMS, GIS ID, Parcel#)**: Property Identification Number and Tax Map System number.

- **State Card (Business license)**: A license card issued to a contractor to conduct business.

- **Building Inspector (Inspector)**: The inspector is a building department employee that inspects building construction for compliance to codes.

- **C.O.**: Certificate of Occupancy. This is the end of the construction process and designates that the owners now have permission to occupy a structure after its building is complete. Sometimes also referred to as a Certificate of Compliance.
Permit Content Definitions

- **Permit Number**: The alphanumeric designation assigned to a permit for tracking within the building department system. Sometimes the permit number gives clues to its role, e.g. a "PL" prefix may designate a plumbing permit.

- **Description**: A field on the permit form that allows the building department to give a brief description of the work being done. More often than not, this is the most important field for EP's to find clues to the prior use(s) of the property.

- **Permit Type**: Generally a brief designation of the type of job being done. For example BLDG-RES, BLDG-COM, ELEC, MECH etc.

EXECUTIVE SUMMARY

DESCRIPTION

Environmental Data Resources, Inc.’s (EDR) City Directory Abstract is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR’s City Directory Abstract includes a search and abstract of available city directory data. For each address, the directory lists the name of the corresponding occupant at five year intervals.

Business directories including city, cross reference and telephone directories were reviewed, if available, at approximately five year intervals for the years spanning 1920 through 2013. This report compiles information gathered in this review by geocoding the latitude and longitude of properties identified and gathering information about properties within 100 feet of the target property.

A summary of the information obtained is provided in the text of this report.

RESEARCH SUMMARY

The following research sources were consulted in the preparation of this report. An "X" indicates where information was identified in the source and provided in this report.

LIEN SEARCH
Covenant House Phase I
538 10th Avenue
New York, NY 10018

Inquiry Number: 4381152.7
August 13, 2015
The EDR Environmental Lien and AUL Search Report provides results from a search of available current land title records for environmental cleanup liens and other activity and use limitations, such as engineering controls and institutional controls.

A network of professional, trained researchers, following established procedures, uses client supplied address information to:

- search for parcel information and/or legal description;
- search for ownership information;
- research official land title documents recorded at jurisdictional agencies such as recorders’ offices, registries of deeds, county clerks’ offices, etc.;
- access a copy of the deed;
- search for environmental encumbering instrument(s) associated with the deed;
- provide a copy of any environmental encumbrance(s) based upon a review of key words in the instrument(s) (title, parties involved, and description); and
- provide a copy of the deed or cite documents reviewed.

Thank you for your business.
Please contact EDR at 1-800-352-0050 with any questions or comments.

ENVIRONMENTAL LIEN
Environmental Lien:  Found  □  Not Found  ✗

OTHER ACTIVITY AND USE LIMITATIONS (AULs)
AULs:  Found  □  Not Found  ✗
Deed Exhibit 1
THIS INDENTURE, made the 19th day of April, nineteen hundred and eighty-four
BETWEEN the New York State Urban Development Corporation, a public
benefit corporation and political subdivision of the State of New
York, having its principal office and place of business at
1515 Broadway, New York, New York 10036

and Covenant House, a not-for-profit corporation
organized under the Laws of the State of New York and having
its principal place of business at 460 West 41st Street, New
York, New York 10036

party of the first part, and party of the second part,

WITNESSETH, that the party of the first part, in consideration of ten dollars paid by the party of the second
part, does hereby remise, release and quitclaim unto the party of the second part, the heirs or successors and
assigns of the party of the second part forever,

ALL that certain plot, piece or parcel of land, with the buildings and improvements thereon erected, situate,
lying and being in the Borough of Manhattan, County, City and State of New
York, bounded and described as follows:

See Attached Schedule A

TOGETHER with all right, title and interest, if any, of the party of the first part in and to any streets and
roads abutting the above described premises to the center lines thereof; TOGETHER with the appurtenances
and all the estate and rights of the party of the first part in and to said premises; TO HAVE AND TO
HOLD the premises herein granted unto the party of the second part, the heirs or successors and assignors of
the party of the second part forever.

AND the party of the first part, in compliance with Section 13 of the Lien Law, hereby covenants that the party
of the first part will receive the consideration for this conveyance and will hold the right to receive such consid-
eration as a trust fund to be applied first for the purpose of paying the cost of the improvement and will apply
the same first to the payment of the cost of the improvement before using any part of the total of the same for
any other purpose.

The word "party" shall be construed as if it read "parties" whenever the sense of this indenture so requires.

IN WITNESS WHEREOF, the party of the first part has duly executed this deed the day and year first above
written.

IN PRESENCE OF:

[Signatures]

NEW YORK STATE URBAN DEVELOPMENT CORPORATION
SCHEDULE A

Description of Property

Beginning at the corner formed by the intersection of the northerly side of West 40th Street and the easterly side of 10th Avenue; running thence northerly along the easterly side of 10th Avenue a distance of 158 feet 1 inch to a point; running thence easterly along a line extending easterly perpendicular to the easterly side of 10th Avenue a distance of 64.00 feet to a point; running thence northerly along a line parallel with the easterly side of 10th Avenue a distance of 39 feet 5 inches to a point in the southerly side of West 41st Street; running thence easterly along the southerly side of West 41st Street a distance of 86.00 feet to a point which is distant 150.00 feet from the intersection of the lines formed by the southerly side of West 41st Street and the easterly side of 10th Avenue; running thence southerly along a line parallel to the easterly side of 10th Avenue through a party wall 3 1/2 feet 3 1/2 inches to the southerly face of said party wall; running thence westerly along the southerly face of said party wall 2 1/2 inches to the westerly face of a one story building on the premises adjoining on the east; running thence southerly along the westerly face of said one story building and a line in continuation thereof 50 feet 5 1/2 inches to the east-west center line of the block formed by 9th and 10th Avenues and West 40th and West 41st Streets; running thence westerly 9 feet 9 1/2 inches along said center line to a point in a line drawn parallel with the easterly side of 10th Avenue and distant 140.00 feet easterly therefrom; running thence southerly along a line parallel to the easterly side of 10th Avenue 98 feet 9 inches to a point in the northerly side of West 40th Street; running thence westerly along the northerly side of West 40th Street a distance of 140.00 feet to the point and place of beginning such lines containing an area of .599288 acres more or less.

EXCEPTING AND RESERVING to The People of the State of New York all gold and silver mines.

Intending to convey those premises acquired by The People of the State of New York by virtue of Map No. 1, Parcel No. 1 entitled Map and Description for the Acquisition of Real Property, Riviera Congress Associates filed in the Department of Public Works (now Department of Transportation) on January 27, 1967, and by virtue of Map No. 1, Parcel No. 1 entitled Map and Description for the Acquisition of Real Property, Gibson and Cushman, Inc. filed in the Department of Public Works (now Department of Transportation) on April 4, 1967.

PROPERTY TAX MAP
Environmental Data Resources, Inc.’s EDR Property Tax Map Report is designed to assist environmental professionals in evaluating potential environmental conditions on a target property by understanding property boundaries and other characteristics. The report includes a search of available property tax maps, which include information on boundaries for the target property and neighboring properties, addresses, parcel identification numbers, as well as other data typically used in property location and identification.

Thank you for your business.
Please contact EDR at 1-800-352-0050 with any questions or comments.

### D. Sales & Value

#### D1. Sales & Values Maps

D2. Valuation Model

Not enough data found to estimate property's value.

E. Property Tax
E1. Property Tax

The following values are from the latest assessment roll and give information about the fiscal years 2014/2015 and 2015/2016. The City’s fiscal year runs from July 1 to June 30.

Market Value

The property tax assessment process starts when the city’s assessors estimate a property’s market value, based upon the available information. The assessors use three approaches to value the property: sales, cost, and income. The market value is generally defined as what the property would sell for in a competitive and open market.

<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>Land market value</td>
<td>$5,698,000</td>
<td>$5,698,000</td>
</tr>
<tr>
<td>Building market value</td>
<td>+ $23,528,000</td>
<td>+ $25,676,000</td>
</tr>
<tr>
<td>Market value</td>
<td>= $29,226,000</td>
<td>= $31,374,000</td>
</tr>
</tbody>
</table>

Assessed Value

Assessed value is a calculation of the property value for tax purposes. It usually represents a percentage of the market value and is subject to limits on annual increases. Sometimes the city will exempt part of the assessed value from taxation, as an incentive to make improvements to an existing structure or to build on a vacant lot. There are also several tax reductions programs for residential properties that may apply and may lower the property’s tax bill.

<table>
<thead>
<tr>
<th></th>
<th></th>

<td>+ $10,587,600</td>
<td>+ $11,554,200</td>
</tr>
<tr>
<td>Assessed value</td>
<td>= $13,151,700</td>
<td>= $14,118,300</td>
</tr>
<tr>
<td>Exemptions granted by city</td>
<td>- $13,151,700</td>
<td>- $14,118,300</td>
</tr>
<tr>
<td>Net assessed value</td>
<td>= $0</td>
<td>= $0</td>
</tr>
</tbody>
</table>

Transitional Value

While the city’s assessors have noted the rapid appreciation of property in New York City, the state understands that it would be burdensome for property taxes to rise too fast. Therefore, increases in the assessed value are phased in over a number of years. This introduces the transitional assessed value, which is a limit on the portion of the assessed value introduced into the tax base. When the assessed value is phased in, sometimes the exemptions are as well.

<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>Transitional land value</td>
<td>$2,532,780</td>
<td>$2,564,100</td>
</tr>
<tr>

<td>+ $9,963,540</td>
</tr>
<tr>
<td>Transitional value</td>
<td>= $11,827,980</td>
<td>= $12,527,640</td>
</tr>
<tr>
<td>Transitional exemption value</td>
<td>$11,827,980</td>
<td>$12,527,640</td>
</tr>
<tr>
<td>Transitional net assessed value</td>
<td>= $0</td>
<td>= $0</td>
</tr>
</tbody>
</table>

Taxable Value

The taxable value, for 2014/2015, is the smaller of the city’s net assessed value and the transitional net assessed value.

Taxable value = $0

Property Tax

Base tax is an estimate of what an owner not benefiting from tax exemptions or abatements would pay and is determined by multiplying the assessed value by the tax rate. Current tax is calculated by multiplying the taxable value by the tax rate.

For a very small number of properties, owner-related exemptions (for which we currently don’t have information) apply, and so the values given below may be slightly different from the official ones. In addition to exemptions, the city also grants tax abatements to some properties. An abatement is simply a discount which is subtracted directly from the current tax. This results in the property tax, the amount the current owner

- $5.00 - $6.00

Property Tax: $1,263,701.38
Tax Year: 2014/2015
Square Foot: 254342 Sq Ft
Tax per sqft: $4.97

**E2. Exemptions and Tax Abatements**

Both the City and State of New York offer property tax reductions through exemptions and abatements for residential property, commercial constructions, and properties used by governmental, industrial, and not-for-profit organizations. Exemptions provide tax relief by reducing a property’s assessed value, and abatements reduce taxes by applying credits to the amount of tax due. The information in this section presents a summary of the granted amounts and other related values of the benefit programs. Some of this data comes from NYC Department of Housing Preservation and Development (HPD) and the Department of Finance, departments which administer the J-51 Program and the 421a Program.

F. Development & Use

F1. Zoning and Building Class
The building class specifies how a property is used or what type of building is present on that property. Building classes range from A to Z (excluding X). There are at most 10 different sub-classes within each building class (ranging from 0 to 10.) These building classes cover all property uses from residential and commercial to government buildings and parks.

**Legend**

- **Health Center, Child Center, Clinic (I5)**

- **Residential:**
  - Residential, 1 Fam
  - Residential, 2 Fam
  - Walkups
  - Condos
  - Elevator

- **Commercial:**
  - Store + Apts, Lofts
  - Small Businesses
  - Theatres & Hotels
  - Offices
  - Parking

- **Mixed Use:**

  - Outdoor Recreation Facilities & Cemeteries
  - Churches
  - Schools
  - City Buildings
  - Health & Social Care

- **Other:**
  - Vacant Lots
  - Miscus
  - Unknown

---

As you can see in our legend, we show many building classes on our maps! Still, we are not showing the entire list. If you have questions or would like to know more about the different types of building classes, [Click Here!](http://www.propertyshark.com/mason/Reports2/print.html?propkey=16161&cats=.//Property-Report/sections/notes.property_photos,.//Property-Report/section...)
New York City is divided into three basic zoning districts: residential (R), commercial (C) and manufacturing (M). These basic zoning districts are subdivided by the intensity of use. Development is governed by the use, bulk, and parking requirements of the zoning district.

<table>
<thead>
<tr>
<th>District code</th>

* The Earlier Rezonings are no longer being updated. They are presented for reference purposes.

### F2. Floor Area Ratio & Air Rights

There are many rules that limit what you can build on a lot and how large it can be. But the most important is the Floor Area Ratio, or FAR. The FAR is expressed as a ratio of the size of the building in square feet to the size of the lot in square feet. For example, if a lot is 2,000 square feet and has an allowable FAR of 4.0, then you can't build a building larger than 8,000 square feet.

\[
\text{Area of lot in square feet} = 26,136 \\
\text{FAR} = x \\
\text{Maximum usable floor area of building} = 261,360
\]

**Available Air Rights by Parcel**
The building on this lot is smaller than the maximum set by the FAR. Thus it may be possible to add to the building (either more floors or an extension) or it may be possible to sell the “air rights” to a developer who owns a nearby lot. (Note: other factors may limit what you can do.)

Unused buildable square feet: 7,056

G. Violations

G1. Housing Preservation and Development Violations

When excessive violations are present, this can adversely affect the support given by The NYC Department of Housing Preservation and Development (HPD). These violations can result in building-wide inspections, fees, and the requirement of extensive repair work to correct underlying conditions. In some cases, outstanding violations may result in a lien being placed on the property. It is also substantially more difficult to mortgage a building with extensive violations.
On this color-coded map, view all properties with open violations that have been left uncorrected.

Legend

- Uncorrected Violation(s)

Please note: the NYC HPD is the only authoritative source for information on housing violations. Please consult the HPD website for up-to-date violations.

PropertyShark obtains its records from HPD and updates them monthly.

G2. ECB Violations

There are eleven city agencies that administer the City’s quality-of-life laws and issue Notices of Violation (NOVs) for alleged violations. The ECB is a separate and independent agency that hears challenges to those NOVs. The agencies that issue the most violations for real estate are:

- Department of Buildings (DOB)
- Department of Environmental Protection (DEP)
- Fire Department
- Landmarks Preservation Commission (LPC)
- Department of Sanitation

PropertyShark obtains its ECB NOV records from the DOB and updates them nightly. Records go back to 1988

Understanding This Map

This screening map, provided to PropertyShark by Toxics Targeting, shows environmental hazards such as toxic dumps, garbage landfills, leaking tanks, hazardous waste sites, and pollution discharges reported by local, state and federal government authorities.

For information about the hazards that can appear on the map, see our Pollutants Groups Description FAQ. For information about Toxics Targeting, see our About Toxics Targeting FAQ.

More Details & Help

Call 800-2-TOXICS (800-286-9427 NYS only) or 607-273-3391 for more info.

Map Disclaimer: Mapped locations are approximate; identified sites based on current and/or historic information; site symbols can refer to large properties; additional toxic sites are not mapped; contamination problems can impact properties far from toxic sources; sites include known and potential hazards; regulatory status of sites may have changed.
I2. Fema Flood Zones Map

To understand flood zoning within the current neighborhood you can review the full map by clicking on this ‘minimap’. Flood zoning codes, Fema map panel, and publication date all can be extracted for this target property.

Legend

- **Moderate to Low Risk Areas**
  - X < 1% ACF

FLOOD INSURANCE RATE MAP
KEVIN A. McGUINNESS, PG

PROPOSED PROFESSIONAL TITLE: LEAD ENVIRONMENTAL SCIENTIST OR PROJECT MANAGER (DEPENDENT UPON TASK PERFORMED)

YEARS OF ENVIRONMENTAL CONSULTING EXPERIENCE: 28

EDUCATION
B.S., Geology (Minor: Hydrogeology), State University of New York at Oneonta, 1986

AREAS OF EXPERTISE
Mr. Kevin McGuinness has over 25 years of experience in investigation, remediation, regulatory compliance, and hydrogeology as a project manager, supervisor, and client manager for a wide range of multidisciplinary projects. He has extensive experience in negotiating environmental projects with regulatory agencies in support of clients' objectives.

Mr. McGuinness serves as Department Manager in the Remediation Practice in TRC’s New York City office. His qualifications include extensive planning, field investigation, work plan and report preparation, cost estimating, remedial construction management, and project management.

Mr. McGuinness has project management and technical experience in the following areas:
- Remedial Investigation and Remedial Design
- Remedial Construction Oversight
- Underground Storage Tank Management
- Soil Vapor Intrusion Investigations and Mitigation
- NY State Brownfield Projects
- NYC Office of Environmental Remediation Projects
- Environmental Forensics

SUMMARY OF EXPERIENCE
Mr. McGuinness has worked for the following firms:

</table>
REPRESENTATIVE EXPERIENCE

Developed a Complex Synergistic Remedial Strategy for CVOC Remediation, Queens, NY
Mr. McGuinness managed the final remedial design of this former staple/stapler manufacturing facility in Queens, NY. Trichloroethene (TCE) and tetrachloroethene (PCE) impacts had been identified in the shallow, intermediate and deep groundwater beneath the site. Previous investigations had identified the presence of greater than 320,000 parts per billion (ppb) of TCE in onsite groundwater and greater than 30,000 ppb of TCE in offsite groundwater. Remediation, consisting of the injection of over 150,000 pounds of oxidant into a network of more than 100 injection wells in the shallow, intermediate and deep groundwater on and offsite had been implemented by others over the previous 8 years. In response to the remedial injections, the TCE concentrations had been reduced to less than 100 ppb at least 3 times, only to subsequently rebound to concentrations greater than 150,000 ppb.

Mr. McGuinness, performed a thorough review of the site history and developed a Conceptual Site Model (CSM) that identified back diffusion (interbedded fine and more coarse grained geologic units where an oxidant preferentially treats the target contaminant in the coarse grained units and the contaminant diffuses from the finer grained units after the oxidant is spent, resulting in a rebound in concentrations) as likely occurring. Subsequent sampling confirmed the presence of a binary mixture of oxidant and contaminant in wells screened across the finer and coarser grained units. The CSM also identified the presence of an aquitard between the intermediate and deep groundwater units and that, although wells that penetrated the aquitard had not been properly constructed, DNAPL had not penetrated the aquitard. Also, the TCE/PCE ratio in the deep groundwater was different then in the source area, indicative of a separate, upgradient source of the deep groundwater impacts.

Mr. McGuinness developed a comprehensive remedial strategy to achieve the clients’ goals of an expeditious remedy and case closure. The strategy consisted of the removal of the TCE source area (shallow and intermediate groundwater) using Electrical Resistive Heating (ERH) and the treatment of the downgradient plume via enhanced reductive dechlorination (ERD). While no degradation of the TCE had been observed in the source area, degradation and daughter products (cis-1,2 dichloroethene and vinyl chloride) were observed downgradient, where a peat layer, acting as a source of carbon, had been logged. Genetic testing confirmed the absence of the dehalorespiring bacteria, Dehalococcoides (Dhc), in the source area, but its presence downgradient, where the peat was present. The remedy is synergistic in that the heated groundwater from the source area treatment, would not only stimulate the bacterial activity downgradient, but it would also breakdown the organic carbon in the source area, which would further
act as a source of carbon for the downgradient ERD remedy. The injection of DHC for further bioaugmentation and a carbon substrate for further biostimulation were included in the remedy to ensure a complete and timely remediation downgradient.

**Scoping and Executing NYC Redevelopment Projects in Accordance with the NYC OER Requirements**
Developed investigation and remediation scopes of numerous NYC redevelopment projects and negotiated the scopes and execution with the NYC OER. Navigated these time-sensitive projects through the OER process in an expeditious manner, while ensuring that the scopes were not overly burdensome. Managed the projects from issuance of the acquisition of the Notice-to-Proceed to Notice-of-Satisfaction. Negotiated reduced scopes of Community Air Monitoring based upon realistic risk and exposure scenarios to reduce the labor and cost of compliance.

**Complex Investigation of Former Chemical Manufacturing Facility, Fords, NJ**
Managed a large project team in the investigation of a 186-acre site impacted by numerous complex contaminants. The high profile, schedule-driven scope included the characterization and delineation of dense non-aqueous phase liquid (DNAPL) chlorotoluene in two ponds, dissolved phase chlorotoluene in groundwater, metals, low-level radioactive compounds and the potential presence of unexploded ordinances. The investigation encompassed soil, groundwater, fresh surface-water bodies, freshwater wetlands, salt water wetlands and a river and associated sediments.

**Scoping Innovative Remedial Strategy of Dissolved Phase Petroleum Plume, Staten Island, NY**
A Phase I Environmental Site Assessment (for refinancing) of an affordable housing complex identified the presence of two former gasoline stations. Subsequent investigation identified the presence of 6 USTs. The USTs were removed, impacted soil was excavated and groundwater impacts were delineated. Groundwater monitoring over time identified benzene, toluene, ethyl benzene and xylenes (BTEX) impacts were persisting at concentrations that could not support a natural attenuation strategy. The area of impacted groundwater was found to be deficient in sulfate and as a result sulfate-enhance bioremediation applications were considered. Mr. McGuinness designed and implemented a simple and very economical strategy of fertilizing and watering the grassy surfaces overlying the impacted plume, using commercially available gypsum. Subsequent groundwater monitoring demonstrated an increase in the sulfate content of the groundwater and a decrease in the BTEX content of the groundwater.
Environmental Consultant for Large National Affordable Housing Client
Acting “in house” environmental consultant to national affordable housing client who manages over 8,000 units of housing in 16 states. Reviewed due diligence documents and environmental conditions of potential acquisition properties and assessed the associated potential liabilities. Assisted in the scoping and estimating of cost of appropriate remedies and assisted with the acquisition of financing. The geographic locations of projects included New York, New Jersey, Connecticut, Chicago and Los Angeles and the liabilities ranged from poly-cyclic aromatic hydrocarbons (PAHs) in soils to lead in drinking water issues.

Investigation and Remediation of Former Printing Facility, Passaic County, NJ
Managed this multifaceted project which included source investigation, vapor intrusion investigation, utility investigation, and horizontal and vertical groundwater delineation activities associated with the historic release of chlorinated volatile organic compounds. As a result of a regulatory directive prior to our involvement, many of investigation activities had to be conducted in parallel and within narrow time frames. This included the investigation of a number of private residences for potential vapor intrusion, and subsequently the installation of sub-slab depressurization (SSDS) mitigation systems at two residences. There were ongoing monitoring requirements and mitigation system analyses to ensure that all vapor intrusions issues were addressed. Because the extent of horizontal and vertical groundwater impacts had not yet been delineated, the technical scopes to meet these requirements were developed. Associated activities included the installation of a Multi-Level Sampling Device that facilitated the collection of groundwater samples from seven discrete zones within a 270-foot deep bedrock well. An interim soil-vapor extraction system was installed to address impacted soils. The system operated while appropriate source area remedial alternatives were screened.

SPECIALIZED TRAINING
- OSHA 40-hour Health and Safety Training for Hazardous Waste Site Operations
- OSHA 8-hour Level B Safety Training
- OSHA 8-Hour Supervisor of Hazardous Waste Site Operations
- On-Track Railroad Worker Safety Certified
- Licensed Site Remediation Professional, New Jersey, 2010 (lapsed 2013)
- Certified Subsurface Evaluator, New Jersey, NJDEP, 1999

PROFESSIONAL AFFILIATIONS
- New York City Office of Environmental Remediation Turbo Training
- New York City Office of Environmental Remediation Task Force Member
- New York Brownfield Partnership Member
KATHLEEN D. STINLEY

EDUCATION
B.S., Civil and Environmental Engineering, George Washington University, 2013

AREAS OF EXPERTISE

Ms. Stinley’s background includes the following experience in the field of environmental engineering/environmental consulting:

- Environmental Site Assessments
- Soil and Groundwater Investigations
- Soil and Groundwater Remediation
- Indoor Air Quality Investigations
- Wetland Delineation and Mitigation

Ms. Stinley serves as a project engineer based in TRC’s New York City office and has been working for TRC since July 2014. Prior to working for TRC, Ms. Stinley served as an engineering intern for six months at an environmental consulting firm based in Reading, PA. Ms. Stinley’s applicable experience includes groundwater and soil sampling, indoor air quality investigations, underground and aboveground storage tank removal inspections, product gauging and vacuum truck extraction, sulfate injection events and monitoring well installation oversight. Ms. Stinley has served on projects for the New York City School Construction Authority, Port Authority of New York and New Jersey, the Dormitory Authority of the State of New York, the New York City Economic Development Corporation and Chesapeake Energy, among others.

REPRESENTATIVE EXPERIENCE

Proposed Maplewood Post Office, Maplewood, NJ
Ms. Stinley assisted in the design of a sub-slab depressurization system for a space to be utilized by the United States Postal Service which conformed to the NJDEP Vapor Intrusion Technical Guidance (Version 3.1-March 2013). The design process included selecting the materials and location of the system and coordinating with the AutoCad designer in order to create working drawings of the sub-slab depressurization system.

The Port Authority of New York and New Jersey, John F. Kennedy International Airport, Jamaica, NY
Ms. Stinley serves as project engineer supervising the multi-phase extraction of light non-aqueous phase liquid and water at the John F. Kennedy Airport. Ms. Stinley conducts knock-out pot tests during the extraction events and records the condition of the groundwater. Gauging events occur quarterly in order to evaluate the residual source and extent of contamination. Additionally, Ms. Stinley has performed sulfate injections at various locations at the airport in order to address residual subsurface impacts. Ms. Stinley is responsible for recording the field parameters, such as the depth to water, oxidation reduction potential, dissolved oxygen, conductivity, turbidity,
temperature, and pH, of the monitoring wells prior to and during the sulfate injection. Approximately 20,000 gallons of water, 13,000 pounds of Epsom Salt and 10 gallons of janitorial strength ammonia water are mixed in a tanker truck and injected into a network of several injection wells. Ms. Stinley has supervised the installation of monitoring and extraction wells at the John F. Kennedy Airport Bulk Fuel Farm. Ms. Stinley has assisted the project manager in the completion of Remedial Progress Reports following the remediation activities at several sites at the John F. Kennedy Airport.

**New York City School Construction Authority, Various Locations, New York, NY**

Ms. Stinley has performed environmental site inspections of proposed pre-kindergarten facilities for the New York City School Construction Authority. Ms. Stinley’s responsibilities include conducting historical research regarding the proposed lease space, performing a site visit of the lease space as well as the preparation of the final Phase I report. Ms. Stinley has also performed indoor air quality investigations as part of the Phase II process for proposed pre-kindergarten facilities. Ms. Stinley’s responsibilities include conducting a chemical inventory of the facility, performing the air quality investigation and preparing the indoor air quality survey report. Ms. Stinley has also performed inspections of the removal of underground and aboveground storage tanks. Ms. Stinley is responsible for ensuring the removal of the tanks is compliant with the specifications.

**Environmental Site Inspections, Various Locations, New York, NY and Reading, PA**

Ms. Stinley has assisted in the environmental site inspections of commercial, office and warehouse spaces. This site assessment process begins by obtaining relevant information regarding the history of the land, the building and the adjoining properties. This information includes property records displaying previous transactions between landowners, which are used to identify any recognized environmental conditions in connection with the property. Ms. Stinley is also responsible for the completion and submission of federal and state Freedom of Information Law forms. Ms. Stinley has assisted the project scientists in both the site inspections and the interviews with the building supervisors. Finally, the data obtained from each step is compiled into an overall environmental site assessment report.

**Groundwater Investigations, Various Locations, New York, NY and Reading, PA**

Ms. Stinley assisted in performing groundwater investigations on monitoring wells located on several commercial properties. Field parameters including oxidation reduction potential, dissolved oxygen, conductivity, turbidity, temperature, and pH were measured during well purging and groundwater samples were collected and sent to the laboratory to be analyzed in order to evaluate the condition of the groundwater at the site.

**New York City Economic Development Corporation, Brooklyn, NY**

Ms. Stinley assisted in the site inspection and collection of an oil sample in response to the discovery of a 55-gallon drum containing what appeared to be waste oil located.
at the South Brooklyn Marine Terminal. Ms. Stinley was responsible for collecting a sample of the waste oil and submitting the sample to the laboratory for analysis.

Dormitory Authority of the State of New York, Soil Investigations, Bronx, NY
Ms. Stinley serves as project engineer performing soil investigations on new and existing construction sites at the Bronx Community College. Ms. Stinley is responsible for collecting composite and grab soil samples from stock piles of the excavated soil. After completing a chain of custody form, Ms. Stinley corresponds with the laboratory regarding the pick-up and obtaining the results of the analysis of the soil samples.

Indoor Air Quality Investigations, Various Locations, New York, NY
Ms. Stinley has assisted project scientists in performing Indoor Air Quality Investigations at various locations in New York City. Ms. Stinley was responsible for preparing the Health and Safety Plan/Mobilization in order to assign responsibilities and establish personal protection standards and mandatory safety practices and procedures for the filed investigation program. A chemical inventory and inspection was completed at each site prior to the collection of several 8-hour duration indoor/ambient air samples in SUMMA canisters. The indoor and ambient air samples were then analyzed using USEPA Method TO-15.

Chesapeake Energy Natural Gas Well Pad, Wetland Delineation, Bradford County, PA
Ms. Stinley was responsible for coordinating with the wetland scientists in order to develop wetland sample plans and field measurements on and around pre- and post-constructed natural gas wells. These measurements were obtained through the utilization and interpretation of Geographic Information Systems program data. The hydrology, soil composition and vegetation onsite were documented in order to differentiate between wetlands and uplands. After the analysis of the site-specific data, Ms. Stinley was responsible for the completion of the wetland delineation report.

SPECIALIZED TRAINING

- 40-Hour OSHA HAZWOPER Training, August 2014
- SIDA Training, December 2014
- CSX Training, December 2014
APPENDIX G:
ENVIRONMENTAL PROFESSIONAL STATEMENT
DEFINITION OF ENVIRONMENTAL PROFESSIONAL AND RELEVANT EXPERIENCE THERETO PURSUANT TO 40 CFR 312

(1) a person who possesses sufficient specific education, training, and experience necessary to exercise professional judgment to develop opinions and conclusions regarding conditions indicative of releases or threatened releases (see §312.1(c)) on, at, in, or to a property, sufficient to meet the objectives and performance factors in §312.20(e) and (f).

(2) Such a person must: (i) hold a current Professional Engineer’s or Professional Geologist’s license or registration from a state, tribe, or U.S. territory (or the Commonwealth of Puerto Rico) and have the equivalent of three (3) years of full-time relevant experience; or (ii) be licensed or certified by the federal government, a state, tribe, or U.S. territory (or the Commonwealth of Puerto Rico) to perform environmental inquiries as defined in §312.21 and have the equivalent of three (3) years of full-time relevant experience; or (iii) have a Baccalaureate or higher degree from an accredited institution of higher education in a discipline of engineering or science and the equivalent of five (5) years of full-time relevant experience; or (iv) have the equivalent of ten (10) years of full-time relevant experience.

(3) An environmental professional should remain current in his or her field through participation in continuing education or other activities.

(4) The definition of environmental professional provided above does not preempt state professional licensing or registration requirements such as those for a professional geologist, engineer, or site remediation professional. Before commencing work, a person should determine the applicability of state professional licensing or registration laws to the activities to be undertaken as part of the inquiry identified in §312.21(b).

(5) A person who does not qualify as an environmental professional under the foregoing definition may assist in the conduct of all appropriate inquiries in accordance with this part if such person is under the supervision or responsible charge of a person meeting the definition of an environmental professional provided above when conducting such activities.

Relevant experience, as used in the definition of environmental professional in this section, means: participation in the performance of all appropriate inquiries investigations, environmental site assessments, or other site investigations that may include environmental analyses, investigations, and remediation which involve the understanding of surface and subsurface environmental conditions and the processes used to evaluate these conditions and for which professional judgment was used to develop opinions regarding conditions indicative of releases or threatened releases (see §312.1(c)) to the Site. TRC personnel resume(s) are included in Appendix F.

I declare that, to the best of my professional knowledge and belief, I meet the definition of environmental professional as defined in §312.10 of 40 CFR 312.

I have the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the subject property. I have developed and performed the all appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312.

Signature of Environmental Professional: ___________________________ Date: 08/28/2015
