CERTIFICATION

I, Christopher McMahon, am a Qualified Environmental Professional, as defined in RCNY § 43-1402(ar). I have primary direct responsibility for implementation of the Remedial Investigation for the 550 10th Avenue Redevelopment (OER Project No. 20TMP0490M, 20EH-N114M. I am responsible for the content of this Remedial Investigation Report (RIR), have reviewed its contents and certify that this RIR is accurate to the best of my knowledge and contains all available environmental information and data regarding the property.

Christopher McMahon 11 May 2021
Qualified Environmental Professional Date Signature
EXECUTIVE SUMMARY

The Remedial Investigation Report (RIR) provides sufficient information for establishment of remedial action objectives, evaluation of remedial action alternatives, and selection of a remedy pursuant to RCNY§ 43-1407(f). The remedial investigation (RI) described in this document is consistent with applicable guidance.

Site Location and Current Usage

The approximately 16,000-square-foot Site is located at 550 10th Avenue in the Clinton neighborhood of Manhattan, New York and is identified as Block 1050 and Lot 61 on the New York City Tax Map. The Site historically consisted of portions of former Lot 1 and Lot 61 until the tax lots were reapportioned in June 2020 to match the current proposed redevelopment extents. The Site consists of Wing A of the Covenant House New York shelter for homeless youth, a parking lot, and construction field offices associated with the redevelopment of the former Wings B and C of the Covenant House New York facility (NYCOER OER Site No. 16TMP0060M, 16EH-N056M) located adjacent to the east of the Site; remediation of the adjacent parcel was completed in June 2020 and construction of the superstructure is ongoing.

The Site is bordered by 10th Avenue to the west, West 41st Street to the north, West 40th Street to the south, and the active redevelopment of former Covenant House New York Wings B and C to the east. New York City Transit (NYCT) tunnels are located to the north of the site, below West 41st Street. In addition, Lincoln Tunnel entrance roads and access ramps for the nearby Port Authority Bus Terminal are located to the south of the site, beyond West 40th Street. A Site Plan is provided as Figure 2. The existing basement level beneath Wing A extends between approximately 10.5 and 15-feet below sidewalk level (bsl).

Summary of Proposed Redevelopment Plan

The proposed future use of the Site will consist of demolishing the existing 8-story Covenant House building (Wing A) and associated cellar space, and constructing a new 48-story residential building with an approximate footprint area of 14,000 square-feet. Excavation will be completed to vertically and horizontally extend the current cellar extents. The new cellar footprint will cover approximately 88% of the Site footprint; the existing 10-foot offset from 10th Avenue on the western side of the Site will remain undeveloped. The current zoning designation is commercial (C2-8). The proposed use is consistent with existing zoning for the property. Soil will be generally excavated to approximately 17.5 feet bsl with deeper excavations ranging from 22.5 feet bsl to 26 feet bsl for the construction of deep foundation elements. Groundwater depth was measured to be between 12 and 14 bsl.
Summary of Past Uses of Site and Areas of Concern

A Phase I Environmental Site Assessment (ESA) was completed for the Covenant House by TRC Engineers, Inc. (TRC) dated September 2015. According to the summary of the historical Sanborn Fire Insurance Maps provided in the ESA, prior to 1930 the Covenant House property was occupied by up to 16 residential buildings, some of which included mixed commercial use. Increased commercial operations were documented between 1930 and 1950. Two filling stations and an automobile repair shop operated between 1950 and 1968 on the western portion of the Site, within the portion of former tax Lot 61 that is part of the proposed redevelopment site. The northeastern corner of the site is labeled as automobile parking during this period. Between 1968 and 1979 additional site buildings were demolished and the southwestern filling station was no longer present. Current Wing A and former Wings B and C are shown between 1968 and 1990 and are labeled as a Narcotic Rehabilitation Center. The northwestern filling station is no longer present by 1990.

Historical ownership information obtained from the New York City Department of Finance and provided in the ESA revealed no information regarding environmental conditions related to past usage.

The Phase I ESA also identified that the Covenant House was registered with the New York State Department of Environmental Conservation (NYSDEC) for Spill No. 0613314, which was reported in 2007 following the observation of oily water in an onsite excavation. Approximately 3,000 gallons of oily water were pumped out of the excavation and no additional oily water infiltration was observed following the removal. The spill was administratively closed in 2009. A second spill was reported for the property, but associated with the 7 Line Subway Extension. According to the ESA, petroleum impacted soils were identified during drilling for the subway extension and Spill No. 04044424 was reported in 2004. Contaminated soil was reportedly removed and replaced with clean fill and the spill was administratively closed in 2005.

The AOCs identified for this site based on the Phase I ESA and previous site inspection and investigations include:

1. Closed Spill Nos. 04044424 and 0613314
2. Former Onsite Filling Stations and Automobile Repair Shop
3. Historic Fill
Summary of the Work Performed under the Remedial Investigation

GO Covenant LLC performed the following due diligence scope of work in 2017, 2018, and 2019:

1. Conducted a Site inspection to identify AOCs and physical obstructions (i.e., structures, buildings, etc.);
2. Completed two geophysical surveys in the vicinity of drilled locations to identify the potential presence of unidentified underground storage tanks and underground utilities;
3. Installed 11 soil borings across the Site and collected 11 soil samples, in addition to 2 duplicate soil samples, for chemical analysis from the soil borings to evaluate soil quality;
4. Installed 3 permanent groundwater monitoring wells and 2 temporary groundwater monitoring wells within the Site and collected 5 groundwater samples, in addition to 2 duplicate groundwater samples, for chemical analysis to evaluate groundwater quality; and,
5. Installed 3 sub-slab soil vapor probes at the Site and collected 3 soil vapor samples, in addition to 1 duplicate soil vapor sample, for chemical analysis.

GO Covenant LLC performed the following scope of work in 2021 in accordance with the NYCOER approved Phase II Work Plan dated December 2019 to supplement the previously completed investigations and fill data gaps for meeting NYCOER RI requirements:

1. Conducted a Site inspection to identify AOCs and physical obstructions (i.e., structures, buildings, etc.);
2. Completed a geophysical survey in the vicinity of drilled locations to identify the potential presence of unidentified underground storage tanks and underground utilities;
3. Installed 7 soil borings across the Site, and collected 12 soil samples, in addition to 1 duplicate soil sample, for chemical analysis from the soil borings to evaluate soil quality;
4. Installed 1 groundwater monitoring well within the Site and collected 3 groundwater samples, in addition to 1 duplicate groundwater sample, for chemical analysis to evaluate groundwater quality;
5. Installed 1 soil vapor probe at the Site and collected 1 soil vapor sample, in addition to 1 duplicate soil vapor sample, for chemical analysis.
Summary of Environmental Findings

1. The top of curb sidewalk elevation adjacent to the redevelopment extents on West 41st Street and West 40th Street is approximately +24.5 feet North American Vertical Datum of 1988 (NAVD88). Measurements collected during the investigation revealed that the basement elevation of Building A is approximately +14 feet NAVD88 (10.5 feet below sidewalk level [bsl]) within the northern portion of the building, approximately +13 feet NAVD88 (11.5 feet bsl) within the southern portion of the building, and the basement elevation beneath the former pedestrian walkway is approximately +9.5 feet NAVD88 (15 feet bsl).

2. Groundwater was encountered during the Site investigation. Depth to groundwater is between approximately 12 and 15.5 feet bsl at the Site, corresponding to approximately el +9 feet to +12 feet NAVD88.

3. Groundwater flow is anticipated to be to the west towards the Hudson River.

4. Depth to weathered bedrock is between approximately 24.5- and 34.9-feet below sidewalk level, corresponding to el 0 and el -10.4 feet NAVD88, and depth to competent rock is between approximately 28- and 45-feet below sidewalk level, corresponding to el -4 and el -20.5 feet NAVD88.

5. Based on borings completed during the 2017, 2018, and 2021 investigations, site stratigraphy below the asphalt parking lot on the northern portion of the subject property consists of an approximately 9.5- to 20-foot thick layer of historic fill underlain by a silty sand unit followed by weathered mica schist rock. The basement floor slab varied from 6 to 18 inches thick and is underlain by historic fill to the depth of drilling refusal on presumed weathered mica schist rock (2.5 to 3.5 below basement floor slab) beneath the central/western portion of the building. Drilling refusal was encountered slightly deeper below the northeastern, southeastern, and southwestern basement slab where a 3- to 3.5-foot thick layer of historic fill was underlain by silty sand to the depth of drilling refusal which varied between 5- and 10.5-feet below the basement floor slab. Clay was also encountered beneath the northeastern portion of the building from 9 to 10.5 feet below basement floor slab. Fill between 8 and 13 feet thick underlain by silty sand was observed beneath the central portion of the building, although no bedrock was encountered. Historic fill was not observed beneath the northeastern, southeastern, and southwestern basement slab, although drilling refusal on weathered mica schist rock was encountered between 5- and 6-feet below the basement slab in the northeastern and northwestern portion of the building. Native material at these locations generally consists of silty sand.
6. Soil/fill samples collected during the RI were compared to NYSDEC Unrestricted Use Soil Cleanup Objectives (SCOs) and Restricted Use Soil Cleanup Objectives (RUSCOs) for Restricted Residential use as presented in 6NYCRR part 375-6.8 and CP51 as well as the NYSDEC January 2021 Guidance Values for PFAS compounds. Soil samples showed the following:

- Volatile organic compounds (VOCs) and polychlorinated biphenyls (PCBs) were not detected above the NYSDEC Unrestricted Use SCOs and the Restricted Residential SCOs in any soil samples collected;

- Several semi volatile organic compounds (SVOCs), specifically polyaromatic hydrocarbons (PAHs), were detected above the NYSDEC Restricted Residential RUSCOs including benzo(a)anthracene (max. 10.8 mg/kg), benzo(a)pyrene (max. 9 mg/kg), benzo(b)fluoranthene (max. 8.44 mg/kg), benzo(k)fluoranthene (max. 7.34 mg/kg), dibenz(a,h)anthracene (max. 2.49 mg/kg), and indeno(1,2,3-cd)pyrene (max. 5.46 mg/kg) in shallow samples. Benzo(k)fluoranthene (max. 1.22 mg/kg) and chrysene (max. 1.27 mg/kg) were also detected above the NYSDEC Unrestricted Use SCOs.

- One pesticide, 4,4-DDT (max. 0.0187 mg/kg), was detected at a concentration exceeding the NYSDEC Unrestricted Use SCOs. No other pesticides were detected above the NYSDEC Unrestricted Use SCOs or Restricted Residential RUSCOs; and,

- Metals were detected at concentrations exceeding the NYSDEC Restricted Residential RUSCOs including barium (max. 562 mg/kg) and lead (max. 3,050 mg/kg) in shallow samples. No other metals were detected above the NYSDEC Restricted Residential RUSCOs. Several metals including cadmium (max. 3.93 mg/kg), copper (max. 50.8 mg/kg), manganese (max. 1,660 mg/kg), mercury (max. 0.533 mg/kg), nickel (max. 31.4 mg/kg), selenium (max. 19.3 mg/kg), and zinc (max. 463 mg/kg) were detected above the NYSDEC Unrestricted Use SCOS throughout the site footprint.

- Perfluorooctanesulfonic acid (PFOS) (10.7 µg/kg) was detected in the sample collected from LSB-2A from 0 to 2 feet bsl exceeding the NYSDEC January 2021 Unrestricted Use SCO Guidance Value.

7. Groundwater samples collected during the RI were compared to NYCRR Part 703.5 and NYSDEC Technical & Operational Guidance Series (TOGS) 1.1.1 Ambient Water Quality Standards and Guidance Values (collectively referred to as SGVs) and screening values...
provided in the NYSDEC’s Guidelines for Sampling and Analysis of PFAS (NYSDEC January 2021 Guidance Values). Groundwater samples showed the following:

- VOCs, pesticides, and PCBs were not detected above the SGVs in any samples collected.

- SVOCs, specifically PAHs, were detected in groundwater samples at concentrations exceeding NYSDEC SGVs including benzo(a)anthracene (max. 0.115 µg/l) in TW-2, LMW-8, and LMW-9, benzo(a)pyrene (max. 0.0842 µg/l) in TW-2 and LMW-9, benzo(b)fluoranthene (max. 0.0842 µg/l) in TW-2 and LMW-9, benzo(k)fluoranthene (max. 0.0737 µg/l) in TW-2 and LMW-9, chrysene (max. 0.108 µg/l) in TW-2 and LMW-9, and indeno(1,2,3-c,d)pyrene (0.0526 µg/l) in LMW-9.

- Dissolved metals were detected in groundwater samples at concentrations exceeding NYSDEC SGVs including: manganese (max. 1,660 µg/l), selenium (10.2 µg/l), and sodium (max. 1,480,000 µg/l).

- PFOS (67.5 ng/l) and perfluorooctanoic acid (PFOA) (45.4 ng/l) were detected above the NYSDEC January 2021 Guidance Values in LMW-11.

8. Soil vapor samples collected during the RI were compared to the October 2006 New York State Department of Health (NYSDOH) Final Guidance for Evaluating Soil Vapor Intrusion in the State of New York and Soil Vapor/Indoor Air decision matrices A through C (updated May 2017). Soil vapor samples showed the following:

- Total concentrations of petroleum-related VOCs (BTEX) within the four soil vapor samples ranged from 1.83 µg/m³ to 12.3 µg/m³.

- The chlorinated solvents detected include carbon tetrachloride (max. 0.286 µg/m³), methylene chloride (max. 11 µg/m³), tetrachloroethylene (PCE) (max. 4.1 µg/m³), and trichloroethelyne (TCE) (max. 1.2 µg/m³). Cis-1,2-dichloroethene, 1,1-dichloroethene (DCE), 1,1,1-trichloroethane (TCA), and vinyl chloride were not detected in any of the soil vapor samples at concentrations above the laboratory method reporting limits.

- Concentrations of chlorinated VOCs in soil vapor at the subject property indicate no further action is required.
REMEDIAL INVESTIGATION REPORT

1.0 SITE BACKGROUND

GO Covenant LLC has completed this investigation to fulfill the requirements of the hazardous materials E-Designation placed on a site located at 550 10th Avenue in the Clinton neighborhood of Manhattan, New York. Residential use is proposed for the property. The RI work was performed in November 2017, December 2018, May 2019, and February 2021. This RIR summarizes the nature and extent of contamination and provides sufficient information for establishment of remedial action objectives, evaluation of remedial action alternatives, and selection of a remedy that is protective of human health and the environment consistent with the use of the property pursuant to RCNY§ 43-1407(f).

1.1 Site Location and Current Usage

The approximately 16,000-square-foot Site is located at 550 10th Avenue in the Clinton neighborhood of Manhattan, New York and is identified as Block 1050 and Lot 61 on the New York City Tax Map. The Site historically consisted of portions of former Lot 1 and Lot 61 until the tax lots were reapportioned in June 2020 to match the current proposed redevelopment extents. Figure 1 shows the Site location. The Site consists of Wing A of the Covenant House New York shelter for homeless youth, a parking lot, and construction field offices associated with the redevelopment of the former Wings B and C of the Covenant House New York facility (NYCOER OER Site No. 16TMP0060M, 16EH-N056M) located adjacent to the east of the Site; remediation of the adjacent parcel was completed in June 2020 and construction of the superstructure is ongoing.

The Site is bordered by 10th Avenue to the west, West 41st Street to the north, West 40th Street to the south, and the active redevelopment of former Covenant House New York Wings B and C to the east. New York City Transit (NYCT) tunnels are located to the north of the site, below West 41st Street. In addition, Lincoln Tunnel entrance roads and access ramps for the nearby Port Authority Bus Terminal are located to the south of the site, beyond West 40th Street. A Site Plan is provided as Figure 2. The existing basement level beneath Wing A extends between approximately 10.5 and 15-feet bsl. A map of the site boundary is shown in Figure 2.

1.2 Proposed Redevelopment Plan

The proposed future use of the Site will consist of demolishing the existing 8-story Covenant House building (Wing A) and associated cellar space, and constructing a new 14-story residential building with an approximate footprint area of 14,000 square-feet. Excavation will be completed to vertically and horizontally extend the current cellar extents. The new cellar footprint will cover approximately 88% of the Site footprint; the existing 10-foot offset from
10th Avenue on the western side of the Site will remain undeveloped. Layout of the proposed site development is presented in Appendix A. The current zoning designation is commercial (C2-8). The proposed use is consistent with existing zoning for the property. Soil will be generally excavated to approximately 17.5 feet bsl with deeper excavations ranging from 22.5 feet bsl to 26 feet bsl for the construction of deep foundation elements. Groundwater depth was measured to be between 12 and 14 bsl.

1.3 Description of Surrounding Property

According to records maintained online by New York City Open Accessible Space Information System (NYCOASIS), surrounding properties include multi-story mixed-use residential/commercial and public institutional buildings as well as transportation/utilities properties associated with the nearby Lincoln Tunnel entrance.

Adjacent properties to the north across West 41st Street include a three- to four-story parking structure and a 59-story mixed-use residential/commercial building. The adjacent property to the east consists of currently under construction 12-story Covenant House building (Phase 1). The adjacent property to the south across West 40th Street is occupied by the Port Authority Bus Terminal flyover approach to the Lincoln Tunnel. The property adjacent to the west of the Site across Tenth Avenue consists of a 51-story mixed-use residential/commercial building.

Sensitive receptors located within 500-feet of the subject property include the Bank Street Headstart facility located approximately 519-feet to the southeast at 410 West 40th Street and the 43rd Street Kids Preschool LLC located approximately 421-feet to the northeast at 484 West 43rd Street. The adjacent Covenant House facility is considered a future sensitive receptor as the building is not yet operational. Figure 3 shows the surrounding land usage.

2.0 SITE HISTORY

2.1 Past Uses and Ownership

A Phase I Environmental Site Assessment (ESA) was completed for the Covenant House by TRC Engineers, Inc. (TRC) dated September 2015. According to the summary of the historical Sanborn Fire Insurance Maps provided in the ESA, prior to 1930 the Covenant House property was occupied by up to 16 residential buildings, some of which included mixed commercial use. Increased commercial operations were documented between 1930 and 1950. Two filling stations and an automobile repair shop operated between 1950 and 1968 on the western portion of the Site, within the portion of former tax Lot 61 that is part of the proposed redevelopment site. The northeastern corner of the site is labeled as automobile parking during this period. Between 1968 and 1979 additional site buildings were demolished and the southwestern filling station was no longer present. Current Wing A and former Wings B and C
are shown between 1968 and 1990 and are labeled as a Narcotic Rehabilitation Center. The northwestern filling station is no longer present by 1990.

Historical ownership information obtained from the New York City Department of Finance and provided in the ESA revealed no information regarding environmental conditions related to past usage.

The Phase I ESA also identified that the Covenant House was registered with the New York State Department of Environmental Conservation (NYSDEC) for Spill No. 0613314, which was reported in 2007 following the observation of oily water in an onsite excavation. Approximately 3,000 gallons of oily water were pumped out of the excavation and no additional oily water infiltration was observed following the removal. The spill was administratively closed in 2009.

A second spill was reported for the property, but associated with the 7 Line Subway Extension. According to the ESA, petroleum impacted soils were identified during drilling for the subway extension and Spill No. 04044424 was reported in 2004. Contaminated soil was reportedly removed and replaced with clean fill and the spill was administratively closed in 2005.

The Phase I ESA is provided in Appendix B.

### 2.2 Previous Investigations

As discussed in Section 2.1, a Phase I ESA was completed for the Covenant House by TRC dated September 2015. The following on-site recognized environmental conditions (RECs) were identified:

- Historical operations including two filling stations and one automobile repair shop within the proposed redevelopment extents.
- Closed NYSDEC Spill Nos. 04044424 and 0613314 which were reported for Covenant House based on the observation of petroleum impacts in soil and/or groundwater at the site.
- Presence of historic urban fill.

Langan completed a limited due diligence environmental investigation within the extents of the proposed redevelopment on 20 and 21 November 2017. The investigation activities included a geophysical survey, the installation of seven soil borings (LSB-1, LSB-2, and LSB-5 though LSB-9), the installation of two temporary monitoring wells (TW-2 and TW-3), and the collection of soil and groundwater samples for laboratory analysis. Langan also completed a supplemental due diligence environmental investigation in December 2018 which included completion of four additional soil borings (LSB-21 through LSB 24), collection of four additional soil samples, and installation and sampling of three permanent monitoring wells (LMW-8 through LMW-10). Langan completed an additional supplemental due diligence environmental
investigation in May 2019 which included the installation and collection three sub-slab soil vapor points (LSV-9 through LSV-11).

Results of these investigations are discussed in Sections 4.0 and 5.0.

2.3 Site Inspection

A Langan staff engineer completed a site inspection on 20 November 2017 as part of the due diligence investigation. The site inspection was completed to identify Areas of Concern (AOCs) and proposed sampling locations. Observations made during the inspection included the general use of the site as a youth shelter with a partial basement and pedestrian walkway. No AOCs were identified based on the results of the site inspection.

2.4 Areas of Concern

The AOCs identified for this site based on the Phase I ESA and previous site inspection and investigations include:

4. Closed Spill Nos. 04044424 and 0613314
5. Former Onsite Filling Stations and Automobile Repair Shop
6. Historic Fill

The 2015 Phase I ESA is provided in Appendix B. A map showing areas of concern is presented in Figure 2.

3.0 PROJECT MANAGEMENT

3.1 Project Organization

The Qualified Environmental Profession (QEP) responsible for preparation of this RIR is Chris McMahon. The Project Manager responsible for the daily oversight of the Remedial Investigation activities was Amanda Forsburg.

3.2 Health and Safety

All work described in this RIR was performed in full compliance with applicable laws and regulations, including Site and OSHA worker safety requirements and HAZWOPER requirements.

3.3 Materials Management

All material encountered during the RI was managed in accordance with applicable laws and regulations.
4.0 REMEDIAL INVESTIGATION ACTIVITIES

GO Covenant LLC performed the following due diligence scope of work in 2017, 2018, and 2019:

1. Conducted a Site inspection to identify AOCs and physical obstructions (i.e., structures, buildings, etc.);

2. Completed two geophysical surveys in the vicinity of drilled locations to identify the potential presence of unidentified underground storage tanks and underground utilities;

3. Installed 11 soil borings across the Site and collected 11 soil samples, in addition to 2 duplicate soil samples, for chemical analysis from the soil borings to evaluate soil quality;

4. Installed 3 permanent groundwater monitoring wells and 2 temporary groundwater monitoring wells within the Site and collected 5 groundwater samples, in addition to 2 duplicate groundwater samples, for chemical analysis to evaluate groundwater quality; and,

5. Installed 3 sub-slab soil vapor probes at the Site and collected 3 soil vapor samples, in addition to 1 duplicate soil vapor sample, for chemical analysis.

GO Covenant LLC performed the following scope of work in 2021 in accordance with the NYCOER approved Phase II Work Plan dated December 2019 to supplement the previously completed investigations and fill data gaps for meeting NYCOER RI requirements:

1. Conducted a Site inspection to identify AOCs and physical obstructions (i.e., structures, buildings, etc.);

2. Completed a geophysical survey in the vicinity of drilled locations to identify the potential presence of unidentified underground storage tanks and underground utilities;

3. Installed 7 soil borings across the Site, and collected 12 soil samples, in addition to 1 duplicate soil sample, for chemical analysis from the soil borings to evaluate soil quality;

4. Installed 1 groundwater monitoring well within the Site and collected 3 groundwater samples, in addition to 1 duplicate groundwater sample, for chemical analysis to evaluate groundwater quality;

5. Installed 1 soil vapor probe at the Site and collected 1 soil vapor sample, in addition to 1 duplicate soil vapor sample, for chemical analysis.
4.1 Geophysical Investigation

An initial geophysical survey using electromagnetic surveying equipment and ground penetrating radar (GPR) was completed on 17 November 2017 by NAEVA Geophysical Inc. of Congers, New York to clear the proposed soil boring locations of underground utilities. A second limited geophysical utility clearance was completed on 5 December 2018 by Enviroprobe Services, Inc. (Enviroprobe) of Mt. Laurel, New Jersey to clear the proposed drilling locations prior to the advancement of investigative soil borings. A geophysical survey was also completed on 10 February 2021 by Enviroprobe to clear the proposed investigation locations. In addition to the utility clearance activities, all three geophysical investigations were also completed for the purposes of identifying potential underground storage tanks.

Equipment used for geophysical clearance includes electromagnetic surveying equipment (i.e., the Fisher TW-6 metallic locator, a Radiodetection multi-frequency transmitter, and a Radiodetection receiver) and ground penetrating radar (i.e., the Geophysical Survey Systems, Inc. UtilityScan cart-mounted system). Geophysical utility clearance was completed in a 10-foot radius around each proposed soil boring locations during each mobilization. Typical GPR penetration depths were limited due to the reinforced concrete basement slab which was measured to be up to 18-inches thick in areas of the site. The December 2018 and February 2021 geophysical surveys identified the presence of linear anomalies consistent with underground utilities. The radiodetection unit was used to trace common utilities in and around the survey area within the Wing A basement level and within the asphalt-paved parking lot. Subsurface metallic anomalies consistent with the presence of USTs were not identified in any of the geophysical surveys conducted.

Copies of the 2018 and 2021 geophysical investigation reports are provided in Appendix C.

4.2 Borings, Monitoring Wells, and Soil Vapor Points

Based on the 16 February 2018 Preliminary Architectural Survey prepared for Covenant House by True North Surveyors, P.C. of Edison, New Jersey, the top of curb sidewalk elevation adjacent to the redevelopment extents on West 41st Street and West 40th Street is approximately +24.5 feet. The survey also notes that the elevation of the basement of Building A is approximately +13 feet and the first floor of Building A is approximately +24.54 feet. Measurements collected during the investigation revealed that the basement elevation of Building A is approximately +14 feet (10.5 feet bsl) within the northern portion of the building, approximately +13 feet (11.5 feet bsl) within the southern portion of the building, and the basement elevation beneath the former pedestrian walkway is approximately +9.5 feet (15 feet bsl). All elevations are presented in NAVD88.
Sample locations were measured in the field and located using detailed building floor plans and are shown on Figure 4. The referenced survey is provided in Appendix A.

4.2.1 DRILLING AND SOIL LOGGING

On 20 and 21 November 2017, seven soil borings (LSB-1, LSB-2 and LSB-5 through LSB-9) were completed at the Site by Coastal Environmental Solutions, Inc. (Coastal) of Medford, New York to investigate soil conditions and assess the potential presence of impacts associated with historical site operations. Soil borings LSB-1 and LSB-2 were installed in the asphalt-paved parking lot on the northern side of the Site (former gasoline filling station area) using a track-mounted Geoprobe® 6610DT direct-push drilling rig. Soil boring LSB-5 was completed in the central-western portion of the basement using a limited access large bore sampler advanced with a pneumatic drive and soil borings LSB-6 through LSB-9 were completed in the southern portion of the basement using a limited access Geoprobe® 420M direct push drill rig. Soil borings LSB-6 and LSB-7 were installed in the area of the former filling station and LSB-8 was installed in the area of the former automobile repair facility.

On 5 and 6 December 2018, four soil borings (LSB-21 through LSB-24) were completed by AARCO Environmental Services Corp. (AARCO) of Lindenhurst, New York. One soil boring (LSB-21) was installed in the asphalt-paved parking lot on the northern side of the Site (former gasoline filling station area) using a track-mounted Geoprobe® 7822 direct-push drilling rig. Soil borings LSB-22 through LSB-24 were installed using a limited access Geoprobe® 420M direct push drill rig. Soil boring LSB-22 was installed in the central portion of the basement and two soil borings (LSB-23 and LSB-24) were installed in the southern portion of the basement in areas historically occupied by a filling station and automotive repair facility, respectively.

On 10 and 11 February 2021, seven soil borings (LSB-2A, LSB-5A, LSB-8A, LSB-21A, LSB-22A, LSB-23A, and LSB-24A) were completed by AARCO. LSB-2A, LSB-5A, LSB-8A, LSB-21A, LSB-22A, LSB-23A, and LSB-24A were installed in the vicinity of previously installed soil borings LSB-2, LSB-5, LSB-8, LSB-21, LSB-22, LSB-23, and LSB-24, respectively. A soil boring was proposed to be advanced in the vicinity of LSB-9, however, this area was not accessible during the 2021 investigation. As such, additional soil samples were taken from nearby LSB-24A to fill in analytical data gaps associated with LSB-9. Soil borings LSB-2A and LSB-21A were installed using a track-mounted Geoprobe® 7822 direct-push drilling rig and LSB-5A, LSB-8A, LSB-22A, LSB-23A, and LSB-24A were installed using a direct push Geoprobe® 420M drilling rig.

Continuous macrocore samples were collected from all soil borings to the bottom of each boring. With the exception of LSB-8A, drilling refusal on weathered mica schist rock was encountered in all soil borings advanced from the basement level (LSB-5 through LSB-9, LSB-5A, LSB-22 through LSB-24, and LSB-22A through LSB-24A) at depths that varied between 2.5- and 10.5-feet below the basement floor slab, corresponding to between 14- and 21-feet bsl...
Field screening of soil during sample collection for VOCs using a photo-ionization detector (PID) was completed during the installation of all 18 borings and all soil samples were screened for visual or olfactory evidence of impacts. Odors, staining, and/or elevated PID readings were observed as follows:

<table>
<thead>
<tr>
<th>Boring</th>
<th>Depth (feet bsl)</th>
<th>PID Readings (ppm)</th>
<th>Observations</th>
</tr>
</thead>
<tbody>
<tr>
<td>LSB-6</td>

</tr>
</tbody>
</table>

No other elevated PID readings and/or odor and staining were observed at the remaining soil borings. Site stratigraphy detail is provided in Section 5.1.

Boring logs are attached in Appendix D. The location of soil borings, monitoring wells, and soil vapor points are shown on Figure 4. Sample location details, including installation date and depth of drilled locations, are provided in Table 2.

### 4.2.2 Groundwater Monitoring Well Construction

Soil borings LSB-6 and LSB-9 were completed as 1-inch-diameter temporary groundwater monitoring wells (LTW-2 and LTW-3, respectively), which were removed at the conclusion of groundwater sampling in 2017. Soil borings LSB-21, LSB-23 and LSB-24 were completed as 1-inch-diameter permanent groundwater monitoring wells (LMW-8, LMW-9, and LMW-10, respectively) finished with flush-mount manhole covers in 2018. LMW-8 could not be located during the 2021 investigation. As such, LMW-11 was installed in lieu of LMW-8. Soil boring LSB-22A was completed as a 1-inch-diameter permanent groundwater monitoring well (LMW-11) finished with a flush-mount manhole cover in 2021.

Groundwater monitoring well construction logs are provided in Appendix D and the monitoring well locations are shown on Figure 4. Sample location details, including installation date, depth of drilled locations, well diameters, construction materials, and screen intervals, are provided in Table 2.
4.2.3 Soil Vapor Point Construction

In order to assess soil gas conditions and evaluate any potential vapor intrusion conditions (pVICs) on the site, three sub-slab temporary soil vapor points and one temporary soil vapor point were installed as part of the subsurface investigation activities in 2019 and 2021. Each point was sampled as per NYCOER, NYSDOH, and NYSDEC guidelines. Sampling locations were removed at the conclusion of sampling activities.

On 8 and 9 May 2019, sub-slab soil vapor samples LSV-9 through LSV-11 were installed by Langan using a hammer drill to penetrate through the concrete cellar slab. Once penetrated, dedicated Teflon-lined polyethylene tubing was installed directly beneath the slab and a hydrated bentonite seal was installed at the surface to prevent infiltration of ambient air.

On 11 February 2021, soil vapor sample location LSV-12 was installed by AARCO using a track-mounted Geoprobe® 7822 direct-push drilling rig to 14 feet bsl corresponding to one foot above the observed groundwater interface. A six-inch dedicated stainless steel screen with Teflon-lined polyethylene tubing was installed at this depth and sealed with hydrated bentonite to prevent infiltration of ambient air.

The soil vapor sampling locations are shown on Figure 4. Sample location details, including installation date, depth of drilled locations, and construction materials, are provided in Table 2.

4.2.3 Survey

Sample locations were measured in the field and located using detailed building floor plans.

4.2.4 Water Level Measurement

Groundwater levels were measured prior to sampling on 7 December 2018 and 12 February 2021 using an oil/water interface probe and recorded on groundwater sampling field logs provided in Appendix D. LMW-8 could not be located during the 2021 investigation; as such, a groundwater measurement could not be collected from this location. Light non-aqueous phase liquid (LNAPL) was not detected in any of the groundwater monitoring wells and groundwater depth was measured to be between 12 and 15.5 feet bsl. Based on the curb elevations provided in the 16 February 2018 Preliminary Architectural Survey prepared for Covenant House by True North Surveyors, P.C. of Edison, New Jersey, the groundwater elevation beneath the site varies from approximately el +9 to el +12 feet NAVD88.

4.3 Sample Collection and Chemical Analysis

Sampling performed as part of the field investigation was conducted for all Areas of Concern and also considered other means for bias of sampling based on professional judgment, area history, discolored soil, stressed vegetation, drainage patterns, field instrument measurements,
odor, or other field indicators. All media including soil, groundwater and soil vapor have been sampled and evaluated in the RIR. Discrete (grab) samples have been used for final delineation of the nature and extent of contamination and to determine the impact of contaminants on public health and the environment. The sampling performed and presented in this RIR provides sufficient basis for evaluation of remedial action alternatives, establishment of a qualitative human health exposure assessment, and selection of a final remedy.

**Soil Sampling**

Twenty-three soil samples from 18 soil boings were collected for chemical analysis during the investigations completed as part of the RI. Data on soil sample collection for chemical analyses, including dates of collection and sample depths, is reported in Table 1, laboratory analytical results are summarized on Tables 4A and 4B and a summary of these results are shown on Figure 5. Figure 4 shows the location of samples collected in this investigation.

On 20 and 21 November 2017, seven soil borings (LSB-1, LSB-2, and LSB-5 through LSB-9) were advanced to evaluate soil conditions. One sample for laboratory analysis was collected from each soil boring. Samples were collected from the base of the soil boring, from the two-foot interval above the groundwater table, or from the two-foot interval above the depth of drilling refusal at locations where no field evidence of impacts was observed (LSB-1, LSB-2, LSB-5, LSB-7, LSB-8, and LSB-9); refer to Table 1 for specific sampling depths. A sample was collected from the interval exhibiting the highest level of impacts as determined by PID screening results and odors at soil boring location LSB-6 (12.5 to 14.5 feet bsl).

On 5 and 6 December 2018, soil samples were collected from four environmental soil borings (LSB-21 through LSB-24) to further evaluate soil conditions. A soil sample was collected from the 13- to 15-foot bsl interval in LSB-21 to correspond to the depth interval immediately above the observed groundwater interface as no evidence of impacts was observed. Soil samples were collected from the two-foot depth interval immediately below the current basement slab (corresponding to 12 to 14.5 feet bsl) in soil borings LSB-22 through LSB-24 as slightly elevated PID readings (up to 0.4 ppm) were observed and groundwater was not encountered above the depth of drilling refusal at these locations.

On 10 and 11 February 2021, soil samples were collected from seven environmental soil borings (LSB-2A, LSB-5A, LSB-8A, and LSB-21A through LSB-24A) to evaluate soil conditions and to fill analytical data gaps from the 2017 and 2018 investigations. The sampling plan included advancing soil borings in the immediately vicinity of investigation locations previously completed by Langan in November 2017 and December 2018, collecting soil samples from the same depth intervals as those previously collected, and collecting additional soil samples from the 0 to 2 foot depth interval immediately below the drilling surface to supplement the existing analytical results and satisfy typical NYCOER investigation requirements. One soil sample was
collected from LSB-5A, LSB-8A, and LSB-22A, two soil samples were collected from LSB-2A, LSB-21A, and LSB-23A, and three samples were collected from LSB-24A; the proposed LSB-9A drilling location, adjacent to the LSB-9 location, was not accessible during the 2021 investigation so supplemental soil sample collection was completed at nearby LSB-24A.

Soil samples were collected as follows:

- from the 0 to 2 feet interval immediately below the drilling surface corresponding to 0 to 2 feet bsl at LSB-2A and LSB-21A as well as 11.5 to 13.5 feet bsl at LSB-8A and LSB-23A;

- from the interval corresponding to the capillary fringe from 11 to 13 feet bsl at LSB-2A and 18 to 20 feet bsl at LSB-24A from the depth equivalent to the base of the proposed final excavation for redevelopment based on the available design drawings at LSB-22A (14.5 to 16.5 feet bsl), LSB-23A (14.5 to 16.5 feet bsl), and LSB-24A (20 to 22 feet bsl); and,

- from the 15 to 17 feet bsl interval at LSB-24A as a substitute for the LSB-9 location that could not be accessed during the investigation.

All soil samples were submitted to York Analytical Laboratories, Inc. (York) of Stratford, CT a NYSDOH Environmental Laboratory Approval Program (ELAP) certified analytical laboratory (ELAP ID No. 10854 and No. 11627). Samples collected in 2017 and 2018 were analyzed for VOCs, SVOCs, TAL metals, and hexavalent chromium; samples collected in 2018 were also analyzed for pesticides and PCBs. Soil samples collected in 2021 from LSB-2A and LSB-21A from 0 to 2 feet bsl, LSB-22A through LSB-24A from 14.5 to 16.5 feet bsl, and LSB-24A from 16.5 to 18.5 feet bsl were analyzed for VOCs, SVOCs, TAL metals, hexavalent chromium, pesticides, and PCBs. LSB-2A from 0 to 2 feet bsl was also analyzed for PFAS and 1,4-dioxane. Soil samples collected in 2021 from LSB-2A from 11 to 13 feet bsl, LSB-5A from 12.5 to 14.5 feet bsl, and LSB-8A, LSB-23A, and LSB-24A from 11.5 to 13.5 feet bsl were analyzed for pesticides and PCBs, which were not analyzed during the previously completed due diligence investigations.

Quality Assurance/Quality Control

All sampling devices (macrocores) were properly decontaminated according to NYSDEC and ASTM (ASTM D-5088-90) guidelines prior to each sampling location. Each macrocore was lined with a dedicated acetate liner prior to the collection of each sample. Soil samples were then placed in glass jars supplied by the laboratory. Soil samples collected for VOCs were obtained via a plunger calibrated to collect approximately 5 grams of soil and then placed in a vial that was preserved with methanol or distilled water. Each soil sample location, interval and analytical parameter was recorded in a field log book. Samples were transferred to the
laboratory following sample collection and were stored at a maximum of 4º Celsius. Chain-of-custody forms were utilized to document custody for the acquisition, possession, and analysis.

Quality assurance (trip blanks) and quality control samples (field blank and duplicate samples) were incorporated into the sampling event and consisted of four field blanks, three duplicate samples, and five trip blanks. One duplicate soil sample was analyzed for pesticides and PCBs, one duplicate soil sample was analyzed for VOCs, SVOCs, TAL metals, and hexavalent chromium, and one duplicate soil sample was analyzed for VOCs, SVOCs, pesticides, PCBs, TAL metals, and hexavalent chromium. Two field blank samples were analyzed for VOCs, SVOCs, pesticides, PCBs, TAL metals, and hexavalent chromium, one field blank was analyzed for PFAS and 1,4-dioxane, and one field blank sample was analyzed for VOCs only. The five trip blank sample were analyzed for VOCs only.

**Groundwater Sampling**

Eight groundwater samples from four permanent monitoring wells and two temporary monitoring wells were collected for chemical analysis during the 2017, 2018, and 2021 investigations. Data on groundwater sample collection for chemical analyses, including dates of collection and sample depths, is reported in Table 1, laboratory analytical results are summarized on Tables 5A and 5B and a summary of these results are shown on Figure 6. Figure 4 shows the location of samples collected in this investigation.

A total of five groundwater samples were collected for chemical analysis during the 21 November 2017 (TW-2 and TW-3) and 7 December 2018 (LMW-8 through LMW-10) sampling events. Groundwater samples were collected via United States Environmental Protection Agency (USEPA) low-flow purging and sampling methods using dedicated polyethylene tubing and a 0.75-inch diameter submersible bladder pump with a dedicated polyethylene bladder at each location. Following initial purging in TW-3, groundwater recharge was not sufficient and a grab groundwater sample was collected via a dedicated polyethylene bailer.

On 12 February 2021, groundwater samples from LMW-9 through LMW-11 were collected for chemical analysis via USEPA low-flow purging and sampling methods using dedicated polyethylene tubing and a peristaltic pump at each location. VOC samples were collected using a dedicated Teflon bailer and the remaining analyses were collected using the dedicated polyethylene tubing and a peristaltic pump used for purging.

Groundwater field parameters, including pH, specific conductivity, dissolved oxygen, oxygen-reduction potential, temperature, and turbidity were measured during low-flow purging activities at all locations with the exception of TW-3 due to insufficient groundwater recharge as identified above. Groundwater Field Sampling Logs are provided in Appendix D. Visual
observations were made of groundwater samples that were collected; no evidence of sheen or free product was observed in any of the monitoring wells.

Quality Assurance/Quality Control

Collected groundwater samples were placed in containers supplied by the laboratory with the appropriate preservatives. Each groundwater sample was recorded in a field log book. Samples were transferred to the laboratory immediately after field sampling was completed, and were stored prior to submission to the laboratory at a maximum of 4°C Celsius. Chain-of-custody forms were utilized to document custody for the acquisition, possession, and analysis.

Quality assurance (trip blanks) and quality control samples (field blank and duplicate samples) were incorporated into the sampling event and consisted of three field blanks, three trip blanks, and three duplicate samples. Both groundwater duplicate samples were analyzed for VOCs, SVOCs, pesticides, PCBs, total TAL metals, and hexavalent chromium; one of the duplicate samples was also analyzed for dissolved TAL. All three field blanks were analyzed for VOCs, SVOCs, pesticides, PCBs, total TAL metals, and hexavalent chromium; two of the field blanks were also analyzed for dissolved TAL metals and one of the field blanks was also analyzed for PFAS. The trip blank samples were analyzed for VOCs only.

Soil Vapor Sampling

Three sub-slab soil vapor sampling locations and one soil vapor sampling point were installed and sampled for chemical analysis during the 2019 and 2021 investigations. Data on soil vapor sample collection for chemical analyses, including dates of collection and sample depths, is reported in Table 1, laboratory analytical results are summarized on Table 6 and a summary of these results are shown on Figure 7. Figure 4 shows the location of samples collected in this investigation.

On 8 and 9 May 2019, sub-slab soil vapor locations LSV-9 through LSV-11 were installed and sampled. On 12 February 2021 soil vapor location LSV-12 was sampled. Methodologies used for soil vapor assessment conform to the NYSDOH Final Guidance on Soil Vapor Intrusion, October 2006. Prior to sampling, each soil vapor sampling point was tightness tested using the helium tracer gas method and purged at a flow rate of <200-ml per minute. No evidence of helium breakthrough (i.e., helium concentrations above 5%) was observed before sample collection. PID readings for VOCs were measured between 140 parts per billion (ppb) at LSV-12 and 0.9 ppm at LSV-10. Low permeability of the material surrounding the LSV-12 soil vapor point caused reduced flow into the Summa canister; a flow rate of <20-ml per minute was observed at this location.
Quality Assurance/Quality Control

Soil vapor samples were laboratory analyzed for VOCs via the USEPA TO-15 Method. Samples were collected in laboratory-cleaned and certified evacuated 6-Liter stainless steel summa canisters with regulators supplied by York. The regulators were set to collect each sample over a 2-hour sampling period (a flow rate of <200-ml per minute) as per USEPA soil vapor sampling guidance. Each soil vapor sample was numbered and recorded in a field log book. Samples were transferred to the laboratory immediately after field sampling was completed, and stored at a maximum room temperature of 30° Celsius. Chain-of-custody forms were utilized to document custody for the acquisition, possession, and analysis.

Two quality control samples were incorporated into the sampling event and consisted of two duplicate soil vapor samples. These duplicate samples were submitted for VOC analysis.

Results of Chemical Analyses

Laboratory data for soil, groundwater and soil vapor are summarized in Tables 4, 5, and 6, respectively.

5.0 ENVIRONMENTAL EVALUATION

5.1 Geological and Hydrogeological Conditions

Stratigraphy

Based on borings completed during the 2017, 2018, and 2021 investigations, site stratigraphy below the asphalt parking lot on the northern portion of the subject property consists of an approximately 9.5- to 20-foot thick layer of historic fill underlain by a silty sand unit followed by weathered mica schist rock.

The basement floor slab varied from 6 to 18 inches thick and is underlain by historic fill to the depth of drilling refusal on presumed weathered mica schist rock (2.5 to 3.5 below basement floor slab) in LSB-5, LSB-7, and LSB-8. Drilling refusal was encountered slightly deeper below the basement slab in LSB-6, LSB-9, LSB-22A, and LSB-24, where a 3- to 3.5-foot thick layer of historic fill was underlain by silty sand to the depth of drilling refusal which varied between 5- and 10.5-feet below the basement floor slab. Clay was also encountered in LSB-22A from 9 to 10.5 feet below basement floor slab. Fill between 8 and 13 feet thick underlain by silty sand was observed in LSB-5A and LSB-8A; refusal was not encountered at these locations. Historic fill was not observed in soil borings LSB-22, LSB-23, LSB-23A, and LSB-24A although drilling refusal on weathered mica schist rock was encountered between 5- and 6-feet below the basement slab at LSB-22 and LSB-23. Native material at these locations generally consists of silty sand. Based on the geotechnical investigation completed by Langan between January and February 2018, weathered mica schist was encountered between 24.5- and 34.9-feet below
sidewalk level and competent mica schist was encountered between 28- and 45-feet below sidewalk level.

**Hydrogeology**

Based on the curb elevations provided in the 16 February 2018 Preliminary Architectural Survey prepared for Covenant House by True North Surveyors, P.C. of Edison, New Jersey, and the depth to groundwater collected during the investigation, the groundwater elevation beneath the site varies from el +9 ft to el +12 ft NAVD88. Groundwater flow is anticipated to be to the west towards the Hudson River.

**5.2 Soil Chemistry**

Data collected during the RI is sufficient to delineate the vertical and horizontal distribution of contaminants in soil/fill at the Site. A summary table of data for chemical analyses performed on soil samples is included in Tables 4A and 4B. Figure 5 shows the location and posts the values for soil/fill that exceed the NYSDEC Unrestricted Use SCOs and RUSCOs for Restricted Residential use as presented in 6NYCRR part 375-6.8 and CP51 as well as the NYSDEC January 2021 Guidance Values for PFAS compounds.

VOCs and PCBs were not detected above the NYSDEC Unrestricted Use SCOs and the Restricted Residential RUSCOs in any soil samples collected.

SVOCs, specifically polycyclic aromatic hydrocarbons (PAHs), were detected in fill samples at concentrations exceeding NYSDEC Restricted Residential RUSCOs as follows:

- Benzo(a)anthracene (1.37 mg/kg – 10.8 mg/kg), benzo(a)pyrene (1.61 mg/kg – 9 mg/kg), benzo(b)fluoranthene (1.41 mg/kg – 8.44 mg/kg), dibenz(a,h)anthracene (0.341 mg/kg – 2.49 mg/kg), and indeno(1,2,3-cd)pyrene (0.909 mg/kg – 5.46 mg.kg) in LSB-2A and LSB-21A from 0 to 2 feet bsl; and,
- Benzo(k)fluoranthene (7.34 mg/kg) in LSB-2A from 0 to 2 feet bsl.

PAHs were also detected in fill sample LSB-21A from 0 to 2 feet bsl at concentrations exceeding NYSDEC Unrestricted Use SCOs including benzo(k)fluoranthene (1.22 mg/kg) and chrysene (1.27 mg/kg). No other SVOCs were detected above the NYSDEC Unrestricted Use SCOs.

One pesticide, 4,4-DDT (0.0187 mg/kg), was detected in fill sample LSB-21A from 0 to 2 feet bsl at a concentration exceeding the NYSDEC Unrestricted Use SCOs. No other pesticides were detected above the NYSDEC Unrestricted Use SCOs.
Metals were detected in fill sample LSB-21A from 0 to 2 feet bsl at concentrations exceeding the NYSDEC Restricted Residential RUSCOs including barium (562 mg/kg) and lead (3,050 mg/kg). No other metals were detected above the NYSDEC Restricted Residential RUSCOs.

Metals were detected in samples at concentrations exceeding NYSDEC Unrestricted Use SCOs throughout the site footprint as follows:

- Cadmium (3.93 mg/kg) in LSB-21A from 0 to 2 feet bsl;
- Copper (50.8 mg/kg) in LSB-24A from 18 to 20 feet bsl;
- Lead (64.3 mg/kg – 285 mg/kg) throughout the site footprint from 0 to 16.5 feet bsl;
- Manganese (1,660 mg/kg) in LSB-2 from 15 to 17 feet bsl;
- Mercury (0.198 mg/kg – 0.533 mg/kg) throughout the site footprint from 0 to 22 feet bsl;
- Nickel (31.4 mg/kg) in LSB-21 from 13 to 15 feet bsl; and,
- Selenium (7.96 mg/kg – 19.3 mg/kg) throughout the site footprint from 11.5 to 17 feet bsl; and,
- Zinc (350 mg/kg – 463 mg/kg) in LSB-2A from 0 to 2 feet bsl and LSB-21A from 0 to 2 feet bsl.

Perfluorooctanesulfonic acid (PFOS) was detected in the sample collected from LSB-2A from 0 to 2 feet bsl at 10.7 µg/kg exceeding the NYSDEC January 2021 Unrestricted Use SCO Guidance Value of 0.88 µg/kg. No other PFAS compounds were detected and no other exceedances of the NYSDEC January 2021 Guidance Values were identified.

### 5.3 Groundwater Chemistry

Data collected during the RI is sufficient to delineate the distribution of contaminants in groundwater at the Site. A summary table of data for chemical analyses performed on groundwater samples is included in Tables 5A and 5B. Exceedances of the NYCRR Part 703.5 and NYSDEC Technical & Operational Guidance Series (TOGS) 1.1.1 Ambient Water Quality Standards and Guidance Values (collectively referred to as SGVs) and screening values provided in the NYSDEC’s Guidelines for Sampling and Analysis of PFAS (NYSDEC January 2021 Guidance Values) are shown. Figure 6 shows the location and posts the values for groundwater that exceed the SGVs.

VOCs, pesticides, and PCBs were not detected above the SGVs in any samples collected.
SVOCs, specifically PAHs, were detected in groundwater samples at concentrations exceeding NYSDEC SGVs as follows:

- Benzo(a)anthracene (0.0556 µg/l – 0.115 µg/l) in TW-2, LMW-8, and LMW-9;
- Benzo(a)pyrene (0.0615 µg/l – 0.0842 µg/l) in TW-2 and LMW-9;
- Benzo(b)fluoranthene (0.0385 µg/l – 0.0842 µg/l) in TW-2 and LMW-9;
- Benzo(k)fluoranthene (0.0385 µg/l – 0.0737 µg/l) in TW-2 and LMW-9;
- Chrysene (0.0947 µg/l – 0.108 µg/l) in TW-2 and LMW-9; and,
- Indeno(1,2,3-c,d)pyrene (0.0526 µg/l) in LMW-9.

Metals were detected in groundwater samples at concentrations exceeding NYSDEC SGVs as follows:

- Barium (1,930 µg/l) in TW-2;
- Beryllium (4.81 µg/l) in TW-2;
- Chromium (56.2 µg/l) in LMW-9;
- Iron (1,280 µg/l – 93,100 µg/l) in TW-2, LMW-8, LMW-9, LMW-10, and LMW-11;
- Lead (49.7 µg/l – 313 µg/l) in TW-2, LMW-8, LMW-9, and LMW-11;
- Manganese (455 µg/l – 7,470 µg/l) in TW-2, LMW-8, LMW-9, LMW-10 and LMW-11;
- Dissolved Manganese (441 µg/l – 1,660 µg/l) in LMW-8, LMW-9, LMW-10, and LMW-11;
- Selenium (28.7 µg/l – 60 µg/l) in TW-2 and LMW-9;
- Dissolved Selenium (10.2 µg/l) in LMW-9;
- Sodium (282,000 µg/l – 1,320,000 µg/l) in TW-2, LMW-8, LMW-9, and LMW-11; and,
- Dissolved Sodium (273,000 µg/l – 1,380,000 µg/l) in TW-2, LMW-8, LMW-9, LMW-10, and LMW-11.

PFOS (67.5 ng/l) and perfluorooctanoic acid (PFOA) (45.4 ng/l) were detected in the sample collected from LMW-11 and exceed the NYSDEC January 2021 Guidance Values of 10 ng/l. No other PFAS compounds were detected in exceedance of the NYSDEC January 2021 Guidance Values.

5.4 Soil Vapor Chemistry

Data collected during the RI is sufficient to delineate the distribution of contaminants in soil vapor at the Site. A summary table of data for chemical analyses performed on soil vapor samples is included in Table 6. Figure 7 shows the location and posts the values for soil vapor samples with detected concentrations.
Soil vapor analytical results were compared to October 2006 NYSDOH Final Guidance for Evaluating Soil Vapor Intrusion in the State of New York and Soil Vapor/Indoor Air decision matrices A through C, updated May 2017.

For purposes of this investigation, the only compounds detected in soil vapor coinciding with the VOCs detected in groundwater and/or soil at the Site and VOCs included on NYSDOH Soil Vapor / Indoor Air Decision Matrices A through C are considered for the potential vapor intrusion concern (pVIC). The following VOCs were detected in soil and/or groundwater at concentrations above the laboratory method reporting limits:

- 1,2,4-Trimethylbenzene;
- 1,3,5-Trimethylbenzene;
- Acetone;
- Carbon Disulfide;
- Ethylbenzene;
- m,p-Xylene, o-Xylene, and Total Xylenes;
- Methyl Ethyl Ketone;
- Methylene Chloride (also included on NYSDOH Decision Matrices);
- Tert-Butyl Methyl Ether; and,
- Toluene.

The following VOCs were detected in soil vapor and are listed in the NYSDOH Soil Vapor / Indoor Air Decision Matrices A and B:

- Carbon Tetrachloride;
- Methylene Chloride;
- Tetrachloroethene (PCE); and,
- Trichloroethene (TCE).

Of the VOCs included in the NYSDOH Soil Vapor / Indoor Air Decision Matrices A through C, cis-1,2-dichloroethene, 1,1-dichloroethene (DCE), 1,1,1-trichloroethane (TCA), and vinyl chloride were not detected in any of the soil vapor samples at concentrations above the laboratory method reporting limits. Carbon tetrachloride was detected in LSV-9, LSV-11, and LSV-12 (0.64 µg/m³ - 0.286 µg/m³). Methylene chloride was detected in all soil vapor samples (2.26 µg/m³ - 11 µg/m³). PCE (0.31 µg/m³ - 4.1 µg/m³) was detected in LSV-9, LSV-10, and LSV-11. TCE (0.31 µg/m³ - 1.2 µg/m³) was detected in LSV-9 and LSV-11. These detections were compared to the NYSDOH Vapor Intrusion Matrices A and B. Concentrations indicate that no further action is required.
Of the VOCs detected in soil and/or groundwater at the site, but not included on NYSDOH Soil Vapor / Indoor Air Decision Matrices A through C, 1,2,4-trimethylbenzene (2.1 µg/m³ – 72 µg/m³), 1,3,5-trimethylbenzene (1.1 µg/m³ - 26 µg/m³), acetone (3.49 µg/m³ - 1,500 µg/m³), carbon disulfide (2.1 µg/m³ - 53 µg/m³), ethylbenzene (1.4 µg/m³), m,p-xylene (3.2 µg/m³ - 5.9 µg/m³), methyl ethyl ketone (0.491 µg/m³ - 45 µg/m³), o-xylene (2.1 µg/m³), and toluene (0.913 µg/m³ - 11 µg/m³) were detected. Additionally, total concentrations of petroleum-related VOCs (BTEX) were detected within all soil vapor samples with detections ranging from 1.83 µg/m³ in LSV-12 to 12.3 µg/m³ in LSV-9.

### 5.5 Prior Activity

Based on an evaluation of the data and information from the RIR, disposal of significant amounts of hazardous waste is not suspected at this site.

### 5.6 Impediments to Remedial Action

There are no known impediments to remedial action at this property.

---

**Explanation of SCOs**
- Restricted Use Residential SCOs:
  - Tetrachloroethene (PCE)
  - p-Cymene (p-Isopropyltoluene)
  - o-Xylene (1,2-Dimethylbenzene)
  - n-Propylbenzene
  - Methyl Isobutyl Ketone (4-Methyl-2-Pentanone)
  - M,P-Xylene
  - Ethylbenzene
  - Bromobenzene
  - 1,3-Dichloropropane
  - 1,2-Dichlorobenzene
  - 1,2-Dibromoethane (Ethylene Dibromide)
  - 1,2-Dibromo-3-Chloropropane
  - 1,1,2-Trichloroethane
  - 1,1,1-Trichloroethane

- Restricted Use SCOs:
  - Tetrachloroethene (PCE)
  - p-Cymene (p-Isopropyltoluene)
  - o-Xylene (1,2-Dimethylbenzene)
  - n-Propylbenzene
  - Methyl Isobutyl Ketone (4-Methyl-2-Pentanone)
  - M,P-Xylene
  - Ethylbenzene
  - Bromobenzene
  - 1,3-Dichloropropane
  - 1,2-Dichlorobenzene
  - 1,2-Dibromoethane (Ethylene Dibromide)
  - 1,2-Dibromo-3-Chloropropane
  - 1,1,2-Trichloroethane
  - 1,1,1-Trichloroethane

- Unrestricted Use SCOs:
  - Tetrachloroethene (PCE)
  - p-Cymene (p-Isopropyltoluene)
  - o-Xylene (1,2-Dimethylbenzene)
  - n-Propylbenzene
  - Methyl Isobutyl Ketone (4-Methyl-2-Pentanone)
  - M,P-Xylene
  - Ethylbenzene
  - Bromobenzene
  - 1,3-Dichloropropane
  - 1,2-Dichlorobenzene
  - 1,2-Dibromoethane (Ethylene Dibromide)
  - 1,2-Dibromo-3-Chloropropane
  - 1,1,2-Trichloroethane
  - 1,1,1-Trichloroethane

Notes provided on Page 7
Concentrations above Unrestricted Use SOCIs are bolded.
Concentrations above Restricted Use Restricted Residential SOCIs are shaded.
Notes:
1. Soil sample analytical results are compared to the New York State Department of Environmental Conservation (NYSDEC) Title 6 of the Official Compilation of New York Codes, Rules, and Regulations (NYCRR) Part 375 Unrestricted Use and Restricted Use Restricted-Residential Soil Cleanup Objectives (SCO).
2. Detected analytical results above Unrestricted Use SCOs are bolded.
3. Detected analytical results above Restricted Use Restricted-Residential SCOs are shaded.
4. Analytical results with reporting limits (RL) above the lowest applicable criteria are italicized.
5. Sample DUP-1_112117 is a duplicate sample of LSB-5 (1-3); sample DUP-6_120618 is a duplicate sample of LSB-23_120618 and sample DUP-01_20210211 is a duplicate sample of LSB-2A_11-13_20210211.
6. ~ = Regulatory limit for this analyte does not exist
7. bsl = below sidewalk level
8. mg/kg = milligrams per kilogram
9. % = percent
10. NA = Not analyzed
11. ND = Not detected

Qualifiers:
D = The concentration reported is a result of a diluted sample.
J = The analyte was detected above the Method Detection Limit (MDL), but below the RL; therefore, the result is an estimated concentration.
U = The analyte was analyzed for, but was not detected at a level greater than or equal to the RL; the value shown in the table is the RL.
B = The analyte was found in the associated analysis batch blank.

## Table 5A

Remedial Investigation Report  
Groundwater Sample Analytical Results

550 10th Avenue Redevelopment  
New York, New York  
OER Regulatory Site No.: 20TMP0490M, 20EH-N114M  
Langan Project No.: 100674402

### Notes:
1. Groundwater sample analytical results are compared to the New York State Department of Environmental Conservation (NYSDEC) Title 6 of the Official Compilation of New York Codes, Rules and Regulations (NYCRR) Part 703.5 and the NYSDEC Technical and Operational Guidance Series (TOGS) 1.1.1 Ambient Water Quality Standards and Guidance Values for Class GA Water (herein collectively referenced as "NYSDEC SGVs").
2. Criterion comparisons for total xylenes and m,p-xylene are provided for reference. Promulgated NYSDEC SGVs are for o-xylene, m-xylene, and p-xylene.
3. Detected analytical results above NYSDEC SGVs are bolded and shaded.
4. Analytical results with reporting limits (RL) above NYSDEC SGVs are italicized.
5. Sample DUP-7_120718 is a duplicate sample of LMW-9_20210212; sample DUP-2_112117 is a duplicate sample of TW-2_112117; and sample DUP-1_20210212_GW is a duplicate sample of LMW-11_20210212.
6. = Regulatory limit for this analyte does not exist
7. µg/l = micrograms per liter
8. NA = Not analyzed
9. ND = Not detected

### Qualifiers:
D = The concentration reported is a result of a diluted sample.  
J = The analyte was detected above the Method Detection Limit (MDL), but below the RL; therefore, the result is an estimated concentration.  
U = The analyte was analyzed for, but was not detected at a level greater than or equal to the RL; the value shown in the table is the RL.  
B = The analyte was found in the associated analysis batch blank.

### Notes:

1. Groundwater sample analytical results are compared to the New York State Department of Environmental Conservation (NYSDEC) Part 375 Remedial Programs Guidelines for Sampling and Analysis of Per- and Polyfluoroalkyl Substances (PFAS) (January 2021) and the 1,4-Dioxane value reflects the drinking water maximum contaminant level (MCL) adopted by New York State for public water systems (July 2020). Pursuant to Part 375-1.7(f)(2), the NYSDEC will treat the MCL as relevant and appropriate and will consider this value in remedy selection.

2. Detected analytical results above NYSDEC January 2021 Guidance Values are bolded and shaded.

3. ng/l = nanograms per liter

### Qualifiers:

U = The analyte was analyzed for, but was not detected at a level greater than or equal to the Reporting Limit (RL); the value shown in the table is the RL.

Notes:
1. Soil vapor sample analytical results are compared to the minimum soil vapor concentrations at which mitigation is recommended as set forth in the
New York State Department of Health (NYSDOH) October 2006 Guidance for Evaluating Soil Vapor Intrusion in the State of New York Decision Matrices
for Sub-Slab Vapor and Indoor Air and subsequent updates (2017).
2. Sample DUP-1_20210212 is a duplicate of parent sample LSV-12_20210212.
3. ~ = Regulatory limit for this analyte does not exist
4. µg/m³ = micrograms per cubic meter
5. SV = Soil Vapor
Qualifiers:
D = The concentration reported is a result of a diluted sample.
J = The analyte was detected above the Method Detection Limit (MDL), but below the Reporting Limit (RL); therefore, the result is an estimated concentration.
U = The analyte was analyzed for, but was not detected at a level greater than or equal to the RL; the value shown in the table is the RL.
B = The analyte was found in the associated analysis batch blank.

2. Land use information from MapPLUTO 17v1.1 copyrighted by the New York City Department of Planning.
3. The adjacent Covenant House (Phase 1) facility at 460 West 41st Street is considered a future sensitive receptor as the building is not yet operational.

Potential Sensitive Receptors
A - Covenant House (Phase 1) (460 West 41st Street)
B - 43rd Street Kids Preschool Inc. (484 West 43rd Street)
C - Bank Street Headstart (410 West 40th Street)
Notes:
1. Property boundary digitized from basemap and measurements provided on the New York City Digital Tax Map maintained online by the Department of Finance.
2. Building footprint imagery provided in Covenant House Building Massing & Stacking, 8 May 2017, by FX Fowle, Denham, Wolf and Chi Phase 2 plan, 14 July 2018, by Handel Architects, LLP.
5. Remediation of Tax Lot 1 (Phase 1) was completed in June 2020.
APPENDIX A

Proposed Development Plans
1. Details shown are for design intent. Where specifically called out, T.O. building #546.80; T.O. bulkhead #544.63.

2. All details shall be coordinated with the structural method of attachment.

3. Whether or not explicitly indicated, vapor barrier is to be provided within 3'-0" of all wall penetrations, within 3'-0" of top level and 10'-8" of floor penetrations.

4. Connections, angles, shapes and details shown are to be concealed unless otherwise shown on drawings.

5. Owner: Gotham Organization

6. Architect: ConsenSuni Associates

7. Civil Engineer: Design 2147

8. Structural Engineer: Zeligman & Associates

9. Exterior Wall Consultant: Arup

10. Landscape Designer: Jon J. Tutt Design Associates

11. Lighting Consultant: Halston Lighting

12. Textrue Consultant: Design 2147

13. Acoustics Consultant: Design 2147

14. Audio Consultant: Design 2147

15. Audio Consultant: Design 2147

16. The building exterior wall shall be a complete system including all CMU, precast concrete panels, metal sills, and flashing to provide a weather-tight installation.

17. Window installation shall allow for vertical movement and shall provide means for longitudinal expansion and contraction.

18. All exterior signage will be filed under separate schedule.

19. Transfers shall be coordinated with adjacent work including materials and other contiguous.

20. All wall penetrations shall be sealed and flashed.

21. The color, character, quality and range of the exterior wall assembly are to match an approved visual mockup to product safety standards.

22. Resinous (Kynar) coated. Color selected by the architect for building movement and thermal expansion and contraction.

23. Windows to be protected. Wider windows to be protected.

24. New York, NY 10001

Attachment 1 – Proposed Development Plans
Attachment 2 – Previous Reports
**Introduction**

This Phase II Investigation Work Plan has been developed for the above referenced site. The Site is located in the Clinton neighborhood of Manhattan and is identified as Block 1050 and Lots 1 and 61 (portions). The entire site is being redeveloped in two separate phases to allow for Covenant House’s continued operation of services during the construction of a new Covenant House facility on the eastern portion of the site. Currently, the western portion of the Site is occupied by the Covenant House New York shelter for homeless youth (Wing A) while the eastern portion of the Site most recently consisted of two buildings (Wings B and C) that have been demolished in preparation for Phase 1 of the proposed site redevelopment. A Notice to Proceed for the Phase 1 redevelopment was issued by NYCOER on 25 January 2019.

This Work Plan is being prepared for Phase 2 of the proposed redevelopment located on the western portion (Wing A) of the site, which corresponds to the extents of the approved tentative reapportionment of tax Lot 61.

**Site Location, Current Use, and Proposed Development Plan**

The Site is located in the Clinton neighborhood of Manhattan and is identified as Block 1050 and Lots 1 and 61 (portions). A site location plan is provided as Figure 1. The eastern portion of the Site most recently consisted of two buildings (Wings B and C) that have been demolished in preparation for Phase 1 of the proposed site redevelopment; the western portion of the Site (Wing A) is occupied by the Covenant House New York shelter for homeless youth and a parking lot. As part of development, the tax lots are expected to be reapportioned to correspond with the proposed redevelopment extents: tentative lots 1 (Phase 1 redevelopment / eastern portion of the Site) and 61 (Phase 2 development / western portion of the Site).

The Phase 2 portion of the proposed redevelopment (Wing A) site is bordered by 10th Avenue to the west, West 41st Street to the north, West 40th Street to the south, and the Phase 1 Covenant House redevelopment site to the east. New York City Transit (NYCT) tunnels are located to the north of the site, below West 41st Street. In addition, Lincoln Tunnel entrance roads and access ramps for the nearby Port Authority Bus Terminal are located to the south of the site, beyond West 40th Street. The existing basement level beneath Wing A extends approximately 15-feet below sidewalk level.

Phase 2 of the development project will consist of demolishing the existing 8-story Covenant House building (Wing A) and associated cellar space in the western portion of the site, and constructing a new 42-story mixed-use building with an approximate footprint area of 15,913
square-feet. Excavation will be completed to vertically and horizontally extend the existing cellar extents. Based on field measurements collected from permanent monitoring wells installed during Langan’s December 2018 Due Diligence Investigation, the water table is anticipated at approximately 14 feet below sidewalk level. The proposed development plans for the Phase 2 development / western portion of the site are presented in Attachment 1.

**Phase I ESA Summary**

A Phase I Environmental Site Assessment (ESA) was completed for the Covenant House by TRC Engineers, Inc. (TRC) dated September 2015. According to the summary of the historical Sanborn Fire Insurance Maps provided in the ESA, prior to 1930 the Covenant House property was occupied by up to 16 residential buildings, some of which included mixed commercial use. Increased commercial operations were documented between 1930 and 1950. Two filling stations and an automobile repair shop operated between 1950 and 1968 on the western portion of the Covenant House site, located within the extents of the proposed Phase 2 redevelopment. The northeastern corner of the site (within the extents of the proposed Phase 1 redevelopment) is labeled as automobile parking during this period. Between 1968 and 1979 additional site buildings were demolished and the southwestern filling station was no longer present. Buildings labeled as a Narcotic Rehabilitation Center are shown between 1968 and 1990. The northwestern filling station is no longer present by 1990.

Historical ownership information obtained from the New York City Department of Finance and provided in the ESA revealed no information regarding environmental conditions related to past usage.

The Phase I ESA also identified that the Covenant House is registered with the New York State Department of Environmental Conservation (NYSDEC) for Spill No. 0613314, which was reported in 2007 following the observation of oily water in an onsite excavation. Approximately 3,000 gallons of oily water were pumped out of the excavation and no additional oily water infiltration was observed following the removal. The spill was administratively closed in 2009. A second spill was reported for the property, but associated with the 7 Line Subway Extension. According to the ESA, petroleum impacted soils were identified during drilling for the subway extension and Spill No. 04044424 was reported in 2004. Contaminated soil was reportedly removed and replaced with clean fill and the spill was administratively closed in 2005. The Phase I ESA also identified that Covenant House is registered with NYSDEC as Petroleum Bulk Storage (PBS) facility no. 2-610819 for a 10,000-gallon No. 2 fuel oil underground storage tank (UST) beneath the parking lot in the northern portion of property, located within the extents of the proposed Phase 1 redevelopment extents.
The AOCs identified for the Phase 2 redevelopment include:

1. Historical operations including two filling stations and one automobile repair shop in close proximity to the proposed redevelopment extents.
2. Closed NYSDEC Spill Nos. 04044424 and 0613314 which were reported for Covenant House based on the observation of petroleum impacts in soil and/or groundwater at the site.
3. Active 10,000-gallon fuel oil UST.
4. Presence of historic urban fill.

The Phase I ESA is included in Attachment 2.

**Due Diligence Investigation Summary**

For the purposes of due diligence, to determine if the above identified AOCs could potentially impact the proposed site redevelopment plans, and to partially satisfy future NYCOER remedial investigation requirements a limited Phase II EI was completed within the proposed Phase 2 development extents of the Site in November 2017 which included completion of six soil borings (LSB-1, LSB-2, and LSB-5 through LSB-8) and collection of six soil samples, and the installation of two temporary monitoring wells (TW-2 and TW-3) and collection of two groundwater samples. Soil samples were collected from depths corresponding to between 15 and 18 feet below street level and were analyzed for volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), and target analyte list (TAL) metals. Groundwater samples were analyzed for VOCs, SVOCs, and total TAL metals.

An additional due diligence investigation completed by Langan in December 2018 included the completion of four additional soil borings (LSB-21 through LSB-24) and collection of four additional soil samples, installation of three permanent monitoring wells (LMW-8 through LMW-10) and collection of three groundwater samples, and installation of three soil vapor points (LSV-9 through LSV-11) and collection of three soil vapor samples. Soil samples were collected from depths corresponding to 13 to 15 street below street level and 1 to 3.5 feet below basement slab level and were analyzed for VOCs, SVOCs, TAL metals, pesticides, and polychlorinated biphenyls (PCBs). Groundwater samples were analyzed for VOCs, SVOCs, total and dissolved TAL metals, pesticides and PCBs, and soil vapor samples were analyzed for VOCs.

A summary of the sampling completed as part of due diligence is provided as Table 1. Due diligence investigation analytical results were generally unremarkable and will be discussed in detail in the Remedial Investigation Report.
Phase II Investigation Work Scope

Geophysical Survey

A limited geophysical survey will be performed for utility clearance at each boring location. The contractor will determine the potential underground structures using ground penetrating radar and magnetic geophysical instruments and will clear a 10-foot area around each boring location.

Soil, Groundwater, and Soil Vapor Sampling Summary

An investigation of soil, soil vapor and groundwater is being performed to supplement the due diligence investigations previously completed in November 2017 and December 2018 and to properly characterize the site for potential environmental impacts from historical on-site/off-site uses, operations, etc. The proposed sampling event will address both AOCs and historic fill, as well as provide general horizontal/vertical characterization across the site for development purposes. The sampling procedures of this investigation will be performed in accordance with the NYSDEC Technical Guidance for Site Investigation and Remediation DER-10.

Eight test borings will be completed at the site. A proposed sample location plan (which also includes historical sampling locations) is provided as Figure 2 and a summary of the proposed sampling plan is provided as Table 2. At a minimum, a total of 11 soil samples will be collected from the eight test borings to address data gaps remaining following the November 2017 and December 2018 due diligence investigations to satisfy NYCOER investigation requirements. Soil borings will be advanced for the collection of shallow soil samples to supplement the deeper soil samples previously collected at LSB-2, LSB-9, and LSB-21, and for the collection of deeper soil samples to supplement shallow samples previously collected at LSB-22, LSB-23, and LSB-24; these samples will be analyzed for VOCs, SVOCs, pesticides, PCBs, TAL metals, and hexavalent chromium. Soil samples will also be collected from previously sampled intervals at LSB-2, LSB-5, LSB-8, LSB-9, and LSB-23; these samples will be analyzed for pesticides and PCBs, which were not previously analyzed.

A minimum of three groundwater samples will be collected from three previously installed permanent monitoring wells and analyzed for VOCs, SVOCs, pesticides, PCBs, total and dissolved TAL metals, and hexavalent chromium. One soil vapor point will be installed and one soil vapor sample will be collected and analyzed for VOCs to supplement the three soil vapor samples previously collected.
The depth of groundwater is expected to be encountered at approximately 14 feet below sidewalk level. General groundwater flow direction is expected to be west towards the Hudson River. Each sample point location at the site will be accurately measured using detailed building floor plans.

**Soil Sampling**

A geologist/engineer/QEP will screen the soil samples during borehole advancement for organic vapors with a photo-ionization detector (PID) and evaluated for visual and olfactory impacts prior to collecting environmental samples. All field work will be recorded in a field log. A track mounted direct push GeoProbe 7822DT drill rig will be used to drill two locations in the parking lot to the north of the existing Wing A building and a limited access direct push Geoprobe 420M drill rig will be used to drill six locations within the building cellar.

Based on the 2016 Remedial Investigation Sampling Scope Guidelines, NYCOER requires seven soil borings and the collection of a minimum of fourteen soil samples for analysis of VOCs, SVOCs, pesticides, PCBs, and TAL metals for a 10,000- to 15,000-square-foot site. As eight borings were previously completed by Langan in November 2017 and December 2018, eight additional soil borings will be installed to collect the required number of samples and analyses at the site to address data gaps remaining following the previous investigations to satisfy NYCOER investigation requirements. A minimum of 11 samples will be collected for laboratory analysis. Up to two discrete soil samples will be collected from each of the eight borings to supplement the samples previously collected as described above – one from the previously sampled interval for compounds not previously analyzed, the upper two-foot depth interval material, from the capillary fringe (two-foot interval above the groundwater interface), and/or one from the depth interval exhibiting the greatest degree of contamination. If neither contamination nor groundwater are encountered, the sample will be collected from the depth equivalent to the base of the final excavation for redevelopment based on the available design drawings. Discrete (grab) samples will be collected from the aforementioned sampling intervals. The subsurface soil samples may also serve as in-situ post-excavation soil samples for the remedial plan. An additional soil sample may be collected from each or several test boring(s) if elevated PID readings and/or visual and olfactory observations are noted during borehole advancement, and/or field observations identify an upper fill layer underlain by native material the additional soil sample from the upper zone of the native layer will help delineate the vertical migration of impacts (if any), as well as determine a more detailed remedy and potentially provide a cost savings for disposal options.
Monitoring Well Installation and Groundwater Sampling

No additional groundwater monitoring wells will be installed. Representative groundwater samples will be collected from three permanent monitoring wells, previously installed during Langan’s December 2018 due diligence investigation using low-flow sampling techniques. A representative groundwater sample will be collected from each well with a peristaltic pump and dedicated tubing. Sampling will be conducted in accordance with NYSDEC Draft DER-10 Technical Guidance for Site Investigation and Remediation, dated May 2010, and Sampling Guidelines and Protocols, dated March 1991. Groundwater wells will be gauged with a water level meter to record a depth to groundwater reading (1/100 foot), and if necessary, an interface meter to determine the thickness of LNAPL or DNAPL.

Soil Vapor Sampling

One soil vapor sample will be collected to supplement the three soil vapor samples previously collected in December 2018 in accordance with the Final Guidance for Evaluating Soil Vapor Intrusion in the State of New York (NYSDOH October 2006). Conditions in the field may require adjustment of the proposed sampling location. Groundwater is expected to be encountered at a depth of 14 feet below sidewalk grade.

The soil vapor implant will be set at a depth of approximately 13 feet, corresponding to one foot above the groundwater interface. The vapor probe will consist of a new, dedicated stainless steel screen implant connected to polyethylene or Teflon™ tubing extending to the target depth. About 1 foot of clean sand filter pack will be placed around the screen implant, and the remaining annular space will be backfilled to grade with hydrated bentonite. Sampling will occur for the duration of two hours.

Samples will be collected in appropriate sized Summa canisters that have been certified clean by the laboratory and samples will be analyzed by using USEPA Method TO-15. Flow rate for both purging and sampling will not exceed 0.2 L/min. 24-hours following soil vapor probe installation, one to three implant volumes shall be purged prior to the collection of any soil-gas samples. A sample log sheet will be maintained summarizing sample identification, date and time of sample collection, sampling depth, identity of samplers, sampling methods and devices, soil vapor purge volumes, volume of the soil vapor extracted, vacuum of canisters before and after the samples are collected, apparent moisture content of the sampling zone, and chain of custody protocols.
As part of the vapor intrusion evaluation, a tracer gas will be used in accordance with NYSDOH protocols to serve as a quality assurance/quality control (QA/QC) device to verify the integrity of the soil vapor probe seal. A container (box, plastic pail, etc.) will serve to keep the tracer gas in contact with the probe during testing. A portable monitoring device will be used to analyze a sample of soil vapor for the tracer gas prior to sampling. If the tracer sample results show a significant presence of the tracer, the probe seals will be adjusted to prevent infiltration. At the conclusion of the sampling round, tracer monitoring will be performed a second time to confirm the integrity of the probe seals.

**Sample Analysis**

Soil, groundwater, and soil vapor samples will be submitted to a NYSDOH Environmental Laboratory Accreditation Program (ELAP)-certified laboratory for Full analysis:

- Volatile Organic Compounds by EPA Method 8260;
- Semi-volatile organic compounds by EPA Method 8270;
- Pesticides/PCBs by EPA Method 8081/8082; and
- Target Analyte List metals by EPA Method 6010 and 7471;
- Hexavalent chromium by EPA Method 7196A;
- Soil vapor samples will be analyzed for VOCs by using USEPA Method TO-15.

All groundwater samples will be analyzed for both filtered (dissolved) and unfiltered (total) metals.

If either LNAPL and/or DNAPL are detected, appropriate samples will be collected for characterization and “finger print analysis” and required regulatory reporting (i.e. NYSDEC spills hotline) will be performed.

**Quality Assurance/Quality Control Procedures**

QA/QC procedures will be used to provide performance information with regard to accuracy, precision, sensitivity, representation, completeness, and comparability associated with the sampling and analysis for this investigation. Field QA/QC procedures will be used to document that samples are representative of actual conditions at the Site and identify possible cross-contamination from field activities or sample transit. Laboratory QA/QC procedures and analyses will be used to demonstrate whether analytical results have been biased either by interfering compounds in the sample matrix, or by laboratory techniques that may have introduced systematic or random errors to the analytical process. QA/QC samples (field and trip blanks, duplicates, etc.) will be collected and analyzed at an ELAP-certified laboratory.
Investigation Derived Waste

Cuttings may be disposed at the site within the borehole that generated them to within 24 inches of the surface unless:

- Free product or grossly contaminated soil, are present in the cuttings;
- The borehole has penetrated an aquitard, aquiclude or other confining layer; or extends significantly into bedrock;
- Backfilling the borehole with cuttings will create a significant path for vertical movement of contaminants. Soil additives (bentonite) may be added to the cuttings to reduce permeability;
- The soil cannot fit into the borehole.

Those soil cuttings needing to be managed on-site will be containerized in properly labeled DOT approved 55-gallon drums for future off-site disposal at a permitted facility. All boreholes which require drill cuttings disposal would ultimately be filled with bentonite chips (hydrated) and asphalt/concrete capping. Disposable sampling equipment including, spoons, gloves, bags, paper towels, etc. that came in contact with environmental media will be double bagged and disposed as municipal trash in a facility trash dumpster as non-hazardous trash.

Reporting

A Remedial Investigation Report will be prepared following completion of the field activities and receipt of the laboratory data. The report will provide detailed summaries of the investigative findings. Soil, groundwater, and soil vapor analytical results will be compared to the NYSDEC Part 375-6.8(a) Unrestricted Used Soil Cleanup Objectives, appropriate Part 375-6.8(b) Restricted Soil Cleanup Objectives and NYSDEC Part 703 Groundwater Quality Standards (GQS) (class GA) and Division of Water Technical and Operational Guidance Series (TOGS) 1.1.1 Ambient Water Quality Standards (AWQS), and NYSDOH October 2017 Final Guidance for Evaluating Soil Vapor Intrusion Matrices. The report will include an updated sampling plan, spider diagrams, analytical data tables for all reported constituent compounds (including non-detectable concentrations) and remedial recommendations, as warranted.

Investigation HASP

An OSHA compliant Health and Safety Plan that meets all OSHA HAZWOPER requirements will be implemented during the site work to protect worker safety. The Site Safety Coordinator will ensure full compliance of the HASP in accordance with applicable health and safety laws and regulations. All field personnel involved in investigation activities will participate in training.
required under OSHA HAZWOPER 29 CFR 1910.120, including 40-hour hazardous waste operator training and annual 8-hour refresher training. Emergency telephone numbers will be posted at the site location before any work begins. A safety meeting will be conducted before each shift begins. Topics to be discussed include task hazards and protective measures (physical, chemical, environmental); emergency procedures; PPE levels and other relevant safety topics including a highlighted route map to the nearest hospital/emergency room. Meetings will be documented in a log book or specific form. Potential on-site chemicals of concern include VOCs, SVOCs, Pesticides/PCBs, and Metals (specifically arsenic, lead, and mercury at a minimum). Information fact sheets and/or summary tables for each contaminant group are included in the HASP. A copy of this HASP will be on-site during each sampling event.

EXECUTIVE SUMMARY

Subject to the qualifications and limitations stated in Section 1 of this report, TRC Engineers, Inc. (TRC) was retained by Covenant House International (also known as “Client” or “User”) to perform a Phase I Environmental Site Assessment (ESA) of the property located at 538-554 Tenth Avenue, New York, NY 10018 (herein referred to as the “Site”). The legal description of the Site is Block 1050, Lots 1 and 61. This property was assigned an E-Designation “E-137” as part of the 2005 No. 7 Subway Extension—Hudson Yards rezoning study. The E-designation is for Hazardous Materials and Window/Wall Noise Attenuation. According to the study, the Site or nearby properties were historically occupied by a coal yard and a piano factory and, as a result, there is potential for non-petroleum contamination on the Site. This Phase I ESA was performed in accordance with the scope and limitations of the American Society of Testing and Materials Practice E 1527-13 Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process (ASTM E 1527-13). Limiting conditions and/or deviations from the ASTM E 1527-13 standard are described in Sections 1.3 and 7.7 of this report.

The approximately 29,000 square foot (sf) lot area contains 3 buildings (buildings A, B and C) and a parking lot. Building A is an 8-story 90,000 sf building that fronts on Tenth Avenue. Originally built in 1961 as a hotel, the building was converted by Covenant House in 1984 to serve as its main residential and administrative facility. Building B is a 4-story, 12,000 sf building that fronts 40th Street. Originally built as a branch of the New York Public Library in the early 1900s, the building has been significantly altered by Covenant House to serve as the organization’s gymnasium, chapel, and legal services center. Building C is a 5-story, 29,000 sf building that fronts 41st Street. The building currently serves as Covenant House’s cafeteria, health center, classrooms, and administrative offices.

As a result of the Phase I ESA, including but not limited to our visual observation of the Site; review of historical information, environmental databases, and information provided by the User; interviews with current Site representative(s); and TRC’s professional judgment, the following recognized environmental conditions (RECs) and/or controlled recognized environmental conditions (CRECs) associated with the Site, as defined by the ASTM E 1527-13 standard were identified:

On-Site RECs:

- The review of the regulatory agency database report identified the Site in the Historic Automobile Stations database. Additionally, the review of the historic Sanborn Maps confirm the historic presence of two filling stations and an automobile repair shop. One of the filling stations on the northwest corner of the Site operated from approximately 1950 until at least 1987. Historic Site use for automobile repair and filling stations are considered RECs.

- The review of the regulatory agency database report identified two NYSDEC reported spills associated with the Site. In 2004, petroleum impacted soils were reportedly identified during soil borings drilled on the Site in association with the No. 7 subway...
extension. Additionally, petroleum impacted soil and perched water/groundwater were encountered during excavations associated with rate renovations performed in 2007. Petroleum impacted soil and groundwater are considered RECs.

- There is an active 10,000-gallon fuel oil underground storage tank (UST) on-Site. The presence of a 10,000-gallon fuel oil UST is considered a REC.

- Structures were formerly on-Site and demolished prior to the construction of the current Site building. Historic fill of unknown origin and suspect buried structures have the potential to impact the Site property. The likely presence of historic fill and buried structures is considered a REC.

**Off-Site RECs:**

- Review of the regulatory agency database revealed that petroleum releases to soil were observed during a pre-closure investigation performed in the vicinity of the No. 6 fuel oil UST located on the east adjoining site. A spill was reported to the NYSDEC and groundwater monitoring wells were installed in the vicinity of the UST to monitor for the presence of petroleum impacts. Reportedly, the wells were monitored for several years and the spill was closed by the NYSDEC. However, petroleum impacts to soil remain in the vicinity of the UST and this is considered a REC.

- Review of the regulatory agency database report revealed that the east adjoining site is listed in the RCRA database as a CESQG for generation of hazardous waste. The current and historic generation of hazardous waste at this site is considered a REC.

- Review of a previous Phase I Environmental Site Assessment performed at the east adjoining property revealed that the site was previously utilized as an automobile repair trade school. Historic site uses of the east adjoining property for automobile repair is considered a REC.

- The review of historic Sanborn fire insurance maps revealed that coal yards were present on a property to the east of the Site from at least 1890 to approximately 1899 and the northeast adjoining property from at least 1950 to approximately 1968; a laundry facility, “Steam Laundry”, was present on a property to the east of the Site along 41st Street from at least 1930 to approximately 1950; an upholsterer was present on a property to the east of the Site along 40th Street from approximately 1911 to approximately 1930; and “Iron Works” was present on a property to the east of the Site along 40th Street from at least 1930 to approximately 1950. These historic uses of adjoining properties are considered RECs.

- Review of the regulatory database report identified the west adjoining property as a historic automobile station and a CESQG. There is a NYSDEC reported spill associated with the property as well. Petroleum impacted soils were encountered in 1995. Reportedly, wells were installed and monitored for several years. Historic fill and impacted soils were excavated for off-site disposal during the redevelopment of the site.
A vapor barrier and waterproofing system was installed beneath the footprint of the current building. The spill case was closed in 2014, however, the historic use of the western adjoining property as an automobile station, the historic generation of hazardous waste and the presence of petroleum impacted soils and groundwater are considered a RECs.

- Review of the regulatory agency database report identified that two Con Edison service boxes located on the west adjoining sidewalks and associated with the Site address are listed in the RCRA database as CESQGs for generation of hazardous waste. The historic generation of hazardous waste is considered a REC.

In addition to the ASTM E 1527-13 requirements and in accordance with TRC’s signed proposal dated July 30, 2015, TRC performed limited visual inspections for asbestos-containing materials (ACM), lead-based paint (LBP), and other building materials with regulated components. Suspect ACM, LBP, and building materials with regulated components (i.e., fluorescent light bulbs and ballasts, mercury switches, exit signs, electronic waste, first extinguishers, etc.) were identified during the Site reconnaissance. The presence of ACM, LBP and building materials with regulated components at the Site is considered an environmental concern.

This Executive Summary is part of this complete report; any findings, opinions or conclusions in this Executive Summary are made in context with the complete report. TRC recommends that the User read the entire report for all supporting information related to findings, opinions and conclusions.
Legal Notice

This document was prepared by TRC solely for the benefit of the User. With regard to third-party recipients of this document, neither TRC, nor the Client, nor the User, nor any of their respective parents, affiliates or subsidiaries, nor any person acting on their behalf: (a) makes any warranty, expressed or implied, with respect to the use of any information or methods disclosed in this document; or (b) assumes any liability with respect to the use of any information or methods disclosed in this document. Any third-party recipient of this document, by its acceptance or use of this document, releases TRC, the Client, the User, and their parents, affiliates and subsidiaries, from any liability for direct, indirect, economic, incidental, consequential or special loss or damage whether arising in contract, warranty, express or implied, tort, or otherwise, and irrespective of fault, negligence, and strict liability.
1.0 INTRODUCTION

TRC Engineers, Inc. (TRC) has prepared this Phase I Environmental Site Assessment (ESA) for Covenant House International (hereinafter “Client” or “User”).

This report was prepared for and may be relied upon by Client for the purposes set forth herein; it may not be relied on by any party other than the Client and reliance may not be assigned without the express approval of TRC. Authorization for third party reliance on this report will be considered by TRC if requested by the Client. TRC reserves the right to deny reliance on this report by third parties.

1.1 Purpose and Scope of Services

The following Phase I ESA was performed for the property located at 538-554 Tenth Avenue in New York, New York (hereinafter the “Site”). The legal description of the Site is Block 1050, Lots 1 and 61. A Site location map is included as Figure 1. This Phase I ESA has been prepared by TRC in accordance with the American Society for Testing and Materials E 1527-13 Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process (ASTM E 1527-13) and is intended for the sole use of Client as per the Proposal for Phase I Environmental Site Assessment dated July 30, 2015.

The purpose of this assessment is to identify Recognized Environmental Conditions (RECs) at the Site, as defined by the ASTM E 1527-13 standard. The completion of this Phase I ESA report may be used to satisfy one of the requirements for the User to qualify for the innocent landowner, contiguous property owner, or bona fide prospective purchaser limitations pursuant to the Comprehensive Environmental Response, Compensation and Liability Act (CERCLA), thereby constituting all appropriate inquiries into the previous ownership and uses of the property consistent with good commercial or customary practice as defined by 42 U.S.C. §9601(35)(B) of CERCLA.

TRC understands that this assessment is not funded with a federal grant awarded under the United States Environmental Protection Agency (U.S. EPA) Brownfields Assessment and Characterization program.

The Scope of Services for this Phase I ESA included the following tasks:

- Site and vicinity reconnaissance;
- Site and vicinity description and physical setting;
- Historical source review and description of historical Site conditions;
- Interviews with owners, operators, and/or occupants of the Site, and/or local officials;
- Review of environmental databases and regulatory agency records;
- Review of previous environmental reports/documentation, as applicable;
- Review of environmental liens, if provided or authorized to obtain by the User; and
- Preparation of a report summarizing findings, opinions and conclusions.
Pursuant to the ASTM E 1527-13 standard, recommendations to conduct Phase II sampling or other assessment activities are not required to be included in this report. TRC can provide such recommendations upon request.

1.2 Additional Services

Items outside the scope of the ASTM E 1527-13 standard include, but are not limited to, the following:

- Asbestos-containing building materials (ACM)
- Radon
- Lead-based paint (LBP)
- Lead in drinking water
- Wetlands
- Regulatory compliance
- Cultural and historic resources
- Industrial hygiene
- Health and safety
- Ecological resources
- Endangered species
- Indoor air quality unrelated to releases of hazardous substances or petroleum products into the environment
- Biological agents
- Mold
- Polychlorinated biphenyls (PCBs)

The additional services performed during the course of this Phase I ESA, other than those required by the ASTM E 1527-13 standard, included limited visual survey for suspect ACM, suspect LBP, and suspect PCB-containing materials as discussed in greater detail in Section 9.0.

1.3 Deviations to ASTM E 1527-13 Standard

The following significant deviations or deletions to the ASTM standard were made during this Phase I ESA:

1. Property area history was not conducted in five-year intervals. However, sufficient information about the history of the Site and surrounding area could be obtained from the available historical Sanborn maps, aerial photographs, city directories, and local records, and this data gap is not likely to alter the conclusions of this report.
2.0 SITE DESCRIPTION

2.1 Site Location and Legal Description

The approximately 29,000 square foot (sf) property is located at 538-554 Tenth Avenue in New York, New York, in a mixed commercial/residential area. The Site is described by the tax assessor as Block 1050, Lots 1 and 61, is zoned as C6-3, commercial, and is currently owned by the City of New York. A Site location map is included as Figure 1.

2.2 Site Improvements

Current on-Site improvements are listed in the following table. A Site layout plan is included as Figure 2.

Table 2.1 - Site Improvements

2.3 Current and Historical Site Use

2.3.1 Current Site Use(s)

The approximately 29,000 sf property is located in an area that is part of a rezoning project under the Metropolitan Transportation Authority (MTA) to facilitate the No. 7 Subway Extension-Hudson Yards Rezoning and Development Program and consists of 3 buildings (buildings A, B and C) and a parking lot. Building A is an 8-story, 90,000 sf building that fronts on Tenth Avenue and serves as the main residential and administrative facility. Building B is a 4-story, 12,000 sf building that fronts 40th Street and serves as the organization’s gymnasium, chapel, and
legal services center. Building C is a 5-story, 29,000 sf building that fronts 41st Street and serves as the cafeteria, health clinic, classrooms, and administrative offices.

2.3.2 Previous Owner and Operator Information

Based on information provided by the User (Section 3), the historical record review (Section 4), and/or interviews conducted during this Phase I ESA (Section 6), historical Site ownership and operator information is provided in the tables below.

Review of the New York City Department of Finance Office of the City Register database revealed that the Site is located in an area that is part of a rezoning project under the Metropolitan Transportation Authority (MTA) to facilitate the No. 7 Subway Extension-Hudson Yards Rezoning and Development Program. The No. 7 Subway is believed to run beneath 41st St. The lateral extent is not known and may partially run beneath the northern extent of the Site.
2.4 Physical Setting

According to the United States Geological Survey (USGS) topographic map, Central Park, New York quadrangle dated 1995 (Figure 1), the Site is located approximately 0.5 miles east from the Hudson River, the Site topographic elevation is approximately 26 feet above mean sea level (MSL), and local topography slopes downward toward the west. The topographic downward slope observed at the Site during the Site reconnaissance is generally flat slightly sloped toward the west. Based on local topography and historical environmental reports provided to TRC, as applicable, the assumed direction of shallow ground water flow is to the west, towards the Hudson River. However, a subsurface investigation would be required to determine actual ground water flow direction.

The database radius report supplied by Environmental Data Resources, Inc. (EDR) of Milford, Connecticut was reviewed to obtain information regarding the dominant soil composition in the Site vicinity. This information is summarized below:

- Hydric Status: Soil does not meet the requirements for a hydric soil.
- Soil Surface Texture: Silt loam, loamy sand, sandy loam, fine sandy loam
- Soil Component Name: URBAN LAND
- Deeper Soil Types: Unweathered bedrock, very gravelly-loamy sand, stratified, sandy loam

Please refer to the Geocheck Physical Setting Source Summary of the EDR report presented in Appendix A for further information regarding the soil composition in the Site vicinity. According to Federal Emergency Management Agency (FEMA) Flood Insurance Rate Map (FIRM) Panel ID 3604970088F, the Site is not located in a FEMA flood zone.
3.0 USER PROVIDED INFORMATION

According to the ASTM E 1527-13 standard, certain tasks that may help identify the presence of RECs associated with the Site are generally conducted by the Phase I ESA User. These tasks include: providing, or authorizing the environmental professional to obtain, recorded land title records for environmental liens or activity and land use limitations (AULs); providing specialized knowledge related to RECs at the Site (e.g., information about previous ownership or environmental litigation); providing commonly known or reasonably ascertainable information within the local community about the property that is material to RECs in connection with the property; and informing the environmental professional if, as believed by the User, the purchase price of the property is lower than the fair market value due to contamination. A list of requested information was included in TRC’s Proposal for Phase I Environmental Site Assessment dated July 30, 2015 (see Section 1.1). The User did not provide any additional helpful documents as defined in the ASTM E 1527-13 standard. A copy of the User questionnaire is included in Appendix B.

3.1 Title and Judicial Records for Environmental Liens or Activity and Use Limitations

TRC reviewed the EDR report (discussed in Section 4.2), local municipal records (Section 4.4), and the State Land Records (Section 4.4). No evidence of environmental liens or AULs associated with the Site was identified.

3.2 Specialized Knowledge

The User was not aware of specialized knowledge related to RECs at the Site.

3.3 Property Value Reduction Issues

The User was not aware of property valuation reduction issues regarding the Site.

3.4 Commonly Known or Reasonably Ascertainable Information

TRC was supplied with commonly known and/or reasonably ascertainable information regarding the Site by the Site occupants. This information was used during this Phase I ESA and has been incorporated in this report as applicable.

3.5 Reason for Conducting Phase I

It is TRC’s understanding that the User requires a Phase I for due diligence purposes associated future redevelopment of the Site.
4.0 RECORDS REVIEW

4.1 Historical Use Information

Information regarding Site and vicinity historical uses was obtained from various publicly available and practically reviewable sources including:

- Local municipal records;
- An environmental database report; and
- Interviews with Site representative(s) and regulatory agency official(s), as necessary.

Historical research documentation is included in Appendix C.

4.1.1 Site History

Operational History

Table 4.1 - Site History

<table>
<thead>
<tr>
<th>Year</th>
<th>Site History</th>
</tr>
</thead>
<tbody>
<tr>
<td>1890 – 1911</td>
<td>The Site is developed with multiple (approximately 16) 4-story buildings and a 5-story building located in the southern portion of the Site labeled “Piano Factory”.</td>
</tr>
<tr>
<td>1911 – 1930</td>
<td>The 4-story buildings are now labeled as residential buildings with basements and first-floor commercial space. Two buildings along Tenth Avenue are labeled “Drugs” and “Bakery”.</td>
</tr>
<tr>
<td>1930 – 1950</td>
<td>Two of the 4-story buildings in the southern corner of the Site are labeled “N.Y. Public Library”. The 5-story building located in the southern portion of the Site is no longer labeled “Piano Factory”. Two of the 4-story buildings at the corner of Tenth Avenue and 41st Street have been demolished and replaced by a triangular building labeled as a store.</td>
</tr>
<tr>
<td>1950 – 1968</td>
<td>Five buildings in the northeastern portion of the Site and two buildings in the southwestern corner of the Site have been demolished. The northeastern corner of the Site is now labeled “Auto Parking”. The 5-story building located in the southern portion of the Site is labeled “Auto Repair”. The southwestern and northern corners of the Site are labeled “Fill’g Sta.”.</td>
</tr>
</tbody>
</table>
Table 4.1 - Site History

<table>
<thead>
<tr>
<th>Year</th>
<th>Site History</th>
</tr>
</thead>
<tbody>
<tr>
<td>1968 – 1979</td>
<td>The remaining 4-story buildings along Tenth Avenue have been demolished. There is no longer a filling station located on the southwestern corner of the Site. The Site is improved with the current Site buildings A and B on the eastern portion of the Site along Tenth Avenue (c. 1961) and in the southern corner of the Site (c. 1912). The Site is labeled “Narcotic Rehabilitation Center”.</td>
</tr>
<tr>
<td>1979 – 1990</td>
<td>Current Site building C has been built in the northeastern portion of the Site (c. 1968). The Site is labeled “N.Y. State Narcotic Rehabilitation Center”.</td>
</tr>
<tr>
<td>1990 – 2001</td>
<td>The Site is depicted as the current configuration. The filling station located in the northern corner of the Site is no longer shown.</td>
</tr>
<tr>
<td>2001 – Present</td>
<td>The Site is labeled “N.Y. State Narcotic Rehabilitation Center”. The northern corner of the Site is labeled “Park’g”.</td>
</tr>
</tbody>
</table>

It does not appear that topographic contours in the Site area have significantly changed during the time period reviewed.

Hazardous Substances

The historic use of hazardous substances on-Site (i.e., gasoline) associated with the former filling stations and an auto repair shop are considered a REC. No hazardous substances were observed during the Site reconnaissance.

4.1.2 Adjoining Property History

Table 4.2 - Adjoining Property History

<table>
<thead>
<tr>
<th>Direction</th>
<th>Adjoining Property History</th>
</tr>
</thead>
<tbody>
<tr>
<td>North</td>
<td>West 41st Street has been present north of the Site since at least 1890. The properties beyond West 41st Street, adjoining north of the Site, were generally developed with mid-rise buildings with undesignated uses until approximately 1930. A tile warehouse was located on the northeast adjoining property in 1930. In 1950 a coal yard is shown on the north adjoining property. In 1968, the warehouse facilities were razed and West 41st Street was widened to create a “Bus Driveway” to a 4-story building with a basement located on the north adjoining property labeled “Westside Airlines Bus Terminal”. In 1984 the bus garage was replaced by a recording studio until 2005 when the entire northwestern adjoining block was razed. In 2001 the adjoining property to the north was razed and replaced with a parking garage in 2002.</td>
</tr>
</tbody>
</table>
Table 4.2 - Adjoining Property History

<table>
<thead>
<tr>
<th>Direction</th>
<th>Adjoining Property History</th>
</tr>
</thead>
<tbody>
<tr>
<td>East</td>
<td>The adjoining property to the east was developed with multiple (approximately 16) 4-story buildings and one 5-story building from 1890 until 1911. In 1911, approximately 19 4- and 5-story buildings with basements are depicted as residential buildings and one of them is labeled “Job Painter”. The small northern adjoining structure is labeled “Plaster &amp; Moulder” from 1911 to approximately 1950. Between 1930 and 1950, an adjoining property to the southeast along 40th Street was labeled “Iron Works”. In 1950, the buildings on the eastern portion of the property are no longer depicted and the area is labeled “Lumber Yard” and “Auto Parking”. A structure along 40th Street is labeled “Metal Wks” from 1950 to approximately 1968. In 1968 the property is improved with a 6-story L-shaped building labeled “Off. &amp; W. Ho.” and is occupied by “Diana Stores Corp.”. The property was occupied by “N.Y.C. Community College” from 1979 to approximately 1995. Since 1995, the eastern adjoining property has been occupied by “Hunter College Voorhees Campus”.</td>
</tr>
<tr>
<td>South</td>
<td>West 40th Street has been present south of the Site since at least 1890. The properties beyond west 40th Street, adjoining south of the Site, were developed with 3-, 4- and 5-story buildings from at least 1890 until approximately 1950 when the south adjoining property was replaced with a tunnel exit/entrance ramp to the 3rd floor of the nearby bus terminal.</td>
</tr>
<tr>
<td>West</td>
<td>Tenth Avenue has been present to the west of the Site since at least 1890. West adjoining properties were generally developed with 5-story buildings with the exception of a mid-rise building to the southwest labeled “Kilns” and “Matt House” from 1890 to approximately 1911. In 1911, the 5-story buildings are identified as residential buildings having basements and first-floor commercial space. In 1930, one of the 5-story buildings is labeled “Chine Laundry”. The adjoining property to the southwest is labeled “Schlossman’s Furniture Warehouse” until the entire block was razed and replaced with an access tunnel connecting to the Lincoln Tunnel in 1950. One of the 5-story buildings is labeled “Tin Shop” and three of the 5-story buildings have been demolished and replaced with a “Filling Station” with four underground storage tanks. In 1968, the remaining 5-story buildings were demolished and the property is depicted as undeveloped land until 1990 when it was replaced with an auto repair shop and parking lot. In 1995, the four underground storage tanks are no longer shown on the northeastern adjoining property.</td>

4.1.3 Surrounding Property History

Table 4.3 - Surrounding Property History

<table>
<thead>
<tr>
<th>Direction</th>
<th>Surrounding Property History</th>
</tr>
</thead>
<tbody>
<tr>
<td>North</td>
<td>Central Park is present to the north of the Site. From at least 1890 to approximately 1950 this area consisted of mid-rise commercial and residential buildings. In approximately 1968, the area was cleared of buildings, temporarily used for parking and consisted of a filling station until approximately 1979. The area has been improved with high rise residential buildings from approximately 1979 to present.</td>
</tr>
</tbody>
</table>
## Table 4.3 - Surrounding Property History

<table>
<thead>
<tr>
<th>Direction</th>
<th>Surrounding Property History</th>
</tr>
</thead>
<tbody>
<tr>
<td>East</td>
<td>From at least 1890 to approximately 1950 this area consisted of low to mid-rise commercial and manufacturing buildings. In 1940, Dyer Avenue was constructed which vertically bisected the block east of the Site between the Site and 9th Avenue. In approximately 1950 this area was redeveloped with the current entrance and exit ramps to various levels of the nearby “Bus Terminal”. Review of topographic maps revealed that the subway along Broadway, St. Patrick’s Cathedral, Bryant Park, and the Public Library have been located east of the Site since at least 1947; “Longacre Sq” was shown east of the Site in 1947 and was replaced by “Times Square” by 1956; and, Penn RR Station was shown southeast of the Site, PS 17 was located northeast of the Site, and the Metropolitan Opera House, Rockefeller Center, and Grand Central Terminal have been located east of the Site since approximately 1956. No other significant changes were noted from the historical reference documents.</td>
</tr>
<tr>
<td>West</td>
<td>The Hudson River is west of the Site. Subway tracks have been west of the Site since at least 1947. No other significant features from historical reference documents were identified on surrounding properties to the west.</td>
</tr>
<tr>
<td>South</td>
<td>Public School 127 was present south of the Site from approximately 1956 to 1966. Pennsylvania Railroad station has been present south of the Site since at least 1956 and the department of education has been located south of the Site since approximately 1966. No other significant features from historical reference documents were identified on surrounding properties to the south.</td>
</tr>
</tbody>
</table>

### 4.2 Database Report and Environmental Record Review

A database search report that identifies properties listed on state and federal databases within the ASTM-required radii of the Site was obtained from EDR and is included in Appendix A.

The environmental database report identified 1,708 properties/listings including the Site and adjoining properties. These properties included those that could be mapped and those that could not (i.e., orphan properties). The Site and the adjoining properties were listed in the database search report.

#### 4.2.1 Subject Site

Site information included in the database search report is summarized in the following table:

<table>
<thead>
<tr>

4.2.2 Adjoining and Surrounding Property Record Review

TRC evaluated the following factors to determine whether additional environmental records should be reviewed with respect to the potential for contaminant migration from the adjoining and surrounding properties:

(1) Whether the property is up-gradient or down-gradient of the Site vis-à-vis ground water migration based on the local topography, and the assumed ground water depth and westerly shallow ground water flow direction;

(2) Whether the property is up-gradient or down-gradient of the Site vis-à-vis vapor migration based on readily available information pursuant to the ASTM E 1527-13 standard including soil and geological characteristics; contaminant characteristics;
contaminated plume migration data; and significant conduits that might provide preferential pathways for vapor migration such as major utility corridors, sanitary sewers, storm sewers, and significant natural conduits such as Karst terrain (vapor migration may also be influenced by the age and design of infrastructure features associated with these conduits);

(3) Property case status (i.e., whether the New York State Department of Environmental Conservation (NYSDEC) has issued a No Further Action letter;

(4) Type of database and whether the presence of contamination is known; and

(5) The distance between the listed property and the Site.

Based on this evaluation, TRC limited the review of additional environmental records to the properties listed below, since the potential for contamination to be migrating to the Site from the other properties identified by the database search is considered low.

4.2.2.1 Adjoining Properties

Adjoining property information included in the database search report is summarized in the following table(s):

<table>
<thead>
<tr>

### Database Review Summary

**Database(s)**  
NY Spills

**Description/ID No(s).**  
Spill No.: 9503865

This site is listed in the NYSDEC petroleum spills database. 83 tons of contaminated soil and 434 gallons of contaminated water were removed from the site in 1995. A Phase II report was conducted by MTA during the No. 7 Subway Line Extension. Monitoring wells were installed and vacuum truck extraction was performed prior to the excavation and redevelopment of the site. Historic fill and impacted soils were excavated for off-site disposal. A vapor barrier and waterproofing system was installed beneath the footprint of the building. The spill case was closed in December 2014.

**Site Facility Name(s) and/or Listed Address(es)**  
“Lot 6, Tax Block 1050”  
455 West 40th Street

### Database Review Summary

**EDR Map No(s).** B34  
**Database(s)** LTANKS  
**Description/ID No(s).** NYSDEC Spill No. 9504490

An unknown amount of No. 6 oil was discovered below the tank after cleaning and testing on July 14, 1995 prior to closure. Monitoring wells were installed in the vicinity of the tank and monitored for several years prior to spill closure in July 2005.

### Database Review Summary

**Site Facility Name(s) and/or Listed Address(es)** “Hunter College, MFA”  
450 West 41st Street  
New York, NY 10021  
**EDR Map No(s).** B38  
**Database(s)** NY AST  
**Description/ID No(s).** Facility ID: 2-609728

This site is listed in the NYSDEC petroleum bulk storage tank database for one (1) 20,000-gallon capacity aboveground storage tank (AST) installed in 1995 which originally contained No. 6 fuel oil but presently contains No. 2 fuel oil and one (1) 100-gallon capacity AST which contains No. 2 fuel oil. No spills related to either AST were identified in the regulatory database review.

Based on the above-listings, TRC conducted a file review for abovementioned properties of available files maintained by NYSDEC and USEPA. TRC has not yet received any documentation related to spill closure for these sites, however, if the file review alters the findings within this report, TRC will submit an addendum.

### 4.2.2.2 Surrounding Properties

Surrounding property information included in the database search report is summarized below:

**Site Facility Name(s) and/or Listed Address(es)** “In Street”  
440 West 41st Street  
Manhattan, NY  
**EDR Map No(s).** B30  
**Database(s)** NY Spills  
**Description/ID No(s).** NYSDEC Spill No. 9504490

Approximately 30 gallons of petroleum spilled onto a sidewalk during the removal of drums from the site. The spill was cleaned up and no drains were impacted. The spill case was closed in June 2010.
4.3 Other Environmental Record Sources

Per the ASTM standard, local or additional state records were reviewed to enhance and supplement the ASTM-required federal and state records reviewed and discussed earlier in this report. These additional records include additional information obtained from New York State Department of Environmental Conservation (NYSDEC) and New York State Department of Health (NYSDOH). Local sources that were contacted include New York City Department of Environmental Protection (NYCDEP) and New York City Department of Health and Mental Hygiene (NYCDOHMH). Information from these sources is discussed throughout the report, as applicable.
5.0 SITE RECONNAISSANCE

5.1 Methodology and Limiting Conditions

Mr. Kevin McGuinness, TRC Principal Environmental Scientist conducted a Site reconnaissance of accessible areas on and around the Site on August 14, 2015 for the purpose of identifying potential RECs, and was accompanied by Covenant House Director of Facilities, Mr. Nunzi Cuzzupoli who provided access to the property and answered questions during the reconnaissance. Photographs taken during the reconnaissance are provided in Appendix D. A Site layout plan is included as Figure 2.

5.2 Interior and Exterior Site Observations

Unless otherwise noted, the items listed in the table below appeared in good condition with no visual evidence of staining, deterioration or a discharge of hazardous materials; and there are no records of a release in these areas. Items where further description is warranted are discussed in the section(s) following the table.

5.2.1 Hazardous Substances

No hazardous substances were present on-Site.

5.2.2 Underground Storage Tanks

According to Site personnel and observations made during Site reconnaissance, there is one in-service 10,000-UST at the Site, which contains No. 2 oil. According to the NYSDEC Petroleum Bulk Storage (PBS) database, the UST is a painted steel tank located below the parking lot in the northern portion of the Site. A record request for spill/tank installation documentation was submitted to NYSDEC. TRC has not yet received any additional information from NYSDEC.

5.2.3 Aboveground Storage Tanks

There are no aboveground storage tanks (ASTs) located on-Site.

5.3 Adjoining and Surrounding Properties Reconnaissance

5.3.1 Adjoining Properties

During the Site reconnaissance, TRC viewed the adjoining properties from the Site and publicly accessible areas (e.g., public roadways, etc.).
### Table 5.2 - Adjoining Properties Reconnaissance

<table>
<thead>
<tr>
<th>Direction from Site</th>

<tr>
<td>East</td>
<td>The Site is bordered to the east by a mid-rise commercial building followed by a high-rise residential building, the overpass ramp to the Port Authority (PA) bus terminal and Dyer Avenue.</td>
</tr>
<tr>
<td>South</td>
<td>The Site is bordered to the south by PA bus terminal overpass and West 40th Street followed by a fenced in construction area. Several monitoring wells as well as a transformer vault were observed on the south adjoining sidewalk.</td>
</tr>
<tr>
<td>West</td>
<td>The Site is bordered to the west by 10th Avenue followed by a midrise building that is currently undergoing construction. A large pad-mounted transformer was observed on the northwest corner of the block. Monitoring wells were observed on the eastern sidewalk along 10th Avenue between 40th and 41st street.</td>
</tr>
</tbody>
</table>

#### 5.3.2 Surrounding Properties

The surrounding properties are generally mixed commercial and residential. Historically the area was zoned industrial and commercial and consisted primarily of low and mid-rise buildings; however, the area is undergoing rezoning as part of the redevelopment of the Hudson Yards, which extends from approximately 30th Street to 42nd Street and from 8th Avenue to the Hudson River, and encompass the Site. Rezoning will bring high-rise commercial and residential real estate to the area.
6.0 INTERVIEWS

The following persons were interviewed to obtain historically and/or environmentally-pertinent information regarding RECs associated with the Site.

- Mr. Nick Nilio, Director of Operations, 2 years – *Key Site Manager* (as defined by the ASTM standard and identified by the property User)
- Mr. Nunzi Cuzzupoli, Director of Facilities, 8 years

The information provided by each is discussed and referenced in the text or provided below. Other references and sources of information are included in Appendix E.
7.0 FINDINGS, OPINIONS AND CONCLUSIONS

Potential findings can include RECs, historical RECs (HRECs), controlled RECs (CRECs) and de minimis conditions, pursuant to the ASTM E 1527-13 standard.

RECs are defined as the presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: (1) due to any release to the environment; (2) under conditions indicative of a release to the environment; or (3) under conditions that pose a material threat of a future release to the environment.

CRECs are defined as a REC resulting from a past release of hazardous substances or petroleum products that has been addressed to the satisfaction of the applicable regulatory authority (for example, as evidenced by the issuance of a no further action letter or equivalent, or meeting risk-based criteria established by regulatory authority), with hazardous substances or petroleum products allowed to remain in place subject to the implementation of required controls (for example, property use restrictions, activity and use limitations, institutional controls, or engineering controls).

HRECs are defined as a past release of any hazardous substances or petroleum products that has occurred in connection with the property and has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted use criteria established by a regulatory authority, without subjecting the property to any required controls (for example, property use restrictions, activity and use limitations, institutional controls, or engineering controls).

De minimis conditions are defined as a condition that generally does not present a threat to human health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies. Conditions determined to be de minimis conditions are not RECs nor CRECs.

TRC has performed a Phase I ESA in conformance with the scope and limitations of ASTM E 1527-13 at the property located at 455 West 40th Street, New York, New York (Site), see Appendices F and G. Deviations from this standard are described in Sections 1.3 and 7.6 of this report.

7.1 RECs and CRECs

This assessment has revealed no evidence of RECs (including CRECs) in connection with the Site except for the following:

On-Site RECs:

- The review of the regulatory agency database report identified the Site in the Historic Automobile Stations database. Additionally, the review of the historic Sanborn Maps confirm the historic presence of two filling stations and an automobile repair shop. One of the filling stations on the northwest corner of the Site operated from approximately
1950 until at least 1987. Historic Site use for automobile repair and filling stations are considered RECs.

- The review of the regulatory agency database report identified two NYSDEC reported spills associated with the Site. In 2004, petroleum impacted soils were reportedly identified during soil borings drilled on the Site in association with the No. 7 subway extension. Additionally, petroleum impacted soil and perched water/groundwater were encountered during excavations associated with rate renovations performed in 2007. Petroleum impacted soil and groundwater are considered RECs.

- There is an active 10,000-gallon fuel oil underground storage tank (UST) on-Site. The presence of a 10,000-gallon fuel oil UST is considered a REC.

- Structures were formerly on-Site and demolished prior to the construction of the current Site building. Historic fill of unknown origin and suspect buried structures have the potential to impact the Site property. The likely presence of historic fill and buried structures is considered a REC.

Off-Site RECs:

- Review of the regulatory agency database revealed that petroleum releases to soil were observed during a pre-closure investigation performed in the vicinity of the No. 6 fuel oil UST located on the east adjoining site. A spill was reported to the NYSDEC and groundwater monitoring wells were installed in the vicinity of the UST to monitor for the presence of petroleum impacts. Reportedly, the wells were monitored for several years and the spill was closed by the NYSDEC. However, petroleum impacts to soil remain in the vicinity of the UST and this is considered a REC.

- Review of the regulatory agency database report revealed that the east adjoining site is listed in the RCRA database as a CESQG for generation of hazardous waste. The current and historic generation of hazardous waste at this site is considered a REC.

- Review of a previous Phase I Environmental Site Assessment performed at the east adjoining property revealed that the site was previously utilized as an automobile repair trade school. Historic site uses of the east adjoining property for automobile repair is considered a REC.

- The review of historic Sanborn fire insurance maps revealed that coal yards were present on a property to the east of the Site from at least 1890 to approximately 1899 and the northeast adjoining property from at least 1950 to approximately 1968; a laundry facility, “Steam Laundry”, was present on a property to the east of the Site along 41st Street from at least 1930 to approximately 1950; an upholsterer was present on a property to the east of the Site along 40th Street from approximately 1911 to approximately 1930; and “Iron Works” was present on a property to the east of the Site along 40th Street from at least 1930 to approximately 1950. These historic uses of adjoining properties are considered RECs.
- Review of the regulatory database report identified the west adjoining property as a historic automobile station and a CESQG. There is a NYSDEC reported spill associated with the property as well. Petroleum impacted soils were encountered in 1995. Reportedly, wells were installed and monitored for several years. Historic fill and impacted soils were excavated for off-site disposal during the redevelopment of the site. A vapor barrier and waterproofing system was installed beneath the footprint of the current building. The spill case was closed in 2014, however, the historic use of the western adjoining property as an automobile station, the historic generation of hazardous waste and the presence of petroleum impacted soils and groundwater are considered a RECs.

- Review of the regulatory agency database report identified that two Con Edison service boxes located on the west adjoining sidewalks and associated with the Site address are listed in the RCRA database as CESQGs for generation of hazardous waste. The historic generation of hazardous waste is considered a REC.

**Recommendations**

TRC understands that the proposed redevelopment plans for the Site may include demolition of the existing structure and possible subsurface excavation. Consequently, TRC recommends the following actions to support the proposed demolition and redevelopment of the Site:

- A Phase II Environmental Site Investigation (ESI) should be conducted to determine if there are any subsurface impacts due to historic usage of the Site and surrounding properties. The Phase II ESI should include additional research regarding the reported on-Site spill. As the Site has an E-Designation, the NYCOER E-Designation Program process will be followed. The E-Designation Program requires submittal and review and approval of Phase II ESI Work Plans, Remedial Action Plans and Closure Reports in order to receive a Notice of Satisfaction from the NYCDOB.

- Prior to demolition an Asbestos and Regulated Materials Survey should be performed. This survey should include identifying, quantifying, sampling and analyzing materials suspected of containing asbestos. Inventories of other regulated and hazardous materials, such as Universal and Hazardous wastes should be performed. Potentially PCB-containing building materials (e.g., caulk/glazing) should be identified, quantified, sampled, and analyzed. Based on the results of these surveys the following should be performed:
  - A comprehensive asbestos survey of the Site building should be conducted to confirm the presence and quantities of ACM on the Site. Previous asbestos surveys and renovation plans from the 2007 renovation should be reviewed to define the scope of the survey. All asbestos should be abated, handled and disposed of in accordance with local, state, and federal asbestos regulations.
The potential for LBP exists with respect to the on-Site structure. Prior to general construction activities, building materials with potential LBP should be sampled and tested to determine if the paint would be classified as LBP, as defined by applicable laws and regulations. If LBP is present, the appropriate controls and measures must be instituted during demolition activities to protect Site workers and ensure that any removed LBP materials are appropriately managed and disposed of.

Building materials with regulated components (i.e., fluorescent light bulbs and ballasts, mercury switches, electronic waste, fire extinguishers, etc.) must be gathered, packaged, and disposed or recycled in accordance with applicable laws and regulations prior to any demolition activities.

7.2 HRECs

This assessment has revealed no evidence of HRECs in connection with the Site.

7.3 De Minimis Conditions

This assessment has revealed no evidence of de minimis conditions in connection with the Site.

7.4 Data Gaps

TRC has made an appropriate inquiry into the commonly known and reasonably ascertainable resources concerning the historical ownership and use of the Site back to the first development per 40 CFR Part 312.24 (Reviews of Historical Sources of Information). Data gaps identified during this assessment include the following:

1. Property area history was not conducted in 5-year intervals. However, sufficient information about the history of the Site and surrounding area could be obtained from the available historical Sanborn Maps, aerial photographs, city directories, and local records, and this data gap is not likely to alter the conclusions of this report.

7.5 Other Noteworthy Issues

Other noteworthy issues identified during this Phase I ESA that, while not strictly a REC, HREC, CREC, or de minimis condition, in TRC’s opinion warrant further discussion include the following and are discussed in detail in Section 9.0:

- Suspect ACM, LBP, and building materials with regulated components were identified during the Site reconnaissance. The presence of ACM, LBP and building materials with regulated components at the Site is considered and environmental condition.
7.6 Limiting Conditions and Deviations

7.6.1 Accuracy and Completeness

The ASTM E 1527-13 standard recognizes inherent limitations for Phase I ESAs that apply to this report, including:

- Uncertainty Not Eliminated – No Phase I ESA can wholly eliminate uncertainty regarding the potential for RECs in connection with a property. Data gaps identified during this Phase I ESA are listed in Section 7.5.

- Not Exhaustive – A Phase I ESA is not an exhaustive investigation.

- Past Uses of the Property – A review of standard historical sources at intervals less than five years is not required.

The Client is advised that the Phase I ESA conducted at the Site is a limited inquiry into a property’s environmental status, cannot wholly eliminate uncertainty, and is not an exhaustive assessment to discover every potential source of environmental liability at the Site. Therefore, TRC does not make a statement i) of warranty or guarantee, express or implied for any specific use; ii) that the Site is free of RECs or environmental impairment; iii) that the Site is “clean”; or iv) that impairments, if any, are limited to those that were discovered while TRC was performing the Phase I ESA. This limiting statement is not meant to compromise the findings of this report; rather, it is meant as a statement of limitations within the ASTM standard and intended scope of this assessment. Specific limiting conditions identified during the Site reconnaissance are described in Section 5.1. Subsurface conditions may differ from the conditions implied by surface observations, and can be evaluated more thoroughly through intrusive techniques that are beyond the scope of this assessment. Information in this report is not intended to be used as a construction document and should not be used for demolition, renovation, or other construction purposes.

This report presents TRC’s site reconnaissance observations, findings, and conclusions as they existed at the time of the Site reconnaissance. TRC makes no representation or warranty that the past or current operations at the property are, or have been, in compliance with all applicable federal, state and local laws, regulations and codes. TRC makes no guarantees as to the accuracy or completeness of information obtained from others during the course of this Phase I ESA report. It is possible that information exists beyond the scope of this assessment, or that information was not provided to TRC. Additional information subsequently provided, discovered, or produced may alter findings or conclusions made in this Phase I ESA report. TRC is under no obligation to update this report to reflect such subsequent information. The findings presented in this report are based upon reasonably ascertainable information and observed Site conditions at the time of the assessment.

This report does not warrant against future operations or conditions, nor does it warrant against operations or conditions present of a type or at a location not assessed. Regardless of the
findings stated in this report, TRC is not responsible for consequences or conditions arising from facts that were not fully disclosed to TRC during the assessment.

An independent data research company provided the government agency database referenced in this report. Information regarding surrounding area properties was requested for approximate minimum search distances and was assumed to be correct and complete unless obviously contradicted by TRC’s observations or other credible referenced sources reviewed during the assessment.

TRC is not a professional title insurance or land surveyor firm and makes no guarantee, explicit or implied, that any land title records acquired or reviewed, or any physical descriptions or depictions of the property in this report, represent a comprehensive definition or precise delineation of property ownership or boundaries.

7.6.2 Warranties and Representations

This report does not warrant against: (1) operations or conditions which were not evident from visual observations or historical information provided; (2) conditions which could only be determined by physical sampling or other intrusive investigation techniques; (3) locations other than the client-provided addresses and/or legal parcel description; or (4) information regarding off-site location(s) (with possible impact to the Site) not published in publicly available records.

7.6.3 Continued Validity/User Reliance

This report is presumed to be valid, in accordance with, and subject to, the limitations specified in the ASTM E 1527-13 standard, for a period of 180 days from completion, or until the Client obtains specific information that may materially alter a finding, opinion, or conclusion in this report, or until the Client is notified by TRC that it has obtained specific information that may materially alter a finding, opinion, or conclusion in this report. Additionally, pursuant to the ASTM E 1527-13 standard, this report is presumed valid if completed less than 180 days prior to the date of acquisition of the property or (for transactions not involving an acquisition) the date of the intended transaction.

7.6.4 Significant Assumptions

During this Phase I ESA, TRC relied on database information; interviews with Site representatives, regulatory officials, and other individuals having knowledge of Site operations; and information provided by the User as requested in our authorized Scope of Work. TRC has assumed that the information provided is true and accurate. Reliance on electronic database search reports is subject to the limitations set forth in those reports. TRC did not independently verify the information provided. TRC found no reason to question the validity of the information received unless explicitly noted elsewhere in this report. If other information is discovered and/or if previous reports exist that were not provided to TRC, our conclusions may not be valid.

9.0 ADDITIONAL SERVICES

At the request of the Client and described in the proposed Scope of Work (see Section 1.1), TRC performed limited visual inspections for asbestos-containing materials (ACM), lead-based paint (LBP), and other regulated materials. Below is a summary of the findings.

9.1 Asbestos-Containing Materials (ACM)

TRC conducted a limited visual survey for the presence of suspect ACM within the Site. The intent of the survey was to identify exposed suspect ACM through preliminary non-destructive observations. No sampling of suspect ACM was performed during this investigation. Based upon the age of the three buildings 1961 (building A), 1912 (building B) and 1968 (building C), it is likely that numerous building components are or were ACM. According to Mr. Nilio, the buildings underwent a full renovation in 2007, during which an ACM abatement was performed. The observable suspect-ACM was in good condition. No reports or further documentation of the abatement activities were provided. As such, it is not known what was/was not addressed. As such, all potentially suspect ACM are considered ACM unless documentation establishing otherwise can be provided. The suspect ACM consist of:

- Piping wrap/elbows
- Piping joint compound
- Vinyl floor tiles
- Window caulk and other caulk (may also contain PCBs)
- Window glazing (may also contain PCBs)
- Rolled roofing
- Roof flashing
- Fire Doors
- Roofing mastic
- Electrical systems (wiring and panels)

A thorough review of previous survey data and renovation plans and a comprehensive pre-demolition survey of these suspected ACM, including sampling and analysis should be performed prior to any demolition activities.

9.2 Lead-Based Paint (LBP)

During the site inspection, a limited visual assessment of all accessible painted surfaces was performed. No sampling or intrusive work was performed, as this is outside the scope of this Phase I ESA. No exterior painted surfaces were identified during the limited visual assessment. The interior painted surfaces were found to be in good condition; with no peeling and chipping. Based on the age of the Site buildings, it is likely that materials original to building contain LBP. The buildings were renovated in 2007; therefore, significant removals of LBP coated building materials likely occurred. Remaining LBP coated building materials may have been painted over. A thorough assessment for LBP, should be performed in anticipation of demolition activities.
9.3 Other Regulated Materials

TRC performed a limited visual inspection of the Site to identify other materials or material components that would be considered regulated and therefore would require specialized handling, disposal, and recycling. The following table presents the regulated materials identified during the inspection and the associated environmental concern.

- **RAATS**: RCRA Administrative Action Tracking System
- **RMP**: Risk Management Plans
- **NY UIC**: Underground Injection Control Wells
- **NJ UIC**: Underground Injection Wells Database
- **NJ DRYCLEANERS**: Drycleaner List
- **NY SPDES**: State Pollutant Discharge Elimination System
- **NJ NPDES**: New Jersey Pollutant Discharge Elimination System Dischargers
- **NY AIRS**: Air Emissions Data
- **NJ AIRS**: Emissions Inventory Listing
- **INDIAN RESERV**: Indian Reservations
- **SCRD DRYCLEANERS**: State Coalition for Remediation of Drycleaners Listing
- **NY Financial Assurance**: Financial Assurance Information Listing
- **NY COAL ASH**: Coal Ash Disposal Site Listing
- **COAL ASH EPA**: Coal Combustion Residues Surface Impoundments List
- **US FIN ASSUR**: Financial Assurance Information
- **LEAD SMELTERS**: Lead Smelter Sites
- **NJ COAL ASH**: Coal Ash Listing
**EXECUTIVE SUMMARY**

NJ Financial Assurance, Financial Assurance Information Listing
2020 COR ACTION, 2020 Corrective Action Program List
COAL ASH DOE, Steam-Electric Plant Operation Data
PCB TRANSFORMER, PCB Transformer Registration Database

**EDR RECOVERED GOVERNMENT ARCHIVES**

*Exclusive Recovered Govt. Archives*

NY RGA HWS, Recovered Government Archive State Hazardous Waste Facilities List
NJ RGA HWS, Recovered Government Archive State Hazardous Waste Facilities List
NJ RGA LF, Recovered Government Archive Solid Waste Facilities List

**SURROUNDING SITES: SEARCH RESULTS**

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property. Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in *bold italics* are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

**STANDARD ENVIRONMENTAL RECORDS**

*Federal NPL site list*

NPL: Also known as Superfund, the National Priority List database is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund program. The source of this database is the U.S. EPA.

A review of the NPL list, as provided by EDR, and dated 03/26/2015 has revealed that there is 1 NPL site within approximately 1 mile of the target property.

*Federal CERCLIS list*

CERCLIS: The Comprehensive Environmental Response, Compensation and Liability Information System contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation and Liability Act (CERCLA). CERCLIS contains sites which are either proposed to or on the National Priorities List (NPL) and sites which are in the screening and assessment phase for possible inclusion on the NPL.

A review of the CERCLIS list, as provided by EDR, and dated 10/25/2013 has revealed that there is 1
CERCLIS site within approximately 0.5 miles of the target property.

Federal CERCLIS NFRAP site List

CERC-NFRAP: Archived sites are sites that have been removed and archived from the inventory of CERCLIS sites. Archived status indicates that, to the best of EPA’s knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list this site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. This decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be a potential NPL site.

A review of the CERC-NFRAP list, as provided by EDR, and dated 10/25/2013 has revealed that there is 1 CERC-NFRAP site within approximately 0.5 miles of the target property.

Federal RCRA generators list

RCRA-LQG: RCRAInfo is EPA’s comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

A review of the RCRA-LQG list, as provided by EDR, and dated 03/10/2015 has revealed that there are 9 RCRA-LQG sites within approximately 0.25 miles of the target property.
EXECUTIVE SUMMARY

RCRA-SQG: RCRAInfo is EPA’s comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 03/10/2015 has revealed that there are 8 RCRA-SQG sites within approximately 0.25 miles of the target property.

RCRA-CESQG: RCRAInfo is EPA’s comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

A review of the RCRA-CESQG list, as provided by EDR, and dated 03/10/2015 has revealed that there are 78 RCRA-CESQG sites within approximately 0.25 miles of the target property.

Federal institutional controls / engineering controls registries

US ENG CONTROLS: A listing of sites with engineering controls in place.

A review of the US ENG CONTROLS list, as provided by EDR, and dated 03/16/2015 has revealed that there is 1 US ENG CONTROLS site within approximately 0.5 miles of the target property.

US INST CONTROL: A listing of sites with institutional controls in place. Institutional controls include administrative measures, such as groundwater use restrictions, construction restrictions, property use restrictions, and post remediation care requirements intended to prevent exposure to contaminants remaining on site. Deed restrictions are generally required as part of the institutional controls.

A review of the US INST CONTROL list, as provided by EDR, and dated 03/16/2015 has revealed that there is 1 US INST CONTROL site within approximately 0.5 miles of the target property.

State- and tribal - equivalent CERCLIS

NY SHWS: The State Hazardous Waste Sites records are the states’ equivalent to CERCLIS. These sites may or may not already be listed on the federal CERCLIS list. Priority sites planned for cleanup using state funds (state equivalent of Superfund) are identified along with sites where cleanup will be paid for by potentially responsible parties. The data come from the Department of Environmental Conservation’s Inactive Hazardous waste Disposal Sites in New York State.

A review of the NY SHWS list, as provided by EDR, and dated 06/26/2015 has revealed that there is 1 NY SHWS site within approximately 1 mile of the target property.

State and tribal landfill and/or solid waste disposal site lists

NY SWF/LF: The Solid Waste Facilities/Landfill Sites records typically contain an inventory of solid waste disposal facilities or landfills in a particular state. The data come from the list.

A review of the NY SWF/LF list, as provided by EDR, and dated 06/24/2015 has revealed that there are
EXECUTIVE SUMMARY

2 NY SWF/LF sites within approximately 0.5 miles of the target property.

State and tribal leaking storage tank lists

NY LTANKS: Leaking Storage Tank Incident Reports. These records contain an inventory of reported leaking storage tank incidents reported from 4/1/86 through the most recent update. They can be either leaking underground storage tanks or leaking aboveground storage tanks. The causes of the incidents are tank test failures, tank failures or tank overfills.

A review of the NY LTANKS list, as provided by EDR, and dated 07/21/2015 has revealed that there are 121 NY LTANKS sites within approximately 0.5 miles of the target property.

**State and tribal registered storage tank lists**

NY TANKS: This database contains records of facilities that are or have been regulated under Bulk Storage Program. Tank information for these facilities may not be releasable by the state agency.

A review of the NY TANKS list, as provided by EDR, and dated 06/24/2015 has revealed that there are 4 NY TANKS sites within approximately 0.25 miles of the target property.

NY CBS UST: Chemical Bulk Storage Database. Registration data collected as required by 6 NYCRR Part 596. It includes facilities storing hazardous substances listed in 6 NYCRR Part 597, in aboveground tanks with capacities of 185 gallons or greater, and/or in underground tanks of any size. Includes facilities registered (and closed) since effective date of CBS regulations (July 15, 1988) through the date request is processed.

A review of the NY CBS UST list, as provided by EDR, and dated 01/01/2002 has revealed that there are 2 NY CBS UST sites within approximately 0.25 miles of the target property.

EXECUTIVE SUMMARY

NY CBS AST: Chemical Bulk Storage Database. Registration data collected as required by 6 NYCRR Part 596. It includes facilities storing hazardous substances listed in 6 NYCRR Part 597, in aboveground tanks with capacities of 185 gallons or greater, and/or in underground tanks of any size. Includes facilities registered (and closed) since effective date of CBS regulations (July 15, 1988) through the date request is processed.

A review of the NY CBS AST list, as provided by EDR, and dated 01/01/2002 has revealed that there are 2 NY CBS AST sites within approximately 0.25 miles of the target property.

**Records of Emergency Release Reports**

NY Spills: Data collected on spills reported to NYSDEC. is required by one or more of the following: Article 12 of the Navigation Law, 6 NYCRR Section 613.8 (from PBS regs), or 6 NYCRR Section 595.2 (from CBS regs). It includes spills active as of April 1, 1986, as well as spills occurring since this date.

A review of the NY Spills list, as provided by EDR, and dated 07/21/2015 has revealed that there are 661 NY Spills sites within approximately 0.5 miles of the target property.

**Other Ascertainable Records**

RCRA NonGen / NLR: RCRAInfo is EPA’s comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 03/10/2015 has revealed that there are 75 RCRA NonGen / NLR sites within approximately 0.25 miles of the target property.

CONSENT: Major Legal settlements that establish responsibility and standards for cleanup at NPL (superfund) sites. Released periodically by U.S. District Courts after settlement by parties to litigation matters.

A review of the CONSENT list, as provided by EDR, and dated 12/31/2014 has revealed that there is 1 CONSENT site within approximately 1 mile of the target property.

ROD: Record of Decision. ROD documents mandate a permanent remedy at an NPL (Superfund) site containing technical and health information to aid the cleanup.

A review of the ROD list, as provided by EDR, and dated 11/25/2013 has revealed that there is 1 ROD site within approximately 1 mile of the target property.

NY HSWDS: The List includes any known or suspected hazardous substance waste disposal sites. Also included are sites delisted from the Registry of Inactive Hazardous Waste Disposal Sites and non-registry sites that U.S. EPA Preliminary Assessment (PA) reports or Site Investigation (SI) reports were prepared. Hazardous Substance Waste Disposal Sites are eligible to be Superfund sites now that the New York State Superfund has been refinanced and changed. This means that the study inventory has served its purpose and will no longer be maintained as a separate entity. The latest version of the study is frozen in time. The sites on the study will not automatically be made superfund sites, rather each site will be further evaluated for listing in the registry. So overtime they will be added to the registry or not.

A review of the NY HSWDS list, as provided by EDR, and dated 01/01/2003 has revealed that there is 1 NY HSWDS site within approximately 0.5 miles of the target property.

NY MANIFEST: Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a TSD facility.

A review of the NY MANIFEST list, as provided by EDR, and dated 05/01/2015 has revealed that there are 201 NY MANIFEST sites within approximately 0.25 miles of the target property.

EXECUTIVE SUMMARY

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR’s researchers. Manufactured gas sites were used in the United States from the 1800’s to 1950’s to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

A review of the EDR MGP list, as provided by EDR, has revealed that there are 4 EDR MGP sites within approximately 1 mile of the target property.

EDR US Hist Auto Stat: EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR’s review was limited to those categories of sources that might, in EDR’s opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as “High Risk Historical Records”, or HRHR. EDR’s HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR US Hist Auto Stat list, as provided by EDR, has revealed that there are 67 EDR US Hist Auto Stat sites within approximately 0.25 miles of the target property.

EDR US Hist Cleaners: EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR’s review was limited to those categories of sources that might, in EDR’s opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR’s HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR US Hist Cleaners list, as provided by EDR, has revealed that there are 52 EDR US Hist Cleaners sites within approximately 0.5 miles of the target property.

Executive Summary

EDR Recovered Government Archives

Exclusive Recovered Govt. Archives

NY RGA LF: The EDR Recovered Government Archive Landfill database provides a list of landfills derived from historical databases and includes many records that no longer appear in current government lists. Compiled from Records formerly available from the Department of Environmental Conservation in New York.

A review of the NY RGA LF list, as provided by EDR, has revealed that there is 1 NY RGA LF site within approximately 0.5 miles of the target property.

Administrator has determined that CERCLA funds may be used for remedial action feasibility study to evaluate alternative remedial actions under CERCLA. The various dredging alternatives for a demonstration project. EPA has prepared a Environmental Impact Statement in October 1982 evaluating Administrator could authorize a 75 percent grant, not to exceed 20 million. Reclamation Demonstration Project. Under this legislation, the EPA amendment to the Clean Water Act (CWA) that included the Hudson River PCB the remnant areas from erosion. In September 1980, Congress passed an river sediments exposed when the level of the river was lowered due to removal of the Fort Edward Dam. The State has identified 40 hot spots, New York. General Electric Co. discharged an estimated 1.1 million pounds of Conditions at listing September 1983): The Hudson River PCBs Site is a 40-mile stretch of the Hudson River between Mechanicville and Fort Edward, New York. General Electric Co. discharged an estimated 1.1 million pounds of PCBs into this stretch of river. The State has identified 40 hot spots, defined as sediments contaminated with greater than 50 parts per million (ppm) of PCBs. Also included in the site are five remnant areas, which are river sediments exposed when the level of the river was lowered due to removal of the Fort Edward Dam. The State has taken initial measures to stabilize the remnant areas from erosion. In September 1980, Congress passed an amendment to the Clean Water Act (CWA) that included the Hudson River PCB Reclamation Demonstration Project. Under this legislation, the EPA Administrator could authorize a 75 percent grant, not to exceed 20 million. EPA issued a final Environmental Impact Statement in October 1982 evaluating various dredging alternatives for a demonstration project. EPA has prepared a feasibility study to evaluate alternative remedial actions under CERCLA. The Administrator has determined that CERCLA funds may be used for remedial action
### HUDSON RIVER PCBS (Continued)

at the remnant areas and for evaluating the effectiveness of the water supply system at Waterford, New York. Status June 1984): EPA has completed a draft feasibility study identifying alternatives for remedial action. A search for parties potentially responsible for wastes associated with the site has been completed, and EPA has sent letters to two potentially responsible parties notifying them of possible legal action under CERCLA.

This federal Superfund Record of Decision (ROD) addresses the risks to people and ecological receptors associated with polychlorinated biphenyls (PCBs) in the in-place sediments of the Upper Hudson River. The Site is divided into the Upper Hudson River which is the length of river between Hudson Falls and the Federal Dam at Troy, New York and the Lower Hudson River which is the length of river between Federal Dam at Troy and the Battery. For purposes of this project, EPA further divided the Upper Hudson River area into three main sections known as River Section 1, River Section 2, and River Section 3. The Site also includes five Remnant Deposits, which are areas of PCB-contaminated sediment that became exposed after the river water level dropped following removal of the Fort Edward Dam in 1973. The Upper Hudson River portion of the Site extends from the Fenimore Bridge in Hudson Falls to the Federal Dam at Troy, a distance of just over 43 river miles. The Lower Hudson River extends from the Federal Dam to the southern tip of Manhattan at the Battery in New York City. The Mid-Hudson River, which is primarily a subset of the Lower Hudson River, extends from the Federal Dam at Troy to just south of Poughkeepsie. The predominant sources of PCB contamination to the Upper Hudson River were two capacitor manufacturing plants owned and operated by GE. The plants are located adjacent to or near the Hudson River in the Village of Hudson Falls and the Town of Fort Edward. Over a 30-year period, the plants discharged a substantial amount of PCBs into the river. At the GE Hudson Falls plant, leakage of non-aqueous phase PCB-bearing oils through bedrock to the river continues to be a source of PCB contamination. Regarding the former outfall to the Hudson River from the GE Fort Edward plant, New York State Department of Environmental Conservation (NYSDEC) issued a Record of Decision in January 2000 that calls for the excavation of PCB-contaminated soil and sediment in this area of the Upper Hudson River shoreline in order to eliminate this source of PCBs to the river. EPA’s analysis assumes a significantly reduced PCB loading to the river from these sources once the State’s plans for remediation are implemented. PCBs, the chemicals of concern addressed in this decision document, have been classified by EPA as probable human carcinogens. They are also linked to other serious non-cancer adverse health effects based on observations in animals and emerging evidence in humans. Once discharged from the GE plants, the PCBs adhered to river sediment and accumulated downstream as they settled in impounded pools and other depositional areas. Historic fish and sediment data indicated PCBs were...

accumulating downstream of the old Fort Edward Dam as well as accumulating behind the dam. The removal of the dam in 1973 resulted in a remobilization and downstream distribution of PCBs that had accumulated behind the dam. Historically, the highest PCB sediment concentrations have been detected in the cohesive sediments within the Upper Hudson River. River scouring/erosion and other mechanisms have mobilized PCB-contaminated sediments from the extensive cohesive deposits, redepositing them farther downstream all the way to the Battery. The preponderance of data indicates that burial of contaminated sediment by cleaner materials is not universally or uniformly occurring. Data also indicate that contaminated sediments in River Sections 1, 2 and 3 continue to serve as the major source of PCBs to the water column and the fish within the Upper Hudson River. During an approximate 30-year period ending in 1977, PCBs were used in capacitor manufacturing operations Hudson Falls and Fort Edward, New York facilities. PCB oils were discharged both directly and indirectly from these plants into the Hudson River. This included both non-permitted and permitted discharges. Even after permits were received in 1975, permit exceedances occurred. Estimates of the total quantity of PCBs discharged directly from the plants into the river from the 1940s to 1977 are as high as 1,330,000 pounds (about 605,000 kg). Many of the PCBs discharged to the river adhered to sediments and accumulated with the sediments as they settled in the impounded pool behind the Fort Edward Dam, as well as other depositional areas farther downstream. Because of its deteriorating condition, the Fort Edward Dam was removed in 1973. Five areas of PCB-contaminated sediments were exposed due to the lowering of the river water level when the Fort Edward Dam was removed. These five areas are known as the Remnant Deposits. During subsequent floods, PCB-contaminated sediments from the Fort Edward Dam area were scour and transported downstream. EPA notified the company that had the two plants of the remedy selected in the 1984 ROD and offered the company the opportunity to implement the selected remedy with respect to the Remnant Deposits and the Waterford drinking water supply evaluation. The company declined EPA's offer. NYSDEC, with funding provided by EPA, conducted the evaluation at the Waterford Water Works. In addition, NYSDEC prepared a design for the in-place containment of the Remnant Deposits. This design was completed in 1988. In March 1989, the company offered to assume responsibility for the implementation of the in-place containment remedy for the Remnant Deposits. EPA issued a September 27, 1989 Administrative Order on Consent to the company which required the company to prepare a remedial design report for the construction of access roads to the Remnant Deposits and to submit a design for the in-place containment of the Remnant Deposits incorporating the NYSDEC-prepared design, plus any EPA-approved refinements to that design. EPA also issued a September 27, 1989 Administrative Order to the company requiring the company to construct and maintain the access roads to the Remnant Deposits. The company constructed the in-place containment of the Remnant Deposits under a 1990 Consent Decree with EPA. EPA will evaluate the need for further remedial action for the Remnant Deposits after completion of a 5-year review of the Remnant Deposit containment remedy, performed pursuant to CERCLA ?121(c). The company's manufacturing plants in Hudson Falls and Fort Edward are listed under the New York State Inactive Hazardous Waste Disposal Sites Remedial program. The company currently is conducting remedial activities near the Hudson Falls and Fort Edward plants pursuant to Orders on Consent with NYSDEC. The company has thus far declined to implement the January 2000 NYSDEC Record of Decision for the Fort Edward plant Outfall 004. The NYSDEC is conducting the remedial design for that ROD. As one of America's great rivers, the Hudson has played and will continue to play a major role in the history, culture, and economy of the area. The Hudson has been designated an American Heritage River because of its important role in American history and culture. Current and reasonably-anticipated future land use and surface water
HUDSON RIVER PCBS (Continued)

use are described below. Current land use includes a variety of residential, commercial and industrial activities. Use of the river and lands surrounding the river are projected to remain the same. At this time, no changes in future land use are known, nor are any new uses expected. The Site passes through 14 different counties as the river flows to its final discharge point in New York Harbor. Four counties (Albany, Washington, Rensselaer, and Saratoga) lie adjacent to the more highly contaminated portions (areas of proposed active remediation in River Sections 1, 2 and 3) of the Upper Hudson River between Troy (Federal Dam) and Hudson Falls. Within these four counties, forests and farmlands surround urban centers and historic villages. There are apple orchards and dairy farms, parks, nature preserves and gardens. In addition to the GE Hudson Falls and Fort Edward plants, the area is home to technology companies, oil service companies and food companies. Saratoga and Washington Counties have experienced population growth between 1990 and 1999 of 10.2 percent and 1.4 percent, respectively, while Rensselaer and Albany Counties have experienced population declines of 1.9 percent and 0.3 percent, respectively. Total population of these four counties, according to July 1999 estimates by the US Department of Commerce Bureau of the Census, is just under 700,000. Warren County, in which the City of Glens Falls is located, has a population of just over 60,000 and is just to the northwest of the Hudson River PCBs Site. A Record of Decision (ROD) addressing operable unit 1 (OU 01) was completed in September 1984. A Record of Decision addressing OU 2 was completed in February 2002.

Description: Handler: generates 100 kg or less of hazardous waste per calendar month, and accumulates 1000 kg or less of hazardous waste at any time; or generates 1 kg or less of acutely hazardous waste per calendar month, and accumulates at any time: 1 kg or less of acutely hazardous waste; or 100 kg or less of any residue or contaminated soil, waste or other debris resulting from the cleanup of a spill, into or on any land or water, of acutely hazardous waste; or generates 100 kg or less of any residue or contaminated soil, waste or other debris resulting from the cleanup of a spill, into or on any land or water, of acutely hazardous waste during any calendar month, and accumulates at any time: 1 kg or less of acutely hazardous waste; or 100 kg or less of any residue or contaminated soil, waste or other debris resulting from the cleanup of a spill, into or on any land or water, of acutely hazardous waste

Handler Activities Summary:
U.S. importer of hazardous waste: No
Mixed waste (haz. and radioactive): No
Recycler of hazardous waste: No
Transporter of hazardous waste: No
Treater, storer or disposer of HW: No
Underground injection activity: No
On-site burner exemption: No
Furnace exemption: No
Used oil fuel burner: No
Used oil processor: No
User oil refiner: No
Used oil fuel marketer to burner: No
Used oil Specification marketer: No
CON EDISON MANHOLE: 43247  (Continued)

Used oil transfer facility: No
Used oil transporter: No

Violation Status: No violations found

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Prior to Sept, 2004 data translation this spill Lead_DEC Field was "TIBBE"10/10/03 1030 Hrs - Sawyer - I called the Lewis Berger Group and Katie Jeffries advised me that they were subcontractors for the Jersey Boring and Drilling. The drilling was done for investigation for NYCTA mapping for and addition to the 7 train. This spill will be given to Mark Tibbe. 11/12/10 - spill re-assigned from Tibbe to Joe O'Connell11/28/11 - Obligado - Spill re-assigned from O'Connell to Obligado4/10/13 - Raphael Ketani. I researched this spill case. The only site in the vicinity of the above spill that could generate contamination is spill number 9503865. This is a former gas station at 543-551 10th Avenue, Manhattan at the intersection of 10th Avenue and West 41st Street. They were removing tanks from the old gas station and found contaminated soil. Groundwater monitoring is ongoing. Development plans are "in the works." The DEC project manager is Kumar Patel in the Region 2 Spills Unit.4/11/13 - Raphael Ketani. I made an unannounced site visit. The location is a fenced in lot with an old, one story service building on it. The site was an old gas station. Except for the service building, there was nothing left above ground. I saw the tops of two groundwater monitoring wells. I took some pictures and left the site.4/16/13 - Raphael Ketani. I contacted Toni Watts of NYCT by e-mail and asked her for any information that NYCT would have regarding the site.4/25/13 - Raphael Ketani. I spoke to Ms. Watts today. She said that she had researched the spill number in the NYCT records, but did not find any information.4/26/13 - Raphael Ketani. As there was no evidence of a spill on the sidewalk, and as the gas station site is being monitored as an active spill through a DEC case manager, I am closing spill case #0307082 effective today.

Remarks:
- diesel spill occurred on sidewalk at location
Tank Test:

Prior to Sept, 2004 data translation this spill Lead_DEC Field was "O'CONNELL"e2mis no. 152263:found approx. 125 gallons of green unknown fluid mixed with water. Two samples taken, Clean up pending lab results. Lab Sequence Number: 04-01457-001 PCB <1 ppm Lab Sequence Number: 04-01463-001 The sample does not match any current Con Ed standard. Lab Sequence Number: 04-01465-001 Flash Point, PMCC >140 deg FClean Harbors reported that the manhole has approx. 1500 gallons of fluid and not the 125 gallons originally reported. They stated that they would not be able to pump the liquid into drums. They would have to pump the liquid into their truck. They stated that they would hold the truck until Monday, 3/1/04 when theresults of the antifreeze test
MANHOLE 60112 (Continued)

is expected. Lab Sequence Number: 04-01482-002 
Propylene Glycol < 6.08 ppm 
EPA 805 
Ethylene Glycol < 7.18 ppm 
EPA 8015 
Closure of this incident is pending results of the T-Clip analysis and details of the cleanup from Clean Harbors. Lab Sequence Number: 04-01482-001 
Arsenic as As 5.0 0.13 ppm 
Barium as Ba 100.0 0.38 ppm 
Cadmium as Cd 1.0 0.0080 ppm 
Chromium as Cr 5.0 < 0.016 ppm 
Lead as Pb 5.0 0.085 ppm 
Mercury as Hg 0.2 0.00095 ppm 
Selenium as Se 1.0 0.057 ppm 
Silver as Ag 5.0 < 0.010 ppm 
Remarks: 
125 Gal. of unknown Green liquid mixed with water. Sean from Con Ed says they are running test and pretty sure this is not an oil. Less than 1ppm PCB's and flashpoint is greater than 140 degrees. Will update when the results are obtained.

Mr. Kelly has reviewed a Phase II report prepared by Parson Brinkerhoff on behalf of the MTA. the Phase II report shows low levels of semi volatile organic compounds and metals in the site soils, consistent with historic fill materials used to raise the elevation of the property in the past. no gasoline constituents were identified in the soil samples collected. three temporary groundwater samples were collected during the Parsons Phase II. one of these samples contained low levels of benzene, slightly in excess of the groundwater standard. it is not clear if this is due to the former use of the property as a gas station, or is coming from off site. a more in depth Phase II will be proposed to determine the source of this contamination. Seamus KellyAtlantic Environmental Solutions, Inc.PH. (201) 876-9400 (O) (201) 360-1440 (C)Fax (201) 876-9563email: skelly@solutionsenvironmental.com 07/27/10-Hiralkumar Patel.1:28 PM:- received email from Mr. Kelly. they have submitted report to their client for feedback. he will submit report soon.08/10/10-Hiralkumar Patel.1:21 PM:- received Phase I report (including copy of Phase II done by MTA’s contractor in 2005) from Mr. Kelly. abstract of Phase I done by Atlantic Environmental:- Block/Lot #: 1069/29 and 34- lot is currently identified as 547-551 10th ave, but has historically included addresses from 537-551 10th ave- the subject property is
current use as a MTA construction yard- the property is improved with one structure, formerly utilized as an auto repair shop- where it is not covered with structures, the lot is covered by asphalt, concrete and dirt- the subject property is bound to the west by a church, to the south by W 40th street followed by a bus parking lot, to the east by 10th ave followed by a multistory building occupied by Covenant House New York, to the north by W 41st street followed by residential and commercial properties- local topography is generally flat sloping gently to the south- property elevation is approx. 23 ft above mean sea level- sanborn map 1990:- subject property is identified as developed with five story residential buildings identified as 537 through 551 10th ave. the adjacent property to the west is developed with a church and a school, a furniture factory and a coal yard- sanborn map 1899:- no significant change on the subject property, coal yard and a furniture factory is no longer on map- sanborn map 1911:- the property identified as 539 10th ave on the subject property is identified as a ‘Chine Laundry’. no other changes- sanborn map 1930:- no changes- sanborn map 1950:- a gasoline filling station with four USTs is identified on the subject property at the addresses 547-551 10th ave. a 'Tin Shop' is identified at 541 10th ave. filling stations are shown on the north and south corners of the property to the east- sanborn map 1968:- the buildings at addresses 539-545 10th ave have been demolished. the gasoline filling station remains on the northern portion of the subject property. the property to the east is identified as a 'Narcotics Rehabilitation Center', with a filling station on the northern portion- sanborn map 1979 to 1988:- no change- sanborn map 1990:- the subject property is shown to be improved with the filling station and a second building, denoted 'Auto Repair'. the southern portion of the lot is shown as parking- sanborn map 1991 to 1993:- no change- sanborn map 1994:- the four USTs are no longer shown at the subject property- sanborn map 1995 and 1996:- no change- sanborn map 2001:- the subject property is no longer shown as filling station and is just denoted as auto repair- no change after 2001- identified 55 gal drums in the on-site building (which could be used by MTA); number of these drums were not labeled- also observed containers of compressor lubricant and kerosene- a compressed gas cylinder storage cage was observed outside of on-site building- no evidence of ASTs or USTs noticed during site inspection- during the site inspection, MTA contractor reported that they had inadvertently accessed an underground vault, which may have been a previously undiscovered UST- in-ground hydraulic lifts were observed within the former service building at the site- found three monitoring wells during site inspection (could be installed by MTA in 2005)- in 1995, eight USTs, 83 tons of contaminated soils and 434 gallons of contaminated water were removed- PB Team (MTA’s environmental consultant) did Phase II in 2005 abstract of Phase II done by MTA’s contractor- investigation done in 2005- installed total of ten borings (GP-1 to GP-10) to the refusal- installed boring to 20 ft at GP-1, 32 ft at GP-2, 27.5 ft at GP-3, 24 ft at GP-4, 16 ft at GP-5, 28 ft at GP-6, 16 ft at GP-7, 24.5 ft at GP-8, 30 ft at GP-9 and 28 ft at GP-10- collected one composite sample (for entire boring length) from each boring- as per boring logs, a structural fill material (building debris, bricks and cinders) found up to 16 ft bg in almost all borings- no visual evidence of contamination observed in soil from borings- found petroleum odors from 10-20 ft in GP-1, 16-24 ft in GP-2, 8-27 ft in GP-3 and 10-20 ft in GP-4- found maximum PID of 14 ppm at 12-16 ft in
GP-1, 1.5 ppm at 16-20 ft in GP-2, 15.9 ppm at 12-16 ft in GP-3 and 3 ppm at 10-12 ft in GP-4- oily sheen observed at 16-20 ft depth in GP-3, but only 9 ppm recorded on PID- as per sanborn map from 1950, four gasoline tanks were located in northern portion of the site in area where borings GP-1 to GP-4 were installed

----------------------- collected three water samples: two from temporary groundwater monitoring points (at GP-2 and GP-9) and one from existing monitoring well (FD-303W)- groundwater beneath the site is expected to flow to the west, towards the Hudson River- no VOC contamination found in any soil or groundwater samples- found some SVOC contamination in almost all samples (which could be result of fill material)- the northern section of the site would be excavated approx. 75 ft bg for a new systems building to support the proposed tenth ave station of the No. 7 subway extension- these construction activities would occur primarily below grade through mining (drill and blasting) and excavation (cut-and-cover)- the No. 7 subway extension running tunnel under W 41st street, just north of the site, would be mined by Tunnel Boring Machine

10/09/10-Hiralkumar Patel.4:44 PM:- sent letter to Mr. Nitu requiring scaled site map (including former/current tank systems and well/boring locations), soil investigation in the area of hydraulic lifts and soil/groundwater delineation via installation of monitoring wells around former gasoline tank systems. asked Mr. Nitu to submit site map and results of soil investigation in the area of hydraulic lifts by end of 10/15/10 and a work plan for soil/groundwater investigation around former gasoline tank systems by end of 10/29/10. letter emailed to Mr. Nitu, Ms. Chen (at Hudson Yard development) and Mr. Kelly.09/28/10-Hiralkumar Patel.3:43 PM:- received call from Mr. Kelly requesting time extension to submit results of soil investigation in area of hydraulic lifts. instead of 10/15/10, he proposed to submit report and work plan on 10/29/10. approved Mr. Kelly's request.10/13/10-Hiralkumar Patel.1:16 PM:- received email from Mr. Kelly including work plan for soil/gw investigation. Mr. Kelly proposed to install three monitoring wells within the vicinity of the former tank field. wells will be installed to a depth of 30 ft bg. Mr. Kelly proposed to submit investigation report by the end of 12/20/10. Mr. Kelly also mentioned that they have conducted soil investigation in hydraulic lifts area and waiting for lab results.10/15/10-Hiralkumar Patel.1:23 PM:- left message for (and sent email to) Mr. Kelly. informed him that work plan is not approved as doesn't include information regarding former dispenser islands and remote fill ports. asked him to submit site map with these locations informed him that the department may require additional borings/wells around former dispenser island/remote fill ports.10/29/10-Hiralkumar Patel.4:44 PM:- received email from Mr. Kelly including revised work plan. he included a site map with former dispenser islands. as per site map, dispenser islands were in same area as tanks. Mr. Kelly propose to install four monitoring wells: three in former tank field area and one adjacent to the southern perimeter wall of the former auto shop. this fourth well will be installed to investigate groundwater contamination identified in temporary well points installed during the hydraulic lift investigation. each well will be installed to a depth of 30 ft bg. Mr. Kelly propose to submit report by the end of 01/28/11.11.11/01/10-Hiralkumar Patel.9:22 AM:- received report for investigation done around hydraulic lifts. abstract:- two hydraulic lifts and associated underground hydraulic oil tank- hydraulic oil tank was found adjacent to northern-most lift and has
product in it- installed four borings around two lifts- boring SB-1 was installed to 6 ft bg and boring SB-3 was installed to 7 ft depth where refusal encountered; no petroleum odors or PID were detected- boring SB-2 (adjacent to hydraulic oil cylinder) and SB-4 were installed to 20 ft depth- groundwater was found at 13-14 ft bg in borings SB-2 and SB-4- no odors or PID readings noted upto 12 ft depth in borings SB-2 and SB-4- high PID readings found below 13 ft depth in borings SB-2 and SB-4- collected total of four soil samples: two from SB-2 (5 ft and 12 ft) from two from SB-4 (5 ft and 13 ft)- collected two water samples: one from SB-2 and one from SB-4- staining and petroleum odor extended to 20 ft bg in borings SB-2 and SB-4- no contamination found in soil samples- found minor VOC contamination in groundwater samples- groundwater analyticals:

odors/PID readings found below water table in SB-2 and SB-4, further investigation is needed in area around hydraulic lifts. also, samples were not analyzed for MTBE. 11:51 AM:- spoke with Mr. Kelly. informed him that the department requires complete delineation of contamination. as high PID readings were found to 20 ft depth, asked Mr. Kelly to continue borings, during well installation, until hit clean soil. Mr. Kelly mentioned that MTA’s contractor found refusal at 30 ft depth. informed him that if there is no refusal at 30 ft depth and soil shows sign of contamination, then boring must be continued until finds clean soil or refusal, whichever comes first. asked Mr. Kelly to collect soil samples from deepest dry, highest PID and deepest clean zone. also asked him to analyze samples for MTBE as it wasn’t included in recent investigation. informed him that as no soil contamination found during investigation around lifts, the department does not require any investigation inside the shop at this time, but may require additional investigation inside the shop based on results of investigation around tank field. 11/22/10-Hiral Kumar Patel 3:24 PM:- spoke with Mr. Kelly. they are waiting for driller’s schedule. they are planning to do well installation by 12/09/10. Mr. Kelly mentioned that lab did analyzed previous samples for MTBE, but did not reported. so lab is analyzing samples again (which are out of its holding time) and will send results. 11/30/10-Hiral Kumar Patel 2:49 PM:- received email from Mr. Kelly including revised lab report which includes results of MTBE. 10 ppb of MTBE found in groundwater sample. Mr. Kelly mentioned that required wells for additional investigation will probably be installed on 12/08/10. he will confirmed the schedule. 12/07/10-Hiral Kumar Patel 9:37 AM:- received call from Mr. Kelly. due to schedule conflicts, well installation will start on 12/27/10. 10/03/23/11-Hiral Kumar Patel 4:20 PM:- sent email to Mr. Kelly inquiring updates. 4:33 PM:- received email from Mr. Kelly. he is working on report and will submit by next week. 04/19/11-Hiral Kumar Patel 10:45 AM:- spoke with Mr. Kelly. he mentioned that report is ready and were sent to property manager for review. currently, they are discussing about findings. 10:49 AM:- spoke with Mr. Nitu. he mentioned that he is the property manager, but Joe Grabowski handling the spill issue. informed Mr. Nitu that
investigation report must be submitted to the Department on or before
04/22/11. 10:54 AM: sent email to Mr. Nitu and asked him to submit
report by 04/22/11. informed him that the department may not approve
any more time extension. email copied to Mr. Kelly. 3:26 PM: received
report from Mr. Kelly. abstract: installed four borings to approx.
27 ft bg and borings were converted into monitoring wells (MW-1
through MW-4): organic decomposition or peat layer was identified at
27 ft depth- due to possibility of contamination in the shallow
aquifer, and the likelihood that the peat layer was acting as a
confining layer, the soil borings were not advanced any further- due
to the presence of the peat confining layer all four wells were set
at a depth of approx. 25 ft bg- wells were installed with 15 ft of
screen and 10 ft of casing- total of seven soil samples were
submitted for analysis- SVOCs identified in the site soils are
consistent with historic fill material contamination- found
contamination in soil and groundwater samples- groundwater found at
around 13 ft bg- ----------------- groundwater flow towards the
northeast ------------------------ found high PID readings right above
water table in MW-2 (290 ppm at 12 ft bg) and below water table in
MW-3 (190 ppm at 22 ft bg) and MW-4 (840 ppm at 15 ft bg) less than
-------- recommended further investigation to delineate the soil
and groundwater contaminations
soil MPD:

-23 high PID readings observed under water table: 190 ppm at 22 ft in
MW-3 and 840 ppm at 15 ft in MW-4; but found less than 25 ppm below
these high PID depths. also found organic decomposition or peat layer
at 27 ft depth. also as per Phase I, in 1995, eight USTs, 83 tons of
contaminated soils and 434 gallons of contaminated water were removed
from the site. discussed with DEC Austin. as gasoline tank systems
were removed in 1995, soil contamination found below 12 ft and only
MTBE and based on level of contamination in groundwater samples,
Austen asked for quarterly monitoring of groundwater for two more
rounds including wells survey and tidal survey. 04/22/11-Hiralkumar
Patel. 11:50 AM: sent letter to Mr. Nitu requiring tidal survey and
quarterly groundwater monitoring (including well survey each quarter)
and sampling. letter emailed to Mr. Nitu, Mr. Kelly and Joe Grabowski
(jgrabowski@solil.com) at Solil. 05/20/11-Hiralkumar Patel. 12:25 PM:
received email from Jeff Anderson from Atlantic environmental
including a letter requesting 90 days extension for submission of
tidal survey and quarterly monitoring report. he mentioned that
property owner is currently negotiating property sale agreement with
a brownfield developer. 05/26/11-Hiralkumar Patel. 11:14 AM: left
message for Jeff at Atlantic. 11:36 AM: received call from Jeff. Jeff
mentioned that property owner doesn’t have anymore new data
during sale negotiation as it could change anything. informed him
that as property sale is only in negotiation phase and no confirmed
547 10TH AVENUE (Continued)  S101658388

schedule available for site redevelopment, the department does not approve 90 day extension and requires to submit tidal survey result by end of 06/24/11. also informed him that the first quarterly report is due on 07/22/11 (three months from 04/22/11 when letter was sent out). 11:42 AM:- sent email to Mr. Nitu and informed him that the 90 day extension can not be approved. asked him to submit tidal survey by 06/24/11 and first quarterly groundwater monitoring report by 07/22/11. email copied to Jeff and Mr. Kelly at Atlantic.06/07/11-Hiral Kumar Patel. received message from Mr. Kelly (at 1:43 PM on 06/02/11).11:00 AM:- spoke with Mr. Kelly. he mentioned that well tidal survey has been scheduled on 06/27/11. a preliminary tidal survey data will be submitted by 07/01/11, wells will be sampled on 06/28/11 and a combined first quarter GW monitoring report (including tidal survey and sample results) will be submitted by 07/29/11.07/29/11-Hiral Kumar Patel.3:16 PM:- received tidal survey result and first quarterly groundwater monitoring report from Mr. Kelly. abstract:- wells MW-1, MW-2 and MW-3 were used for tidal survey and were sampled- well MW-4 was neither used in tidal survey nor a sample collected due to free product in well- water level elevation did not change significantly during the survey period- maximum elevation change was 0.2 ft and did not correspond to teh tidal cycle- it is assumed that the water elevation change is associated with the traffic flow on 10th ave, adjacent to the site less than ----???

---

groundwater samples were analyzed for VOCs and SVOCs- product sample was collected from MW-4 for fingerprint analysis- fingerprint analysis indicate that the product in well MW-4 closely approximates #2 fuel oil and may have been degraded through weathering- recommends product removal via vacuum extraction- found minor contamination in water samples

tidal survey data was collected from MW-4 for fingerprint analysis- fingerprint analysis indicate that the product in well MW-4 closely approximates #2 fuel oil and may have been degraded through weathering- recommends product removal via vacuum extraction- found minor contamination in water samples.
Inc. Ph. (646) 388-9520 email: mlapin@akrf.com

11:23 AM: left message for Mr. Kelly inquiring updates.

11:25 AM: spoke with Michelle. She mentioned that AKRF has been hired by a leasee who is planning to construct a residential building with either 1 or 2 story basement. As property owner and leasee are still negotiating their contract, Michelle was not allowed to release their client’s information. But she mentioned that the site has e-designation and AKRF is preparing a work plan (for Phase II investigation) to submit to NYC DEP. She will submit copy of work plan to DEC also and will send their client’s information at that time. She mentioned that their client will do required remediation, informed her that as contract (between owner and leasee) is still under negotiation, the department requires to continue well gauging and monitoring as planned earlier.

2:07 PM: received message from Mr. Kelly.

09/14/11-Hiralkumar Patel.

12:38 PM: left message for Mr. Kelly.

2:56 PM: received call from Michelle with their client’s information. She mentioned that construction will start most probably in mid 2012. Michelle will submit a work plan for Phase II investigation, within two weeks. She mentioned that product found in well MW-4 during recent gauging, she asked to suspend quarterly groundwater monitoring and reduce frequency of well gauging/product removal as they will install boring throughout the site. Asked Michelle to include these in work plan for review, until then well gauging and quarterly monitoring is in effect.

Axtell 4110 LLC, “leasee and developer” *805 3rd Ave., 7th Floor New York, NY 10022 Attn.: Matthew Lobron Ph. (646) 519-6031 email: mlobron@extelldev.com

3:08 PM: left message for Mr. Lobron.

09/15/11-Hiralkumar Patel.

2:57 PM: received message from Mr. Lobron. He confirmed that they are going to develop the site. 10/31/11-Hiralkumar Patel.

4:43 PM: received email from Mr. Lobron including well gauging report. Abstract: all four wells were gauged for five times from 08/16/11 to 10/28/11 and everytime, product found only in well MW-4.

Product thickness in MW-4:
- date---------- thickness (in ft)
  - 08/16/11----------0.408/30/11---------0.509/12/11---------0.
  - 610/11/11---------0.310/28/11---------0.4- during vacuum extraction, removed total of 362 gal oil/mix on 08/16/11, 2,370 gal oil/mix on 09/12/11 and 942 gal oil/water mix on 10/28/11.

Mr. Kelly recommends that the gauging continue as a monthly event for the next quarter as the product level appears to be diminishing, but the product level is the same. 11/14/11-Hiralkumar Patel.

4:32 PM: sent email to Mr. Kelly and asked him to submit result of quarterly groundwater sampling. Email copied to Jeffrey Anderson (Atlantic Env), Joe Grabowski (Solli Management), Mr. Lobron, Mike Novak (Atlantic Env) and Ms. Lapin.

4:34 PM: received call from Mr. Kelly. He mentioned that the site has been leased to developer and he was told that developer’s consultant (AKRF) will do groundwater sampling.

4:36 PM: spoke with Ms. Lapin. She mentioned that due to change in development plans, she had to change investigation work plan, which is now almost ready. She mentioned that they need to submit work plan to NYC OER also. Informed her that based on consistent product level in well MW-4, the Department requires additional groundwater investigation upgradient of well MW-4. So to avoid duplicate work, informed her that the investigation work plan must be submitted by the end of 11/18/11.4:47 PM: sent email to Ms. Lapin and asked her to submit work plan by the end of 11/18/11. Informed her that the bi-weekly well gauging/product removal must be continued until a remedial action plan is approved. Email copied to Michelle.
Jeffrey Anderson, Joe Grabowski, Mr. Lobron, Mike Novak and Mr. Kelly.11/15/11-Hiralkumar Patel:4:37 PM:- received email from Mr. Lapin including a work plan. abstract:- Extell entered into a long-term lease for the site and plans to redevelop the site with a 45-story building containing approx. 600 residential units and ground level retail- development of the site will include soil excavation for the cellar level and for foundation- the majority of the cellar level will be excavated to 13 ft bg, with a small pile cap area excavated to a depth of 16 ft; the remaining area of the cellar level (including the electric switch gear room and elevator pits) will be excavated to 18 ft with small pile cap area to a depth of 21 ft. Extell plans to initiate redevelopment in the first half of 2012. Extell will be taking the lead to address and resolve the open spill less than ------- site also has NYC E-designation- as boring/temporary wells will be installed during investigation, requests to suspend quarterly groundwater sampling requirement- proposes to install up to 14 soil borings to a depth of 21 ft bg- proposes to install either a test pit or soil borings, depending on the result of GPR survey, at/around well location MW-4- test well will extend to the water table, or deeper, if possible- existing monitoring wells will be sampled- an organic peat layer was reported approx. 27 ft bg, which may generate methane, therefore, methane will be monitored during subsurface investigation- two soil samples will be collected from each sampling location from above the water table based on field observations or PID readings- temporary well points will be installed in five of the soil borings and groundwater samples will be collected from temporary well points and existing monitoring wells- soil and groundwater samples will be analyzed for full list VOCs and full list SVOCs the proposed work plan is unacceptable for following reasons:- as per the work plan, it is 'assumed' that product recovery efforts for MW-4 will continue as stipulated by NYSDEC. need to know who is going to do bi-weekly well gauging and product removal- no boring/well is proposed southwest of the well MW-4 which is upgradient area. need at least one boring/well southwest of MW-4 for delineation of free product found in MW-4- proposes to collect two soil samples from borings from above water table. the department requires collection of three soil samples: highest PID, deepest dry and deepest clean if contamination extends below water table11/16/11-Hiralkumar Patel:10:33 AM:- sent email to Ms. Lapin and asked her about who is going to perform bi-weekly well gauging and product removal. also asked her to add boring/well in area southwest of the well MW-4, which is upgradient from the well. informed her that the department requires collection of three soil samples from boring where contamination extends below water table: highest PID, deepest dry and deepest clean. asked her to submit a revised work plan. email copied to Mr. Lobron.12:39 PM:- received email from Ms. Lapin. she mentioned that AKRF is taking over well gauging/product removal. they will go to site tomorrow. Ms. Lapin will send revised work plan once they get comments on proposed work plan from NYC OER.11/18/11-Hiralkumar Patel:4:13 PM:- received email from Ms. Lapin. they gauged wells and found 1/4 inch product in well MW-4 only.11/22/11-Hiralkumar Patel:3:40 PM:- received email from Ms. Lapin including well gauging table and site map including additional boring location. during gauging, AKRF found three additional wells (W1, W1-40 and W2) which were installed in 2007 as part of the geotechnical investigation for the No. 7 line extension project. as these wells were installed for geotechnical investigation, no
information data collected. As only 0.02 ft product found in well MW-4, Ms. Lapin proposed to install an absorbent sock instead of vacuum pumping. She proposed to change socks bi-weekly. 11/25/11-Hiralkumar Patel. 1:15 PM:- sent email to Ms. Lapin, informing her that as per the site map, only four soil borings and four temporary wells will be installed, but as per text in the work plan, she proposed to install a total of 14 borings. Asked her to clarify this. Also asked her about boring locations GP-1 to GP-10 as don’t know when those were installed. 11/29/11-Hiralkumar Patel. 1:14 AM:- received email from Ms. Lapin. She mentioned that the proposed soil borings and temporary wells are in blue and not numbered. The discrepancy in the number is:- one boring/well was left off the southwestern corner of the site, which has been added- the shaded area surrounding MW-4 comprises either test pits or up to 6 borings, depending on the results of the GPR survey. "Up to 14 borings/wells" includes 6 borings at this location. This number is now "up to 15" with the additional boring/well location requested on southwest of MW-4. GP-1 to GP-10 are the previous borings advanced by PB in 2005. The figure had incorrectly shown them as "GB" in the legend. That has been corrected. 12/06/11-Hiralkumar Patel. 3:44 PM:- received email from Ms. Lapin including a revised work plan and a well gauging data. Well MW-4 was gauged on 12/02/11 and found 0.07 ft product. An absorbent sock was installed in well MW-4 and will be replaced during a geophysical survey scheduled for early next week. Revised work plan addresses previous concerns and includes installation of five soil-gas borings (soil-gas samples will be collected from approx. 5 to 6 ft bg) and fifteen soil borings. 12/09/11-Hiralkumar Patel. 4:24 PM:- sent work plan approval letter to Mr. Grabowski and Mr. Lobron. Informed them the department no longer requires quarterly GW monitoring/sampling, but requires continuation of bi-weekly monitoring and product removal. Letter emailed to Mr. Grabowski, Mr. Lobron, and Ms. Lapin. 01/31/12-Hiralkumar Patel. 4:34 PM:- received investigation report from Ms. Lapin. Abstract:- US geological survey reports indicate that bedrock beneath the site is expected at a depth of approx. 30 ft bg- soil beneath the site was observed consist of fill material comprisin sand and silt with concrete, gravel, brick, asphalt, wood, and ash to depths of approx. 12 ft bg- groundwater gauging was conducted from existing on-site wells MW-1 through MW-4, FD-303W, W1, W1-40, and W2 on a weekly to bi-weekly basis due to presence of free product previously identified in well MW-4. An absorbent sock was added to the well on 12/06/11- gauging events subsequent to adding the absorbent sock to well MW-4 have not identified any mesurable free product- absorbent socks removed from well MW-4 have shown approx. 3 to 6 inches of an oily sheen absorbed into the hydrophobic material- a geophysical survey was performed- two small square-shaped anomalies were identified in the southern portion of the site approx. 15 ft from the southern property line (Anomaly 1 & 2)- approx. 30 ft north of the first set of anomalies along southern line, a trench-shaped anomaly was identified in an east-west direction toward 10th Ave (Anomaly 3)- similar trench-shaped anomaly was identified in the same east-west direction approx. 15 ft south of the automotive repair building (Anomaly 4)- a large anomaly measuring approx. 15 ft long by 6 ft wide was identified in the central portion of the site in the vicinity of the suspected vault location (Anomaly 5)- additional anomalies identified included two small square-shaped anomalies on the eastern side of the site - one in line with the trench-shaped anomaly south of the repair
building (Anomaly 6), and one in the northeastern corner of the site (Anomaly 7)- the area immediately north of the repair building. The northeastern corner of the site was identified to consist of reinforced concrete. In the center of the reinforced concrete, the survey identified a square-shaped anomaly indicative of a former excavation area. The vent pipe located on the west-adjacent building was traced to this excavation area, which indicated a possible former UST area (Anomaly 8)- in the interior of the repair building could not identify the hydraulic fluid reservoir associated with the hydraulic lifts due to interference from the metallic legs of the lifts and the density and make up of the reinforced concrete floor within the building- found an unknown reservoir in the central portion of the repair building (Anomaly 9)- test pits were excavated in all anomaly locations- Anomaly 1: southernmost anomaly identified as a suspected buried boiler tank. The metallic tank was buried 3 ft bg, measured approx. 9 ft long by 3 ft wide and was concave at one end. tank was not removed during investigation. asbestos insulation identified along the side of the tank- Anomaly 2: identified as buried scrap metal at approx. 2 ft bg - Anomaly 3 & 4: identified as buried former brick building foundation wall. brick walls extended to depths of at least 5 ft bg - Anomaly 5: identified as an 8 inch thick concrete pad overlying buried former building debris including bricks, wood, pulverized concrete and ash. test pit in the vicinity of this anomaly identified former building debris to termination depths of approx. 6 ft bg- Anomaly 6: former metallic drain and a few ft of associated piping were identified- Anomaly 7: test pits attempted in the vicinity were unsuccessful due to the strength and thickness of asphalt in this area- investigated the unknown reservoir inside the repair building- the opening of the reservoir was approx. 4 inches in diameter and was composed of an approx. 2 ft metallic pipe, which extended into a 1 ft void before encountering approx. 2 ft of petroleum mixture- soft, soil-like bottom encountered at approx. 5 ft below the concrete building slab appeared to be the termination point of the reservoir- liquid in reservoir was separated into two phases - one dark brown and one light green- sample collected from reservoir- results indicated that the reservoir contained a heavier degraded gasoline and waste oil mixture floating on top of a lighter, water-based lubricating oil or motor oil- approx. 210 gal of petroleum mixture removed from the reservoir- small amount of residual oil left at the bottom which could not be removed due to debris- 13 soil borings were advanced: SB-1 through SB-11, SB-11A, SB-12 and SB-13- five delineation soil borings (SB-11, SB-11A through SB-13) were advanced in the vicinity of monitoring well MW-4- contamination below water table was not observed- PID readings from 2.5 to 74.7 ppm were detected, with the highest detections observed between depths of 13 to 15 ft bg in boring SB-11 advanced immediately west of the well MW-4 and boring SB-8 advanced in the northeastern portion of the site- petroleum-like odors were observed at 13-15 ft bg within SB-11 and SB-11A- gasoline-like odors were observed at 13-15 ft and in the vicinity of the groundwater table in borings SB-6, SB-7 and SB-8- mixed petroleum and gasoline-line odor was identified in boring SB-9- petroleum sheen observed on water table at temporary well TW-9- petroleum odors were identified in groundwater sampled from each of the wells (MW-1 through MW-4) and from temporary wells TW-7, TW-8 and TW-9- groundwater was encountered between 13 and 16 ft bg- VOC contamination was not found in soil samples (except few very minor

02/02/12-Hiralkumar Patel.10:53 AM:- spoke with Ms. Lapin, asked her
about further investigation of the waste pit inside the repair shop.

informed her that if excavation happens soon (within couple of
months), then further investigation can be done after on-site
building demolition, otherwise requires further investigation of
the waste pit. asked her to find out work schedule for on-site
building demolition and excavation. also asked to find out whether
site will be excavated to the property line.11:34 AM:- sent email to
Ms. Lapin and asked to submit update (about redevelopment) by
02/08/12. email copied to Mr. Lobron.02/08/12-Hiralkumar Patel.11:44
AM:- received call from Ms. Lapin. she is in contact with Mr. Lobron
and his attorney regarding investigation/remediation of waste pit in
repair shop. as owner’s attorney is out of office today, she will
call back tomorrow with more updates.02/10/12-Hiralkumar Patel.

02/02/12. email copied to Mr. Lobron.02/08/12-Hiralkumar Patel.11:44
AM:- received call from Ms. Lapin. she is in contact with Mr. Lobron
and his attorney regarding investigation/remediation of waste pit in
repair shop. as owner’s attorney is out of office today, she will
call back tomorrow with more updates.02/10/12-Hiralkumar Patel.
a response regarding waste oil pit investigation. Ms. Lapin mentioned
that waste oil pit was likely last used in approx. 1995 when the
gasoline station/automobile repair facility ceased operations. she
does not suspect any leak from the oil pit as only BTEX found in
groundwater sample from the closet sample location TW-9 and no SVOCs
found. she has gauged all wells on 02/06/12 and found no free phase
product in any well. they replaced absorbent sock in MW-4. she
proposes to monitor on-site wells monthly until the site
redevelopment occurs. as per her, construction is scheduled to
commence in the Fall of 2012 at which time, the former repair
building will be demolished and waste pit will be excavated. she
proposes to remove product from wells, if any, via vac
truck.02/24/12-Hiralkumar Patel.1:11 PM:- sent letter to Mr.
Grabowski and Mr. Lobron. informed them the department agrees with
the recommendation of monthly monitoring and removal of free product
(if applicable) from existing wells until site redevelopment occurs.
also informed them that the department does not require excavation of
waste oil pit at this time. asked them to submit a monthly monitoring
report. informed them the department may require additional
investigation/remediation after reviewing the reports. letter emailed
to Mr. Grabowski, Mr. Lobron and Ms. Lapin.07/19/12-Hiralkumar

Pate.3:01 PM:- spoke with Mr. Lapin and inquired about monthly
gauging report. she mentioned that they gauged existing well monthly
and found nothing. she will send data by tomorrow morning.3:19 PM:-
received email from Ms. Lapin including monthly gauging report. wells
gauged monthly and found oily sheen on absorbent sock (between 0.5
inch and 7 inches) from well MW-4.07/20/12-Hiralkumar Patel. met with
Shaminder Chawla (NYC OER) in DEC office. he mentioned that AKRF has
submitted soil-vapor investigation results and RAP. he will ask OER
project manager to forward available documents, for
review.07/23/12-Hiralkumar Patel.4:43 PM:- sent email to Mr. Chawla.
and asked to submit available documents for review.

07/30/12-Hiralkumar Patel. 4:32 PM:- left message for Mr. Chawla.
08/03/12-Hiralkumar Patel. 8:28 AM:- received email from Mr. Chawla including copy of remedial investigation work plan dated Dec. 2011. Mr. Chawla asked to contact Breanna Gribble, project manager in NYC OER. Breanna Gribble NYC OER. Ph. (212) 442-7126. Email: BGribble@dep.nyc.gov. Work plan that Mr. Chawla sent was previously submitted to DEC. 08/24/12-Hiralkumar Patel. 3:21 PM:- received email from Ms. Lapin including monthly gauging report. Wells gauged on 08/16/12 and found 6 inches of oily sheen on absorbent sock from well MW-4. 10/01/12-Hiralkumar Patel. received email from Ms. Lapin at 5:08 PM on 09/28/12 including monthly gauging report. Wells gauged on 09/20/12 and found 3 inches of oily sheen on absorbent sock from well MW-4. 11/20/12-Hiralkumar Patel. 12:15 PM:- received email from Ms. Lapin including monthly gauging report. Wells were gauged on 10/17/12 and 11/15/12. On 10/17/12, the absorbent sock in MW-4 was found to have not been in touch with the water table. On 11/15/12, found 3 inches of oily sheen on absorbent sock from well MW-4. 12/26/12-Hiralkumar Patel. received email from Ms. Lapin at 5:26 PM on 12/13/12 including monthly gauging report. Wells were gauged on 12/13/12. Found 5 inches of oily sheen on absorbent sock from well MW-4. Ms. Lapin mentioned that they got approval for NYC BCP program and have sent RIR and RAP and awaiting comments to the RAP. Once approved from city, she will submit copy to DEC. 01/16/13-Hiralkumar Patel. 1:27 PM:- received email from Michelle Lapin including monthly gauging report. Wells gauged on 12/13/12 and 01/14/13. During both monitoring events, approx. 5 inches of sheen observed when the absorbent sock in MW-4 was removed and replaced. 02/01/13-Hiralkumar Patel. received draft remedial action work plan, including construction health and safety plan, from AKRF.

547 10TH AVENUE (Continued)

abstract:- Site is identified as Block 1069, Lots 29 and 34-

Following redevelopment, the site will also occupy Block 1069, Lot 9136, which is an air volume lot over the west-adjacent property-

Proposed future use of the site consists of a 52-story, approx. 727,000 gross sq. ft. residential building with one sub-grade level-

That will include utility rooms, storage space, the superintendent's office, a possible management/leasing office and possible tenant amenities and ground floor retail space-

The proposed building footprint will occupy the entirety of the site-

The majority of the cellar level will be excavated to 13 ft below existing grade, with small pile cap areas excavated to a depth of 16 ft-

The elevator pits located in the cellar level will be excavated to approx. 24 ft with small pile cap areas to a depth of 31 ft-

Additional excavation will be conducted in the vicinity of soil boring SB-8 to remove the lead hotspot, and in the vicinity of borings SB-11 and SB-11A to address petroleum and PAH contaminated soil-

Each of the planned hotspot removals will be completed as 10 ft long by 10 ft wide excavations centered on the boring locations and extending to 16 ft bg-

Will collect endpoint samples-

Will install a vapor/waterproofing barrier system beneath the building slab and outside of foundation walls-

The base of the building will be below the water table and there is no potential for migration and accumulation of soil vapors beneath the building slab-

Will collect product sample, if detected, for fingerprint analysis-

Approx. 8 month remediation period is anticipated less than --- 02/06/13-Hiralkumar Patel. 1:31 PM:- left message for Dustin at AKRF. Informed him that all documents must be submitted to DEC (not only NYC OER) for review and approval.
him to submit final RAWP and work schedule. 02/07/13-Hiralkumar Patel. 1:35 PM:- received call from Ms. Gribble from NYC OER. discussed about the RAWP. she mentioned that work plan is in public review stage. they are still awaiting for documents for "e" designation for noise. if there is no comments from public, OER will issue notice to proceed. she will call once this notice ready. 02/21/13-Hiralkumar Patel. 4:06 PM:- received message from Shaminder Chawla from NYC OER. 02/25/13-Hiralkumar Patel. 2:01 PM:- spoke with Mr. Chawla at OER. discussed about DEC requirements of endpoint samples (as per DER-10) and sample analytical methods (8260/8270), he will include this in comment to RAWP review. 03/07/13-Hiralkumar Patel. 2:15 PM:- received email from Ms. Gribble requesting call back regarding endpoint sampling. 03/08/13-Hiralkumar Patel. 11:08 AM:- spoke with Ms. Gribble. she mentioned that there will be shoring at property boundaries and all soils will be removed within shoring, to 15 ft bg. so no endpoint sidewall samples are possible. informed her that endpoint bottom samples must be collected as per DER-10. 03/12/13-Hiralkumar Patel. 10:03 AM:- received email from Dustin inquiring about endpoint sample frequency. 03/19/13-Hiralkumar Patel. 9:51 AM:- left message for Dustin. informed him that endpoint samples must be collected as per DER-10. also asked him to submit final work plan. 04/05/13-Hiralkumar Patel. received final remedial action work plan from Dustin. 04/22/13-Hiralkumar Patel. 1:37 PM:- sent email to Dustin and asked to inform once project begins. email copied to Michelle and Ms. Gribble. 07/03/13-Hiralkumar Patel. 3:46 PM:- received email from Dustin including gauging data. since Jan. 2013, about 4 inches of light oily sheen observed on absorbent sock in well MW-4. no product found in any well. Dustin stated that waste classification sampling was done recently. they are coordinating with NYC OER to obtain excavation and foundation permits from NYC DOB. pre-construction meeting will be scheduled once permits received. 08/22/13-Hiralkumar Patel. 11:46 AM:- received email from Shaminder Chawla from NYC OER, including meeting roster and summary of yesterday’s pre-construction meeting. developer is ready to start work at this site within next two weeks. still waiting on DEP dewatering permit. work will be performed in stages. initial cut will be removal of soil from top 7 to eight feet, then contractor will install caissons (two months). total soil removal is 16 to 17,000 cubic yards. all soils will be shipped to NJ and PA. AKRF will provide continuous VOC and dust monitoring. end point sampling in accordance with DER-10 around waste fuel oil tank. AKRF has been directed to send a copy of daily reports 09/06/13-Hiralkumar Patel. received email from Dustin (at 4:03 PM on 09/05/13) including well gauging report, which is last gauging report prior to site construction. Dustin mentioned that earth work is set to being middle to late next week (pending permits), they will start from suspected waste oil pit area. he will submit weekly report, at end of each week. 09/16/13-Hiralkumar Patel. 1:27 PM:- received email from Dustin. he mentioned that excavation of suspected waste oil pit will begin tomorrow. 09/17/13-Hiralkumar Patel. 2:17 PM:- received email from Dustin. during test pit excavation this morning, they found a 550 gal steel waste oil UST in where where suspected waste oil pit located. no evidence of holes or pitting noted on tank. tank collected some rain water from an opening on top of the tank. no former piping runs were connected to the tank. due to the product storage, this tank will be registered. no evidence of a historic release from this tank was identified beneath or adjacent to tank’s
location and total of five end point samples will be submitted for VOCs, SVOCs, and PCBs. Two additional hydraulic lifts were also identified and removed from beneath the slab. The lifts were in good physical condition and no evidence of a historic release from either of the lifts was identified. One end point sample was collected from beneath each of the lift locations for VOCs, SVOCs, and PCBs. 09/18/13-Hiralkumar Patel. received email from Dustin (at 8:43 PM on 09/17/13) including daily report for 09/17/13 summarizing removal of 550 gal waste oil USTs and two hydraulic lifts. 09/19/13-Hiralkumar Patel. received email from Dustin (at 6:11 PM on 09/18/13) including daily report for 09/18/13. Contractor removed approx. 276 gal of oil-water mixture from UST and hydraulic lifts. 09/26/13-Hiralkumar Patel. received email from Dustin (at 4:10 PM on 09/25/13). During excavation activities in the northwestern corner of the Site, an additional approximately 550-gallon steel suspected waste oil UST was encountered north of the former automotive repair building. The tank was fully intact (no evidence of holes, pitting, etc.), and contained some oily water. No former piping runs were connected to the tank and no evidence of soil contamination was observed beneath the location of the tank. During excavation activities immediately south of the former automotive repair building, an approximately 550-gallon steel heating oil UST was also encountered. The tank was empty but was observed to contain thin, spotty streaks of degraded heating oil inside of the tank carcass. No evidence of contamination was observed in the soil beneath the location of the tank. Endpoint soil samples were collected after removal of tanks due to possibility of finding more tanks.

Dustin mentioned that PBS application will be submitted after an approximately five foot cut is completed throughout the site (to avoid too many or any confusing submittals). 10/01/13-Hiralkumar Patel. 10:13 AM:- received email from Dustin including daily report. They removed both 550 gal tanks. They also excavated test pits to investigate the existing foundation wall next to the west-adjacent church building (for underpinning) and along the eastern site boundary. No evidence of contamination noted in test pits. 10/03/13-Hiralkumar Patel. 10:34 AM:- received email from Dustin including daily report for 10/02/13. 10/08/13-Hiralkumar Patel. 7:57 AM:- received email from Dustin including daily report for 10/03/13, 10/04/13 and 10/07/13. On 10/04/13, investigative excavation activities were performed in WC-9 up to a depth of 13 ft bg. Petroleum-like odor was detected in soil at the groundwater interface (approx. 13 ft bg). Petroleum-impacted material was placed back into the excavation at its originating depth and backfilled with overburden material. 10/10/13-Hiralkumar Patel. 4:48 PM:- received email from Dustin. They found additional approx. 1,500 gal suspected fuel oil UST, located south of the former automotive repair building. This is fourth tank found at the site. 10/15/13-Hiralkumar Patel. received email from Dustin (at 9:51 AM on 10/14/13) including daily status report for Oct. 8, 9, 10 and 11. On 10/08/13, crew found previously unknown. approx. 1,500 gal steel fuel oil UST in northern portion of grid WC-4. The tank measured approx. 15 ft long by 4 ft wide and was discovered approx. 7.5 ft bg. The tank was approx. 9 ft south of the existing church building wall. Bottom of the tank was located in close proximity to the groundwater table at the site. Evidence of petroleum contaminated soil was encountered immediately south of the tank and a small hole was observed on the south side of the tank. Approx. 6 inches of oil-water mixture was present in the...
bottom of the tank. The 1,500 gal UST was removed on 10/11/13. Soil was not excavated from beneath the former UST location due to the need to maintain the site grade to allow for the drilling of caissons along the western property boundary (to prevent any potential undermining of the west-adjacent church building during excavation activities). 10/22/13-Hiralkumar Patel received email from Dustin (at 4:40 PM on 10/21/13) including daily reports from 10/14/13 to 10/18/13. Contaminated soil noted in grids WC-4, WC-5&7 and WC-8, during underpinning of existing church building to the west. 10/29/13-Hiralkumar Patel. 4:10 AM:- received email from Dustin including daily reports from 10/21/13 to 10/25/13. 11/06/13-Hiralkumar Patel. received email from Dustin (at 1:20 PM on 11/05/13) including daily reports from 10/28/13 to 11/02/13. 11/12/13-Hiralkumar Patel. 9:39 AM:- received email from Dustin including daily reports from 11/04/13 to 11/08/13. 11/26/13-Hiralkumar Patel. received email from Dustin (at 5:26 PM on 11/21/13) including daily reports from 11/11/13 to 11/15/13. 11/27/13-Hiralkumar Patel. 7:32 AM:- received email from Dustin including daily reports from 11/18/13 to 11/22/13. 12/05/13-Hiralkumar Patel. received email from Dustin (at 5:27 PM on 12/04/13) including daily reports from 11/25/13 to 11/29/13. During excavation for installation of corrugated metal piles along the adjacent church site to the west, petroleum odors were noted in soil; however, area was backfilled and no stockpile was generated. Impacted soil will be excavated for off-site disposal at a later stage for pile cap construction. 12/12/13-Hiralkumar Patel. 3:54 PM:- received email from Dustin including daily reports from 12/02/13 to 12/06/13. 12/20/13-Hiralkumar Patel. 8:04 AM:- received email from Dustin including daily reports from 12/09/13 to 12/13/13. 12/24/13-Hiralkumar Patel. 11:49 AM:- received email from Dustin including daily reports from 12/16/13 to 12/20/13. 01/02/14-Hiralkumar Patel. received email from Dustin (at 12:04 PM on 12/31/13) including daily reports from 12/23/13 to 12/27/13. 01/09/14-Hiralkumar Patel. received email from Dustin (at 5:12 PM on 01/08/14) including daily reports from 12/30/13 to 01/04/14. 01/15/14-Hiralkumar Patel. 9:40 PM:- received email from Dustin including daily reports from 01/06/14 to 01/11/14. 01/24/14-Hiralkumar Patel. received email from Dustin (at 5:09 PM on 01/23/14) including daily reports from 01/13/14 to 01/18/14. Some of the excavated soil from grids WC-4 and WC-9 exhibited evidence of petroleum odors and staining and no or low-level PID readings. Impacted soil was segregated for off-site disposal. 01/29/14-Hiralkumar Patel. 6:56 AM:- received email from Dustin including daily reports from 01/20/14 to 01/25/14. Some of the excavated soil from grids WC-4, WC-5&7 and WC-9 exhibited evidence of petroleum odors and/or staining and low-level PID readings. Impacted soil was segregated for off-site disposal. 01/30/14-Hiralkumar Patel. received email from Dustin (at 6:14 PM on 01/29/14). He mentioned that after proper stabilization, they can now excavate to 16 ft bg in area of former borings SB-11 and SB-11A where some deeper SVOC contamination was noted. He also mentioned that during field work in Oct. 2013, they found a 1,500 gal fuel oil UST in the vicinity of these borings. After removing contaminated soil, endpoint samples will be collected as per DER-10 for 8260/8270 analyses. 10:04 AM:- received call from Dustin to discuss sampling approach in western area where former borings SB-11/11A were located and where a 1,500 gal UST was found. Informed him that based on available information, the proposed approach looks fine. AKRF is planning to collect...
547 10TH AVENUE (Continued)

endpoint samples tomorrow. asked Dustin about excavation in area of well MW-4 where free phase product found last year. he mentioned that area of MW-4 is currently used as ramp to get access to other parts of the site.Ashutosh SharmaAKRFPh. (917) 842-678102/04/14-Hiralkumar Patel.10:53 AM:- received email from Dustin including daily reports from 01/27/14 to 02/01/14. some of the excavated soil from grids WC-4, WC-5&7 and WC-9 exhibited evidence of petroleum odors and/or staining and low-level PID readings. impacted soil was segregated for off-site disposal. a hydraulic hose connected to one of the excavator ruptured during the sheeting work within grid WC-3. less than 5 gal of hydraulic fluid sprayed/leaked on to the steel sheeting and the whalers. spill was contained and cleaned up. Dustin mentioned that endpoint samples will be collected from western boundary of the site (beneath the fuel oil tank discovered in Oct. 2013 and in the vicinity of former borings SB-11 and SB-11A) in next day or two.02/07/14-Hiralkumar Patel.12:51 PM:- received email from Dustin including summary of results for endpoint samples collected in area where UST was found in Oct. 2013 and in vicinity of former well MW-4. no contamination found in samples.02/18/14-Hiralkumar Patel. received email from Dustin (at 4:14 PM on 02/17/14) including daily status reports from 02/03/14 to 02/08/14.02/26/14-Hiralkumar Patel.8:25 AM:- received email from Dustin including daily status report from 02/15/14 to 02/22/14.03/04/14-Hiralkumar Patel.12:41 PM:- received email from Dustin including daily status report from 02/24/14 to 03/01/14.03/18/14-Hiralkumar Patel.7:26 AM:- received email from Dustin including daily status report from 03/03/14 to 03/05/14.7:28 AM:- received email from Dustin including daily status report from 03/10/14 to 03/15/14.03/26/14-Hiralkumar Patel.8:39 AM:- received email from Dustin including daily status report from 03/17/14 to 03/22/14.04/03/14-Hiralkumar Patel.12:55 PM:- received email from Dustin including daily status report from 03/24/14 to 03/31/14.04/09/14-Hiralkumar Patel.8:01 AM:- received email from Dustin including daily status report from 04/01/14 to 04/07/14.04/24/14-Hiralkumar Patel.12:40 PM:- received email from Dustin including daily status report from 04/08/14 to 04/12/14.12:40 PM:- received another email from Dustin including daily status report from 04/14/14 to 04/19/14.05/05/14-Hiralkumar Patel.9:23 AM:- received email from Dustin including daily status report from 04/21/14 to 04/25/14.05/09/14-Hiralkumar Patel. received email from Dustin (at 9:56 AM on 09/07/14) including daily status report from 04/28/14 to 05/14/15.14-Hiralkumar Patel.3:56 AM:- received email from Dustin including daily status report from 05/15/14 to 05/09/14.05/19/14-Hiralkumar Patel.10:02 AM:- received email from Dustin including daily status report from 05/12/14 to 05/16/14.05/28/14-Hiralkumar Patel.11:52 AM:- received email from Dustin including daily status report from 05/19/14 to 05/23/14.06/09/14-Hiralkumar Patel.4:18 PM:- received email from Dustin including hand sketch with three proposed well locations for groundwater monitoring.06/16/14-Hiralkumar Patel.2:20 PM:- received emails from Dustin including daily status report from 05/27/14 to 06/06/14 and from 06/09/14 to 06/13/14.06/23/14-Hiralkumar Patel. received message from Dustin (at 1:26 PM on 06/20/14).12:01 PM:- spoke with Dustin. asked him about possibility of fourth well along W 41st Street. Dustin mentioned that due to subway extension project (7-line), they could not install well along 41st street. informed Dustin that based on available information, three proposed well locations looks fine.08/20/14-Hiralkumar Patel. received email from
Dustin (at 8:29 AM on 07/08/14) including daily status report from 06/16/14 to 06/20/14. received email from Dustin (at 5:24 PM on 07/24/14) including daily status report for 07/23/14. he mentioned that two of the three proposed wells (MW-1 and MW-2) were installed on the eastern side of the site along 10th Ave. groundwater was encountered at depths of approx. 12-13 ft bg, both wells were installed to a depth of approx. 26 ft bg. no petroleum odors or PID readings were encountered on any of the soil samples/drill cuttings during installation activities. no soil samples were collected for lab analysis. received email from Dustin (at 6:13 PM on 07/28/14) including daily status report for 07/25/14 and 07/28/14, on 07/28/14, the third proposed well was installed along W 40th Street, immediately southwest of the property. refusal encountered at 17 to 18 ft bg in three borings. the 2-inch well was installed to a depth of approx. 18 ft bg. no petroleum odors or PID readings were encountered on any of the soil samples/drill cuttings during installation activities. no soil samples were collected for lab analysis. 09/30/14-Hiralkumar Patel. 10:10 AM: received call from Dustin inquiring about any record of registration of old motor fuel tanks that were removed in 1995. as there is no record for those tanks, asked Dustin to include old tank's information on PBS application. Dustin mentioned that NYC OER is currently reviewing draft remedial action report. he will submit final report, once he has comments from OER. he has collected first quarterly groundwater samples from three new wells and will submit that report also. asked Dustin to collect minimum of three quarterly rounds of groundwater samples. 11/04/14-Hiralkumar Patel. received email from Dustin (at 6:31 PM on 11/03/14) including first quarterly gw monitoring report. abstract: three (3) 2-inch monitoring wells (MW-1 through MW-3) were installed- well MW-1 was completed to a depth of approx. 26 ft bg with screen from 11 to 26 ft bg- well MW-2 was completed to a depth of approx. 26.5 ft bg with screen from 11.5 to 26.5 ft bg- well MW-3 was completed to a depth of approx. 18 ft bg with screen from 8 to 18 ft bg- groundwater was found between 12 and 13 ft bg- first round of quarterly groundwater sampling was conducted on 08/07/14- no free-phase product was detected in any of the three wells- localized groundwater flow direction to the northeast. minor VOC contamination noted in groundwater samples (max: 102 ppb xylene in MW-2) 12/04/14-Hiralkumar Patel. received email from Shaminder (at 4:23 PM on 12/03/14) from NYC OER, including sampling result summary table for groundwater sampling on 11/11/14. low level of VOCs detected in groundwater sample (max: 38 ppb Xylene in MW-1). Shaminder asked about additional work needed to close the spill. 12/05/14-Hiralkumar Patel. 8:33 AM: sent email to Shaminder at NYC OER. informed him that the department has asked for minimum of three quarterly groundwater sampling and has received only 1st quarterly sampling report in Nov 2014 (for sampling occurred in Aug 2014). email copied to Dustin. 1:43 PM: received email from Dustin including link to final remedial action report. excavated and removed historic fill and other contaminated soils. excavation was completed to a depth of at least 13 ft bg across the site. additional excavation was conducted in the northern portion of the site to depths up to 20 ft bg- removed one (1) 1.500 gal fuel oil UST, two (2) 550 gal fuel oil USTs, one (1) 550 gal waste oil UST and two underground hydraulic lifts that were encountered in the northwestern portion of the site during excavation- collected and analyzed endpoint samples- installed a vapor barrier/waterproofing system.
547 10TH AVENUE (Continued)  S101658388

beneath the footprint of the building and behind the foundation walls- no contamination noted in endpoint samples12/17/14-Hiralkumar Patel.3:45 PM:- received email from Dustin including 2nd quarterly groundwater sampling report. groundwater samples were collected from three wells on 11/11/14. no free phase product found in wells. minor VOCs detected (maximum 32 ppb Toluene in MW-1) in groundwater samples. Dustin recommended spill closure based on remedial actions taken at the site and results of groundwater monitoring.12/19/14-Hiralkumar Patel. based on available information, case closed.1:01 PM:- sent spill closure letter to Extell Development. letter emailed to Dustin, Joseph Montano (JMontano@extelldev.com), Laura Kirschbaum (LKirschbaum@extelldev.com), Ryan Masters (RMasters@extelldev.com) and Mr. Chawla.02/03/15-Hiralkumar Patel. received email from Dustin (at 5:07 PM on 02/02/15) including well closure letter.**e-designation**

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Spoke with FD Hazmat Chief Rogers. He indicated that they emptied the saddle tank into 2 85 gallon drums and left the drums at the scene to be picked up by the tow truck. He said he explained it to the truck driver that it is their responsibility to remove the drums. Drum location is 440 41st street. Besides this, few gallons spilled on the street which was cleaned up with speedy dry. No drain was impacted. Diesel ran over a con ed manhole FD did not open up the manhole, instead, notified ConEdision about the incident. Chief Rogers can be reached @(718)476-6288. Case closed. (sr)
2004 spill next door (fill pipe on tank???) Bovis Developers is gutting the building. In basement pump room they broke under the floor and found an oil water mix. They think the oil may be coming from a building next door. Also a possibility of an old, old gas station on the site. Covenant House (Youth shelter non-for-profit) owns both buildings. 3/13/07 - Raphael Ketani. According to Property Shark, the site is part of a large property with the address 456-464 W. 41 Street, block and lot 01050/0001. The official address is 538 W. 41 Avenue. Covenant House owns the entire property. There is no PBS case for the site. There was a spill case for the site from 2004, #0404424. It was opened on 7/24/04 and closed on 10/6/05. It involved soil sampling by the NYCTA for a #7 train extension and the discovery of contaminated soil. The soil was removed. 3/14/07 - Raphael Ketani. I made a scheduled site visit and met Gerald Tiss V.P. of JLC Environmental Consultants (212) 420-8119. He showed me the site. I saw the fill port, vent pipe, and stick port for the UST. There is a UST under the sidewalk that serves the site's building and one next to the tank. The stick port is in the driveway that runs to the back of 460 W. 41 Street. The fuel line from the tank to the boiler also runs under the driveway. Mr. Tiss pointed out where the tank was located under the sidewalk. He said that the tank was replaced in 2004 (this doesn't match the information from case #0404424). We went inside and down the stairs. The ppb Ray PID meter detected 115 ppb of vapors, but they were working with all kinds of materials throughout the building. I looked at a groundwater location under some plywood boards that was situated about mid-way down a hallway in the basement and another groundwater location near the landing to the basement stairs. Both locations looked like they had just groundwater. The engineer from Bovis Developers told me that the water level goes up and down with the tides (the building also fronts on 10th Avenue and they are a few blocks from the Hudson River). Lastly, we looked at a section of open floor in a pump room. There were several pools of black oil floating on top of the groundwater. The pools were no larger than about 18 inches long and were not connected to each other. The engineer from Bovis told me that the groundwater here doesn't move with the tides. Mr. Tiss asked what should be done. I told him that the oil should be recovered and then the hole should be monitored for more oil. I added that if the oil keeps coming back, then the source will have to be found. He said he understood this. I also told him that if the oil keeps coming back, then I would be suspicious of the tank system and that it should be tested to see if
it is leaking. He agreed to do this. 3/26/07 - Raphael Ketani. Mr. Tiss called to say that they will begin pumping the pit where the small pools of oil showed up and see what follows. I told him that the tank was never tightness tested. He said he knows this and will address the tank system if the oil keeps returning. 3/28/07 - Raphael Ketani. Mr. Tiss called to say that they started the recovery pump and have already collected a little oil. He said that they will keep an eye on things and keep me informed. 4/3/07 - Raphael Ketani. I spoke to Mr. Tiss (cell (917) 617-3894). He told me that now there are only occasional dime size spots of oil in the water. I asked him whether the tank system had ever been registered. He said he wasn't aware that it had. I told him to have the tank system tested and to register the tank. I told him that DEC needed a copy of the tank system results. He said he would have the testing done and register the tank. 4/10/07 - Raphael Ketani. Mr. Tiss called to say that they don't see any more oil spots on the water in the hole. I told him they can close the hole up and set a date to test the tank system and register the tank. He said he will do this. 4/27/07 - Raphael Ketani. Today I received a letter from Gerald Tiss of JLC Environmental regarding the site. The letter discussed the oil in the trench in the pump room, the collection of the oil with groundwater (approx. 3000 gals.), permission granted from DEC to backfill the trench after no more oil was visible, and a request by DEC to test the tank system. The letter also states that a manifest was attached for the liquids that were collected, but it was not included. 7/13/07 - Raphael Ketani. I made contact with Mr. Tiss. He said that the tank system passed once they replaced the vent pipe. However, Covenant House has not paid him for his work. So he wont submit the passing test report to DEC. Also, Covenant House has not registered the tank with the DEC. 10/4/07 - Raphael Ketani. I tried to get ahold of Mr. Tiss, but could only leave a voice mail on his cell phone. I checked the PBS database, but the tank wasn't registered. Mr. Tiss called back and said he still hasn't been paid. He said that all of the paperwork is ready to go. He will call them again. 11/29/07 - Raphael Ketani. I spoke to Mr. Tiss. He said that his client finally paid most of the money he was owed and so he released the paperwork to them. He said they are reviewing the documentation right now. Once they have determined that everything is satisfactory, then he will send me the paperwork. 1/9/08 - Raphael Ketani. I spoke to Mr. Tiss (cell (917) 617-3894). He said that Covenant House had received the document for their review months ago and he hasn't heard anything from them. He said he will call them again and ask what is happening. 1/25/08 - Raphael Ketani. Mr. Tiss called again. He said that he hasn't heard anything from Covenant House and they haven't paid him. I told him that I will send another letter to them with stronger language. 1/28/08 - Raphael Ketani. I sent a standard CSL with a 2 week due date to Bruce Henry, Executive Director, Covenant House (212) 613-0300. 2/12/08 - Raphael Ketani. To date, I have not received a response from Mr. Henry or anyone else at Covenant House by mail, e-mail, or phone. Therefore, I am sending out a stronger worded letter with a return receipt. I will give a due date of 3/3/08. The letter will state that legal action will be taken if there is no response by the due date. Randall Austin, Chief of the Spills Unit at Region 2, came up to me and told me to hold off sending the letter. He asked that I talk to Mr. Henry and try to find out why Covenant House is not responding. Mr. Austin said that if Mr. Henry doesn't cooperate, then I should contact our Div. of Legal Affairs. I tried to
get the phone number to Mr. Henry by contacting Mr. Tiss, but he said to contact Shawn at his office. Shawn told me he will find the number and give it to me. 2/13/08 - Raphael Ketani. I tried to contact Mr. Henry, but could only leave a message. 2/15/08 - Raphael Ketani. I tried to contact Mr. Henry, but could only leave a message. 2/19/08 - Raphael Ketani. I tried to contact Mr. Henry, but could only leave a message. 2/21/08 - Raphael Ketani. Today, I received a call from Ryan Quinn and a colleague of his from BOVIS Lend Lease. He said that he was responding to a request by David Gregorio (212) 613-0377 of Covenant House to resolve the matter of the missing documentation that DEC needs. He asked what the missing documentation was. I told him that DEC needed a report regarding the removal of the oil contaminated water with a disposal manifest, a timed tank system pressure or vacuum test report, and a PBS registration form with a copy of the deed and a check. They said that they will talk to JLC, their subcontractor, and try to straighten the matter out. I told them there still is the matter of the unregistered tank and that I will have to act on this violation. They said they understood.

2/22/08 - Raphael Ketani. As per a meeting between Lou Oliva, Regional Attorney for Region 2, Randall Austin, head of the Spills Unit, and myself on 2/20/08, I am submitting a Case Initiation Form to Mr. Austin for his approval and signature. 2/26/08 - Raphael Ketani. Mr. Ryan Quinn of BOVIS called to inquire as to whether DEC had received any documentation from JLC. I told him "No." He said he will talk to JLC. 4/8/08 - Raphael Ketani. I spoke to Mr. Tiss. He said that the PBS registration was sent to Albany with a check. He said the report was sent there, too. I told him that Region 2 needed a copy of the report. He said that he will send it to me. He said that the tank system passed the test. I asked him whether he had the phone number to BOVIS. He said that I would be better off calling Manhattan Demo and speaking to Mike at (917) 578-3874. He said that BOVIS hired Manhattan Demo and Manhattan Demo hired JLC. 7/23/08 - Raphael Ketani. I spoke to Mr. Tiss (917) 617-3894. I asked him where the investigation report was. I told him DEC still had an open spill case. He responded and sounded surprised. I told him that we needed a tank test report, a manifest for the contaminated water that was removed, and a PBS registration for the tank. He said that it was sent. I told him that the report and the PBS were sent to Albany. He said that the PBS was kicked back, but he resent it to Albany. He said he will send a copy of the investigation report and tank test results. 8/18/08 - Raphael Ketani. The case is being prepared for transfer due to a case realignment within the unit. The DEC needs to receive the investigation/remediation report and the revised PBS registration. 10/29/09 - Zhune. JLC sent a report dated 04/23/07 describing the oil remediation process that took place at Covenant House-460 W 41st street. At the conclusion of the remediation, approximately 3000 gallons of contaminated groundwater was removed from the subject property. The UST and line were pressure test and passed the test. A waste manifest for liquid collected is included in this report. Spill closed

- DEC Memo: Prior to Sept. 2004 data translation this spill Lead_DEC Field was "TIPPLE"8/19/04 work ongoing// report to be submitted to DEC once it is completed.10-06-05: NYCT was performing soil borings for the #7 line extension. Contamination was discovered in the boring in front of this location. See spill # 0404424. Boring log and notes in eDocs.
MCT.06/19/06: This spill is transferred from Mr. Koon Tang to Q.Abidi.Called to Mr. Michael Feeley (973)496-3467 left message to call me back regarding spill.11/06/04: Called Mr. Michael Feeley and left message to call me back regarding information of the spill.
-QA11/10/06: Called Mr. Mike Feeley he said to contact Ms. Rose Pelino (Environmental Management)AZIS Company at (973)496-3447. Called Ms. Rose Pelino and left message to call me back.Mr. Philip Angle (Environmental Management, Parsippany, NJ) called me back and
said they removed the tank in August 2005. He will mail me the soil sample report. -QA01/22/07: Called Mr. Phillips Angle at (973)496-6942 and left message to call me back regarding soil sample report of the spill. -QA02/05/07: Called Mr. Phil Angle to discuss regarding information of this spill. I requested him to send me Electronic version Pdf of the report and owner’s name address phone number and e-mail address. He said he will send these informations very soon. -QA02/14/07: Reviewed report of UST Closure by Langan Engineering and Environmental Services. At the time of removal of tank, Excavated two drums of petroleum contaminated soil (500 pounds in quantity()). After taking End-point samples, Excavated area has been filled by clean soil. All end-point soil samples are clean. On the basis of provided data of Langan Engineering DEC staff closed the spill. Approval to close the spill has been taken from Mr. Jon Kolleeny supervisor. -QA

Remarks:
soil borings as part of a phase 2.the spill is beleived yo be associated with under ground fuel oil tank and NYC DOB records state it was closed in place under direction of NYC fire dept. in 1993 and the tank is under the side walk not in the buildings basement

MANHOLE 43263 (Continued)

DEC Memo: e2mis # 153525G, Williams#78618 Senior Field Operator found approx. 10 gallons of unknown oil on approx. 200 gallons of water in M43263. The source and cause of the spill is unknown at this time. There was no fire or smoke involved with this spill. There were no sewers or waterways affected. There is no sewer connection or concrete sump in M43. There are no substantial cracks that are visible. There will be two samples taken, one for PCBs and one for ID. G. Williams#78618 used absorbent pads in M43263 to try to pick up some of the unknown oil. The cleanup is pending. L. Walpole#41785 FOD Supervisor changed the reported amount from 10 gallons to 5 gallons of unknown oil. Lab Sequence Number: 04-03982-001: Insufficient amount of sample extracted to perform oil identification. Lab Sequence Number: 04-03981-001: PCBs < 1 ppm On 5/24/04 at 06:05 J. Pelzer # 06470 Underground/Cleanup supervisor called to report that the cleanup was completed at 05:30. There was no visible sign of the source as per J. Pelzer.

Remarks: 10 gallons of unknown oil on 200 gallons of water.

CID: 444
Water Affected: Not reported
Spill Source: Commercial/Industrial
On 2/12/04 at 10:16 F. Versaggi # 11945 of Substations called to report that he found a spill of blue gue (dielectric fluid) at 10:10. This was at 5 W. 41 St. (W42 St Substation). He reports that 4 oz. of fluid came from the "B" phase pothead on feeder 16M81 (41 north position). The substance is on the metal floor and contained in the cubicle. He found it while doing maintenance on the feeder. He hung a tag # S-01293. He is going to turn this into the I&A dept. for repairs & a cleanup. He states that as per generated knowledge it is a non-pcb substance. No sewers or waterways were affected. 3/4/04 I&A crew arrived on the 4-12 shift and repaired pothead and cleaned up spill used pads and simple green. Leak is no longer active. Spill can be closed.

Remarks:
4 OUNCES SPILLED FROM B PHASE POT HEAD, PENDING CLEAN UP, CONTAINED ON A METAL FLOOR: NO SMOKE OR FIRE WATERWAYS
PIPE LEADING TO SELECTOR COMPARTMENT LEAKED APPROX 1 QT. FLUID. CLEAN UP PENDING. CON ED REF #160727

DEC Memo: e2mis no 159461 J.Pitre#12477 reported the can on Capacitor Bank#1 had
blown up, there was a spill of 16 oz. total, 12 oz. were in the metal
compartment of the Capacitor Bank#1 and 4 oz. went in to a drain.
J.Pitre#12477 does not know were the drain leads to, he is in the
process of trying to find out. There was a release into a drain. A
yellow environmental tag numbered #005428 was hung on Capacitor
Bank#1. J.Pitre#12477 states that a drain block was put in place to
prevent any further release into the drain and contaiment devices are
in place to prevent leakage from the metal compartment. The cleanup
is pending equipment deenergization and repair or replacement of the
can. 06/28/05 10:17. J.Pitre#12477, notified the control center on
06/28/05 at 10:15hrs. to report that the drain is connected to a
combined sewer. Logger: M.Casalta#12684. 6/28/05. As per my
inspection. The operator noticed a sheen on the rainwater that went
into the combined sewer drain. He put a drain blocker on the drain
and put absorbent pads on the oil. The leaking capacitors were
replaced with new ones and the oil was cleaned with pads and simple
green. I inspected the drains and found no sign of oil.
P.Keelan Closed. 9-1-05. George Breen

DEC Memo: e2mis no 159444J Plitre found 16 oz. of dielectric fluid on asphalt that leaked from Capacitor Bank#5. The spill is contained on the asphalt. There was no sewers or waterways were affected. The source and cause of the spill is a leak from the can on Capacitor Bank#5. A yellow environmental tag numbered #0005427, was hung on Capacitor Bank #5. There was no initial cleanup action taken. The cleanup is pending feeder deenergization and repair of the leak by Substation Maintence.6/28/05. On the 11-7 shift last night, substation maintenance removed the leaking capacitor and replaced it with a new unit. the oil was cleaned up using simple green and oil pads. P. Keelam. Closed. 8-31-05. Joe Pitre #12477 reported to W. Lee at 09:29 hrs. that he found at 09:20 hrs. approx. one (1) gallon of transformer oil had spilled onto the concrete pad and bluestone from a 55 gallon drum located at the West 42nd Street Substation. The street address of the substation is 521 W. 42nd Street. The drum was in place as an engineering control collecting oil leaking from the secondary throat of Transformer #5. There was water and oil in the 55gal drum. The water froze in the drum causing the drum to crack, which in turn spilled the water and oil onto the concrete pad and bluestone. Only approx. 1 quart of oil spilled onto the bluestone and the remainder spilled onto the concrete pad. The source of the spill is the oil from transformer #5 and the cause is a leak from a cracked steel drum. No sewer or waterway was affected. No samples taken since there is generator knowledge of the spill. Prior PCB historical data is less than 1.0 ppm as per lab sequence #03-05654, dated 7/8/200. The initial cleanup action was started at 09:20 hrs. Maintenance will use Citrus Clean to clean up the spill and they will put the cracked drum into another containment drum. The affected bluestone will be removed and disposed of properly. The S/S Operator will call back when the cleanup is completed. 13:08 hrs. that the cleanup was completed at 11:20 hrs. The active spill will remain open under the original incident. This spill from the secondary containment can be closed out. amd

A DRUM WAS BEING USED AS AN ENGINEERING TOOL COLLECTING OIL THAT WAS LEAKING TRANSFORMER #5 WATER IN DRUM FROZE CRACKING THE DRUM. SPILLED UNTO BLUESTONE AND CONCRETE PCB IS LESS THAN 1 PART PER MILLION. NO SMOKE, FIRE, WATERWAYS OR PRIVATE PROPERTY. CON ED #151982

DEC Memo: Prior to Sept, 2004 data translation this spill Lead_DEC Field was
"O'CONNELL"e2mis no. 144-526:8-13-02 @ 15:04E Alvarado #18791 reports
that while doing an inspection @ w 42 st sub station, he discovered
1 oz of insulatum had leeked from c phase pot head in cap bank #5
onto the concrete floor. No smoke or fire was or is involved. No
sewer or waterway affected. No injuries. Weather had no affect. No
measuring device was used to determine the amount of the spill.Source
of spill is the pot head and the cause is unknown. No private
property affected. Environmental yellow tag #s00290 was applied. No
water, askarel or sump involved. No substantial cracks. No
dielectric filled feeder in the structure. No samples to be taken. No
initial cleanup action taken. Cleanup is pending removal of the cap bank from service. T. Garcia #80482, Associate Specialist, SSO - at 11:33 a.m. 9/9/2002, I was informed by Patrick Keelan, Sr. Environmental Specialist #19995 of SSO that the leaking unit was replaced. This incident can be CLOSE out. This information is per Michael Butchar, Supervisor SSO #20259 email also dated 9/9/002.

Remarks:
con ed # 144526 no to all 5 questions c-phase pot head on cap bank #5 shut is required to repair that will scheduled for a later time

DEC Memo:
Prior to Sept, 2004 data translation this spill Lead_DEC Field was
"O'CONNELL"NOTE: This is the "Master Spill Number" for Transformer
#10. It is to remain open until all repairs on this equipment and
remediation are completed. (JHO, 3/24/06)8/1/08: As per 9/18/06
agreement between NYSDEC and Con Edison, approved engineering
controls (valve bags, drip pans, absorbents, etc.) are in place and
are being maintained for minor drips and small leaks. See eDocs for
final emis report. Close out. (JHO)-----------------------------Con Ed
e2mis #137021 (master):Frank Versaggi #11945, Substation Operator
found at 13:50 hrs. approx. 1/2 gallon of transformer oil had leaked
from the selector compartment of transformer #10 onto the concrete
pad and bluestone at the West 42nd Street Substation. It appears that
the leak is coming from the selector compartment door. No samples
taken due to generator knowledge and previous PCB history which
indicates < 1.0 ppm as per lab sequence #99-09978. Substation
maintenance on location and started the cleanup at 14:00 hrs. All
State Power Vac was called in to remove the contaminated bluestone.On
May 10, 2002 NYSDEC O'Connell and Foley, along with Con Ed Hanebuth,
Susco inspected this leak and found that the leak had not been
repaired. This continues to leak into containment.------------------------e2mis no. 151992 (sub):2/5/04
@ 11:45 hrs.Joe Pitre #12477, Senior Substation Operator found at
10:00 hrs. approx. 2 1/2 gallons of transformer oil leaked from the
selector compartment of Transformer #10. He discovered the leakcoming
from one of the steel cover plates on the Selector compartment. He
believes that the plate is loose. The oil leaked onto the concrete
pad and the bluestone. Approx. 1/2 gallon leaked onto the bluestone.
Prior PCB historical data indicated less than 1.0 ppm as per lab
sequence #03-05654, dated 7/8/03. The cleanup was started at 10:15
hrs. by Substation maintenance personnel. Update: 2/5/04Joe Pitre
#12477 reported at 13:08 hrs. that the cleanup was completed at 12:10
hrs. Substation maintenance is presently investigating how to repair
the leak.

- **Registry ID:** 110004431044

**Environmental Interest/Information System**

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

- Spiller Name: ANDREW KELLY
- Spiller Company: CONSTRUCTION SITE
- Spiller Address: WEST 42 /DIER AVE
- Spiller City, St, Zip: MANHATTEN, NY
- Spiller ID: 001
- Contact Name: ANDREW KELLY
- Contact Phone: (718) 595-4761
- DEC Memo: This was a formal spill call for a site Ryan Piper “unofficially” was asked to visit 2 days ago. At the time Ryan said the site was a typical construction site and the “green” water was actually clear water in a puddle with a greenish cement dust layer on the bottom of the puddle. No smell, no spill found. Closed
- Remarks: AT THIS CONSTRUCTION SITE FOUND GREENISH WATER, UNSURE WHAT IT IS WOULD LIKE DEC TO LOOK AT

**Material:**
- Site ID: 357681
- Operable Unit ID: 1114954
- Operable Unit: 01
- Material ID: 2105013
- Material Code: 0066A
- Material Name: unknown petroleum
- Case No.: Not reported
- Material FA: Petroleum
- Quantity: 0
- Units: Gallons

benzo(a,h)anthracene were detected in sample SB-05 (3.5-4.5) and SV. benzo(b)fluoranthene, benzo(k)fluoranthene, chrysene, benzo(a)pyrene, fluoranthene, pyrene, benzo(a)anthracene, Phenol, Methylphenol, naphthalene, debenzofuran, phenanthrene, sulfuric acid was also stored on the western periphery of the site. 2. Gasoline storage tanks were present on the site between 1930 and 1950. 3. Open leaking gasoline storage tanks were encountered during construction activities, a total of 3 underground storage tanks (USTs) of unknown size were encountered along with petroleum-impacted soil. Verizon is leasing the property from Rockrose. Please send all correspondence to Rockrose Development Corp. 06/10/10. Zhune spoke to Jeff Bohlan from Envirotech. He said DEC will get the final report by the end of next week. The Phase I ESA completion in October 2005 identified the following recognized environmental condition (REC): 1. Prior uses of the site include the storage of coal and the operation of a truck washing station.

DEC Memo: 03/01/09- Zhune spoke to jeff Bohlan from Envirotech 631-924-3001. He sent the following e-mail: EnviroTrac Ltd. is working on behalf of Verizon New York, Inc. for the construction of a FiOs Garage at the subject property. During construction activities, a total of 3 subsurface soil samples were collected within the unsaturated zone at each soil boring location exception of SB-01. The analytical soil results indicated that sample SB-08(4-5')showed VOC's ( benzene 70 ug/kg, and total xylenes 4100 ug/kg) exceeding the RSCO. SVOC's ( phenol, Methylphenol, napthalene, debenzofuran, phenanthrene, fluoranthene, pyrene, benzo(a)anthracene, benzo(b)fluoranthene, benzo(k)fluoranthene, chrysene, benzo(a)pyrene, benzo(a,h)anthracene were detected in sample SB-05(3.5-4.5) and SV.
CONSTRUCTION SITE (Continued)

550-gallon gasoline USTs, (1) 550-gallon diesel UST, one(1)330-gallon gasoline UST, 20-gallon gasoline UST and one (1) 10-gallon gasoline UST and all subsurface piping were removed from this site. Following removal of petroleum-impacted soil a total of eight(8) post-exavcation soil samples were collected for the (6) 550-gallon gasoline at each sidewalk and two bottom locations of the UST excavation. (4)soil samples were collected from the (4) varying sized UST at each sidewalk. No bottom samples could be collected due to the presence of bedrock at the bottom of the varying-sized USTs. The analytical results indicated no VOCs detected above the NYSDEC (TAGM)#4046 RSCOs for samples collected from the excavation of the aix(6) 550-gallon gasoline UST. No VOCs were detected for the (4)samples collected from the excavation of the (4) mixed size UST excavation. SVOCs (Benzo(a) anthracene 3,400 ug/kg, Benzo(a)pyrene 3,200ug/kg, Benzo (b) fluoranthene 3,600ug/kg, Benzo (K) fluoranthene 1,300 ug/kg, Chrysene 3,000ug/kg, Dibenzo(a,h)anthracene 560 ug/kg) were detected at low concentrations slightly exceeding RSCOs in the soil sample collected from the sidewalk #2 and SVOCs(Benzo(a)pyrene 310 ug/kg) were detected at low concentration slightly exceeding RSCOs from soil sample collected from the sidewalk #3. Groundwater was not encountered during excavation activities. spill Closed.

**DEC Memo:** Prior to Sept, 2004 data translation this spill Lead DEC Field was "FOLEY"Con Ed e2mis #138519 Notes: 7-26-01 @ 08:30. This report was taken by R Pagano #48703 and was logged by J Moran #01182. S Tercovich reports that while inspecting Transformer #4 located at w 42 st sub station at 521 w 41 st. he discovered 4 gallons of dielectric fluid had leaked from a nitrogen relief valve on the transformer. Spill is on concrete transformer pad and bluestone. Structure does have oil filled equipment. There is a dielectric filled feeder in the structure. Chem lab to take samples. Historic samples show 3ppm PCB, Lab sequence # 95-05859. Cleanup is in progress. Update 7-26-01 @ 09:40 . S Tercovich #12959 reports that cleanup is complete. 4 gallons of liquid removed and 100 pounds of bluestone removed in a 20 gallon drum , 1 drum of ppe and debris. Oil absorbent pads and rags used with simple green to do cleanup. Spill is not being closed out, pending lab results. UPDATE 7/27/2001 @ 01:15 HRSLab results for Lab sequence # 01-07713-001Date Approved - 7/27/2001. Date Received and sampled - 7/26/2001. To: Hanebuth, Stuart
Spill was repaired on 26 July 01. Pressure relief device in nitrogen cabinet and nitrogen regulator was replaced. Please close out.

On May 10, 2002 NYSDEC O'Connell and Foley, along with Con Ed Hanebuth, Susco inspected this leak and found that the leak had been repaired. There was no apparent staining on the bluestone associated with this incident.

Remarks:

defective relieve valve on transformer. con ed # 138519. cleaning pending test results.

DEC Memo: Prior to Sept. 2004 data translation this spill Lead_DEC Field was "O'CONNELL"Con Ed e2mis #132819:08/10/00 10:18 S. Tercovich #12959 reports while taking daily oil tank readings, found 1-qt. of Transmission feeder oil on steel floor in Oil Pump House #1 leaking from Pump #2, at W. 42 st. Sub station, fdr-38m41. Have drip rate of 3-5 drops per min. Installed catch pan & pads to contain. No impack to soil/bluestone, waterway or sewer. No water involved. No sample taken, pending chemlab. Installed spill tag #s-01265. No history of pcb at this time.08/10/00 11:07 reported to W.P. Murphy #76378 at this time.08/10/00 11:10 Tercovich reports PCB history of <1ppm as per lab seq. # 95-00962. Inspected Pump House #1, Pump #2 on 23-AUG-2000 0545. New Pump in place. Leak repaired spill cleaned up. On May 10, 2002 NYSDEC O'Connell and Foley, along with Con Ed Hanebuth, Susco inspected this leak and found that the leak had been repaired. S. Hanebuth - 85259

Remarks: 1 qt of fluid leak - is an active leak - 3-5 drops per minute - sample will be taken - leak was from pump #2-feeder 38m41con ed #132819

Willing Responsible Party. Corrective action taken.

Prior to Sept. 2004 data translation this spill Lead_DEC Field was "O'CONNELL" Con Ed e2mis #128348:10/09/99 1428 HRS MICHAEL ASARO #17861 SUB STATION OPERATOR REPORTS TO MCC MICHAEL CROWE #71453 8 OUNCES OF OIL UNKNOWN TYPE, LEAKED FROM BANK #6 TAP CHANGER GEAR BOX AT W42ND ST SUB STATION 521 W41ST ST -- CONTAINED -- LEAKED ONTO CABINET AND CONCRETE -- PCB SAMPLE TAKEN BY STEVE PETROSINE #16348 -- CLEANUP AND REPAIRS IN PROGRESS -- LEAK WAS FOUND WHILE MAKING REPAIRS ON BANK #6------HUNG SIGN #S0127410/09/99 1500 HRS CIG MR CESARE NOTIFIED 15-NOV-1999 SUPERVISOR CHASE REPORTS THAT A NEW GASKET WAS INSTALLED, A TEST WILL BE PERFORMED TO VERIFY THAT THE REPAIR IS HOLDING. HE WILL REPORT TO ME ON THE TEST RESULTS. 16-DEC-1999 15:00 HRS STEVEN TERCOVICH # 12959 REPORTS THAT TRANSFORMER # 6 IS OUT OF SERVICE FOR REPAIRS OF OIL LEAKS AND WORK IS IN PROGRESS AS OF NOW. 22-DEC-1999 Transformer Group Supervisor Bobby Kennedy reports that the repair has been completed. The gear box was taken apart. The gaskets were replaced with Garlock gaskets and Neoprene was applied to reduce the possibility of further leaks. The transformer is scheduled to go back in service on 12/23/99. On May 10, 2002 NYSDEC O'Connell and Foley, along with Con Ed Hanebuth, Susco inspected this leak and found that the leak had been repaired. There was no apparent staining on the bluestone associated with this incident.

**Remarks:**
8 oz spill of unk oil - cleanup in progress 128348

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

any residue or contaminated soil, waste or other debris resulting from
the cleanup of a spill, into or on any land or water, of acutely
hazardous waste

Owner/Operator Summary:

Owner/operator name: Not reported
Owner/operator address: NOT REQUIRED
Owner/operator country: US
Owner/operator telephone: (212) 555-1212
Legal status: Private
Owner/Operator Type: Operator
Owner/Op start date: Not reported
Owner/Op end date: Not reported

Handler Activities Summary:

U.S. importer of hazardous waste: No
Mixed waste (haz. and radioactive): No
Recycler of hazardous waste: No
Transporter of hazardous waste: No
Treater, storer or disposer of HW: No
Underground injection activity: No
On-site burner exemption: No
Furnace exemption: No
Used oil fuel burner: No
Used oil processor: No
User oil refiner: No
Used oil fuel marketer to burner: No
Used oil Specification marketer: No
Used oil transfer facility: No
Used oil transporter: No

Historical Generators:

Date form received by agency: 01/01/2006
Site name: MERCEDES-BENZ MANHATTAN INC
Classification: Conditionally Exempt Small Quantity Generator

Date form received by agency: 07/14/1999
Site name: MERCEDES-BENZ MANHATTAN INC
Classification: Small Quantity Generator

Date form received by agency: 03/22/1994
Site name: MERCEDES-BENZ MANHATTAN
Classification: Large Quantity Generator

Date form received by agency: 02/29/1992
MERCEDES-BENZ MANHATTAN INC (Continued)

Site name: MERCEDES-BENZ MANHATTAN
Classification: Large Quantity Generator

Date form received by agency: 10/15/1985
Site name: MERCEDES-BENZ MANHATTAN INC
Classification: Large Quantity Generator

- Waste code: D001
- Waste name: IGNITABLE WASTE

Facility Has Received Notices of Violations:
Regulation violated: Not reported
Area of violation: LDR - General

MERCEDES-BENZ MANHATTAN INC  (Continued)

Site Description: Site Location: The site is located at 536 West 41st Street in New York City, New York County and consists of one tax parcel. Historically this was a number of lots which were recently consolidated into one lot which is 2.296 acres in size. The site is located in the Hell’s Kitchen neighborhood. Site Features: The site has a one to two story brick and concrete building with a partial basement and an asphalt-paved parking lot. Unused Amtrak tunnels and the No.7 train extension tunnels are located approximately 25 to 30 feet beneath the ground surface. It is bordered by a utility building to the north, a church and abandoned gas station to the east, bus parking to the south, and a NYC Transit Authority bus depot to the west. Current Zoning and Land Use: The on-site building is currently unoccupied. The site is zoned C6-4 which is a mixed commercial/residential zone. Mixed use residential/commercial sites are located to the west of the site. Commercial buildings are located to the north while to the east are two churches and an abandoned commercial site. North east of the site are condominiums and a police station. Past Use of the Site: The site uses have included a new car dealership, a bottling company and warehouse, an auto repair station, and a filling station in the past. Site Geology and Hydrogeology: The surface topography slopes down to the east and is approximately 20 feet above mean sea level. Due to the topography, it is expected that groundwater would flow from the southwest towards the Hudson River. However, the groundwater flow can be affected by factors such as bedrock, fill and other factors. Depth to groundwater ranges from 13 to 19 feet below ground surface. Depth to bedrock ranges from 4 feet to 19 feet below ground surface. Depth to bedrock ranges from 4 feet to 19 feet below ground surface.
on the west side of the site to 19 feet on the east side. Bedrock consists of schist with granite intrusions. Overburden is historic fill, underlain in some locations by silts and sands at depths of 7 to 19 feet below grade.

### Env Problem:

**Nature and Extent of Contamination -** There have been three reported spills on the Site since 1996, including diesel and hydraulic oil. Soil - The BCP investigation soil sampling results indicate seven semi-volatile organic compounds (SVOCs) exceed the NYSDEC unrestricted soil cleanup objectives (SCOs). Most notable of the SVOCs was benzo(a)pyrene, which slightly exceeded the commercial SCO of 1 part per million (ppm) at two locations with a maximum concentration of 1.33 ppm. Metals exceeding unrestricted SCOs were detected in 10 of 11 locations sampled during the RI. The primary metal contaminant was lead, found above unrestricted SCOs in 8 of the original 11 samples and all 14 supplemental lead samples. Maximum lead concentration was 6590 ppm, which exceeded both the unrestricted SCO of 63 ppm as well as the commercial SCO of 1000 ppm. PCBs also exceed the unrestricted SCO of 0.1 ppm at two locations, with a maximum concentration of 0.348 ppm. The pesticide 4,4'-DDT exceeded the unrestricted SCO of 0.0033 ppm at 6 locations with a maximum concentration of 0.0826 ppm. 4,4'-DDD and 4,4' DDE also exceeded unrestricted SCOs in one location. No VOCs exceeded the unrestricted SCOs, although exceedances are suspected due to the presence of tetrachloroethene in the soil vapor. Data does not indicate any off-site impacts in soil related to this site.

**Groundwater -** Groundwater slightly exceed groundwater standards for one SVOC (2,4-dichlorophenol at a concentration of 8 parts per billion (ppb) compared to the standard of 5 ppb) and several common metals. PCBs, pesticides, and VOCs did not exceed groundwater standards. Data does not indicate any off-site impacts in groundwater related to this site.

Soil Vapor - Tetrachloroethene (PCE) was detected at a maximum concentration of 120 ug/m3 in one location near the site boundary. Data does not indicate any off-site soil vapor impacts related to this site.

### Health Problem:

The site is currently vacant and entirely covered with building foundations. Therefore, contact with contaminated soil or groundwater is not expected. Contaminated groundwater at the site is not used for drinking or other purposes and the site is served by a public water supply that obtains water from a different source not affected by this contamination. Volatile organic compound in the groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into overlying building and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. Because the site is vacant, the inhalation of site-related contaminants due to soil vapor intrusion does not represent a current concern. Furthermore, environmental sampling indicates soil vapor intrusion as a result of this site is not a concern for off-site buildings.

need to send CSL4/4/06- DEC spoke w/ John from Ambient group, they
will be ripping up slab and determine conditions. report will be sent
along w/ site plan, analytical conclusions and
reccomendations.4/20/06- DEC Piper spoke w. John, they will be
excavating cont. materials and cpllecting endpoint/sidewall
samples.4/28/06- DEC Piper spoke w/ ERic pf Emtke. They have taken
over for Ambient Group. ERic will provide site plan and RAP for
review and comment.5/10/06- DEC Piper reviewed RAP and was contacted
by Emteque to expedite approval. DEC approved following inclusion of
1- must include the collection of at least one groundwater sample to
be analyzed for EPAMethod 8260 and 8270. A contingency plan for the
occurrence,sampling, treatment and/or disposal of contaminated
groundwater will be added to the RAP.2- Installation of a vapor
barrier prior to pouring new slab. 3- DHL enter into a stipulation
agreement with the State. Need to send STIP Agreement toEMTEQUE
Corporation505 Eighth Avenue, Suite 900New York, NY 10018Attn: Eric
TelemaqueBUT ADDRESS IT TO:DHL Express (USA), Inc.145 Hunter Drive,
Bldg. 1005-BWilmington, OH 45177Attn: Shari Hufford6/5/06-DEC PIPER-
DEC Piper spoke w/ Eric at Emteque, As per conversation limited end
point sampling was performed on Saturday, more samples will be taken
this afternoon and final samples will be collected
Wednesday/Thursday. he has found additional tanks in the northeast
corner of the 505 10th Avenue site twelve (12) 550s which were
encased in poured concrete and do not appear to have leaked, however,
endpoint sampling will be performed as a confirmation. The existing
heat oil tank was also uncovered, found to be corroded on the top of the
tank. This tank will be cleaned, removed and endpoint sampling
also performed in this area. 6/8/06- DEC Piper recevied e-mail from
Eric T. at Emteque. E- mail stated specifically that it appears that
the house tank has been leaking no. 4 oil for years into the bedrock.
Where weathered bedrock has been encountered they are removing the
soil. In some area bedrock cannot be removed using conventional
excavation. This condition occurs in the northwest corner of the
site. As they moved towards the east side of the facility they have
uncovered another 16, 550 gallon tanks in addition to the 13 - 16
they thought they knew about. they have encountered gasoline
contamination to 10-12 feet and then they are into bedrock. Again the
direction to the contractor has been to excavate to bedrock in these
areas.6/14/06- DEC Piper receivbed e-mail from eric T requesting
extension on STIP. Considering that the project is moving along and
all associated parties are taking efforts I will grant you two (2)
additional weeks on the signed STIP. The deadline is now Thurs. June
29, 2006. 6/29/06- DEC Piper received RAR from Emteque. The program
included the removal of 29- 550 gallon UST's, 2- 3,500 gal gasoline
UST's, and 1- 8,000 UST. Soils endpoints are acceptable though clean
endpoints were not obtainable below the fuel oil tank. DEC requests
bedrock wells outside building adjacent to fuel oil tank. See e-docs
for full report.1/10/07- DEC Piper reviewed groundwater analyicals.
Groundwater contamination is evident. referred to remediation.1/7/10
- Obligado - This spill has been transferred to Obligado from
Brevdo.2/22/10 - Obligado - After review of the file I contacted Eric
Telemaque from Emteque. I let a message to call back the DEC.2/23/10
- Obligado - I spoke with Mr. Telemaque. He was under the impression
that the spill was closed. I told him it was still open. He said he
thought he received a NFA letter. I asked him if they installed groundwater monitoring wells, and he said yes, there were three. I asked him to please submit documentation of the wells and sampling to the Department. He will review his files and archives and call me back tomorrow. 6/14/10 - Obligado - I sent a letter to DHL Express with an electronic cc to Eric Telemaque requiring the sampling of the 3 monitoring wells at the site and submission of a report to the Department within 60 days. 8/5/10 - Obligado - Steve Sohnly called from DHL 859-391-5204. He said he is going to track down the report of the ground water sampling and send it to me.11/5/10 - Obligado - I received a voice mail from Eric Telemaque. They attempted to sample the wells and 2 of the 3 wells had free product. Thicknesses were 6” and 2’. He thinks its #4 heating oil because the #4 heating oil tank had holes it it. He will submit a letter report recommending monitoring and vacuum extraction. 6/7/11 - Obligado - I spoke with Eric Telemaque. He will submit a report documenting well gauging and VEFRing product. I requested a site plan showing well locations as well as to superimpose former source areas which were excavation areas and UST areas. He said I should expect a report next week.

7/27/11 - Obligado - I reviewed a letter report documenting gauging and product recovery. Only 0.005 ft product in one of three wells. I emailed letter to DHL and Emteque requiring monthly gauging and quarterly sampling. A quarterly monitoring report is due in 90 days.

10/6/11 - Obligado - Quarterly report submitted. The north well had free phase product with thickness of 0.05 ft, and was not sampled. The south well had total VoCs of 1690 including benzene concentration of 1300 ug/L. The east well had 931 ug/L. The south and east wells had low level SVOC exceedences as well. 10/11/12 - Obligado - I sent an email to Jay Hawkes requesting subsequent quarterly reports.10/2/13 - Obligado - I sent an email to Jay Hawkes, Eric Telemaque, Hugh Danielson of DHL requiring submission of overdue reports.10/3/13 - Obligado - I received a response from Mr. Danielson of DHL. He said he thought the matter was resolved. I told him the spill case is still open and there are 3 wells at the site, one with free product and 2 with groundwater contamination.2/26/14 - Obligado - Sue to lack of cooperation and untimely report submissions, I sent an Stipulation Agreement to Mr. Danielson requiring signature within 30 days of receipt.2/27/14 - Obligado - I spoke to Hugh Danielson. He said the DHL address has changed. New address is DHL Express (USA), Inc.236 Wendel H. Ford Blvd Erlinger, KY 41018 Attn: Hugh Danielson 3/21/14 - Obligado - I had a conference call with DHL and consultant WCD. We discussed STIP and CAP requirements. According to WCD consultant Wes, he gauged all 3 wells recently and found product in all three wells with a max thickness of 0.3 ft. They will need to delineate and recover product to the extent feasible and demonstrate reduction in contaminant levels. After the call, I received an email from Hugh danielson stating that he sent the signed STIP and that I would receive it Monday.4/3/14 - Obligado - STIP executed by Lannon on 3/31/14 - Emailed copy to Hugh Danielson and Wes.4/28/14 - Obligado - Phone call from Andreas Eisenburg. He gauged the site on the 16th. All three wells have product. Well # 3 had the most product with 0.3 ft. Samples were GC fingerprinted. He sent me a summary email and request an extension for the submission of report due to delay in surveying. I sent approval email for extension.

Lot Remediation Date: Not reported

Description: Window Wall Attenuation & Alternate Ventilation
Lot Remediation Date: Not reported
ON 05/29/02 at approx. 04:55 found approx. two gallons of what looked like oil floating on top of approx. ten gallons of water that had a sheen and smelled like raw sewerage. There is a sewer connection with a sump pump, which was not running as was unplugged by employee. Release to the sewer is unknown at this time. Two samples were taken oil id and PCB. Update 5-29-02 @ 13:40Lab Sequence Number: 02-04927-001 Insufficient amount of sample extracted to perform oil identification. Update 5-29-02 @ 14:39Lab Sequence Number: 02-04924-001 PCB <1 ppm. UPDATE: 9/03/0 Mike Reiter reported at 13:05 hrs. on 5/31/02 that this vault was cleaned by Clean Harbors. Approx. 600 gallons of liquids (oil & water) was removed from the vault. The vault was washed with 5 gallons of a citrus cleaner and then power rinsed.

Prior to Sept. 2004 data translation this spill Lead_DEC Field was *TIPPLE*11/22/02 Rommel - duty officerContaminated soil letter mailed requiring submittal of summary report before 1/15/02.3:59 Spoke to
Henry Gold Strategic Environmental Solutions, Suite 1500, 118-35 Queens Blvd, Forest Hills, NY 11375 fax: 718-520-8306- who is working for the owner of the property, Fred Howard, Howard International, 500 W37th Street, NY, NY 10018 in association with a pending property transaction. They encountered contaminated soil and what appears to be two 550 gallon (possibly diesel) USTs at the property. Mr. Gold believes that there was a Phase I Assessment completed (by another company) that indicated that either a garage or a car rental facility was previously located at this property. Henry will register the tanks prior to removal on Monday and will submit the results of the subsurface investigation to Michelle Tipple. 4/25/2003 Site Investigation and Tank Closure report submitted April 2003 by Strategic Environmental Solutions reviewed, NFA letter sent with caveat that health and safety plan necessary for future excavations on this property. 4/30/2003 SAME AS SPILL # 0203762---BOTH #S CLOSED while doing a sub surface investigation contaminated soil was found & as they investigated they found 2 improperly abandoned tanks on the property that were not known about.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

UNOCCUPIED GARAGE (Continued)

Spiller Company: 001
Contact Name: MARK GODICK
Contact Phone: (914) 949-7336
DEC Memo: 9/6/05-Vought-Desk Duty Officer-Sent out groundwater contamination letter to owner on spill report. Upon reception of report determination will be made whether gasoline or fuel oil contamination so project manager can be assigned. 4/26/06 - Austin - AKRF submitted a supplemental Phase 2 (dated 1/18/06), a RAP, and a HASP (both dated 3/1/06) for this site. Documents and project transferred to Ketani for review and follow up - end 4/26/06 - Raphael Ketani. Today I received the 11/9/05 Phase II Environmental SIR, the 1/18/06 Supplemental Phase II Environmental SIR, the 3/1/06 Remedial Action Plan and Construction HASP for the site. 4/27/06 - Raphael Ketani. Today, I sent out a letter approving both SIRs and the RAP. In addition, the letter stated that 2 additional groundwater monitoring wells should be installed and monitored for 2 rounds of sampling. Then a report must be issued with the results. 7/5/06 - Raphael Ketani. I tried to reach MarkGodick of AKRF (914) 949-7336 regarding progress at the site, but could only leave a message. 7/10/06 - Raphael Ketani. Mr. Godick called to say that they are still doing source removal, but the wells will probably not be installed until September when excavation will take place and be completed. I told Mr. Godick that would be fine. 8/17/06 - Raphael Ketani. I spoke to Mr. Godick at his NYC number (646) 388-9534. He said that they are not scheduled to remove the soil and excavate down to bedrock until some time in September. He said he will keep me posted. 9/7/06 - Raphael Ketani. I visited the site after work hours. I could not get into the site, but took 3 pictures. Drilling and blasting is taking place at this time. Part of the site is very deep. Next to one building that is on West 39 Street they are drilling and blasting. The rock is granite and looks to be very hard. I did not see any signs of groundwater. 4/26/07 - Raphael Ketani. I tried to reach Mr. Godick to discuss the groundwater issue and the coming report, but could only leave a voice mail. Mr. Godick returned my call. We discussed the groundwater and report issues. I told him that the site doesn’t seem to have any water and I asked whether he was using well points to keep it dry. Mr. Godick said that the site is completely dry naturally. He has not had any groundwater issues. He added that all of the soil and historical fill, and tanks were removed a while ago. He said he will send the site completion
report, anyway, because he has to send it to DEP. I told him that would be good for our records. I told him DEC is closing its spill case today and that I will send DEP a letter just to keep them in the loop. He said to send the letter to Gary Heath, NYC DEP, 59-17 Junction Blvd., Flushing, NY 11373.

I composed a draft closure letter and submitted it to Randall Austin, Chief Spills Unit Region 2, for approval. Based upon my site inspection on 4/24/07, the Phase II SIR, the Supplemental Phase II SIR, and my conversation with Mr. Godick today, I am closing the spill case. However, DEC is holding off sending the NFA letter until the closure report is received, as per Mr. Austin’s instructions.

5/23/07 - Raphael Ketani. I tried to reach Mr. Godick to remind him to send the closure report, but I could only leave a voice mail. 6/25/07 - Raphael Ketani. I spoke to Mr. Godick and asked him where the closure report was. He said that they still haven’t finished installing the vapor barrier. He added that once they’re finished with this and the rest of the foundation work, then the closure report will be written and sent. 7/20/07 - Raphael Ketani. There has been no communication from Mr. Godick, nor the receipt of the closure report. So I am still holding off sending the NFA letter.

Remarks: Contam. found during a phase 2 investigation. Suspected UST in that area. Groundwater was affected. Any kind of clean up will be pending the investigation.

- **Waste name:** THE FOLLOWING SPENT HALOGENATED SOLVENTS: TETRACHLOROETHYLENE, METHYLENE CHLORIDE, TRICHLOROETHYLENE, 1,1,1-TRICHLOROETHANE, CHLOROBENZENE, 1,1,2-TRICHLORO-1,2,2-TRIFLUOROETHANE, ORTHO-DICHLOROBENZENE, TRICHLOROFLUOROMETHANE, AND 1,1,2-TRICHLOROETHANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F004, AND F005, AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND
FINDS:

Registry ID: 110004494397

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Classification: Conditionally Exempt Small Quantity Generator
### Handler Activities Summary:
- U.S. importer of hazardous waste: No
- Mixed waste (haz. and radioactive): No
- Recycler of hazardous waste: No
- Transporter of hazardous waste: No
- Treater, storer or disposer of HW: No
- Underground injection activity: No
- On-site burner exemption: No
- Furnace exemption: No
- Used oil fuel burner: No
- Used oil processor: No
- User oil refiner: No
- Used oil fuel marketer to burner: No
- Used oil Specification marketer: No
- Used oil transfer facility: No
- Used oil transporter: No

### FINDS:
- Violation Status: No violations found

### Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

or generates 1 kg or less of acutely hazardous waste per calendar
month, and accumulates at any time: 1 kg or less of acutely hazardous
waste; or 100 kg or less of any residue or contaminated soil, waste or
other debris resulting from the cleanup of a spill, into or on any
land or water, of acutely hazardous waste; or generates 100 kg or less
of any residue or contaminated soil, waste or other debris resulting
from the cleanup of a spill, into or on any land or water, of acutely
hazardous waste during any calendar month, and accumulates at any
time: 1 kg or less of acutely hazardous waste; or 100 kg or less of
any residue or contaminated soil, waste or other debris resulting from
the cleanup of a spill, into or on any land or water, of acutely
hazardous waste.

Handler Activities Summary:

- U.S. importer of hazardous waste: No
- Mixed waste (haz. and radioactive): No
- Recycler of hazardous waste: No
- Transporter of hazardous waste: No
- Treater, storer or disposer of HW: No
- Underground injection activity: No
- On-site burner exemption: No
- Furnace exemption: No
- Used oil fuel burner: No
- Used oil processor: No
- User oil refiner: No
- Used oil fuel marketer to burner: No
- Used oil Specification marketer: No
- Used oil transfer facility: No
- Used oil transporter: No

Violation Status: No violations found

- DEC Memo: 09/28/10-Zhune. The phase I dated November 2, 2007 and Limited Subsurface Investigation Report dated October 2009 were reviewed. A total of eight soil borings were located base and upland areas of the Amtrack right of way. Nine soil samples were collected from the borings. The analytical soil samples results indicated that four VOCs (Ethylbenzene, Methylene Chloride, Toluene, Total Xylenes) were detected above the NYSDEC (RSCOs). The following SVOCs (Benzo(a)anthracene, Benzo(a) pyrene, Benzo(b)fluoranthene, Benzo(g,h,i)perylene, Benzo(k)fluoranthene, Chrysene, Dibenzo(a,h)anthracene, Indeno) were detected above the NYSDEC (RSCOs). Five pesticides (4,4'-DDT, beta-BHC, Endosulfan sulfate, Heptachlor, Heptachlor epoxide) were detected above the NYSDEC (RSCOs). The following metals (Arsenic, Beryllium, Cadmium, Chromium, Cooper, Iron, Nickel, Zinc, Mercury) were detected above the NYSDEC (RSCOs). The groundwater analytical report indicated two VOCS (1,1-Dichloroethane, Trichloroethene) slightly exceeding the NYSDEC (RSCOs). The following SVOC (Benzo(a)anthracene, Benzo(a) pyrene, Benzo(b)fluoranthene, Benzo(g,h,i)perylene, Benzo(k)fluoranthene, Indeno) Eleven Pesticides (4,4'-DDD, 4,4'-DDE, 4'-DDT, Aldrin, Alpha BHC, .....
### FUTURE HOLIDAY INN OVER AMTRAK (Continued)

Beta-BHC, Delta-BHC, Diedrin, Endrin, Gama BHC (Lindane), Heptachlor epoxide. The following Metals (Aluminum, Cobalt, Iron, Manganese, Sodium, Nickel, Lead, Vanadium, Zinc and Mercury) were detected above the NYSDEC regulatory limits. PCBs were not detected in any of the groundwater samples collected. 9/30/10 - Vought reviewed analytical reports with DEC Zhune at her request. Soil analyticals show PAH compounds as well as metals contamination including maximum concentrations of: 6750 ppm Pb, 2.8 ppm Hg, 19.6 ppm As, 4.10 ppm Cd. Groundwater shows maximum contaminant concentrations of: 10 ppb DCE, 7 ppb PCE, 6 ppb TCE, 3210 ppb Pb and 1.5 ppb Hg. Vought reviewed analyticals with DEC O'Connell who noted that further report review to be performed and meeting set up with DEC Cozzy to discuss potential P-Site listing due to metal contamination in soil and groundwater. Note also that as per email dated 9/29/10 from environmental consultant (Sean Dunn - EBI Consulting - (Ph: 617-715-1868 cell: 787-552-9953) that he is seeking spill closure due to "relatively low levels of contamination detected, the absence of sensitive or environmental human receptors to the contamination, the nature of the proposed development and the likely source of contamination being railroad operations at the property and migration from off-Site properties". Vought reviewed file for metals and chlorinated solvent contamination sources and results: Phase I ESA (EBI Consulting - Joanna Miller) - 11/2/07. Phase I performed due to property transaction. Site is .46 acres in size. Lot was located below grade and had "abandoned portion of the Penn Central Railroad Tracks" with no structures onsite. Proposed development is for two hotel buildings including a "13-story, 198 room Holiday Inn Express" and the second hotel (unnamed as of time of report) will include a "12-story, 144 room hotel located at 506-512 West 44th Street". No current manufacturing or industrial operations on site at time of Phase I. Owner at time of Phase I is SCW West, LLC. "Natural vegetation and subsurface bedrock formations lie along the eastern and western perimeters from ground surface to street level. The eastern and western boundaries are further defined by the adjacent properties facades, consisting of multi-story brick buildings". Northeast of site across 44th Street is a school playground, northwest across 44th Street is a Hess Station, a hotel to the south across 43rd St, an apartment building to the southeast and to the southwest, an Avis Car Rental to the west. From around 1890-1930 the property was occupied by multi-level dwellings and small stores and after 1940 was occupied by the railroad tracks. Historical surrounding property use included a printer, piano factory, "chinese laundry" and paint store. Report recommends limited subsurface investigation due to industrial use of property. Limited Subsurface Investigation Report (EBI Consulting)-10/23/09. Groundwater flow to the east-southeast. Eight soil borings installed via hand auger "at the base and upland areas of the Amtrak right of way" including collection of soil samples and the installation of four monitoring wells via HSA/Air Rotary and boring locations "were selected based on proposed foundation pillar locations and Amtrak instructions". Bedrock encountered at 2-6 bg. Groundwater at 1-3 bg in four monitoring wells. Groundwater samples collected and stabilization of TDS parameters shows approximately 1230 umhos/cm for specific conductivity suggesting turbid samples. Soil analyticals show no TAGM 4046 RSCO exceedence for petroleum VOCs, show PAH exceedences in samples from B1 thru B4, maximum metal concentrations of: 6750 ppm Pb (HA-3), 2.8 ppm Hg (HA-2), 19.6 ppm As (HA-3), 4.1 ppb Cd (HA-3). Report
FUTURE HOLIDAY INN OVER AMTRAK (Continued)

recommends management of contaminated soil removed during piling installation. No additional spills or adjacent spills in UIS, no potential metals source in EPA Envirofacts website or in RCRA E-Smart. 10/1/10-Vought-E-doc’d file and sent email with appointment to DEC O’Connell and DEC Cozzy with summary site plans. Vought received email from DEC Cozzy that Site does not classify as P-Site. Vought spoke with O’Connell and Section A has no further requirements with respect to metals contamination. Vought informed Zhune of same. 10/04/10 Zhune. Discussed with Vought and Based on the no known release of oil or hazardous material at the subject property. Spill Closed.

Remarks: PHASE 2 RESULTS SHOWING CONTAMINATED SOIL AND GROUND WATER CLEAN UP PENDING.

| DEC Memo:                     | Prior to Sept. 2004 data translation this spill Lead_DEC Field was "O’CONNELL"E2mis no. 142-567:4-30-02 @ 02:12THERE WAS A DELAY IN THE INPUT OF THIS INCIDENT DUE TO THE SYSTEM BEING DOWN.J Deangelo #51543 reports that while doing maintenance work at M06899 @ i/o 443 w 36 st he discovered 1 pint of an unknown oil on top of 100 gallons of water on the concrete floor of the structure. Source and cause of spill are unknown. Environmental yellow tag#35991 was installed. No sewer connection as per conduit plate m24-e-2. 2 liquid samples were taken by J Deangelo #51543 from the spill. 1 for id and 1 for pcb.UPDATE: 4/30/02At approx. 09:00 hrs. the Environmental Desk received a call from the Supervisor on location that a local customer was complaining that the Tanker and Vactor truck setup was blocking both loading bays or docks of his business preventing him from receiving or shipping his goods. A decision was made to postpone the cleanup until after 17:00 hrs. (5:00 p.m.) when he will close. Arrangements were made to re-schedule the tanker, vactor truck and underground crews for 17:00 hrs.Lab Sequence #02-03661-001Date Approved: 4/30/02 @ 06:20 hrs. TOTAL PCB 25 ppm.CIG Rich Roach #03494 notified at 13:58 hrs. that this incident is being re-classified from a "Spill - De Minimus (24 hour underground)" to "Spill - Oil (unknown type)" since the cleanup would not be completed in 24 hours.UPDATE: 4/30/02 @ 13:20 hrs.Pete Murphy, clerical staff, W.28th Street reported at 12:50 hrs. that the only available crews to do the cleanup would be the crews coming in at 19:00 hrs.tonight. Since this incident started at 01:05 hrs. on 4/30/02 there would not be sufficient time to complete the cleanup within the 24 hour time frame. The Environmental Desk, therefore, made a decision at 13:00 hrs. to de-classify this from a "Spill - De Minimus (24 hour underground)" to "Spill - Oil (unknown type)" since the cleanup would not be completed in 24 hours. The cleanup is still being scheduled for 19:00 hrs.R. Pellegrino #38620CIG Rich Roach #03494 notified at 13:58 hrs. that this incident is being re-classified from a "Spill - De Minimus (24 hour underground)" to "Spill - Oil (unknown type)" since the cleanup would not be completed in 24 hours.R. Pellegrino #38620UPDATE 5/1/2002 @ 04:33 HRSSpoke to J Seleski # 20525, Operating UG Supervisor and he informed me that the cleanup was completed @ 04:00 HRS on 5/1/2002. 250 gallons of oil and water mix was removed by the tanker and one(1) drum of solid waste including PPE’s, diapers and rags was removed. The structure was

BAPTIST CHURCH (Continued)

DER Facility ID: 344509
DEC Memo: Church thought they were using more oil than usual. Hired ProTest to pressure test the tank (outside/buried 1080 gal)(Non-PBS site). Tank could not hold any pressure (gross failure). ProTest is working with the church to set up temp tanks and will begin the process of opening the old tank to see how much of a problem there is. Tank has been pumped and cleaned. Soilborings will be conducted shortly. 5/5/08- DECP per reviewed closure report. As per report, tank was cut open and inspected. no holes were identified in tank. Geporobe investigation revealed no vocs and no elevated SVOCs. Tank will be abandoned and new tank will be installed in basement. Closed. see e-docs if warranted.

DEC Memo: 2/23/15- Ahmed - Spoke to Chris (347-397-8298) at All Boro Tank. Spilled 10 gal due to overfill, came out from vent line. No spill in tank or boiler room. Spilled on sidewalk concrete. Cleanup has been done with speedy dry. They put the contaminated speedy dry in a drum for proper disposal. Chris sent some pictures of the cleanup. Spill closed.

Remarks: Oil delivery and oil spilled out vent on an overfill. Cleanup is completed by the caller's company.

Prior to Sept, 2004 data translation this spill Lead_DEC Field was "ROMMEL"03/29/04 Transferred from James to Rommel10/29/04 Reassigned from Rommel to Sun.11/1/04 Sun sent a letter to Richard Saut, Environmental Manager of Penske, requiring by January 14, 2004 the following: 1) Delineation of soil and groundwater contamination. A subsurface investigation to adequately characterize site hydrogeology and to completely delineate the full extent of petroleum contamination to soil and groundwater both on-site and off-site must be performed. 2) A surrounding property sketch including layout and usage must be submitted to the Department. 3) The locations of former remote fills and dispenser island must be submitted to the Department, and 4) A PBS registration must be submitted immediately reflecting the former tanks and their subsequent decommissioning.

1/5/06: Called Richard Saut and left a message (610-775-6298) to ask for an update on what was required in 11/1/04 letter. 1/10/06: Spoke with Richard Saut and he said he would speak to his consultants and get back to me. 1/30/06: Left a message with Richard Saut to follow up. 3/15/06: Spoke with Matt of Groundwater Environmental Services (631-582-4187 x15, mschieferstein@gesonline.com). I sent him a copy of the additional delineation letter that was sent to Hertz. 5/19/06: Left voice message with Matt Schieferstein about overdue workplan. 6/21/06: Spoke to Matt Schieferstein of GES. Penske is doing research on this site and has not authorized GES to do any work. Spoke to Richard Saut of Penske. Richard Saut said that Hertz is responsible for this spill and forwarded DEC's letter to Virginia Carlson of Hertz. He forwarded me the correspondence between him and Virginia Carlson. 7/19/06: Sent Virginia Carlson an email to follow up. 8/10/06: Owner according to propertyshark.com: 500 West 38 L.L.C. 290 Park Ave SNew York NY 10010-5313 Sent delineation required letter to above address. Assessment required by 11/10/06. 8/16/06: Received phone call from Mindy Horowitz (212-675-3225) of Fleming Lee Shew, consultant for property owner. She will submit a workplan for remediation after a FOIL request is reviewed. 8/17/06: Received email from Mindy Horowitz: We will begin our remedial investigation upon reviewing the previous investigations conducted at this site. We are simultaneously performing an investigation for the New York City Department of Environmental Protection, as this site has an "e" designation. Mindy Chassin Horowitz Project Manager Fleming-Lee Shue, Inc. 6 E32nd Street, 4th Floor New York, NY 10016 (212) 675-3225 (telephone) (212) 675-3224 (fax) mindy@flemingleeshue.com 11/6/06: Received and approved investigation workplan. Four soil borings will be performed surrounding the former UST location. A soil sample from directly below the floor and from the interval with the highest PID reading will be collected from each boring. The report noted the possible presence of a transformer and hydraulic lifts on the property. 11/14/06: Received call from Fleming Lee Shue. Soil borings installation is not possible because clearance in basement is too low. Borings will be installed following building demolition in early 2007. 12/4/06: Received letter indicating that delineation is not possible, will occur in early 2007 after building demolition. Assessment report submission due 3/30/07. 4/3/07: Emailed Mindy Horowitz to follow up on site status. 4/12/07: Received email from Mindy Horowitz: "We have contacted our client to ascertain when the
building will be demolished, allowing us to install the proposed soil borings. I will let you know as soon as I've heard something. Please call me with any questions."5/2/07: Received email from Matthew Carroll: "The building at 493-497 Tenth Avenue is scheduled to be demolished next week, May 7 through May 11. The following week we will be conducting a site walkover to determine what type of drill rig we can use to collect the required samples around the tank. I will contact you when we have scheduled the sampling event."5/24/07: Left phone message for Mindy Horowitz to followup on site status.6/4/07: Spoke to Matthew Carroll (matthew@flemingleeshue.com, Fleming-Lee Shue, Inc.158 West 29th Street, 9th Floor, New York, NY 10001, T: 212-675-3225, F: 212-675-3224). Building was demolished. The subbasement has not been cleared. He is waiting for the sub basement to be cleared to identify tank location, and sample.7/30/07: Spoke to Matthew Carroll. Slab has not been removed yet. Site will be excavated to bedrock, and then 10-15 ft of bedrock will be removed. Endpoint samples will be collected, and the presence of bedrock fractures will be noted. 9/5/07: Emailed Matthew Carroll for an update on demolition and investigation.9/11/07: Received email from Matthew Carroll, site is being excavated, soil samples will be collected. Sent letter requiring endpoint bottom samples for every 900 square ft, and sidewall samples for every 30 linear ft. 9/13/07: Spoke to Matt. Three endpoint samples will be collected on Monday. Ten to 15 ft of bedrock will be removed. Groundwater has not been encountered below portion of site where the bedrock has been removed already.9/18/07: Site inspection by DEC Kann, Feng, and Chandra. 3/27/08: Left voice message for Matthew Carroll. The final report is overdue.4/9/08: Spoke to Matthew Carroll. He will submit a letter report with an update on site status.5/20/08 - Carlson: Left voice message for Matthew Carroll.7/2/08 - Carlson: Approved Investigation Plan for installation of two off-site borings. Remedial Investigation Report due 9/2/08.7/8/08 - Carlson: Received email from Matthew Carroll (matthew@flemingleeshue.com). Requirements of 7/2/08 letter will be met.9/3/08 - Carlson: Received Remedial Action Report. No VOCs were detected in off-site borings in former tank location. Low level SVOCs were detected. Review file for case closure.9/9/08 - Carlson: Case closed. NFA letter issued.

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

LNAPL collected from TRC-SB1 exhibit characteristics of an unknown analysis. The results of the fingerprint analysis performed on the March 1, 2011 and submitted to the laboratory for fingerprint at boring location TRC-SB1. A sample of the LNAPL was collected on (LNAPL) was identified on groundwater (perched water above bedrock) TRC-SB12 and TRC-SB13. In addition, Light Non-Aquos Phase Liquid in samples collected from soil borings TRC-SB1, TRC-SB4, TRC-SB9, petroleum impacts (elevated PID readings, petroleum odors, staining, contaminated with the exception of observations of contamination observed in the analytical data from the samples collected from the soil borings with the exception of observations of petroleum impacts (elevated PID readings, petroleum odors, staining, in samples collected from soil borings TRC-SB1, TRC-SB4, TRC-SB9, TRC-SB12 and TRC-SB13. In addition, Light Non-Aquos Phase Liquid (LNAPL) was identified on groundwater (perched water above bedrock) at boring location TRC-SB1. A sample of the LNAPL was collected on March 1, 2011 and submitted to the laboratory for fingerprint analysis. The results of the fingerprint analysis performed on the LNAPL collected from TRC-SB1 exhibit characteristics of an unknown.
motor oil an also a non-calibrated fuel type. Two bedrock groundwater monitoring wells were installed in the sidewalks outside the site building. Two (2) groundwater samples representative of the bedrock aquifer were collected from each monitoring well. There were no VOC's, SVOC's, metals, cyanide, PCBs or pesticides detected above the Class GA Values in groundwater collected from the bedrock aquifer. Five metals (arsenic, cadmium, total cadmium, lead and mercury) were detected at concentration greater than unrestricted Use SCCs in three (3) soil samples;TRC-SB2 (Arsenic: 29.8mg/kg, cadmium: 13.3mg/kg, Total Cadmium: 143mg/kg,TRC-SB4 (Total Chromium: 143mg/kg, Lead: 106mg/kg, Mercury: 0.383),TRC-SB6 (Total Chromium: 33.1mg/kg.02/07/12 Mike Hughes is going to meet with Down Hetrick and Joseph Crua to decide whether they want formal plan for the "geo vent".02/07/12 J. Vought and Zhune called Lee Guterman to inform her about curent situation. Lee noticed concerns about confirmation of vapor mitigation, Indoor, ambient sampling, or pressure field extennsion measurements.02/13/12 = Jane O'Connell sent the following e-mail. I discussed the results with Bob C. Thus far there is no groundwater contamination from chlorinated VOCs (as per TRC's July 21, 2011 Phase II report), and DOH has already weighed in on the soil vapor issue, so there is really nothing for me to pursue at this point. I saw by your draft letter that you will be requesting additional soil and groundwater sampling from SCA. Once you receive that data please pass along to me and I will review to see if there are any possible sources to pursue.04/26/12- Charles Gudder from TRC sent copy of RAP along to me and I will review to see if there are any possible sources to pursue.04/26/12- Charles Gudder from TRC sent copy of RAP to Mike Hughes from NYCDOH for review including the following: At the request of the NYSDEC, attached is the Remedial Action Plan for Beacon High School. Please let me know if you would also like a hard copy 05/16/12 Mike Hughes sent the following email. reviewed the attached workplan. The proposed work appears consistent with our guidance and I have no comments at this time.

Remarks:
lab results show contamination

SPILL NUMBER 9815161
437 WEST 43RD ST
MANHATTAN, NY

Site 3 of 5 in cluster O

Relative: Higher
Actual: 32 ft.

SPILLS:
- Facility ID: 9815161
- Facility Type: ER
- DER Facility ID: 175740
- Site ID: 212078
- DEC Region: 2
- Spill Date: 3/23/1999
- Spill Number/Closed Date: 9815161 / 2/26/2003
- Spill Cause: Housekeeping
- Spill Class: Known release with minimal potential for fire or hazard. DEC Response.
- Willing Responsible Party. Corrective action taken.

Water Affected: Not reported
Spill Source: Private Dwelling
Spill Notifier: Affected Persons
Cleanup Ceased: Not reported
Cleanup Meets Std: False
Last Inspection: Not reported
Recommended Penalty: False
UST Trust: False
Remediation Phase: 0

Date Entered In Computer: 3/23/1999

**DEC Memo:**
1/21/05 Sangesland spoke with Bernie DeLeo of Port Authority Facilities Dept at the Bus Depot (tel # 212-502-2472) He said there was a leak in the warming fluid used within the driving ramp connecting the 2nd & 3rd floors of the Bus Depot with the Lincoln Tunnel. A material known as "Savaloid"??? (could not find it on internet) is some type of oil/liquid which is heated up and then pumped through the system to warm up the ramps and prevent the formation of ice. Some where in the ramp, there is a leak which is dripping this product onto 9th Ave. NYPD has closed 9th Ave and Port Authority has spread Speedie Dry to absorb what has already fallen. Mr. DeLeo says that Port Authority is trying to locate the spill source and will stop the leak ASAP. 07/12/06: spill on street, already cleaned up, DEP involved, assume leak was repaired. close

- **DEC Memo:** Prior to Sept, 2004 data translation this spill Lead_DEC Field was "ZHITOMIRSKY"URS PERFORMED INVESTIGATION. NO FURTHER ACTION REQUIRED. 10/11/2005 According to Jane Staten (URS) URS submitted ISRP on 10/18/1999. Contamination was a result of fire in 1987 and not from the former UST.ISRP recommended NFA for the site. On August 17, 1999 AZ approved this recommendation. On October 18, 1999, NFA letter was issued. AZ
- **Remarks:** CALLER COMPANY TESTED SOIL FOR AN UNDERGROUND FUEL TANK CLOSURE AND THEY JUST RECEIVED THE RESULTS TODAY THAT THE SOIL IS CONTAMINATED

ENTERING MH-39842 FOR TELLERGY INSPECTION FOUND 2-OZ. OF
DIELECTRICFLUID HAD LEAKED FROM FEEDER JOINT ON WEST WALL OF
MANHOLE7/7/03The signed 50 to 499 ppm and < 1 pound spill Cleanup
Checklist was received from Matt Ketschke, Manager UG South, on July
3, 2003. Based on the information contained in this checklist, the
following are the details of the cleanup: All liquids and loose
solids were removed from the structure surface. All the contaminated
surfaces of the structure that contained the spill were doubled
washed with Silks and rinsed. Two ounces of oil was recovered. Waste
generated was transported by a Con Edison maintenance vehicle under
the "One-Trip Rule" to the 28 St. Yard. Con Edison employee, Stanly
Taylor directed the cleanup. The cleanup was completed at 13:50 hrs.
on 10/21/2000.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.
